In aid of army medical officers and medical librarians, the Index Medicus may issue soon a special "War Supplement" containing the literature of military medicine (including military hygiene and surgery) from 1914-17, classified under special subdivisions. This with the current numbers of the Index Medicus and the bibliographies of military medicine in the Index Catalogue for the literature of the past, will meet all ordinary requirements.

In choosing new literature, the first essential is good periodicals devoted to military medicine. Among the best are *The Military Surgeon*, and the *Journal of the Royal Army Medical Corps of Great Britain*. In a library frequented by naval medical officers the *United States Naval Medical Bulletin*, the *English Journal of the Royal Naval Medical Service*, and the *French Archives de médecine et pharmacie navales* might be added. Among continental periodicals the *French Archives de médecine et de pharmacie militaires* and *Caducée*, and the Italian *Giornale di medicina militare* are the best available.

Of current medico-military literature, the medical manuals prepared under the auspices of the Council of National Defense, those in preparation by the new organizations of the Surgeon General's Office, the Oxford War Primers, and the French "Collection Horizon"

might be added. A list of standard recent works desirable for purchase is included here. Books on military nursing, Red Cross activities, medical supplies, food conservation, etc., may be needed in some locations.

The article closes with some suggestions for an exhibit if the library is provided with glass cases or other exhibition facilities.

The county medical society library. Lewis H. Taylor. *Bull. of Med. Lib. Assn.*, July, 1917. p. 1-4.

In organization of the medical profession, the proper medical unit is the county medical society, and one of the strongest ties for binding together the medical men of a county is the formation and development of a medical library for their common use. Its establishment independently of the public library will act as one of the strongest stimulants toward securing permanent quarters, to which all members of the society would have access. In sparsely settled districts it often seems a difficult and expensive task to establish such a library, but if the material now going to waste annually, could be collected and preserved, it would become of the greatest value to the coming generations of medical men.

Every county society should appoint a library committee to secure from each member as a nucleus of a library: (1) The gift of books for permanent use or exchange with other libraries. (2) The loan of such books as he could spare and yet might not at first feel inclined to give outright. (3) The gift of current periodicals for the use of the reading room.

The expenses of the library could be met by the annual dues of the members. That which is paid for is appreciated in proportion to the payment, there being more lapses of membership for non-payment of dues at two dollars a year than at ten. A portion of the fund should be used for the binding of periodicals accumulated during the year, and of course some new books must be bought. For the early days of the library, at least, each member could be provided with a key to the building making it accessible to him for reference at all times. The library should be open a portion of each day, with a trained attendant and suitable indexes to assist members, at hand.

The Medical Library Association has been very helpful to the libraries in distributing duplicates thru its exchange, but there still remain many duplicates that could be given away to the smaller libraries. The establishment of libraries in every county medical

society should be encouraged and they should be induced to become members of the association that they may have the benefit of the Exchange.

MOTION PICTURES

The Bureau of Commercial Economics, in Washington, is an association for the dissemination of educational, industrial, and geographical information to the public, by the use of moving pictures and lantern slides. These are available, however, only when admittance to the public is free.

The bureau also maintains a lecture service for large organizations and sends out mica slides of announcements. It is international in character, its aim being to give universal public instruction. It circulates the films of the United States Government, of the Dominions of the British Empire, Republics of France and Argentina and of the lesser nations.

Any organization which desires to use the films of the bureau thru the medium of the co-operating universities, may have the privilege under the following stipulations: The borrowing institution must pay transportation charges from and to the distributing center. The films shall be used on standard machines handled by competent operators. A report of films used and attendance shall be mailed after each performance to the distributing center and films shall be returned immediately after use.

If films of an objectionable or undesirable character are shown in conjunction with the films of the bureau, the bureau may discontinue the service.

PAMPHLETS—CARE OF

The pamphlet as a library tool. Frank Place, Jr. *Bull. of Med. Lib. Assn.*, Oct., 1917. p. 17-22.

In the Academy of Medicine, whose library forms the basis for the practices described in this paper, a pamphlet is defined as a paper-covered book of less than 55 pages which is not a part of a periodical or serial, and the material so designated includes two groups of publications, those of independent issue differing from books only in lack of binding, and the very numerous reprints.

Each day all pamphlets received are divided into two groups, the old (printed in or before 1911), and the new (printed in 1912 or later). All inaugural dissertations are put with current pamphlets. When a hundred or so have accumulated, each group is alphabetized by author and filed with its own kind of uncataloged material.

Few of the old ones (now about 8000 in number) are cataloged, but the new ones are continually in process. When opportunity offers, all the pamphlets under a letter are taken to the catalog, compared, and the duplicates marked, subjects are assigned, cards are written, the pamphlets are accessioned in a special book and an accession number placed on the card as a call number. The cards are filed in the catalog and the pamphlets are filed in pamphlet boxes, first under author and then by number.

The catalog, with its full record of pamphlets and reprints, is a court of first resort, and if magazine references prove incorrect or the needed volume is missing, the catalog often points the way to the reprint. For home use also the reprints, with their slight bulk, are invaluable.

A chronological arrangement having been found unsatisfactory, the present one was substituted. A separate file has been found necessary for those above six by ten inches, of which there are some three or four thousand in some 120 boxes. Only those pamphlets or reprints which show the wear of much borrowing, which are too large to go into the file, or which have real scientific or economic value, are bound. One or two-leaf reprints, and occasional clippings, are slipped for protection into a paper cover taken from some discarded reprint and turned inside out. No pamphlet volumes are made.

The reprint represents certain advantages to the editor of the journal, others to the author, and still others to the librarian. To the latter, indeed, it may be a sort of first aid, but to get them from the authors as soon as printed means a never-ceasing campaign. A very useful medical library could be made from a good collection of reprints when properly cataloged. For a practitioner's library a classification has been worked out and described by Miss Van der Osten from her experience with Dr. T. C. Janeway's library.

In all such collections the variety in shape and size of the reprints, which range from the size of a postal card to a folio, is a serious obstacle to their preservation. If one or two standard sizes could be adopted for reprints, according to whether they came from one-column or two-column journals, it would be a great advantage for everyone concerned.

PHOTOSTAT

The photostat and the library. Charles Perry Fisher. *Bull. of Med. L. Assn.*, Oct., 1917. p. 22-25.

The photostat, an apparatus for photograph-

ing documents, drawings, or printed material directly upon sensitized paper, without recourse to a dark room, is used extensively in certain commercial lines where absolute accuracy in the copying of documents is required. It has also been installed in some of the large public and reference libraries, but its usefulness as an adjunct of the library has not been fully appreciated.

To the reader, the advantage of having personal copies of desired articles for easy reference and transportation is obvious. To the library the protection of valuable books and periodicals from soil and possible mutilation is equally obvious.

In the College of Physicians in Philadelphia, where a photostat was installed in November, 1916, the work of copying incunabula and other rare and valuable books has been begun. The copies so made are to be uniformly bound and open for inspection, while the originals are to be placed in closed steel cases in the stacks. Up to the present [1917], working only two days each week, thirty incunabula have been copied. Three of these, which were imperfect, have been completed thru the courtesy of other libraries, from whom the books were borrowed for photographing.

PICTURE COLLECTION

During 1917 over 1500 plates were added to the picture collection in Salt Lake City, strengthening it in subjects most requested by schools, churches and clubs. A large accumulation of war scenes is being made and, aside from the mounted collection of pictures, the library now has over 1500 portrait reproductions, used chiefly by newspaper men and artists. One of the most attractive additions has been the display of posters on the History of Civilization. There are now over 5000 plates, making 826 sets.

Views of post-card size are circulated for use in the balopticon machine, and the demand for agricultural and local subjects is growing constantly. During the year 11,673 plates were circulated.

PUBLICITY

Why I believe in advertising the public library. Charles E. Rush. *Assoc. Advertising*, April, 1918. p. 15.

Clear and concise statement of arguments for constructive library publicity.

In 1917 a new publicity plan was tried in Salt Lake City, with the idea of introducing the library specially to the business men of the city. The classified list of business houses in the back of the city directory was taken as a basis. For each of the enterprises repre-

sentated there, a very short list of perhaps not more than three books, the latest and best in the library, was made. A personal letter was sent to the representative of every house, enclosing the list and expressing the hope that he would find the library of use to him in a business way, and suggesting that he might find something of interest to him in the list. An application blank was enclosed when the person addressed had no library card. For instance, a letter was sent to every baker in Salt Lake City, and to every banker, each with its appropriate list of books. The responses were very encouraging. There was but one set of letters, but almost every one brought a personal letter in return. The library received in addition many valuable suggestions as to the purchase of books along business and industrial lines, and feels altogether that altho the plan involved a good deal of work, it was well worth while.

The following flyer has been sent out to libraries by the publicity committee of the Pacific Northwest Library Association:

A PUBLICITY EXPERT

Paid for Co-operatively by Libraries

Why should 8000 libraries be duplicating advertising which in most part is ineffective, unattractive and uneconomical?

A publicity bureau connected with A. L. A. headquarters could prepare advertising material for all.

You will hear from us again.

In the meantime think it over.

Publicity Committee, Pacific Northwest Library Association.

C. H. COMPTON, Chairman
Seattle Public Library
G. W. FULLER
Spokane Public Library
CORNELIA MARVIN
Oregon State Library

The librarian from whom you receive this is strongly in favor of the above.

REFERENCE DEPARTMENT

The number of reference questions asked and answered in the San Diego Library last year was 5728, according to a more accurate account of questions asked which has been kept. Reference checks are supplied at the information and registration desks, and all attendants who do reference work or are on floor duty, note requests and on the reverse side of the card indicate whether the library has sufficient material to answer satisfactorily. The plan has worked well, for it not only indicates the nature of the reading of the public, but is an invaluable aid in book purchase.

The reference department is also publishing each month a list of pictures (all of them in the circulating picture collection) suitable for use in the various grades. The course of study has been used as the basis for the lists. Circulation for the year was 3000.

REPORTS

In *Public Libraries* for March, 1918, a correspondent discusses some of the flaws in the average library report. He objects, first, to the departmental report often submitted, maintaining that the departmental reports should go to the librarian and that from them a composite report should be prepared for the public. He also objects to the length of reports, tho deploring the practice of some librarians who, in the name of economy, have cut out many pages from the body of their reports while retaining many pages of statistical tables. Lack of perspective is held responsible for the inclusion of petty items such as the purchase or repair of a desk for the librarian. The common omission of salary schedules, the infrequent use of the graph for presenting fluctuations in circulation or service, and the stereotyped wording of reports, are also subjects of comment.

SPECIAL LIBRARIES—IN GREAT BRITAIN

The interim report of the British Library Association Council, on the provision of technical and commercial libraries, presented at the annual meeting of the Library Association in October, 1917, has been separately issued in pamphlet form.

The report includes a memorandum to the department of scientific and industrial research recommending the removal of the existing limit to the library rate, a closer union between state and copyright libraries on the one hand and municipal libraries on the other, and the provision to some state-supported library such as the Science Library at South Kensington of a fund for the purchase of books required for research which should be available for loan to public libraries.

The British Museum Library is prepared to act as a clearing house or center of final references for all bibliographical inquiries, and the Council and the Panizzi Club have agreed to co-operate in preparing a union list of current periodicals to be found in public and professional libraries of the United Kingdom. The allotment of patent publications is touched upon in the report.

In regard to the growing need for scientific and technical material, the Council urges more generous support by local authorities for the provision of this literature in public libraries; greater co-operation between municipal and other library authorities and institutions so as to make their resources available over wider areas; the publication periodically by a state scientific or technical library of a de-

scriptive list of selected books in science and technology; and the increased provision of current indexes and digests of periodical literature.

The establishment of commercial departments in libraries in trading and industrial centers is urged, which will provide much valuable business information. This should include commercial and industrial data, geographical information, transport and communication material, financial information, books on commercial and industrial law and business organization, general and special reference books, and journals on commerce, industry, and finance.

For the dissemination of information on commercial subjects collected by the government, the Board of Trade Commercial Intelligence Branch might send to provincial commercial libraries, free and unsolicited, all British official publications as soon as issued. The same department has a collection of foreign trade catalogs, listed and indexed, which are lent to manufacturers on application and which might be similarly lent to libraries. Better, the department might obtain additional copies for the libraries. There are in Great Britain four sources of commercial information—the Consular Service, the Board of Trade Commercial Intelligence Branch, the Scientific and Technical Staff of the Imperial Institute, and the Agencies-General for the Colonies. Closer co-operation among them is now being planned.

In order to facilitate the filing of the mass of material collected, the Council has submitted proposals to the leading professional societies and trade journals for the organization of trade catalog literature on standardized lines, and possibly for the publication of periodical condensed catalogs of British manufacturing firms.

The training of libraries for this new special service, in commercial libraries, is strongly urged by the Council, and the suggestion is made that they be organized in a special body within the Library Association and a section on special libraries included in the *Library Association Record*.

SURGEON GENERAL'S LIBRARY

The Library of the Army Medical Museum. R. W. Shufeldt. *Med. Rec.*, Dec. 15, 1917. vol. 92, p. 1022-1025.

This is an account of the library more popularly known as the Surgeon General's Library, of Washington, with a special plea for increased appropriations and larger quarters.

Bibliographical Notes

The Federal Board for Vocational Education has started a monthly bulletin called *The Vocational Summary*, the issue for May being the first number.

As a result of recent war legislation, British publishers and booksellers henceforth may send their catalogs to customers only on receipt of a written request.

A second and enlarged edition of Dr. Koch's pamphlet on the "War service of the American Library Association" has been issued and a third is in preparation.

The *Bankers Magazine* has reprinted the article on "Price-fixing protecting the civilian at the expense of the soldier," by A. E. Adams, president of the First National Bank of Youngstown, Ohio.

Another interesting pamphlet is "The Rockefeller Foundation; a review of its war work, public health activities, and medical education projects in 1917" by Dr. George E. Vincent, president of the Foundation.

New York Libraries has recently issued an index to volumes 1-5 (1907-1917) which is being sent to institutions (not individuals) on the subscription list. It will be furnished to all others who make personal application.

The "Catalogue of Runic literature forming a part of the Icelandic collection bequeathed by Willard Fiske" to Cornell University Library, has been compiled by Halldor Hermannsson and published by the Oxford University Press.

Messrs. Iselin & Co., 36 Wall Street, New York City, have for distribution a beautifully colored profile, several feet in length, illustrating the fluctuations of the industrial and railroad stocks of the United States, as well as the commodities, copper, cotton, wheat and silver.

"Statistics of state universities and state colleges" for the year ended June 30, 1917, has once more been put out by the Federal Bureau of Education as bulletin, 1917, no. 55. Another useful recent leaflet is "Education in patriotism," a synopsis of the agencies at work, issued as Teachers' leaflet no. 2 by the same bureau.

"The story of the Anzacs" published in Melbourne, Australia by James Ingram & Son "in memory of those who, far from home fell fighting for king and country" is a historical account of the part taken by Australia and New Zealand in the Great War from the out-

break in August, 1914, until the evacuation of Gallipoli in December, 1915.

New titles in the War Information Series issued by the Committee on Public Information are: The German war code, by George Winfield Scott and James Wilford Garner; American and allied ideals, by Stuart P. Sherman; German militarism and its German critics, by Charles Altschul; The war for peace, by Arthur D. Call; Why America fights Germany, by John S. R. Tatlock; and The study of the Great War, by Samuel B. Harding.

The Tacoma Commercial Club and Chamber of Commerce has published a folder called "Tacoma, military city of the Pacific Coast." On one side is a view of the city from the waterfront, with notes on its industries and on Rainier National Park. On the other side is a very interesting panorama of Camp Lewis, the largest permanent cantonment in the United States.

The heirs of the late Judge James V. Campbell have presented to the University of Michigan Library the remainder of his "Outlines of the political history of Michigan," published in Detroit in 1876. This is one of the best, if not the best, history of the State of Michigan. The library will be very glad indeed to send copies on exchange account to other libraries. The books are in good condition and unused.

A bibliography of maritime literature has just been issued by the American Steamship Association, 17 Battery Place, New York City. It was compiled by W. M. Brittain, secretary of the association, for distribution among the officers and crews of steamships operated by its members. The bibliography includes sea stories as well as technical material. As the edition is limited the pamphlet is not available for general distribution, but it has been suggested that it be reissued as a government publication.

The 1916 report of the New York State Library has just come from the printers. Besides the report of the directors, which includes reports of the Educational Extension Division and the School Libraries Division, it contains a bibliography on the official publications of the state relating to its history, another on vocations, and the "Best books of 1916"; more translations from the early Dutch records; a report on mothers' pension legislation in this and other states; and the thirteenth annual report of the State Library School.

The National Committee of Patriotic Societies (43 Exchange place, New York City), was organized in February, 1917, for the pur-

pose of co-ordinating other war societies of the United States and co-operating with them to prevent duplication of effort. Under the chairmanship of Edward Harding, a well-known New York lawyer, an important phase of the society's work has been the counter-acting of German propaganda. The society has already published some material and is now about to issue a series of posters. Plans for a series of competitions for the drawings are now being matured. The committee is anxious to build up a mailing list of libraries which can make use of its publications, and will welcome requests.

A tabulation of the votes, and dates of passage, of Federal constitutional amendments in Congress and in New York state was compiled in March by James Hodgson, sub-librarian of the Legislative Reference Section of the New York State Library, and has been printed as a state document and twice reprinted. The table is arranged to show the number of the amendment, its short title, date passed by Congress with the vote in House and Senate, date received in New York and date approved by the state, with vote in Assembly and Senate, date promulgated by the Secretary of State of the United States. Additional notes on some of the amendments are also given, as well as the reference for each entry given. The preparation of the table was publicly commended by leaders of the Republican, Democratic, and Socialist parties in turn.

The Open Round Table

EMBARRASSING PUBLICITY

Editor Library Journal:

The recent civil service examination for the librarianship of the Chicago Public Library, in which the writer was a participant, resulted in a surprising degree of publicity which might have proved disconcerting. Such publicity may also prove unfortunate in deterring librarians from submitting their names in future tests when this would be highly important.

To be in charge of the library in the country's second largest city, with its varied activities, doubtless would appeal to many. When the notices were received from the Chicago Board of Civil Service Commissioners, however, some of us were interested in a general way, but were not sufficiently interested personally to respond.

Chicago newspapers showed a fine spirit in their attitude toward the Chicago librarianship and threw themselves into the fight against the alleged plan to have a Chicago politician appointed librarian who had recently resigned from the Chicago Board of Civil Service Commissioners of which he was a member, for this purpose, it was charged.

Suspicion that the library situation was not to be handled on a professional basis if the city administration could control this, was strengthened by other developments.

It was then that a Chicago club of the highest standing and representatives of Chicago's best activities, sent personal requests to several librarians to help make the selection of the librarian a professional and not a political question. Assurances were given that the Chicago Board of Civil Service Commissioners had stated that "the applicant's name will not be given publicity, so no possible embarrassment will result."

Some of us then submitted our names thru this club, after notifying our library boards of the Chicago situation, and a thesis was sent which covered the requirements for the examination.

The library representative on the examining board in Chicago was the best selection possible in this country and the final selection for the Chicago librarianship was not only the logical one, but one which will meet the approval of the library profession at large.

We were glad to participate in this examination, irrespective of what the examining board's choice would be, but we have not

relished the wide publicity given us by the daily press of the county, the night calls from local newspapers, and the attentions showered by publishers of civil service textbooks who have since encouraged us to renew and future efforts.

To those who are happy and contented in present surroundings and who are not searching for other professional grazing grounds, the unexpected publicity of our well meant efforts are of slight and but temporary irritation. It is easy to realize, however, that such a breach of promise as publishing thru the daily press of the country the names of those who submitted their names on special request in a difficult situation, might prove seriously embarrassing to librarians. There are library boards and communities as well which would easily resent participation in examinations for library work elsewhere, particularly without previous notification having been given, and this can be a delicate and difficult thing to do.

ON CHARGING DESK PROBLEMS

Editor Library Journal:

Years ago I planned a charging device which would mechanically charge books to readers. Upon investigation I ascertained that the manufacture of this device would be difficult without infringing upon certain existing patents. From time to time I have thought of taking a month or two vacation and spending the time in a machine shop with a competent machinist perfecting a device which would not infringe upon other patents.

The basic principles of the device subsequently were worked out and you are doubtless familiar with it in the form of a carriage call used at department stores, theaters, etc. The difference between a carriage call and a charging device is that the carriage call displays automatically the given number, whereas in the charging device, the numbers instead of being displayed in white letters would be displayed in rubber type, and automatically would click down on a card. The thing is perfectly simple and any intelligent patent machinist should be able to work it out at a cost not to exceed a few hundred dollars. At the present period of the world's history I do not feel that I can give any time and outlay to this work. If any one wishes to confer with me on the subject I will do the best I can to help, on the proviso that any patent which is eventually obtained will be presented to the public libraries of the country.

In regard to the static condition of the work

of the charging desk I can only say that it has frequently occurred to me that the present generation of librarians has done substantially nothing to render easier, more accurate, or more efficient the methods of charging and discharging books. I confess I have no substantial improvement in mind that could readily be made, and I do not think that it is altogether amazing that there has been no advancement in the work at the charging desk during all these years. Of course the people who conceived of, organized, and devised the libraries are either dead or are doing administrative work. Their successors found existing machinery and in their inexperience have concluded that the machinery itself was perfect. Indeed, some of the successors have concluded in their own minds that the machinery itself was a reason for its being and not a means to an end, and have accepted it as such without question. By the time that a person has had sufficient training to make improvements at the charging desk, graduation from that desk has been effected if the person is of a caliber sufficient to warrant promotion, and upon graduation has left the desk and its problems to those to whom promotion did not come and to junior subordinates.

I should think that the charging desk and its problem could be compared to the binding problem of ten or fifteen years ago. In library binding and rebinding many experiments were made by many persons. Mr. Dana and Mr. Chivers came along and consolidated practically all of the good points and eliminated practically all of the bad points in vogue in library arrangements. If we can find a Dana or a Chivers to study the charging desk I feel quite sure he would evolve a much simpler, more accurate, and quicker method of charging books than any now existing.

IS THE A. L. A. TOO BIG?

Editor Library Journal:

With the views of Mr. George as expressed in his letter in the April number of the LIBRARY JOURNAL, I am in most hearty accord, and in addition to the question of "Why the A. L. I.?" the question of Why the A. L. A.? might also be asked. For several years I have not attended the meetings of the A. L. A. for the reasons openly expressed in Mr. George's letter, and for the other reasons at which he strongly hints. The three-ring circus is an apt simile. I recall a meeting several years ago, at which two important sessions were being held at the same hour in different rooms of the meeting place, and subjects being discussed

in both which I was anxious to hear. I went back and forth from one room to the other, endeavoring to gather some ideas from each meeting, with the result of getting practically nothing from either.

Mr. George has covered the ground so fully, that it would seem unnecessary to further discuss the conditions. If I had not known that several librarians of my acquaintance had the same feeling about the A. L. A. meetings, I should have regarded myself as an old fogey. It may be the imagination of myself and others who deny themselves the privilege of attending these meetings, but there seems in addition to the failure to provide opportunity for those who wish to hear library topics discussed, a tendency to gather in what Mr. George calls "cosy groups," which, tho probably not so intended, give the appearance of a lack of cordiality towards those who are not in these "inner circles."

There is perhaps a side to this question which Mr. George has not considered and which we have all overlooked, and that is the large attendance at the A. L. A. meetings. Our American mania for bigness has led us to urge a large attendance, and to have the last meeting surpass the previous one. They have thus become so unwieldy that a proper consideration of the topics likely to be brought up cannot be given.

A remedy for this might be had by dividing the country into districts and holding meetings in these various districts, somewhat after the plan by which the Library Institutes are conducted in New York State. Still better would it be to have state divisions of the A. L. A. and have the state organizations conduct meetings in districts convenient to members, doing away with all state library associations, local clubs or similar library organizations. This would be the means of bringing all the smaller libraries in touch with the A. L. A. and make their librarians members, and do away with the many minor organizations which now exist. The central organization of the A. L. A. could still be preserved, and representatives from the various states be elected to represent the interests of the localities from which they come.

JOHN C. SICKLEY.

Adriance Memorial Library, Poughkeepsie, N. Y.

PENNSYLVANIA BIOGRAPHICAL
ENCYCLOPEDIAS

Editor Library Journal:

A circular letter calls attention to a biographical "Encyclopedia of Pennsylvania," now being published by the American Historical Society, 267 Broadway, N. Y., to be

completed in ten volumes at nine dollars per volume—five dollars to libraries.

In 1915, the Lewis Historical Publishing Co. of 265 Broadway brought out "Genealogical and personal history of Western Pennsylvania" in three volumes. That work was not well arranged and the indexing was not well done, while the genealogies were mainly of those who paid for full-page illustrations, or at least bought a set of the work. I am wondering if the American Historical Society is not the same as the Lewis Historical Publishing Co., since the New York Directory names three persons by the name of Lewis as officers in the Historical Society. If the publishers are identical is it not possible that the ten-volume work may be a slight expansion of the "Genealogy"?

GEO. H. LAMB.

*Carnegie Free Library,
Braddock, Pa.*

Telephone inquiry brought out the fact that the American Historical Society had "emanated from" the Lewis Publishing Co., and that while both companies still retained their individual incorporation and the Lewis company is continuing all series which it had originated, all new publications were being undertaken by the more recently organized company. A further question as to the identity of the two series mentioned above brought out the admission that "there might be some slight overlapping of material, of course, but that the new series was not regarded as a revision of the earlier set."

*ON RESIGNATIONS FROM THE NEW YORK
PUBLIC LIBRARY*

Editor Library Journal:

The Association of American Library Schools has sent to library trustees and librarians a circular letter, admirable in purpose, but unfortunately liable to misinterpretation as to the figures quoted in the following paragraph:

"54 members (19%) of the staff of the Reference Department of the New York Public Library resigned during 1917 to take better paid positions, while 154 persons (27%) resigned from the Circulation Department during the same time. From the Brooklyn Public Library 30 persons have resigned during the last year to go into business libraries or to the War Department; from the Cleveland Public Library 24 assistants have left for similar reasons. These figures do not include janitors, pages or mechanical employees."

The figures showing the loss from the staff of the New York Public Library are not comparable with those quoted for the Brooklyn and Cleveland public libraries which include only the persons who have resigned to go into business libraries or to the War Department. The statistics for the New York Public Library quoted in this circular letter are those given in our annual report for last year and repre-

sent, in the case of the Reference Department, the number of employees who left for "better-paid positions," while, in the case of the Circulation Department, they represent the total number of resignations, excluding janitors, pages or mechanical employees. We have no tabulated statement of how many of them took better-paid positions with the government or with business libraries, nor as to the number who went to other libraries, or got married, or were called home by family duties.

The situation described in the circular letter has, as stated there, "affected directly or indirectly nearly all libraries." It is not a problem confronting one library or one locality. In fact, I know of one public library far from New York which lost 50% of its employees during the same period. Incidentally, I have heard of a railroad that lost 60%; and I believe investigation would show that many commercial enterprises have lost larger percentages of their employees than have the public libraries.

E. H. ANDERSON, *Director.*
New York Public Library.

IS THIS PLAGIARISM?

Editor Library Journal:

Mr. H. G. Kugg of our staff called the enclosed matter to my attention and drew up the statement. He wrote Mr. Heartman two weeks ago but has had no reply as yet. It is a rather flagrant case, either of error or deception.

"Mr. C. F. Heartman has recently issued 'Notes toward a history of the American newspaper,' Vol. 1, ed. by William Nelson. Mr. Heartman states that his material has never been published. He is in error however, as the same material was printed in 1894 in 'Documents relating to the Colonial History of the State of New Jersey,' ed. by William Nelson, which is Vol. XI of 'Archives of the State of New Jersey.'

"This contains the 'Some account of American newspapers particularly of the eighteenth century and libraries in which they may be found, Part I, Alabama-Maryland.' This account is continued in Vols. 12 and 19, printed in 1895, 1897 of the N. J. Archives covering newspapers thru New Hampshire. The sheets in Mr. Heartman's Bibliography are apparently the very same as used in the New Jersey Archives."

WHERE SOME OF THE BURLESON MAGAZINES GO. THE CAMP KEARNY LIBRARY TRUCK IS STOPPING AT ONE OF THE WARDS OF THE BASE HOSPITAL ON ITS WEEKLY CIRCUIT. THE LATEST AND CLEANEST MAGAZINES ARE RESERVED FOR THIS USE, AND A PROTEST GOES UP IF THE TRUCK IS LATE. MAGAZINES ARE CARRIED INTO THE WARD FOR THOSE WHO CANNOT LEAVE THEIR BEDS

THE LIBRARY JOURNAL

Vol. 43

JULY, 1918

No. 7

ONE of the best features of the camp library buildings, with their open shelves, has been to furnish a "browsing room" for our soldiers during their hours of leisure, where hard work and drill training may be relieved by turning to the books of pleasure as well as to those which have proved so useful to them for technical training. This use of the library should be positively encouraged by the camp library staffs, that our soldiers may not look upon the library solely as an educational establishment, in which they are called upon to do another kind of work, with their brains instead of their bodies. Let it be clearly understood that these buildings are for recreation as well as for education. While, as has been stated, these buildings have been very useful as central reference libraries, the men should not feel that all their pleasure reading must be done elsewhere. The hearthstones of those buildings which have fireplaces should literally be a home focus for the men, and they should be made to feel at home quite as much for pleasure as for work.

It is well that American modesty should be safeguarded by cordial recognition of the good things which have been pioneered in other parts of the world. Notably Australia, which makes the kangaroo its national symbol, has leaped forward in more than one respect, and it is especially interesting for American librarians to note that in the middle ages between the 1853 conference and the organization of the A. L. A., a system of country reference libraries prefiguring our traveling libraries in the county library system here, had been started in the island continent in 1859. It has always been the desire of American librarians to welcome our English speaking brethren from the south Pacific at our

national conferences, that we might well learn from them and their methods as well as they from us, but with scarcely more than a single exception, we have not been successful in obtaining Australian attendance. The article by Mr. Ifould, of New South Wales, in the current issue, will open the eyes of many American librarians to the great work which Australia is doing, even tho its kangaroo posters have not before come to their attention. We are glad always to grasp "hands across the sea" with our Australian colleagues and wish we could see more of them and learn more of their work.

It is gratifying that the exchange of library knowledge and facilities is proceeding at a more rapid pace in Asia. Japan has a library school graduate at the head of one of the Tokio libraries, and we have had more than one visitor from those progressive islands. In China, Boone College at Wuchang, with its distinctive library building, has been a center radiating library influence, and a summary of other popular libraries in China, issued from that institution, shows a surprising number. A graduate from the library school in New York city has already returned to Wuchang, another is a student there this year, and a third student at Albany is doing good work bibliographically in acquainting Americans and Chinese with their respective bibliographical equipment. A translation and adaptation of the Dewey Decimal classification into Chinese has been published from Wuchang by Mr. Seng, the graduate first referred to, since his return to China. And now the Philippines, where the library at Manila is thoroly on home lines, take the step forward of providing financially for five library students, who are to be sent to

America for technical instruction. Truly, this is progress in the Orient!

MR. JOHN COTTON DANA has contributed to the New York *Evening Post* a valuable series of articles on books for the woman voter, with special reference to the state of New York, whose adoption of woman suffrage is the most significant fact in its recent development, giving new impetus to the Federal amendment and setting the pace for other states in the East and South which have been slow to adopt the measure. Here is an example of bibliographical work which should be done in common by many libraries or for all libraries, by mutual co-operation of libraries acting together, or thru the Publication Board of the A. L. A. The tendency is unfortunately for libraries to do a piece of work like this, each for itself, basing its publication on the books on its own shelves, to the great waste of time, effort and money. Mr. Dana has kindly caused to be prepared from his wealth of material a reading list, printed in this issue, which may safely be purchased by small libraries thruout the country, whether in suffrage or non-suffrage states. Another field of present interest to libraries the country over is that of the "problem territories" from which so many of our new voters come to us. Books especially on Alsace-Lorraine, on Poland and the Ukraine, and on Armenia and other Asian regions, should be at the service of library readers thruout the country, and here again publication of special bibliographies for the libraries generally is much to be preferred to the issuing of different lists by different libraries.

WITH the summer season, the summer schools again begin their useful work of giving a modicum of library training to those who cannot attend the full courses of library schools. Professionally, librarians, especially graduates of library

schools, should never overlook the fact that a large number of small libraries, such as those to whom the Carnegie Corporation grants \$10,000 with a required support of \$1000 a year, must depend in great measure upon those who have not had the advantage of library school training and to whom corresponding salaries cannot be paid. In other words, the time has not passed, and indeed will never pass, when the gentlewoman "fond of books and reading" and with some administrative ability will not be required the country thru in many a library where she will be able to do real service to her community. Librarians should never become so professional as to fail to appreciate this class of associates.

THERE can be too much of a good thing, and this seems to be the case in the matter of books sent on approval to libraries. It is, of course, desirable that librarians should have full opportunity of inspecting books, where they so desire, but there has been a growth of the habit of sending books to libraries on approval without request, especially on the part of minor publishers, who think their books likely to be overlooked. This has become quite an annoyance and abuse, and some libraries have found reason to complain. Books should not be sent on approval, unless some desire to inspect them has been expressed; and to cure the evil librarians would do well to send such parcels back, unopened, at sender's expense, if after a courteous note on the subject the nuisance is not abated. Many of the smaller libraries obtain books on approval from or thru local dealers, and in some such cases books sent for approval may be duplicated from the publisher as well as from the bookseller, to nobody's profit. With the increases in the costs of both letter postage and expressage publishers owe it to themselves and to the libraries to use "on approval" methods with especial restraint.

THE SCIENCE OF INDEXING

By WALTER H. McCLENON, *Chief Indexer and Compiler, Legislative Reference Division, Library of Congress*

ONE of the most important functions of a modern library is to provide reference works which make available at a moment's notice substantially the entire store of knowledge along every important line of human activity or speculation. In order to fulfil this function, it is of the highest importance that the library should possess a complete index or list of all the books or other sources of information relating to every particular point that is likely to be the subject of research. It is also important that each separate book should be so indexed as to enable the investigator to find at a moment's notice the particular section relating to the point in which he is interested. If the index does not enable him to do this, it is useless or worse than useless, for it gives him the incorrect impression that the book contains no reference at all to the point in question.*

In spite of the vital importance of a reliable index, little thought is for the most part given to the need of systematic method and care in the preparation of an index. The usual theory seems to be that any reasonably intelligent person is competent to prepare an index, and frequently the indexing of the most important scientific works is relegated to a clerk or stenographer who has only a slight appreciation of the various points treated. There are undoubtedly a large number of professional indexers of one or another sort of material, but rarely if ever has anyone attempted to develop a science of indexing, or to so much as indicate in an elemental way a few of the fundamental principles upon which the merits of an index must depend.

The only reasonable measure of the

merits of any index is the extent to which it fulfills its purpose; *i. e.*, the extent to which it makes the material indexed readily available to the person wishing to consult it. The science of indexing must accordingly deal with the methods by which an indexer may best meet the probable needs of those likely to consult the index. Obviously indexing can never be made an exact science, since the personal equation of the investigator enters so largely into the determination of the utility of an index that it is impossible to lay down any standard for a theoretically perfect index. There is however much similarity in the mental processes of all rational persons, especially of persons likely to consult any particular index; and on the basis of this similarity it is possible to develop certain rules as to the methods likely to give an index the greatest practical utility.

The most fundamental rule to be observed in the scientific preparation of an index is that the purpose for which the index is likely to be used must furnish the test for deciding any doubtful question which may arise. The indexer should constantly endeavor to put himself so far as possible in the place of the person likely to consult the index. No desire to secure a logically perfect system should ever be permitted to interfere with the attempt to secure an index possessing the maximum feasible amount of utility.

A scientific method of preparing an index presupposes some plan worked out more or less completely in advance. In the working out of such a plan, it is important to anticipate, so far as possible, every contingency likely to arise in the actual process of indexing. But since it is seldom possible to anticipate everything in advance, the plan adopted should never be regarded as fixed and unalterable; it should rather be subject to development and modification as the progress of the actual indexing may seem to indicate. It is however of primary importance to preserve a consistency of method throughout the entire index. Con-

* The classic example of unsatisfactory indexing is that of the story of a parrot, which was indexed under "Absurd story," "Extraordinary tale," "Fable," "Remarkable story," "Unusual tale," and in a dozen other places, but never once under "Parrot." A number of scarcely less striking examples have recently been called to the writer's attention. Thus the Blue Sky Law of one of the Southern states is not indexed under "Blue Sky," "Corporations," "Stock," "Securities," "Promoters," or "Fraud," but only under "Bonds," where almost no one would think of looking for it. Again, a bill relating to an additional judge in Pennsylvania was indexed under "Additional" instead of under "Judges" or "Pennsylvania."

sistency is of more consequence than absolute logic in the plan. If the investigator fails to find what he is looking for in the first place where he looks, he is apt to turn next to what he considers the next most promising place; but if he finds even a single reference in one place, he naturally assumes that it is unnecessary to look for other similar references elsewhere. Hence it must be regarded as one of the most serious defects of an index to have one or two references only under a particular heading to which four or five other references are equally applicable.

The first question to be determined in connection with the plan for any index is the basis of arrangement. There are three possible ways in which an index might be arranged: alphabetical, numerical, and by subject-classification. A numerical arrangement is obviously inapplicable in the vast majority of cases, but occasionally it is by far the most useful possible arrangement. It is often useful to arrange numerically particular subdivisions of an alphabetical index or of a subject-classification, especially in cases where chronological order is a matter of interest or importance. A good example of the value of a numerical arrangement, as well as of the inconveniences resulting from the absence of a reliable index, is furnished by the records of real estate transactions recorded in the office of a register of deeds. By law every person is chargeable with knowledge of every transaction recorded, but in the absence of an official index arranged numerically according to the various parcels of ground, it is necessary to pay a substantial fee to an attorney or title company to have the records themselves searched.

A subject-classification is frequently the most useful form of index. It can be made logically complete with far less overlapping than would be necessary in any alphabetical system. On the other hand, a subject-classification is of relatively little use except for people who are already familiar with the classification scheme employed, or who would at least be able at a glance to comprehend it sufficiently to locate any desired point. But the number of readers able to do this is in most cases extremely limited;

for the average reader the amount of time and effort required for a mastery of the classification scheme would be too great to make the use of such an index practicable for most purposes. Something in the nature of a subject-classification is usually followed in the arrangement of the material itself, so that substantially all the merits of this sort of index are found in a reasonably complete table of contents. Such a table of contents is frequently of the greatest value in locating a specific point, but for most people it is apt to be far less useful than an alphabetical index. Indeed, so completely is the superiority of an alphabetical arrangement recognized that to most people the word index necessarily implies an alphabetical index.

An alphabetical index does not involve an elaborate system of classification which must be learned by the reader; every intelligent person must be presumed capable of finding in an instant whatever he is looking for in an alphabetical arrangement. But while the work of the reader is simplified by the alphabetical arrangement, that of the indexer is made more difficult; for he must anticipate every place where a reader might reasonably think of looking for a particular point. In other words, it is impossible to prepare a satisfactory alphabetical index without frequently duplicating references two or three or even six or more times, according to the various words which might reasonably be thought of as catchwords. For example, a reference to action by the Secretary of the Treasury refunding duties paid on iron ore at a certain port might reasonably be indexed under "Secretary of the Treasury," under "Refunds," under "Iron ore," and under the name of the port and of the person to whom the duties are refunded.

A point which is sometimes overlooked in the preparation of an index, but which may be a matter of some importance, is the manner of citing the material indexed. In every book divided into paragraphs or sections numbered consecutively, each page of the index should indicate whether the references are to pages or to the paragraphs or sections. Especial care should be used in citing material contained in a volume

other than that in which the index occurs. If abbreviations are used on any page of the index, there should appear on the same page a complete explanation of them, or at least a reference to the place where such an explanation may be found.

After these preliminaries have been determined, the next question to be considered by the indexer is how much of the material he shall index, and how completely he shall index it. The answer to this question must depend very largely on the nature and purpose of the index. Only in the most elaborate and detailed indexes is it possible to index every important word, or even every subject of a sentence. On the other hand, it would seem that the most concise index should include a reference to every word that forms the subject of a section or paragraph or whatever else constitutes the unit of the material indexed. The ideal is of course to index everything that might reasonably be looked for by the one using the index. But, as has already been said, it is impossible to realize this ideal completely; what is of really vital importance is absolute consistency in method. Even this is a matter of the greatest difficulty, especially if more than one person is connected with the preparation of the index. Perhaps no one problem of indexing demands such careful attention as the matter of consistency and proportion in the extent to which different parts of the material are indexed. Obviously a true sense of proportion demands that more attention should be devoted to the more important parts of the material. On the other hand, it must always be borne in mind that what the indexer regards as important may not coincide with what will actually be sought in the index. It is never safe to regard any point as too trivial to be worth indexing. Wherever any of the material is ignored for the sake of conciseness, the point omitted is very likely to be the first thing that someone or other attempts to find in the index. Yet this defect must always to some extent be accepted by the indexer, otherwise the index would become so bulky as to be entirely unworkable. The largest part of the element of discretion in the work of the indexer consists in deciding in what

cases it is better to run the risk of omitting something of possible value than to encumber the index with matter unlikely to be of any real use.

In this connection it is well to call attention to a defect extremely common in indexes; *viz.*, the multiplication of entries under one heading, all referring to the same section or paragraph. Unless the index professes to contain a complete digest of all the material indexed, four or five entries with the same reference are scarcely more useful than one, altho tending to increase materially the bulk of the index. The one entry adopted should of course be sufficiently descriptive to indicate clearly the nature of the material indexed; sometimes the addition of two or three words to the entry is sufficient to reduce to a fourth part the number of references which any particular reader may need to look up.

The scientific principles relating to the method of indexing must be considered separately with respect to a subject-classification and to an alphabetical arrangement, for no principle can be recognized as applicable in exactly the same way to the preparation of both kinds of indexes. In the case of a subject-classification, the principal point to be borne in mind is that the outline must be logically complete, with the possibility of overlapping reduced to the absolute minimum. Wherever it is impracticable to avoid entirely situations in which the same subject-matter might reasonably be included in more than one place in the classification scheme, it would seem clearly useful to give a cross-reference to the point where such material is in fact indexed, from every other place where it might reasonably have been indexed. On the other hand, there is of course no necessity of including cross-references from headings appropriate to some other system of classification, but only from those which might reasonably have been expected in the system actually employed.

In the case of an alphabetical index, there are a number of considerations specially applicable. In the first place, as there is no attempt to create a logically complete outline, it is impracticable to attempt to avoid or materially restrict the

possibility of overlapping. It is, however, frequently desirable to avoid actual overlapping by indexing the material in one place only, with cross-references to that place from every other place where a reader might reasonably be expected to look for it. For example, any reference to nominations by direct primary might reasonably be looked for under "Primaries," "Direct primaries," "Nominations," "Candidates," or "Elections"; but obviously the same material would not need to be repeated at length under all five headings. Some one heading should be adopted as the one under which the material is to be indexed, with a cross-reference to that heading from each of the others.

It is not always easy to decide what headings should be given index entries, and what ones cross-references to other headings. In general, there should be entries in the place where the largest number of people would be likely to look. There should clearly be a general plan adopted with respect to cross-references, in order to give the reader some basis for assuming from one case that another similar case will be similarly treated. For example, if references to generals in the Army are indexed under "Army," with a cross-reference from "Generals," references to admirals in the Navy should be indexed under "Navy," with a cross-reference from "Admirals." It should always be borne in mind that a cross-reference is less useful than an actual entry, as it requires twice as much work from the reader; consequently it should never be used except for the sake of reducing the size of the index by avoiding the duplication of a number of entries. In most cases it would be better to duplicate three or four entries than to refer the reader to an entirely different part of the index for them, even tho the latter method would save a small amount of space. Above all things care should be taken to avoid if possible all double cross-references, *i. e.*, cross-references to a place where no entries exist, but only other cross references. Wherever possible, cross-references should be specific rather than general. The form "For a particular —, see the specific titles" is unsatisfactory. If the indexer cannot

enumerate the different specific titles to which reference should be made, it is scarcely likely that the reader can do so. Nor is the gain in space ever likely to offset the lack of completeness and definiteness in the cross-reference.

In any extensive index, there are apt to be a number of headings which need to be subdivided, and each subheading treated for many purposes as comparable with a separate main heading. The use of subheadings should be avoided unless the number of entries would otherwise be so great as to be unwieldy, or unless there is a natural division of the main heading into two or more entirely distinct subjects; *e. g.*, "Ministers—Diplomatic" and "Ministers—of Religion." Every time a main heading is divided into subheadings, the total number of entries is almost certain to be increased to some extent. It is also frequently of the greatest difficulty to plan subheadings that are mutually exclusive to a sufficient extent to enable the reader to direct his attention entirely to the subheading most directly in point, and to ignore the rest of the title. He is generally, however, enabled to concentrate his attention upon a smaller number of entries than would be the case if the main heading had not been subdivided. The same considerations apply with even greater force in the case of sub-subdivisions, consequently a subheading should never be subdivided unless the necessity for doing so is very clear. On the other hand, it may occasionally be necessary, in order to prevent the accumulation in one place of an absolutely unwieldy bulk of material, to subdivide even a fourth or fifth time.

One of the most difficult problems arising in connection with the preparation of an alphabetical index is the extent to which specific headings are to be grouped together under a main title, rather than scattered thru the entire index alphabetically. The most natural arrangement is to index everything under the most specific possible title; for example, to index a reference to captains in the Army under "Captains" rather than under "Army officers." On the other hand, it is frequently of importance to the reader to be able to find quickly all the reference to every specific title included

within a larger group. This object can of course be met by the use of specific cross-references from the more general to the specific titles in point, and in most cases this is no doubt the best way to meet the situation. But since a good index should be more than a mere word-index, something in the nature of subject-grouping is needed. It is apt to be far more useful, for example, to index under a single title all the material relating to the various steps in a single complex process, such as the distillation of liquor or the assessment and collection of customs duties, than to scatter these references throught the index under the various titles descriptive of the separate steps of the process. On the other hand, an excessive consolidation of related headings under a single main title tends to transform the index into a subject-classification and thus to lose the distinctive characteristics of an alphabetical index.

A point which it is scarcely necessary to mention, but which is obviously of considerable importance, is that distinctions between titles or subdivisions should always involve a real difference in subject-matter, and not merely in designation. It would obviously be a defect in any index to have certain material indexed under "Aliens," and other material indexed under "Foreigners"; everything should be included under one or the other of these headings, with a cross-reference from the other. On the other hand, any real distinction, however slight, may justify a difference in heading; thus, in the Index to the Federal Statutes with which the writer has for some years been connected, certain provisions of law are indexed under "Navy," and others under "Naval Forces," altho the difference in meaning between the two expressions is extremely slight.

In connection with the preparation of an alphabetical index, it is necessary to determine the rules according to which entries are to be alphabetized. Occasionally, indeed, we find indexes that are regarded as sufficiently alphabetized when all entries beginning with the same letter are grouped together, regardless of arrangement within the letter; but this cannot be regarded as in any respect scientific or complete, and for any but the briefest indexes is aggravat-

ingly inadequate. It may perhaps seem at first glance that no special rules of alphabetizing are necessary; but a number of doubtful cases are certain to arise in connection with any extensive index, and inconsistent alphabetizing is likely to occur unless these doubtful cases are determined in accordance with definite rules.

One of the most important questions to be determined is whether alphabetizing is to be by words or by letters; for example, whether San Francisco shall precede or follow Sandusky. If alphabetizing is to be by words, certain further questions are apt to arise, such as whether compound words like post-office, and nouns in the possessive case, shall be regarded as one or two words; whether every word shall be counted, or whether certain unimportant words such as articles, prepositions, etc., are to be disregarded in alphabetizing; whether prefixes like De, O', Van, etc., are to count as complete words or not. The prefix Mc is bound to cause trouble in any index containing proper names; this has sometimes been treated as a distinct letter between M and N; sometimes as a letter between L and M; again, the letters are taken just as they come, between Maz and Me; finally, Mc may be treated as an abbreviation and alphabetized as if it were written Mac. Abbreviations should clearly be alphabetized as if they were written out in full (except of course in an index of abbreviations), tho this rule is frequently not observed. With respect to the other questions of alphabetizing referred to above, it is impossible to say that one rule is any more scientific than the opposite one; but scientific indexing demands the existence of some rule as to each of these points, instead of leaving each specific case to be decided independently by the individual indexer.

Scientific indexing involves constant attention to a multitude of details. It also involves a consistent adherence, thru all the mass of detail, to a definite plan worked out in advance. Beyond this, the merits of an index must depend chiefly upon the accuracy and judgment of the individual indexer.

The world belongs to the energetic.—
RALPH WALDO EMERSON.

WHY A COUNTY LIBRARY LAW FOR MISSOURI*

BY HAROLD L. WHEELER, *Librarian, School of Mines and Metallurgy, Rolla, Mo.*

I WANT to read you a news item that appeared, two or three weeks ago, in one of the Rolla newspapers:

"Pie Social"

There will be a pie-social at Point Bluff School House Saturday night, September 29th, proceeds to be used for a library. All are cordially invited.

It is books that these people want—a library. Point Bluff School House is about eight miles south of Rolla. To get there you ride by wagon or on horse-back, out into the Ozark hills, over one of the roughest approaches to a road that I have ever traveled—and I've seen some rough roads. For two miles, the only road is a creek bed. When you get there, the little, one-room school house nestles by the far side of the creek, without a house or dwelling in sight. But around in the hills, within two or three miles, live the families for whose children the school house exists—some of them fairly well-to-do farmers, as wealth goes in the Ozarks; many of them struggling pretty hard to win a living from the stony, unproductive hills. But they want books—a library.

The Point Bluff School and its neighborhood are samples of a type with which nearly all of us are more or less familiar. Surely any librarian from a rural community can call to mind a number of these isolated school houses. They are more isolated, perhaps, down in the Ozarks, than they are up in North Missouri. For Red Cross and Y. M. C. A. talks at Sunday church services, or pie socials, I have been to quite a number of them in my county. And the people everywhere have had the same thing to say: "We are mighty glad to have you come out here and tell us about these things. You see we don't have books here in the country; and we don't get magazines, and we don't very often see the big city newspapers. All we ever get to read is the little county weekly, and it doesn't tell us very much." And I have said, "Do you folks want books and maga-

zines?" And the answer every time is, "Indeed we do; but how can we get them?"

Now the point I want to make is, that the people in the country want books—something good to read. And as soon as they get one book or pamphlet that helps solve their problems—tells them how to prevent black-leg among their cattle, how to raise alfalfa under unfavorable conditions, how to keep their canned vegetables from going "flat sour"—as soon as they realize how practically useful and helpful books may be, then they want them twice as much. And I believe that any one would agree that they ought to have them if it is possible for them to get them.

But they haven't them, and they can't get them.

There are three ways in which books can be supplied to these dwellers in the small towns and rural communities all over Missouri. First there is the system of independent, local libraries—each little town and city, and each rural school district, as in the case of Point Bluff, trying to establish a library of its own. Then there is the system of traveling libraries, as operated by the State Library Commission, lending small collections—25 to 50 volumes—to localities or organizations which ask for them.

Third, there is the county library system, which is outlined in the bill we are hoping to see enacted. It contemplates the establishment of a library for an entire county, just as we now have libraries serving towns or cities. The county library idea is about like this: The County Court is authorized to levy a tax on the population of the entire county. The bill under consideration prescribes the conditions under which such tax may be levied, and limits it to two mills on the dollar. Administrative headquarters of the library system would be at the county seat, or at the largest library or in the largest town in the county. Books would be sent out in varying numbers to many branches or stations, part or all of the books being changed at frequent intervals from one point to another, in the

* Read at a meeting of the Missouri Library Association at Jefferson City, Oct. 18, 1917.

way that would serve the greatest number. The branches and deposit stations would be located in stores, school houses, residences—wherever numbers of people can easily reach them, and without having to erect or rent, if possible, a building or rooms. The local stations would be in the care of local assistants, while the administration and supervision of the whole county unit would be in the hands of a trained librarian.

Compare this, now, with the independent, local system, and several advantages of the county system will be apparent. With the local system, the first and chief effort is too often toward a building. You know how prevalent is the idea that the building *is* the library—if you have no building you have no library. So, many communities wait until they can spend their money on a building, when, under the county system, they could and would, with a few dollars, have the use of a great many books.

Another advantage of the county over the local system is that it eliminates the useless material—the “cord-wood” and “junk”—and makes unnecessary the duplication, in each separate library, of much of the book stock, especially the more expensive and specialized books, encyclopedias and reference books. One of the misfortunes of the small local library is its inability to buy more than a handful of even the best novels, the most valuable works of history, science and economics, poetry, essays and the drama. At the same time its shelves contain yards of dusty, useless volumes—War of the Rebellion Records, Reports of the Adjutant General of Illinois for 1867.

Each separate little library has, to a certain extent, a duplication of books—and if it is not a duplication of actual titles it is a duplication of scope and subject matter. While it is quite possible that any county library would buy some “dead ones,” it is obvious, on the other hand, that, with only one copy of such a book to be sent around to many stations and inspected by readers all over the county, it would eventually get pretty well used. And instead of duplicating in each of the local libraries all the reference books and encyclopedias and less

used books of literature, science and economics, one copy of each, under the county system, would be sufficient for all the branches and stations in the county.

One reason why the small local libraries are not used more is because they can not be constantly offering their readers a fresh lot of books. How often we have heard, “Oh, I’ve read everything in the library.” And so the books—even the good ones—rest on the shelves, gathering dust. Under the county system, local libraries like this would be branches, and books which had been read would be exchanged for something new from another branch. So, at the minimum expense, without duplication, each little neighborhood would always have books of fresh interest, and all the books would be in continual use until worn out. Isn’t that “efficiency and economy”?

The county system saves, too, in eliminating the duplication of overhead costs of administration and maintenance. Instead of two or three, or a dozen or twenty separate libraries buying in a more or less ill-advised way, classifying, cataloging and handling the books independently, it is all done better and more economically at one central point.

Moreover, in addition to all the untrained volunteers and assistants at the various local stations and branches, the county system makes possible a trained librarian at the head of the whole thing, able to see and correlate the needs of each locality, to supervise and direct the work of the assistants, and administer the entire system to the greatest service to every part.

Most important of all, the county system not only gives *better* service; it tends to introduce library privileges to thousands of people who never have had them before—and who are every bit as much entitled to them, and who would appreciate them every bit as much as you or I. The people of a large village or town might in time undertake to establish a collection of books; but the small village, and the community which centers about a single remote school house or country store, or group of rural mail boxes at a cross-roads, would seldom venture it. Hundred of thousands of Mis-

sourians live in just such small communities, or are isolated altogether, and never would be reached by a local library service. I know how it is down in my county—and in all the counties round. We have three good sized "cities"—Rolla, with a population of about 2500; St. James, with 1100, and Newburg, with 900. None of these "cities" has a library. In the course of time perhaps one or another of them may find a way, and a person with the initiative, to undertake a library. But think what weak, struggling little libraries they will be, as compared to what a county system would make of them. And think of the 10,000 other residents of Phelps county, scattered around thru the hills, who never will have the use of a library—unless some one thinks to have a pie supper, and they can clear \$10 or \$15 for books. The county system would soon reach all these people with a station, or by a book-wagon delivery; and it could reach them immediately by telephone and parcel post.

But, it may be asked, doesn't the State Commission, with its Traveling Libraries system, embody all these advantages of the county system? Isn't it, practically, the county system on a state-wide scale? Theoretically, yes. But the state-wide system is on too big a scale to do this work anywhere near as effectively as the county system. In spite of its many good features, the state system means too great distances, too remote a connection and personal acquaintance between headquarters and local custodians, too difficult and delayed communications and shipments. It would take a week or ten days for many communities in Missouri to send a letter to Jefferson City and get books from the State Commission in return. But the station at a cross-roads store twelve or fifteen miles out in the hills, or the farmer on a "rural route," can telephone in to the County Library headquarters this afternoon, and get his information either at once, or by parcel post tomorrow morning. It is a comparatively simple and easy matter for the county librarian to know every part of his county, and see that every part gets regular and adequate service. For the state commission to have an equally intimate knowledge of

119 counties, an equally immediate oversight of the work in each, and provide equally thoro service in each—well, it is asking a little more of the commission than is humanly possible.

There is another point wherein the county system would have the advantage over the state system. The organization, administration, and financing of the latter are in the hands of a few people, all of whom are strangers to the people back on the farms. The direction of the county library is in the hands of the "home folks." The state system is some vague thing "up at Jefferson City," beyond the ken of people who never have been outside their own county. The County Library is something tangible, in our midst; it is "our" library, with which we are directly concerned. The funds of the State Commission and its traveling libraries are appropriated by the state legislature, which sometimes has to economize. The county library is supported by a tax levied by direct vote of the people concerned. Now the significance of this must be apparent. The amount of money raised by a single tax for the whole state for the support of a state system, will tend to be small as compared with the sum of the separate county library levies which the people will gladly vote and gladly pay, provided we give them the legislation that makes it possible. What might seem burdensome or extravagant as part of a state tax, will take on a different aspect when levied as a local tax, by the voters themselves.

So the county library system is the system that gives the best service and reaches the most of the people at the lowest cost. It combines the advantages of the local and state systems, without their shortcomings. It reaches communities that never would be reached by either of the other systems. It is the best system of library service that has yet been devised for rural communities.

One point should be made clear in regard to this law that we have in mind for Missouri. It is *not* compulsory; it is *not* mandatory. It only provides an opportunity, and prescribes the way in which the opportunity may be grasped by those who

will. No county *has to have* a county library. But under our present law, practically no county *can* have one. This law merely provides that, under certain conditions and restrictions, any county *may* tax itself a limited amount for the maintenance of a library. Is there anything less that we can do to help our rural communities—unless we ignore them altogether?

More than half the population of Missouri is a rural population, living on remote farms, in scattered hamlets, or in villages too small to support a library. Their only hope is in co-operation. Recently I had occasion to compile some data in regard to the Ozark and South Central counties of Missouri. Rolla is just about in the center of a group of 27 counties which lie in a belt about 100 miles wide, from the Missouri River to the Arkansas line. These 27 counties comprise approximately 10,000 square miles, with a population of about 400,000. In that area there are two cities with a population of 3000, and four more towns of from 2000 to 3000; ten other towns with more than 1000. That accounts for 35,000 out of the 400,000. In other words, more than 90 per cent of the population are in little bits of settlements, or scattered about thru the hills, hopelessly beyond reach of any library influence except that of the county unit.

In all these 10,000 square miles, there are four small libraries, of which mine is one—and mine is the collection of an engineering school. Just think what a wonderful opportunity is there, if only we had the enabling law that would make it possible. These people are citizens of Missouri, just the same as you or I; their votes have just as much weight. Why aren't they entitled to just as much consideration, why shouldn't we give them the advantages for education and advancement that the city people in other parts of the state have? Is there any fairness, any logic or wisdom in saying to the people of St. Louis, "Yes; you may have a fine library," and to the people of Kansas City and St. Joseph, "Yes, you are city residents, you may have these advantages," and then turning around and saying to the people of more than a quarter of the state, "No; you can't have library privileges;

why you are just a lot of ignorant hillbillies; you don't need a library. You *stay* ignorant." That is just what our present law says, in effect.

The county library is a move—and a real one—to help better the community and the state. It is of a kind with the move to consolidate rural schools—to get one good school in place of a dozen poor ones, two or three good trained teachers instead of a dozen immature girls. It is on a par with the move for better roads, for county highway engineers, for farm demonstrators. All these things are a part of one big movement of the times—the movement for rural betterment. They are a part of the world's progress. The farmer and the country dweller knows that he would be better off, and have more of the comforts of life, if he had better farming methods, better roads, better schools, better library service. We are not forcing a library on him. But if he wants a library, and if he is willing to tax himself in order to get it, why turn a cold and indifferent shoulder, why stand in his way? Why not give him a chance?

USING FILMS TO AMERICANIZE THE ALIEN

A NOTE in the *Moving Picture World* for Feb. 16, says that the University of South Dakota, which some time ago installed a bureau of visual education, has extended its influence into Wyoming. The films supplied by the South Dakota institution are playing an important part in the Americanization of employes of the Colorado Fuel and Iron Company at Sunrise, Wyoming. The films are supplied free, with the exception of the payment of express charges and upon the condition that no admission fee is charged. Men in the mining camps are particularly interested in industrial subjects, such as those dealing with automobile manufacturing, railroading and trips to industrial centers of the United States.

THERE is one voice in books, and yet they teach not all men equally.—THOMAS A KEMPIS.

THE COUNTRY REFERENCE SECTION OF THE PUBLIC LIBRARY OF NEW SOUTH WALES

By W. H. FOULD, *Principal Librarian*

THE State Library in Sydney, the oldest of Australasian cities, is purely a reference library, except for its country circulation section. The metropolitan circulating department was transferred to the civic authorities nine years ago and it is now a separate institution. The Public Library of New South Wales has three definite divisions, the General Reference Library, the Mitchell Library, and the library for country circulation. The three sections contain 312,000 volumes and the increase for 1917 was 13,638 volumes and 3251 pamphlets.

The section known as the Mitchell Library is a collection of Australasian books and manuscripts. The trustees aim to include all material published in Oceania as well as everything on those regions, and it is perhaps surprising that with this geographical limitation the Mitchell collection numbers over 98,000 volumes as well as a very large number of manuscripts, maps, pictures, and other Australianiana.

The Country Circulating Department of the main library is divided into two sections. The first comprises books in boxes circulating amongst country schools of arts, recognized bodies of students, branches of the Country School Teachers Association, lighthouses, and branches of the State Agricultural Bureau. The traveling library system is not new to the Commonwealth; indeed Australia may claim to have been the first country in the world to have circulated books in this way. As far back as 1859 the state library of South Australia, then called the South Australian Institute, commenced the loan of boxes of books to country institutes, and the system has continued with very little alteration to this day. The Public Library of Victoria commenced its traveling library system within a few months after South Australia, and these two states apparently originated the idea quite independently of one another.

During the past year the Public Library of New South Wales circulated 470 travel-

ing libraries containing 18,222 volumes to 219 groups of readers. The boxes are of four classes. Those circulating amongst small local libraries, schools of arts, and organized groups of general readers, contain biographies, works of history and travel, sociology and natural history, especially recent works which are too expensive for purchase by local libraries catering for a majority of their readers—that is, for the class who mainly desire works of fiction and the more ephemeral general literature. Lighthouses and signal stations are supplied with cheaper and popular general literature, a fair proportion of fiction, and books for children. Boxes for teachers' associations contain works on education, child study, psychology, nature study, as well as a small proportion of general literature. Libraries circulating amongst branches of the Agricultural Bureau, and similar groups of primary producers, are made up almost entirely of books on agriculture and domestic science.

The traveling libraries are not intended as substitutes for local libraries but as aids to them in supplying material for the readers of better class books and to increase their borrowers by affording a frequently changing supplement to the local collection.

The circulation of agricultural boxes has only been in operation for one year but so far has proved successful. It is recognized that but few farmers have the impulse to read more than their newspapers with perhaps an odd magazine or novel. It is not expected that without this energizing motive it will be easy to get them to study very seriously even the literature of their own particular calling, but it is hoped that by placing the latest and best books before them—books of which they had previously never heard—they will gradually learn to read. The twenty-five agricultural libraries so far circulated have undoubtedly been well used and each group on returning a collection has asked to be supplied with an-

other; whilst several committees and organizers have expressed great approval of the new opportunities offered to their members. The greatest hope, however, is centered in the younger men and in the populations of newly opened up districts, especially that increasing number who have passed thru the agricultural colleges. These men have learned to use books and will apply direct to the library for volumes they know or for books on subjects about which they desire information. It is not difficult to get them to take advantage of the branch of the Country Circulating Department known as the Country Reference Library.

This section was established in 1913 with about 2000 specially chosen volumes, and since then has grown at the rate of 1000 volumes per year. The collection covers works on almost all branches of useful arts, fine arts, science, sociology and history. Literature as such is not included altho works on literature are purchased freely. The section is not intended to supply mere interesting reading. Each addition is made with the idea of supplying definite information on a definite subject. Medical and legal text books, and works on theology, are not included altho borrowers may obtain books on physiology and anatomy and on comparative religion. All citizens of the state may borrow except those living within the metropolitan area. Intending borrowers are required to sign with a witness a simple guarantee form and may then obtain without further formality three books at a time, to be kept for a period not exceeding a month, or for an extended period on further application if the works are not required for another borrower. The books are forwarded by post and the borrower has to pay the return postage. No general catalog has yet been published but in place of it there are available sectional lists on over 100 subjects and a printed list of these sectional catalogs is forwarded to all new borrowers. Many of these lists are on single sheets of foolscap size or half foolscap size. The letterpress on the following page will give an idea of the form of the shorter lists.

New editions of most sectional lists are issued every year, and manuscript additions

are made as required. When the Country Reference Section was first established the main difficulty which presented itself was the problem of making the scheme widely known, but the notoriety grew with the resources at the command of the officers and there gradually arose the problem of ministering to the requirements of certain sections of people whose demand was greater than the supply, and at the same time creating a greater demand for less popular subjects. An example of this variation in demand may be interesting. The section contains twenty-one books and a number of United States and Australian bulletins on Pigs. As they were not circulating satisfactorily special attention was called to them in the agricultural column of one of the best weekly papers. Moreover, circulars and sectional lists on the pig were sent to branches of the Agricultural Bureau in dairying and pig-raising districts. The response was overwhelming and taught the lesson of not over-advertising a small supply. It was found necessary to add eighteen copies of a New South Wales book which carried the excellent short title of Potts "On the pig." At the same time was purchased every copy in Australian book-shops of other good books on the same subject, and still borrowers were waiting their turn for books on the pig. When the demand of similarly advertised sections shows signs of decreasing a paragraph relating to the "free books for country borrowers" is inserted in some of the country newspapers, the proprietors of which have been a splendid help in making the system widely known.

More than half of the present borrowers are agriculturists and school teachers. Clergymen, bank managers, and country store-keepers have so far proved disappointing, for notwithstanding individual circularizing of these classes, and the forwarding of lists of books on subjects it is hoped to bring more into demand, it is found that they respond unevenly. Clergymen commence by borrowing a work on philosophy perhaps and then in a surprising number of cases ask for books on poultry, a subject for which there are already more

borrowers than can be properly supplied. The bank managers have borrowed little but are helpful in bringing the library under the notice of other classes. Thru their agency requests for books on live stock

continue after he had removed to the city, is typical and has its pathetic side:

"A few years ago I bought a small farm on the extended payment principle, and started my son planting out young citrus

and similar subjects have come in only too freely.

The system is proving helpful in connection with repatriation and there are many examples of its value to our returning soldiers and to the friends who are endeavoring to provide for them. The following extract from the letter of one borrower, who pleaded to be allowed to

trees. He planted some 1300 trees, varying in age from under 12 months to 4 years, but when the call came to serve his country he, when he became 21 years of age, enlisted and is now fighting in France. As I had spent too much money, time, and energy in establishing him on the little orchard for me to let it go to the dogs, I gave up my job in the country and got work in

Sydney so that I could go home of a week end, and for the last 12 months I have been doing my best to keep the orchard in good order and growing so as to have it for my boy if he has the luck to return."

Our country lending system is discovering in the far back districts many men educated for the professions, English and Australian graduates in Arts and other faculties, who are now pastoralists and farmers. One reader from the Far West returned a book on soap manufacture and asked for the latest on Bergson's philosophy. Most of the requests, however, are essentially practical. A baker in an out back township wrote for a book on building an oven, saying that a bricklayer was passing thru the district and that if he could not get the book he would lose the bricklayer. Another borrower found veterinary science books of practical value. He sent the following unsolicited testimonial: "I was asked to help a man whose horse could not travel further. I operated and after three days' treatment the horse was well on the way to recovery when I left. I obtrude this item on you to show that the books are being used in a practical manner."

In a state so large in area and with such a scattered population as New South Wales the methods necessary for making people acquainted with the system of loaning books from the State Library has to be along commercial rather than official lines, and it may be of some interest to librarians in other countries and especially in the United States to know what these methods are. The newspapers have been of the very greatest assistance in disseminating information about the section. The Sydney daily and weekly papers with large country circulations have been good enough to publish articles in their columns, especially in the agricultural columns. Editors of country newspapers have not refused to publish an interesting article sent to about six papers per month, chosen as covering different parts of the state in their circulation. The journal of the Department of Agriculture has published articles, especially on the agricultural books loaned, and has kept a running advertisement in its columns without charge to the library. The journal

of the Education Department similarly has been helpful in bringing the matter under the notice of public school teachers. Circulars have been compiled dealing with special classes of books, and forwarded to the people engaged in particular branches of agriculture and other industries. For example, the New South Wales Post Office Directory will show perhaps two or three hundred people engaged in bee-keeping. Circulars would be sent to these at the rate of perhaps twenty per week until the whole list in the directory had been covered. Specially worded circulars and letters have been forwarded to organizations in the country such as teachers' associations, farmers and settlers' unions, co-operative bodies, and agricultural societies of all descriptions. Advantage has been taken of the meetings of country people for conferences in the city, and a library officer has arranged to address the delegates on the facilities offered to their constituents thru the country reference section of the Public Library. Placards and specially designed posters have been placed in public buildings and shop windows in townships and have been handed to borrowers who have expressed enthusiasm concerning the value of the system, with the request that they should display the posters in a conspicuous manner. The red kangaroo poster, now becoming familiar thruout the state, is reproduced here in black and white.

A special exhibit of about five hundred volumes from the Country Reference Section, and of sample boxes of books circulated to three different classes, namely, schools of arts, country teachers' associations, and agricultural bureaus, is made at the royal shows in Sydney in the spring and autumn, and is there seen by many thousands of country people. The exhibit is under the charge of competent officers who explain the working of the system, hand out forms, circulars, and sectional lists.

The principal newspapers of the metropolis are scanned daily for reports of new organizations in the country and organizers are immediately communicated with. Every opportunity is taken to advertise the library.

Country people are not very willing

students. They have never previously had an opportunity of using books regularly except the novels, popular works, magazines and newspapers supplied by the schools of arts and country institutes where they are in reach of these institutions. The older farmers are conservative and suspicious of something offered free by a government department or institution, and frankly hostile to the suggestion that books are going to help them in work in which they have had long experience under local conditions. Pushing the circulation amongst such classes is slow work but the records show very definite and satisfactory progress. In 1915 only 1790 books were forwarded thru the post. In 1916 this increased to 2703, and in 1917 the circulation amounted to 6984 with a rapidly mounting curve. These figures will not appear very large to librarians of big city circulating libraries in America but it must be remembered that each book was sent in response to an individual application thru the post and was a treatise on a definite subject, not a book for pleasant reading but to supply information so much required that the borrower took the trouble to write for it. Country people are not given to correspondence if they can avoid it.

The work of choosing the right volume or of sending a sympathetic reply to an enquiry for some piece of information, advertising the section, choosing, buying and cataloging books, and dealing with the traveling libraries, occupied the time of four officers during 1917. As the circulation grows the proportionate time of attending to each borrower will decrease. It is expected that in the current year four officers will be able to manage the circulation of over 20,000 volumes in the travelling libraries and 9000 separate volumes thru the post. The need for advertising so extensively will probably decrease, as the growing circle of borrowers will themselves constitute the best advertising agents.

The books by post as well as the circulating boxes travel long distances. They go by rail as far north as the Queensland border, 508 miles by rail and then 256 miles by river boats to Wilcannia, in the west; while both posted books and traveling books

for Broken Hill have to go 1072 miles by sea and then 335 miles by rail. The circulation extends in the east to Lord Howe Island, 400 miles by sea, with only a monthly service. Yet with all the difficulties of transport and the freedom with which anyone is accepted as a borrower who is interested enough to apply for the privilege, only three volumes have actually been lost from the Country Reference Section during the four years of its existence. It is pleasant to record also that for the last thirty years only three traveling libraries have been lost. One fell into the River Murray, another into the Darling, and one was destroyed by fire. Another box was mislaid for fifteen years but was eventually recovered, only to have its contents relegated to the dead stock.

The country circulating department and especially the Country Reference Section is proving a valuable part of the library system in New South Wales. It does not need the lessons of the great war to teach thinking people that patriotism and the instincts of national progress, and indeed national preservation, demand for the masses of the people, and especially the primary producers, a better training to meet rapidly changing industrial and social conditions. The provision of the best books will assist in this training. Up to now the state has taught people to read, but so far as the country people are concerned it has not been interested in what they read. It must continue the education by teaching them to read well and by providing books which in such a scattered community the countryman can never hope to procure without the co-operative assistance of the state.

IN REPLY TO AN OVER DUE NOTICE

Dear Librarian:

I am not married; neither is my wife, for I have no wife, and my wife has no husband. Therefore, I beg of you, on behalf of myself and my wife, who is not yet, that you kindly look this matter up again and if possible let me know the error, as I do not want to pay for any books my wife gets before I get her.—*Occasional Leaflet.*

THE KANGAROO POSTER WHICH IS CARRYING THE SERVICE OF THE PUBLIC LIBRARY OF NEW SOUTH WALES TO EVERY CORNER OF THAT EXTENSIVE STATE

THE COLOMBIAN EXHIBIT IN NEWARK, N. J.

BY A FRIEND OF COLOMBIA AND THE NEWARK FREE PUBLIC LIBRARY

PRESIDENT WILSON has assured Latin America, thru the editors of many Mexican newspapers, that the United States, under his guidance, has no desire to boss the Spanish American republics. And President Wilson has declared, in a telegram to R. C. Jenkinson, vice-president of the Newark Free Public Library trustees, that he is heartily in sympathy with the movement lately put on foot by the library to increase intimacy between Spanish and English-speaking America, thru the agency of an exhibit. His words are:

"I have much pleasure in expressing to you and your co-workers in the organization of this notable international work, the hearty interest I feel in the enterprise." -

The "enterprise" is both modest and ambitious. It is modest, because the exhibit is, and only aspires to be, a small one. It is ambitious, because it is the first of its kind, and is done in spite of the advice of everybody who knows. Colombia has never acquired the exhibition habit. There is no learned citizen in Bogota living usually in modest retirement, but brought to the front every few years by an inadequate appropriation tied up in faded red tape, empowering him to set forth the greatness of his nation in history, in archaeology, in natural resources, in industry, education and culture, all by means of a show which will, when set up, occupy 1000 cubic feet of space, and weigh less than 10,000 pounds. For obvious and perfectly respect-worthy reasons, Colombia had little interest in exploiting her assets at either of the late great fairs. And no Colombian city has so far been willing to risk adventuring a fair of its own, as did Philadelphia, Chicago, Buffalo, St. Louis or San Francisco.

But John Cotton Dana is of the order of Melchizedek. Tho argumentative, he is anti-belligerent. He is a constructive warrior, a champion of the arts of peace. Hence, after paying due tribute to Mars by an exhibit of military equipment, paraphernalia, and architecture, he sought a

subject calculated to make for international friendship, neighborliness, commercial co-operations and economic amities.

"Who is our neighbor?" said he. "Canada is our ally. The West Indies and Panama are our near-wards. Mexico is our dearest foe. There remain the republics of South America, of which nearest, yet most remote, is Colombia. A Colombian exhibit we shall show."

There is a saying among museum folk—"Don't be unequally yoked with a library, lest it overlie you." But the distrust is not mutual. There is nothing which a library enjoys more than to play host to a parasitic museum. For the presence of the museum excuseth all things.

A library may lure the public by a display of fine bindings, or rare prints, or flags of all nations, or posters, or postage stamps, or heraldic devices; but it is going distinctly beyond its legitimate field when it lends its corridors to Red Cross bandages and war bread. At least, it has no right to spend public funds on things so plainly objective, so far removed from the symbolism to which it owes its being. But to a library which has foster-mothered a museum, much latitude may be allowed.

Mr. Dana began the Colombian Exhibit as a librarian. "In spite of the fact," said he, "that our Business branch has 6000 visitors and 7000 circulation monthly, it is plain that most of our business men still believe a library to be a place where the frivolous and immature—that is, women and children—can get fiction and fairy tales for the amusement of their playtime, and not a treasure house of solid facts capable of feeding the fires of lucre-producing factories. I will teach them a lesson. Their wives and little ones shall drop, about the dinner table, crumbs of information to which the financier will hearken, upon which the exporter will meditate, which will be to the importer an eye-opener, which will assail the manufacturer's ears, and challenge the imagination of the middleman."

So he gathered for display, books.

The Dewey-ly informed reader will understand how wide was the field from which he gleaned when I mention that his exhibition shelves were ornamented with white circles, numbered: 015, 266.1, 327, 341, 342, 380, 382, 385, 387, 403, 468, 508.3, 614.5, 616.9, 658.1, 811, 860, 913.7, 913.8, 917.2, 918, 970, 972, 980, 986, and many B's, not to mention government pamphlets, popular magazines, railway reports, and publications of the National Trade Council, the National Association of Manufacturers, the International High Commission, Dun's *International Review*, and divers Spanish volumes printed in Colombia or Boston, all decorated with bright-hued colored bands of several widths and sequences, as described in the pamphlet, "Color and position filing, No. 8, Vol. II, of the Modern American library economy series, J. C. Dana and others."

Then he gathered pictures. There are some 500,000 of these in the library art department, and among them were found street scenes, public buildings, bridges, railway stations, natural scenery, heroes, celebrated beauties, authors, and many other interesting features of Colombian life and environment.

At this point the museum began to function. And the friends and natives of Colombia began to offer help. The result is, that without, so far, receiving anything from South America direct, Mr. Dana has amassed a roomful, and two hallsful of Colombian material—maps, charts, fruits, minerals, laces, carvings, weapons, textiles, Panama hats, hammocks, money, medals, industrial and festival scenes in wood and wax, feather work, nuts, vegetables, manufacturing processes, costumes—and still they come.

Moreover, the library has become, for the nonce, headquarters and meeting ground for South American guests—a matter of profit and pleasure on both sides.

Frequenters of the exhibit are moved to wonder at the likenesses and diversities in the lives of North and South Americans.

For a cool climate, we go north; they go up. Our people collect in valleys; theirs on plateaus. Our great river runs

south; theirs north. Our blood is chiefly Germanic; theirs Latin. Our Indians were warriors and hunters, and we evicted them; theirs were agricultural, and they enslaved them. We are chiefly Protestant; they are almost entirely Catholic. Our ideals are chiefly English; theirs French. Our traditions, too, are English; the traditions of Colombia are Spanish. Civilization, with us, began on the coast, and spread to the interior; civilization in Colombia began in isolated spots in the interior, and is spreading outward. Our empire spread from east to west; theirs is spreading from west to east. Our higher classes are scientific and motor-minded; the American is a hustler. The educated Colombian is literary and contemplative, and largely of the opinion, "Slaves keep time; I keep no time." We speak of "The Revolution"; the Colombian refers to the "last revolution." We are, alas, often brusque and tactless; the Colombian dilutes his telegrams with compliments, and renders a bill with a bow.

But both have tasted of the well spring of Liberty, and Colombia matches our Washington with her Bolivar.

There is as much human variety there as here; the Antioquian is as different from the Bogotaian as is a New Englander from a native of Georgia. But perhaps the racial gradations are more minute, and the social grades more precipitous in Colombia.

As to commercial products, the two countries seem destined to supplement each other. Even now we send to Colombia leather in exchange for hides, textiles for wool and hair, harvesters for sugar, clothing for cotton, coal for emeralds, jam for bananas, paper for bark, patent medicines for medicinal herbs, and jewelry for platinum. And the products of Colombia are merely sampled in this interchange. The future holds opportunities for mutual benefit which it will take considerable skill to avoid.

This exhibit has, however, plainly shown that such skill is not lacking. The one thing which has most impeded the collectors of Colombian data has been the mutual distrust of American firms—the fear of giving away trade or financial secrets.

So long as the German government and German manufacturers and merchants know their interests to be identical, and American manufacturers, bankers, traders, and government officials believe their several interests to be mutually indifferent or prejudicial, so long will Colombia as a "sphere of influence" fall more and more under Teutonic guidance. South America is the opportunity of the future, and Colombia is the chief feature of that opportunity.

So saith the librarian-director of the museum-library, who has studied both facts, as they may be seen, and opinions, as they may be read.

There is talk of making at least part of this exhibit into a traveling exhibition, that the patriotic and international service involved may be multiplied with but slight additional labor and expense. This has been done very satisfactorily with other exhibitions, notably the exhibition of materials, tools and processes of bookbinding, a step-by-step exhibition of the production of printed publicity, exhibition of German applied art, the wood engravings of Rudolph Ruzicka and the Why study Latin? exhibit.

Such collaborations are intended as suggestions of one way in which to substitute, for the efficiency and economy of autocratic control, the broader efficiency and nobler economy of democratic co-operation.

The exhibition is open during the month of June. It will be closed during the months of July and August and will be opened again about the 15th of September, to remain open until the end of October.

To the exhibit, already interesting, will be added in the next three months, much material direct from Colombia.

ITALY PROHIBITS ADVERTISING IN PERIODICALS SENT TO FOREIGN COUNTRIES

THE *Gazzetta Ufficiale* published at Rome, Mar. 23, 1918, contains a new Lieutenant's Decree No. 345, in regard to sending to foreign countries any publication containing advertisements, as follows:

Article 1. The sending to foreign countries of any periodical or printed matter whatsoever containing advertisements is prohibited.

The directors and editors of newspapers or of periodicals and editors of publications who intend to continue sending to foreign countries, must prepare special editions in which the advertisements are suppressed.

The periodicals and publications to be sent abroad must be submitted, at the offices of the respective editors, to the examination of a censor and of a postal official, to whom are consigned the copies verified for shipment.

There is prohibited the posting second-hand to foreign countries of newspapers, periodicals and publications containing advertisements.

Article 2. The editors and directors of newspapers who make shipments to foreign countries without observance of the verification as by the preceding article, are punished by a fine up to 10,000 lire and they shall be denied the faculty [facility] of further shipment of their newspapers abroad even with suppression of the advertisements.

Article 3. The present decree shall enter into force on the day of its publication in the *Gazzetta Ufficiale* and shall have effect for the entire duration of the war. Given at Rome, this third day of March 1918.

A similar order was issued in Paris June 11 by M. Clemenceau, as Minister of War, with the intent of rendering impossible all communication with the enemy by means of advertisements containing secret code messages. Henceforth French newspapers must print for foreign subscribers special editions from which all advertisements are excluded, or else must black out or otherwise obliterate all advertising matter.

It was suspected several months ago that the enemy spies were using the advertising columns to send information out of the country, and it was required that every advertisement must be submitted to the police before acceptance for insertion. Apparently this was not sufficiently drastic to be effective.

¹ THE Second Pan-American Child Welfare Congress will meet at Montevideo, Uruguay, in December, 1918. Honorary chairmen of the various sections have been appointed as follows: Section on Sociology and Legislation, Hastings W. Hart; Section on Hygiene, Dr. Albert H. Freiburg; Section on Education, Franklin B. Dyer; Section on Medicine, Richard C. Cabot.

CITIZENSHIP AND CIVICS

[EDITOR'S NOTE: The following list was prepared in the Newark Public Library by Marie L. Prevost, head of the catalog department, under the supervision of John Cotton Dana, who contributes the introduction.]

WHETHER their localities are yet under equal suffrage or not, libraries, large and small, are meeting requests, and are likely to meet more in future, for books that will profit the woman voter and instruct her in the arts of citizenship. The larger libraries whose collections are fairly representative should have no difficulty in supplying on the instant the material desired, for the simple reason that the demand, altho voiced in new words, in no wise expresses a new need. The print that will help a woman to become a good citizen is exactly the same print that has been helping or, much oftener unfortunately, waiting to help the male members of her generation. Government is not one thing to a woman and another to a man, nor are any of the normal processes of governing, from ballot casting to presiding, differentiated by sex. Whether the variation in points of view will or will not produce noticeable changes in future administration, as some affirm and others deny, is not the point at issue here. Political theory, history, functions and righteousness, and their records, do not themselves alter because their students change; and the only way to make this erroneous idea persist—for it may be seen in the popular conception—is to cater to it unreasonably. Already certain manuals for women are appearing; but librarians who take these at their face value without going further will be unwise. The sooner we can make all women realize that the differences in citizenship are of grade and not of kind the better it will be for us all.

While large libraries, therefore, should be able to meet this demand without special forethought, smaller ones, whose accessions are always more or less narrowed to the necessities of immediate strain, may find the following short list of service in purchasing for present wants.

In reducing this selection to practicable size, the omission of scores of excellent books may be presupposed, as in preparing far longer lists the question of choice has

been difficult. An attempt has been made to include a sufficient variety of subjects to cover the main points required in making government and politics intelligible to the average woman or man.

CITIZENSHIP AND CIVICS

"Universal training for citizenship and public service" by Wm. H. Allen, published by Macmillan, N. Y., 1917, \$1.50, is particularly valuable in showing citizens what should be expected of themselves and of those they place over themselves, and for its suggestions toward retaining, in times of peace, the co-operative efficiency called forth by war needs.

"Woman's part in government; whether she votes or not," by Wm. H. Allen, published by Dodd, Mead, N. Y., 1911, \$1.50, is well known; but cannot be too well known. It shows in what effective personal power lies.

"Community and the citizen," by Arthur W. Dunn, published by Heath, Boston, 1908, 75 cents. A textbook which has been called "a revelation in its field."

"American citizenship," by C. A. Beard and M. R. Beard, published by Macmillan, N. Y., 1914, \$1.12. Another good textbook on civics which includes the social aspects.

So far the best of the "woman" books is "The woman voter's manual," by S. E. Forman and Marjorie Shuler, published by Century Co., N. Y., 1918, \$1.00. A preferable substitute would be Mr. Forman's earlier "Advanced civics," published by Century Co., N. Y., 1915 ed., \$1.25, which covers the same ground more fully.

"Civil government in the United States, considered with some reference to its origins," by John Fiske, published by Houghton Mifflin, Boston, 1890, \$1.00. A short, accurate and most readable history.

"Hindrances to good citizenship," by James Bryce, published by the Yale University Press, New Haven, 1909, \$1.25, warns against the dangers of indolence, private self-interest, and party spirit.

POLITICS, PARTIES AND VOTING

"Introduction to political parties and practical politics," by P. Orman Ray, pub-

lished by Scribner, N. Y., 1913, \$1.60. Useful for its own information and for its good bibliographies.

"American politics. Political parties and party problems," by J. A. Woodburn, published by Putnam, N. Y., rev. ed., 1914, \$2.50. A much used and often quoted volume.

"Politics and administration," by Frank J. Goodnow, published by Macmillan, N. Y., 1900, \$1.50. Showing how politics are actually administered rather than the legal provisions for them.

"Party organization and machinery," by Jesse Macy, published by Century Co., N. Y., 1912, \$1.25, is described by its name. It contains an appendix giving the full regulations of the Democratic-Republican Organization of the County of New York.

"Democracy and the party system in the United States," by M. Ostrogorski, published by Macmillan, N. Y., 1910, \$1.75. An abridgement by this noted Russian analyst of his longer work "Democracy and the organization of political parties."

"Government by the people," by Robert H. Fuller, published by Macmillan, N. Y., 1908, \$1.00, includes an excellent chapter on the details of voting on election day.

"Primary elections," by C. Edward Merriam, published by the University of Chicago Press, Chicago, 1908, \$1.25, is probably the best book on the subject for general use.

"Short ballot principles," by Richard S. Childs, published by Houghton Mifflin, Boston, 1911, \$1.00. A delightful, humor-touched little volume giving considerably more to the reader than its clear exposition of the short ballot.

"American ballot laws, 1888-1910," by A. C. Ludington, published by the University of the State of New York as Legislative bulletin 40, Albany, 1911, \$1.00, gives a historical summary and an analytical digest of existing laws arranged by states.

GOVERNMENT: NATIONAL, STATE AND LOCAL

"The American commonwealth," by James Bryce, published by Macmillan, N. Y., 1915, \$1.75, needs no introduction to American librarians but may not be omitted from any such list as this.

"Actual government as applied under American conditions," by Albert Bushnell Hart, published by Longmans, N. Y., 1914, \$2.25. An interesting treatise on our government as a whole.

"The state: elements of historical and practical politics," by Woodrow Wilson, published by Heath, Boston, 1910, \$2.40. Full treatment of governmental theory, with studies of ancient and modern forms in many countries.

"Constitutional government in the United States," by Woodrow Wilson, published by the Columbia University Press, N. Y., 1908, \$1.50. Studies of federal departments and the Executive.

"State government in the United States," by Arthur N. Holcombe, published by Macmillan, N. Y., 1916, \$2.25. A critical analysis of state government principles.

"Introduction to the study of government," by Lucius Hudson Holt, published by Macmillan, N. Y., 1915, \$2.00. A general book on government structure that is excellent in its comparative treatment of different states.

"Local government in counties, towns and villages," by J. A. Fairlie, published by Century Co., N. Y., 1906, \$1.25, gives the present common forms of local government other than city.

MUNICIPAL GOVERNMENT AND THE NEWER FORMS

"Municipal administration," by J. A. Fairlie, published by Macmillan, N. Y., 1901, \$3.00. This is a complete, authoritative study of all divisions of city administration in all times and countries.

"American city," by Henry C. Wright, published by McClurg, Chicago, 1916, 50 cents. "An outline of the functions performed by people grouped together in a city."

"American city government," by Charles A. Beard, published by Century Co., N. Y., 1914, \$1.00, includes the newer tendencies and is written by an undoubted authority on things municipal.

"Government of American cities: a program of democracy: a study of municipal organization and the relation of the city to the state," by Horace E. Deming, pub-

lished by Putnam, N. Y., 1909, \$1.50. Contains a reprint of the "Municipal program" of the National Municipal League.

"Government of American cities," by William B. Munro, published by Macmillan, N. Y., 1916, \$2.00. Particularly good from both historic and descriptive viewpoints and well up to date.

"Applied city government," by H. G. James, published by Harper, N. Y., 1914, 75 cents, describes a model commission government charter.

"New city government," by Henry Bruère, published by Appleton, N. Y., 1913, \$2.00. Administrative workings of commission government as seen in a survey of ten cities.

"Initiative, referendum and recall," by William B. Munro, published by Appleton, N. Y., 1913, \$2.00, has been called, and probably is, the best single work on its subjects for the general reader.

As will have been seen, little effort has been made here to touch on anything but the political side of citizenship. Being the obvious approach this is the one that the many will use, and our institutions must be fortified against the onslaught. But where a true and rounded citizenship is really desired and those of our profession have the good fortune to be called in consultation toward its attainment, we will do well to recognize its other and perhaps more important side, the social one. For, to know society, both in the mass and in the individual, in its physical and mental history, its moral proclivities, its actions and reactions, is but to possess the rational equipment for legislating—or voting properly—or using our influence—in its behalf.

THE North Carolina State Conference of Social Service has invited the National Child Labor Committee to undertake a child welfare survey in North Carolina similar to those which the committee has made in Oklahoma and Michigan. The survey will be made in co-operation with a number of the state departments and the information obtained will be used to lay the basis for subsequent action looking toward the standardization and codification of state child welfare laws.

STATE INSTITUTION LIBRARIES IN OHIO

DESIRING to know conditions in the libraries of the state institutions, the Ohio Library Association appointed a committee to make investigations. The committee decided to visit each institution and really see the work and report on its spirit rather than on details and statistics. The first step was to secure the permission of the Ohio State Board of Administration, which controls these institutions, and a letter to the president brought a cordial reply in which he promised the "cheerful co-operation" of each superintendent.

Then the committee consulted several persons of experience in directing institution library work and, from their suggestions, report blanks and questionnaires, prepared a list of points on which it seemed wise to concentrate attention. The idea was to make the visits as informal and friendly as possible and to avoid any appearance of gathering testimony. The question blanks were not carried on the trips but were filled out afterwards.

The librarians, who visited the twenty-one institutions supported by the state, were welcomed kindly, by officers and by inmates. In some cases the hospitality was royal, for the guests were met at trains, driven in state to the buildings, dined in the superintendents' private dining rooms, and in one case a special evening of song was arranged to honor the occasion. In some cases the superintendents were more anxious to show off their specialties than to discuss the books, so they ushered their visitors thru green-houses and kitchens, class-rooms and hospital wards, showed them the views and introduced them right and left. But eventually the important topic was reached and the information supplied.

The libraries vary in size from the penitentiary collection of ten thousand volumes to the hospital for the criminally insane without a single book. The books have been secured in many ways, by purchase, by gifts from individuals and from societies, and by taking discards from public libraries. Some of the collections have been selected admirably, especially those of the institution for the feeble-minded and the

reformatory for women. The librarian of the first, a teacher who has had a summer course at Chautauqua, has built up a well-balanced children's library; the list for purchase for the other was prepared, at the request of the superintendent, by Miss Doren of Dayton. Some of the libraries are made up mostly of fiction but the men's reformatory has many books of history, poetry and technology which are well read, remarkably so, for each man is limited to one book at a time, with which to while away the long solitary evenings, when he might be expected to crave novels. (The officers report attempts of the men to smuggle books they have enjoyed to friends in other cells.) Some of the libraries contain books unsuited to the ages and tastes of the inmates and consequently useless.

Two of the institutions have full-time librarians but only one has a trained worker. The others are cared for by inmates, chaplains, teachers, nurses, and office assistants, and one by the postmistress. In some the books are on open shelves, in others they are kept in locked cases. In the penitentiary and the reformatory the men are not permitted to go to the library but select their books from printed catalogs and the volumes are delivered to them in their cells. In several places the collections are divided into traveling libraries, charged to the cottages or wards. At the girls' industrial school the library is in the basement of the school-house and is not used as a reading room, but delegates come from the cottages carrying baskets of books to be returned and choosing, with the aid of the teacher-librarian, fresh sets. In both the girls' and the boys' industrial schools there are reference collections and supplementary reading for school-work, separated from the recreational literature.

Some of the institutions have no periodicals. One has magazines brought to it regularly by women of the neighborhood, after their families have read them. In the boys' industrial school each cottage is supplied with weeklies subscribed for by the superintendent and by friends and parents of the boys. At the reformatory each man is permitted to take three periodicals. The visitor happened to be there on the

day of the arrival of the *Saturday Evening Post* and saw two prisoners busy assorting the huge piles. The tables in the periodical room of the Soldiers' and Sailors' Home are laden with a choice of magazines which would make the librarian of a town library quite envious.

Most of the institutions do not keep records of circulation. The Soldiers' and Sailors' Home reports an annual circulation of twelve thousand volumes but shows a strange fluctuation. Each soldier receives, in addition to this home provided by the state, a pension from the federal government. When the pension money arrives, four times a year, so many of the men depart to spend it that the circulation drops suddenly and fearfully. When the pensions are spent the men return, little by little, resume their reading habits and the circulation gains steadily until the next pension day.

One institution has its own bindery. The others make no provision for rebinding. Consequently the favorite books are in tatters, and in some places, where economy has reduced the book fund to little or nothing, there is great need.

Do these institutions borrow from the state or local libraries? Two of them do so occasionally and one borrows altogether.* The others give various reasons for not borrowing: for fear of either catching or spreading contagious disease, for dread of accountability for damage or loss, thru discouragement over unsuccessful attempts to borrow in the past. One institution does not have to borrow, on the contrary it lends books to the people of the neighborhood.

The inmates of these institutions are free from anxiety and distraction. Their clothes, their meals, their sleeping quarters are provided for them, their hours are regulated, even the tasks assigned are performed without the nervous tension of modern industry. They have more time to read than any group of normal persons and therefore they should be supplied with quantities of reading matter. They are free from responsi-

* See the report on libraries in institutions in Cleveland to be published in a forthcoming number of the LIBRARY JOURNAL.

bility but they have lost the most precious things in life; the companionship of family and friends, opportunities to see plays and to hear music and lectures, to be active in club and church and community life. For contact with the outside world they must depend largely upon books.

Books and periodicals are needed on a great variety of subjects, for these people come from all walks of life and expect to return to various occupations and hobbies. Some of the men and women have had little education and need simple books in large print and easy sentences, such books as are suitable for foreigners beginning to read English. On the other hand, among the patients in hospitals for the insane are many professional men and others of wide culture. For all, books are needed to amuse, to instruct, to stimulate, to plant high ideals of personal and civic morality. Attractive make-up is important, especially to appeal to the indifferent.

The wise selection of books is one of the serious problems of every library, as the experienced librarian with access to bibliographies and book reviews and lists from other libraries will admit. It is not surprising, then, to find that these collections, many of which have been secured as gifts or bought from very limited funds by persons without book selection tools, are weak; on the contrary it is surprising that they are as satisfactory as they are.

In what spirit is the library service rendered? With genuine interest and a desire to please and help but without comprehension of the healing and invigorating power of great literature and the importance of fitting the book to the individual reader. And there is no vision of what the libraries might accomplish by implanting the reading habit and accustoming the readers to library methods and so preparing them, when liberated, to turn to books and libraries for pleasure and assistance.

The committee would have liked to recommend that the association use its influence to secure the appointment of a librarian for state institutions, with funds sufficient to build up useful and attractive collections. The war, however, made it inappropriate to urge new offices and new

expenditures. So the committee contented itself with recommending three definite, practical things:

That the Board of Administration be requested to have the bindery at Mansfield rebind books for the other institutions;

That an invitation be extended to each ward, as he leaves his institution, to use the public library of the town where he goes to live;

That the association offer to assist the present librarians of the institutions in the choice of new books.

The Ohio Library Association instructed its committee for the year 1918 to carry out these recommendations.

MARY RUDD COCHRAN.

A LIBRARY FOR AMERICANS IN LONDON

WHEN America came into the war, the managing director of the Dorland Advertising Agency in London, George W. Kettle, foresaw the convenience of a reading room and library where the American soldier or sailor in London could see copies of his home newspaper, or any other American paper in which he is interested. A library was accordingly started by the agency in its building, at 16 Regent street, S. W.—close to Piccadilly Circus, the heart of London. Before many weeks had passed, the agency had completed contracts to supply American newspapers and magazines to the American Army and Navy Units, the American Red Cross, and the American Y. M. C. A.

As this department is run entirely without any fee for the service it renders to American visitors, publishers of newspapers are invited to mail copies each week to make the library as comprehensive as possible. Every additional paper sent means happy hours for some American boy thousands of miles from his home.

When the *Tuscania* sank, and hundreds of American troops were temporarily accommodated at an Irish port, the librarian of the above reading room dispatched to the temporary camp large numbers of American magazines and newspapers to amuse and cheer the men.

A JUNIOR TRAINING CLASS—THE EXPERIENCE OF THE WASHINGTON PUBLIC LIBRARY

"Gentlemen," said the commandant at the opening of a military training camp, "we have just thirty days in which to take you and make soldiers of you. In the short time we have you here, we intend to put you thru all the training, from an artillery standpoint, that you would get in the regular three years course." In comparison with this program, our decision to conduct a one month's training course to fit for junior clerical positions in the Washington Public Library did not seem too difficult.

The necessity to fill the gaps made by the rush of the younger members of the staff to higher paid government positions was upon us and we could not draw upon library schools, or upon other libraries, which were equally handicapped, or hope to attract into long courses a sufficient number of students to meet the emergency. There was no alternative but to follow the example of the Army camps and resort to intensive training. At the time of writing we are completing the second one month course and we have found the experiment an interesting one.

Our first necessity was to define as accurately as possible the purposes of the training, and to protect ourselves from any misconceptions in regard to the standing of the students upon completion of the course. We were therefore more explicit in telling applicants that the course was a war measure only, that the instruction would be of a most limited nature designed to prepare them for the business end of library work, namely, that connected with the circulation of books or distinctly clerical detail, that the salaries would be limited to the two lowest, and that there would not be opportunities for promotion without further training. We felt, however, that the course had something to offer young people just leaving school who had had no business experience to qualify them for government positions and we thought it might commend itself to the parents of these young people as offering a safe and

protected environment and one affording certain educational advantages. If these students left after a reasonable period of service, the library would not have put as large an investment of time and thought into their training as it does with the students of the regular eight months' course. If, on the other hand, they found library work attractive and proved themselves adapted for it, they might be tempted to enter the longer course later. The shorter course would afford them and us a desirable period of probation.

Our first point of interest was to see whom we could attract into the library service at a time when relatively large salaries were to be had almost for the asking. Our first idea, based on the thought that the course was designed to recruit for junior clerical positions only, was that we would require only part of the high school course as educational qualification, but we later found that it would not be hard to maintain our ordinary educational standards and the personnel of the second class has been as high as we have ordinarily secured. Many members of that class were army women who wanted occupation when their husbands went abroad. Apparently, the library environment appealed more to husbands than to the anxious mothers of our imagination, for in the second class we had not a single application from high school students, altho posters announcing the course were exhibited in each of the three large high schools and the matter was taken up personally with the principals, the date of the course being arranged in connection with the mid-year graduation.

Our idea was to limit the range of instruction but to demand high standards for the work covered. We felt that each student should acquire a satisfactory library hand, both joined and disjoined, a certain facility with the typewriter so that lists and forms could be typed creditably in a reasonable time, that desk work, filing and other detail should be handled accurately, systematically, and expeditiously. Classification, how to use the catalog, covering the most important

forms of entries, with exercises in alphabetizing cards, some general book talks and accounts of the activities of the various departments by their chiefs, completed the ground covered.

The students proved responsive, intelligent, and most eager to learn. The opening up of a new world of interests to many of them was interesting to watch, and more than one said that whether they secured positions or not the month's experience would be invaluable to them.

The chief difficulties in carrying out the program of instruction were to secure enough practice in desk work without unduly taxing the circulation departments and to get additional typewriters for sufficient practice to ensure any degree of speed, since war work was consuming the entire output of the typewriter factories. More especially the lack of time resulted in a failure to acquire those essential things that come more by absorption than by actual instruction; the sense of the relation of one piece of work to another and to the whole, *esprit de corps* and a professional attitude. These things may come with experience. In the meantime the library suffers, especially when it becomes necessary to appoint too many meagerly trained workers in the same department. In order to follow up the preliminary instruction, heads of departments make monthly reports on each student for three months after appointment to enable the director to keep in touch with the work and spirit of the student and to correct such weaknesses as she can.

As there proved to be no vacancies for the members of the second class immediately at the end of their course, they will continue their instruction another month or pending appointment. Their further training will include such part of the senior class course as they are fitted for, supplemented by general book talks and fifteen hours weekly of practice work.

CLARA W. HERBERT,
Director, Training Class.

TWO NEW WELFARE LIBRARIES IN NEW YORK CITY

MORE and more are American communities coming to realize their community duty toward the well-being of the individual members of each body politic. In New York city are two organizations working for physical and social welfare, whose work is becoming increasingly important. Both have felt the need of libraries as an aid in the proper carrying out of their work, and both have organized special libraries within the past year, putting trained librarians in charge.

The American Red Cross Institute for Crippled and Disabled Men at 311 Fourth avenue, has a library which consists of books, pamphlets and magazine articles relating to the re-education and care of cripples. It was formed by Douglas C. McMurtrie and maintained by him until the fall of 1917 when he became director of the institute. At that time he transferred the books to the institute and Miss L. Lucile Davis was appointed librarian.

Before the war the literature on crippled children formed the bulk of the collection, but now that relating to disabled soldiers is the larger. Thus far it has been devoted to rehabilitation of the limb cripple but its scope is to be enlarged to include the blind, deaf and neurotic cases as well. The orthopedic side is also to be more strongly represented. Until recently it has been chiefly used by the research staff of the institute, but is open to all who are interested in this subject. It is indexed by author only, tho an analytical index is in course of preparation.

The National Organization for Public Health Nursing, at 156 Fifth avenue, is headed by Lillian D. Wald as honorary president, with Mary Beard as its active head. Its official magazine is the *Public Health Nurse Quarterly*, and it also issues a *Bulletin* eight times a year.

The library was started in the summer of 1917, and the books on hand were cataloged at that time, but no one was regularly in charge until March 1, when Frances R. Young was appointed librarian. The library is to consist of pamphlets, clippings,

books and periodicals on public health questions. The material is selected from the social welfare and public health points of view, rather than from the purely technical; it is to help the nurse to help others to help themselves. The public health nurse is constantly in touch with the following, on all of which the library has literature, usually in pamphlet form: Prevention of blindness, Cancer, Contagious diseases, Feeble-mindedness, Food conservation and dietetics, Health insurance (the need for it), Housing problem, Medical school inspection, School nursing, Mental hygiene, Obstetrics, Occupational hygiene, Pellagra, Infant welfare, Prenatal work, Sanitation, Social hygiene, Tuberculosis, Typhoid, Venereal diseases, Red Cross work, and Social conditions.

The public health nurse seeks to remedy family and community conditions thru her contact with individual cases of physical defect. The library was established to keep her in touch with the way other nurses have solved their problems. In rural communities particularly the public health nurse is often the social worker as well, all of which is a very roundabout way of saying that the nursing end of a public health nurse's work is the smallest end, no matter how large that may be.

The organization is endeavoring thru its magazine to get the nurses to send to the library for material, and is also sending out letters to members telling them of it. The pamphlets, etc., are to go out in packages, free of charge except for return postage; the borrower may have them for two weeks from the day they are received. Eventually the organization wants every state in the Union to take over this work and to have one or more libraries in every state where the nurse may borrow material, which will almost always be in pamphlet form. In this case the organization expects to discontinue sending out material from this library and to turn all requests for material over to the state from which it has come, insisting that the nurses use the libraries so designated in their own state.

The package library is only part of the work, for the library is used now as a bureau or clearing house for information

on public health literature. Every morning brings a call for literature on infant welfare for children's week in some small community. The inquirer usually wants quantities of literature to distribute free of charge to the people of her town, and is referred to the people who are prepared to handle such material in bulk.

Space is to be set aside in the magazine to be devoted to the library, and here will be listed the books, pamphlets and magazine articles of the month that will most interest the public health nurse.

THE NEW SERVICE BUREAU IN WASHINGTON

At the regular meeting of the District of Columbia Library Association in May, Dr. Arthur J. Klein of the Service Bureau, spoke to the association on "The Service Bureau, the librarian and the information game." Mr. Klein referred to his appeal at the March meeting of the association for the assistance of librarians in the work of listing and arranging information, and the splendid response to that appeal. He expressed his appreciation of the sacrifice entailed to many of the libraries in putting aside for the time some of their own lines of work in order to enable their assistants to help in the work at the Service Bureau.

The Service Bureau was created by executive order, Mar. 19, 1918, its purpose being to establish a place where information concerning all government activities, the personnel, location and function of all bureaus, offices, etc., could be found. Its aim is to give to the man coming to Washington to transact business with the government exact information as to the location of the person or office he desires to find, so that he shall not waste precious time in going from place to place, as has been too often the case heretofore. Three bureaus of information were already in existence when the Service Bureau was inaugurated; one at the Council of National Defense, another at the Food Administration, and a third in the Committee of Public Information, but none of these were well situated, nor did they have the funds to carry on the work nor the authority to require from

the various government departments the information necessary to make such a service of value. The Service Bureau was given the funds and the authority to ask for information, and has recently moved into a central position at 15th and G streets. Dr. Klein sketched the makeup of the Committee of Public Information to show that the logical place for the Service Bureau was under that committee. In mentioning the *Official Bulletin*, published by the committee, he announced that the Service Bureau was in the process of making an index for it, a fact that was appreciatively received.

One of the first tasks of the Service Bureau was, as Dr. Klein put it, to "sell the idea"; that is, to convince the various branches of the government that the bureau was going to render a distinct service and one which would be of importance to them. The bureau has a mailing service to answer the large number of inquiries that come to it thru the mail; a collection of informational books, directories and the like; and most important of all, a directory on cards. The latter is arranged under Department, Bureau, Office, etc., and subject, with a separate name list for personnel. The cards are arranged under guides of varying sizes and in two colors, so that the bureaus, divisions, etc., under a department stand out clearly. A system of call numbers has been devised, which shows at a glance the location of any office in the organization of a department. Catch word references are also used where an office is popularly known by some abbreviated form of title. There is also a visible index showing the organization of the various departments. This is merely a skeleton index.

In the first six days of its existence the Service Bureau was visited by over 1300 people. It is the dispenser of fleeting information; historical records are not within its scope; it looks to the libraries for such material and expects to refer to them inquiries which have to do with technical research questions and "historical information"—that is, anything over a month old. The bureau hopes to be of use to the libraries and Dr. Klein invited the members of the association to make use of it and to

call and see for themselves the work that the Service Bureau is undertaking to do.

VOCATIONAL LIBRARY BEGUN AT ALBANY

THE vocational placement department of the New York state employment bureau has installed a collection of books, largely from the State Traveling Library, which is to be the nucleus of a library on the trades for young people. The librarian of the Albany High School has been helpful with suggestions. Arrangements are under way for installing additional books of fiction thru the co-operation of the Pruyn Library, one of the city libraries.

The original purpose of such a library was to provide information about particular trades in order to stimulate interest and increase the efficiency of girls and boys in the trades. "In addition," writes Anna A. Boochever, the supervisor of the department, "we should welcome suggestive reading, written in simple language, and in a manner that would appeal to girls and boys between fourteen and eighteen years of age. We found such a limited bibliography of books dealing directly with trades that we have introduced biography of great men and women, books giving general advice to young people, and we are planning to add interesting books of fiction. This would be a tangible method of securing the confidence of boys and girls in our department and of bringing them in for frequent interviews.

"On Thursday evening of each week our offices are open for follow-up work. At such time applicants who have been referred to positions are invited to call after business hours, to report on their progress. Advice is given which would tend to advancement in position, and readjustments are made for better opportunities. For many applicants we have secured work after school and during vacations in order to encourage a continuation of their educational opportunities. During these consultations the boys and girls become most confidential, their plans and aspirations are crystallized. Therefore, the placing of the right book with the interested boy or girl may have the most far-reaching results."

NOTES AND REFLECTIONS ON LIBRARY SALARIES

THE question of salaries is of never-failing interest and importance in the educational world. From the newly-organized library unions to the special committee on teachers' salaries in the N. E. A., there is everywhere agitation and discussion of ways and means by which the librarian and the teacher alike can secure sufficient increase in wages to meet the rapidly rising cost of living. Thousands of teachers have gone into other lines of work, and librarians likewise—as shown by the letter from the Association of American Library Schools in last month's JOURNAL—have been leaving the libraries in such large numbers as to affect seriously the work of the institutions.

From Pratt Institute Miss Rathbone, who has made a careful study of the situation, writes:

"As the year closes, two factors stand out clearly as showing the influence of the war—one an increased demand for our graduates at distinctly better salaries than hitherto, and the other a diminished number of applications for the class of 1919. The former is caused by the need of skilled workers in all departments of the government; the reason for the other is twofold: on the one hand the drafting into war work of girls graduating from school and college, on the other the hesitation of untrained assistants, of whom we have many in each class, to give up an assured position in times of uncertainty. This is especially true because in many cases brothers who have helped with the family support have been drafted. But I feel very strongly that girls need professional training now as never before. Those who go into temporary, unskilled work will find themselves with no economic basis when the war is over, and the untrained worker may find her burdens heavier than ever a year hence, while her productivity will have increased very little if at all. So that this coming year of all others is the time, it seems to me, when the library schools should be filled to capacity that they may help to meet the professional demands of the present and may help women to prepare themselves for an uncertain future."

The Army Ordnance Department of the War Department has announced its policy of equal pay for equal work done by women filling the places of men in war industries, and this policy, if adhered to, will undoubtedly attract increasingly large numbers of women from the professions to munitions and similar establishments.

The board of trustees of the Tacoma Public Library has transmitted to the City Council, with its full approval, a petition from the library staff asking that library employes be given equal consideration with other city employes in the matter of salary increases thruout the city, which is now being considered by the City Council.

In Hibbing, Minn., the library board, early in June, granted an increase of 10 per cent in salaries to the librarians and other employes. This affects all not given raises at the preceding meeting of the board.

In Des Moines, Iowa, a scheme of library service was adopted April 1 which provided for substantial increases in salaries for a large number of the staff, amounting to about \$1500 per year.

FRANCE STARTS WAR LIBRARY AND MUSEUM

AN item in the *Nation* for June 15 says that the French government has established in Paris a library and museum in which will be collected all the material needed by the historians of the present war. The authorities hope to collect in this country all the information relating to the activities of the United States, whether governmental or private, since the beginning of the conflict in 1914, and especially everything that relates to the part taken by the United States in the war itself since the declaration of war in 1917. The history of public opinion during these eventful years is almost as important as the narrative of military and governmental activity. As funds are very limited, the French government will appreciate the contribution of documents and periodicals bearing on this subject. All material may be sent to the Bibliothèque-Musée de la Guerre, care of Professor Adolphe Cohn, Columbia University, New York city.

WOMAN'S TECHNICAL DEPARTMENT IN PORTLAND (ORE.) LIBRARY

"EVERY man is changing his business these days," remarked a man who was himself transferring his interest in lumbering to ship construction.

That women are also finding new uses for their training or former equipment has become a proverb. One housewife who lives in a city has transformed a space in her pantry formerly devoted to flower arrangement, into what she calls her "dairy," for the purchase of a cow has made possible cheese and buttermilk—processes never dreamed of in town in our days of careless wasteful living a few months ago.

A woman's technical department just created at the Portland Public Library is an endeavor to keep pace with the new special training required by women.

For the women intending to fill office positions vacated by men, there are late books on efficiency, advertising, the psychology of salesmanship, secretarial work, accounting, shorthand and typewriting methods, and works on vocations.

The new "farmers" will find works on intensive farming, farm engineering, rural economics, plant husbandry, farm business arithmetic, dry farming and irrigation, silos, spraying, pruning manuals, fertilizers, forage crops, farmer's veterinary information, as well as sanitation in all its aspects, truck-growing, marketing, poultry raising and dairy technology.

Nursing and first aid books, food adulteration, bacteria, also scientific feeding of the family, with recipes for the new methods in cooking and conservation of wheat, meat and sugar, are found in this technical room.

The practice of economy in dress to-day gives impulse to books like "Every woman her own dressmaker," "Practical home millinery," and the monthly magazines of fashion, which are kept in this department.

Two blue-capped khaki-clad women in "feminalls" carrying the outfit of the professional window-cleaner, call to mind the books on laundering, hotel housekeeping, and apartment house service, also stored in the woman's technical department.

DR. LICHTENSTEIN TO LEAVE NORTHWESTERN UNIVERSITY

Dr. Walter Lichtenstein, who has been librarian at Northwestern University since 1908, has been retired from his position by action of the board of trustees. Dr. Lichtenstein will be granted a year's leave of absence on half pay, beginning Sept. 1.

The reason offered by the trustees is that the university must make all possible economies during the coming year, and since it was recalled that the library had been successfully carried on during his trip to South America in 1914-15, it was felt that a similar arrangement of administration might be effected at this time.

In the first letter sent by Acting-President Holgate to Dr. Lichtenstein in April, it was proposed to discontinue his salary after Aug. 31. This summary action was protested by Dr. Lichtenstein, on the ground that in 1911 he had been given the rank and title of full professor, which according to the understanding at Northwestern and the rules of the Association of American University Professors meant that his position was permanent and that he should not be removed without cause. During the ten years that Dr. Lichtenstein has been at Northwestern the library has become one of the better university libraries.

It has been hinted in certain Chicago papers that Dr. Lichtenstein's removal had something to do with patriotism. Tho born in Germany, he was brought to this country when but two years of age, and his father became a naturalized citizen in 1893. His own citizenship has always been recognized by the American government, which has issued to him the usual American passports for all his travels. In 1914, when in South America, Dr. Lichtenstein aided, very indirectly, a German carrying mail from Buenos Aires to Genoa. On his return to this country in 1915 he reported the incident to his trustees, and the university counsel went to Washington and interviewed the officials of the State Department. His report to the trustees was that while the action, at worst, may have been foolish, it had in no way violated the laws of this country, and involved no moral question of any kind.

"YOUR HOME"—THE JOHNSON CITY LIBRARY

WHAT would some of the towns which are longing for a public library, think of having one of 6500 volumes, housed in a most attractive building, with artistic decorations, handsome hangings, rugs and furniture, great fire-places, comfortable living and sun rooms for reading, a children's room dear to the heart of every child, one of the best collections of pictures in this section of the state on the walls, a fully equipped kitchen and dining room, with everything for use from tin ware to exquisite silver, linen and china, and club rooms for the use of community groups! Would not these longing towns say, had they such a library, "Truly we have a home." This is what Johnson City possesses and this is what the people say, and therefore, the library has been named "Your Home."

"Your Home," the gift of big-hearted and big-minded men of Johnson City, is first and foremost a library, having an unusually fine selection of readable and workable books. In March, 1917, when the library was first opened, there were 2300 books on the shelves. Now at the end of one year there are over 5800 books, and in that time 76,820 books have been circulated. Of this number 21,966 were non-fiction; and the circulation averages 10 books for every person in the town of 8000 persons, or 18 books for each of the 4100 borrowers registered.

The library is splendidly located as a community center. It is surrounded by a large section of the largest shoe manufacturing center in the world, by thriving churches, homes, and the public playgrounds for young and old. This fact, coupled with the attractiveness of the library, the privileges extended, and the spontaneous and helpful co-operation of the townspeople, has made the institution a success in the first year of its existence.

The library was given without a penny of expense to the townspeople, with no strings attached for its upkeep, with no fines charged for books—in fact with only one condition: that the payment of money must not enter into the question in relation of its use by the public. The rule works both

ways. The library charges nothing for the use of the building or any of its equipment, and on the other hand admission or other charge may not be made by any community group. In the 315 working days of the library, in the last year, 410 groups, with a total attendance of 8000, used the library. The interests represented covered a wide range: Red Cross workers, literary societies, men's clubs, Boy Scouts, university alumnae, study clubs and purely recreational groups.

The work with the children has been made especially prominent, first in the room provided for them. Seldom will one find a more attractive place from the viewpoint of a critic or of a child. With its sage green walls, the geranium cretonne curtains, the comfortable fumed oak and willow furniture, the children feel that it is a place which belongs, without question, to them. They love the finely colored prints, such as Murillo's "The melon eaters," MacWhirter's "June in the Austrian Tyrol," and Millais's "Boyhood of Sir Walter Raleigh." All these things, added to the freedom granted the children, create in them a feeling of responsibility, which is shown in the care given to the furnishings and equipment, and the good use of the books in general. Of the 76,820 books circulated from March, 1917, to March, 1918, 32,693 were juvenile.

Here is what the mother of one of the children said, after she had followed the advice of her daughter and formed the library habit: "Until I went to the library I never knew how to make graham bread and I never could bake a good pie. I wasted what seems now an appalling amount of food. The library taught me new and practical methods. It showed me that home economics is a real science."

A child is permitted to take out one book of fiction and one book of non-fiction at a time. With adults more latitude is granted. They are permitted to borrow two books of fiction and as many volumes of non-fiction as they choose at one time.

Library work among the women is growing by leaps and bounds. Particularly the foreign born and foreign speaking women are developing interest. The volumes most

popular are related to home economics and to politics.

The foreign books most in demand are Polish, Slavic or Lithuanian, of which there are now 308. From the time the foreign-speaking women began coming to the library, the supply has been short of the demand. The most avid readers are the women who do not know more than a half dozen words in English.

Besides the knitting clubs which meet regularly to work for the soldiers, 3000 books and magazines have been shipped thru the library to the boys at the front.

Other educational work includes the distribution thru books of thousands of pamphlets on gardening, canning, food conservation and economy.

A little later classes in stenography and other business subjects may be started. And eventually it is possible that there will be cobbling classes and other instruction in trades.

"Your Home" was formerly a dwelling house and has been entirely remodeled to fit the purposes of the library. The original cost of remodeling, equipment and all expenses of organizing and furnishing of the library was \$25,000. This included the 2500 books with which the library opened. Since that time, because of the demand, more have been added until it now has 6500 books. It is estimated that the running expenses, yearly, will average \$9000 or \$10,000. There is no endowment fund, the expenses being met by the donors, the members of the Endicott, Johnson Company. Chief among these in interest, as well as in financial support, is H. L. Johnson, from whose ideas the library was developed. Equally hearty support is given by George F. Johnson.

HAZEL E. KILIAN.

THE CLASSIFICATION OF READERS

Readers who read through,
Readers who read at,
Readers who read in,
Readers who read round about,
And the well-beloved readers who read between the lines.

—From "The gentle reader," by S. M. CROTHERS.

PUBLICATIONS ON FOOD IN FOREIGN LANGUAGES

THIS list of bulletins and leaflets on the conservation and preparation of food, printed in one or more foreign languages, was sent out by the library publicity committee of the U. S. Food Administration for Illinois, as its Library Letter no. 11. The problem of food conservation is especially complicated in communities where there is a large foreign-born population, and knowledge of English among adults is too slight to enable them to read even the daily newspapers.

Librarians who are conscientiously trying to look after the needs of their foreign-born population will welcome the following list of publications in foreign languages on the subject of food:

Agricultural Department of the Chicago Hebrew Institute, 1258 Taylor Street, Chicago, Ill.

The Food Conservation Bulletin:

1. The impending crisis
2. Home canning of vegetables and fruits
3. Food economy in war time
4. Applying the wisdom of the ant (use of fruits and vegetables)

Published partly in *English* and partly in *Yiddish*.

Bristol County Agricultural School, Segrengset, Mass.

Bulletin on canning and preserving of fruits and vegetables.

Published in *Arabic (Syrian)*, *French*, *Italian*, and *Portuguese*.

Hampden County Improvement League, Springfield, Mass.

Bulletin 24—"Cold pack method of canning."

Published in *Polish*.

Miss Margaret Justin, Home Demonstration Leader, U. P., Extension Division, Michigan Agricultural College, Court House, Marquette, Mich.

Bulletin on "Food."

In *Finnish*. In preparation.

Massachusetts Agricultural College, Agricultural Extension Service, Amherst, Mass.

Extension circular on canning of fruits and vegetables.

Published in *French*, *Italian*, *Lithuanian*, and *Polish*.

Massachusetts Board of Food Administration, State House, Boston, Mass.

United States Food Leaflets:

1. Start the day right
2. Do you know corn meal?
3. Whole dinner in one dish
4. Choose your food wisely

THE DWELLING HOUSE REMODELLED AS "YOUR HOME"

A BUSY MOMENT IN THE CHILDREN'S ROOM

THE LIVING AND READING ROOM
"YOUR HOME" IS THE PUBLIC LIBRARY AT JOHNSON CITY, N. Y.

THE SUN ROOM IS A READING ROOM, TOO

5. Make a little meat go a long way
6. Do you know oatmeal?
7. Food for your children
8. Instead of meat

Translated and published in *Armenian, Finnish, French, Greek, Italian, Lithuanian, Polish, Portuguese, Swedish, Syrian, and Yiddish.*

New Hampshire College of Agriculture and Mechanic Arts, Durham, N. H.

Lessons for the preparation of foods for the present emergency:

2. War bread (Circular 23)
3. Corn meal and other corn products (Circular 24)
4. Means of saving meat (Circular 25)
5. Milk and its products (Circular 27)
6. What to eat in war time (Circular 30)

A series of lessons published in *French, Greek, and Polish.*

New Jersey Department of Agriculture, Trenton, N. J.

Leaflets written by M. Anna Hauser, State Home Demonstration Leader:

1. Good food at little cost; whole grain hominy and corn meal dishes.
2. Save vegetables and fruits for winter; home canning instructions.

Published in *Hungarian, Italian, Polish, and Yiddish.*

United States Bureau of Education, Washington, D. C. H. H. Wheaton, Chief, Division of Immigrant Education.

Food conservation series of "America's war lessons."

Published for purpose of teaching foreigners English. These lessons are now being translated into several foreign languages.

United States Food Administration, Washington, D. C.

Home information card.

Published in *French, Italian, and Polish.*

Food posters.

Published with legends in *Italian, Lithuanian, Polish, and Yiddish.*

DECIMAL CLASSIFICATION OF AGRICULTURE

A DETAILED classification of agriculture now printing will be sent to all libraries of agricultural colleges or experiment stations on the printed lists of the United States Department of Agriculture and, on request, to other agricultural librarians having enough interest to test or examine the scheme critically and send the editor notes of faults or suggestions for improvement. This classification is for incorporation in the 10th edition of the Decimal Classification by Melvil Dewey, to be published next winter. Address Forest Press, Lake Placid Club, N. Y.

AN EXCHANGE OF PRACTICAL INFORMATION

THE District of Columbia Library Association is devoting a part of each regular meeting to an exchange of information which has proved of practical value to the members. Questions are sent to the secretary, who sends them out to members with the notice of the meeting, so that members come prepared to contribute replies. The questions submitted have been very practical, and the information secured thru this interchange of experience has been of such very definite value that it seems a pity more local clubs do not make the same plan a feature of their meetings.

At the May meeting, for example, the president read the following questions which had been submitted in advance. The account is quoted from a report of the meeting sent in by Miss Atwood, the secretary of the association:

"1. *Where can be secured a list of associations of employers?*

"Mr. Meyer reported that at the Library of Congress they used 'Convention dates,' successor to Russell's 'Convention dates' but did not find it very satisfactory; Mr. Houghton recommended U. S. Bureau of Foreign and Domestic Commerce, Publ. no. 61, Misc. Ser. 'Commercial organization of the United States,' revised July 1, 1917. In using this one has to do some searching for information as the arrangement is by location, but Mr. Houghton kindly gave the pages on which he found the desired information as follows: p. 27, 30, 33, 35², 47², 52, 54, 66, 67, 68, 74, 82, 85, 86², 90, 92, 100, 115.

"2. *What libraries in the city are currently indexing trade and other journals?*

"Miss Cross reported that the Library of the Department of Commerce is indexing about 3000 journals. This index is on cards.

"Miss Stone drew attention to the fact that the Bureau of Railway Economics made a practice of indexing all the more important articles dealing with the subject of railways.

"3. *Is there any place in the city where the various questionnaires sent out by the government are collected?*

"Joint Board on Minerals and Deriva-

tives located at the Geological Survey collects those on its own subject but gets many others also. The questionnaire sent out by the Census gives much information as to the questionnaires previously sent out by other government agencies.

"4. *Has this Association designated a depository of the bibliographies compiled by the various libraries in Washington?*

"Nothing has been done in regard to this matter by the association. Mr. Meyer, speaking as chief of the division of bibliography of the Library of Congress, urged the necessity for collecting such bibliographical material, and suggested the division of bibliography as the logical depository. He said that there was a feeling that after this war the United States would be looked to more and more for research work in all lines and that we should be preparing for the demands that were sure to be made upon us. The Library of Congress should be the clearing house for all information as to what scientific or other investigations are being undertaken and as to what bibliographical material has already been compiled on various subjects.

"5. *Which two press clipping bureaus cover the broadest field and give generally the best service?*

"To this question several people murmured 'none,' but Mr. Houghton reported having received fairly satisfactory service from Henry Romeike and the Luce Press Clipping Bureau."

SCHOOL LIBRARY MOVEMENT IN NEW ENGLAND.

A MEETING of teachers, librarians, and others interested in school libraries was held at Simmons College, Boston, on May 18. Addresses were made by Mary E. Hall, of the Girls' High School of Brooklyn, Clarence D. Kingsley, agent for Massachusetts high schools, Ernest L. Collins, head master of the Quincy High School, Martha G. Pritchard, librarian of the Bridgewater Normal School, and Herbert S. Weaver, head master of the School of Practical Arts, Boston.

A constitution was adopted and the following were elected officers of the New England Association of School Librarians

for the year 1918-19: President, Martha C. Pritchard, librarian of State Normal School, Bridgewater, Mass.; vice-presidents, Iva M. Young, librarian of the High School, Machester, N. H., and Mary H. Davis, librarian of the High School, Brookline, Mass.; secretary-treasurer, Anna L. Bates, librarian of the High School, Quincy, Mass.; advisory board, Samuel Thurber, of the Newton Technical High School, Newtonville, Mass., Alfred M. Hitchcock, of the High School of Hartford, Hartford, Conn., and Alice M. Jordan, supervisor of children's work, Public Library, Boston, Mass.

New England schools are urged to send names of principal or faculty member to the secretary at 72 Willow St., Wollaston, Mass., that they may receive notices of future meetings of the association.

ANNA L. BATES, *Secretary.*

PHILIPPINE GRADUATES TO STUDY LIBRARY SCIENCE

AN act (No. 2746) has been passed by the fourth Philippine legislature, in its second session, authorizing the Secretary of Justice to grant scholarships to graduates of the College of Liberal Arts of the University of the Philippines to specialize in the United States in bibliography and library science.

The text is as follows:

SECTION 1. The Secretary of Justice is authorized to appoint every two years, upon the recommendation of the Board of Regents of the University of the Philippines, not more than five students who shall have successfully completed the course of library science in the College of Liberal Arts, to complete their studies in said science and in bibliographic science in a university of the United States designated by said Secretary of Justice.

SEC. 2. The sum of twelve thousand pesos is hereby appropriated, out of any funds in the Insular Treasury not otherwise appropriated, to carry out the purposes of this Act during the year nineteen hundred and eighteen.

SEC. 3. This Act shall take effect on its approval.

The act was approved Feb. 18, 1918, and it is hoped that five students may be sent to this country to begin work in September.

DR. HILL REPORTS ON HIS TRIP THRU SOUTHERN CAMPS

TRAVELING as a representative of the American Library Association War Service Committee, Dr. Frank P. Hill of Brooklyn, visited the southeastern group of camps and cantonments in April and May for the purpose of noting the library work being done in this field, and to see what, if any, extension of the work was possible. The trip included the following ten camps: Greene, at Charlotte, N. C.; Jackson, Columbia, S. C.; Hancock, Augusta, Ga.; Wheeler, Macon, Ga.; Johnston, Jacksonville, Fla.; Shelby, Hattiesburg, Miss.; Sheridan, Montgomery, Ala.; McClellan, Anniston, Ala.; Gordon, Atlanta, Ga.; and Sevier, Greenville, S. C. In addition he visited the six cities of Charleston, S. C., Savannah, Ga., New Orleans, La., Pensacola, Fla., and Mobile, Ala., also Paris Island, S. C. where libraries are, or are about to be, installed.

A general report of this trip submitted by Dr. Hill to the committee contains much interesting material, and from it numerous extracts are made.

"My general impressions of camp life and surroundings coincide with those gained by Chairman Wyer on a similar trip to the southwestern group," writes Dr. Hill. "The appreciation of our work as expressed by officers and men was most gratifying even if due, in a measure, to the fact that they have never had anything like it. From the library standpoint, however, there is much yet to be done before we can say that we have reached the point of really efficient service.

"At the time of my visit whole divisions were leaving camps, which meant a busy time and change of commanding officer. Whenever this was the case I merely left my card at Headquarters instead of seeing the general in person. I made a point, however, of making an early call upon the local Fosdick representative who had his office in town and who was the best posted man of all, knowing everybody and where anybody could be found. I also visited the Public Library—where there was one—and invariably found the librarian aiding the camp librarian in every possible way.

"I had personal interviews with the Y. M. C. A. educational and camp secretaries as well as with every representative of the Knights of Columbus, Jewish Welfare and Christian Science organization; and at several camps, as at Greene, Hancock and Johnston—in fact, all but one—met them informally at mess or at a regular meeting. The meetings of representatives of the different welfare organizations, held at regular intervals, are of the greatest benefit to all concerned. At every camp was found the most wonderful spirit of co-operation and comradeship. Everyone was trying to help someone else rather than trying to get all he could for his own organization.

"The cities mentioned in this report were visited at the request of the General Director. A full report was made to him immediately after an inspection of the Charleston district with a recommendation that an organizer be sent there for a long period, a building erected and books purchased at once for the large contingent of army and navy men now or soon to be in this neighborhood. This is one of our golden opportunities. A somewhat similar opening was found at Pensacola. Paris Island is almost as good from a library point of view, for here we have the effective assistance of the commanding officer, who will see that we are provided with a new building and librarian without expense to the fund. Savannah is well cared for by the local librarian. At Mobile the library work is in charge of A. G. Clinger, representative of the Fosdick Commission, who is giving it every possible attention. Unfortunately the local library—subscription—is about to go out of existence so no help can be expected from that quarter.

BUILDINGS

"Without exception the library building is better in architecture, in construction, and in conveniences than the building of any other welfare organization, but the more recently constructed Y. M. C. A. and K. of C. buildings are a great improvement over those of an earlier date. The newest type of Y building has a separate room at the side or end for officers, the desirability of which is still a matter of opinion

among the Y. M. C. A. secretaries. Four librarians have experimented with alcoves reserved for officers without as yet scoring any marked success. Two have already given them up, a third is about to do so, while the fourth thinks they serve a good purpose. By tactful treatment of all readers camp librarians have in several instances overcome much of the prejudice which existed; and at Camp Johnston officers and men use the library with the same freedom as they do a city library.

"In every case I found the buildings in apple-pie order, not due to the anticipated visit of your representative, who was usually two or three days ahead of schedule, but just naturally because they were in charge of men who had had some library training.

"All buildings are well screened. Some have awnings and those which have not ought to have them. Covered porches would add to the appearance of the buildings, and are very desirable in the South. At some camps plants, flowers, pictures and curtains are effectively used, and add to the attractiveness of the interior and the pleasure of visitors. Anything we can do to add to the comfort and enjoyment of the men should be provided if the expense is within reason.

"Cheap tables, chairs, shelving and delivery desks are a poor investment as it has been found necessary to have the same reinforced at every building where such purchases have been made. The top of one desk made of ten-inch boards showed openings of one-half inch between boards, caused by shrinkage. . . .

"If we have made a mistake it is in erecting buildings too small and of too cheap construction. It will be recalled that when a member of the Carnegie Corporation asked what would become of the buildings after the war he was told, at the conference in New York, that, as many of the camps were in the South, near cities or towns without libraries, the buildings could be so constructed as to be moved to the nearby city. This disposal of the buildings appealed to the Carnegie representatives. The buildings at the National Guard camps will not stand the strain of such removal.

MANNING THE CAMP LIBRARIES

"The best work has been done at libraries where men of experience are at the head and where continuous service has been possible. Good examples are Camps Greene, Jackson, Johnston and Gordon. . . . Too much stress cannot be laid on continuity of service. Three months is the shortest term for effective results and six months is better. Emphasis too must be laid on the need for experienced men as chief librarians. One man has put it exceedingly well. He says: 'We want men who will live on the job and make it big, men who will be in it heart, soul and brain. We can find such men, we must find them, if we are to do this work. It is not a case in my mind whether the chief can spare an assistant. It seems to me it is up to the association to go out and get these men, and it's up to every chief to spare his men and for the chief to go himself.'

"The Y. M. C. A. and Knights of Columbus have likewise suffered from lack of continuity of service, but where, in their cases, the men are shifted from camp to camp and are replaced by men acquainted with the work, our men go back to their libraries and are succeeded by men of little or no camp experience.

"The experienced man would be valuable for the following reasons: 1. Being an older man he would have greater trust placed in him, and could better approach the commanding officers. 2. He would have better control over the assistants. 3. He would have a broader knowledge of books and the needs of readers.

"The camp librarian has greater responsibilities than rest upon the shoulders of the representative of any other welfare organization. Each organization, in a measure, is concerned in its own affairs, while the camp librarian not only looks after his own library but also must see that all the welfare organizations with their many ramifications are supplied with enough books, both old and new, to meet their needs. Where a Y. M. C. A. camp secretary has charge of say ten or twelve huts, with seven to ten under-secretaries, the camp librarian must keep in mind not only these ten or twelve huts, but the huts

of all other organizations, not to mention headquarters of one kind or another, base hospitals and barracks, where books are in constant demand.

"The Y. M. C. A. has reached the point where men who cannot afford to give their services are paid such salaries as will make up any deficiency. This is as it should be. At one camp the educational secretary and the camp secretary each is paid at the rate of \$4000-\$6000 per annum. If necessary we should do equally well. We cannot expect libraries which have already given men, women and money to continue to do so indefinitely. . . . As librarians we have long preached the gospel of higher salaries, and now that we have the opportunity of showing what ought to be done we should not set the bad example of paying too low salaries to camp librarians. It is the consensus of opinion that assistants are adequately paid.

"At every camp the library was undermanned, and in very few camps was any attempt made to keep to a work schedule. The staff of a camp library is the hardest worked lot of people I know anything about. Up at six o'clock, they 'keep at it' until ten to ten-thirty at night. It is an all day job with no Sunday, evening or holiday off. We who have a comfortable sort of life in our own libraries would think this a hardship. Not so with the camp library staff. Every member is out to do his share, enthusiastically, loyally and gloriously. But such a life may lead to a nervous breakdown and can be prevented only by providing a staff large enough to do all the work expected of it.

"Three to five additional assistants could be used to advantage in every camp I visited, and until such provision is made very little supervision of branches can be done and no extension of the work should be expected. At some of the camps the wives of officers and women from the town volunteer their service, and without such help books would still be waiting to be made ready for use.

"The ideal staff—to be increased according to demands—would consist of one trained librarian, two or three women assistants and two or three exempted men or men over draft age.

"Enlisted men are, in some cases, detailed for library duty but the number cannot always be depended upon nor is the work satisfactory. It goes against the grain of a commanding officer to make such assignment for, as one of them well said: 'These men are deprived of the advantage of that training for which they are sent to camp.' It is also contrary to the unanimous vote of the War Service Committee. With few exceptions, such for instance as drafted men who, on account of some physical defect, such as flat feet (found after entrance to camp) or as at Camp Johnston (which is a school camp) where men are assigned to library duty as a part of the routine, enlisted men ought not be employed in the library.

"A schedule might be made which would require each assistant to take a day and three evenings off each week. Only by some such forced schedule can the staff keep up to its maximum of health and efficiency.

WOMEN ON THE CAMP LIBRARY STAFF

"Ever since the War Service Committee was organized I have felt that women, being in a large majority in the American Library Association, should be called into intimate relations with the work, both at Headquarters and in camp, and I still feel just as strongly about it. From the beginning I have realized that there were many obstacles in the way of women serving as chief librarians at the camps, and I come back from my trip strongly fortified in that opinion. Here are some of them: 1. Objection on the part of commanding officer; 2. Difficulty of establishing relations with camp headquarters; 3. The fact that it is a camp of men; 4. Inaccessibility of the camp library; 5. Necessity for leaving the grounds by 7 p. m. But they can be a large part of the staff at nearly every library, and at many of the camps women are employed both as volunteers and as paid members of the regular staff.

"Camps are located six to twelve miles from towns and to reach them one has to make use of most uncomfortable jitney service. . . . Women would not find it altogether pleasant to work in such camps, but the best evidence on this score would come from the women now serving in the

libraries. If they are willing to put up with the discomforts and inconveniences we ought to accept their services and place them in every camp as assistant librarians. Give them every possible opportunity to aid in this noble work. To them quite as much as to the men is due the success of the money campaign and they should be given an equal share in the conduct of the work.

GIFT BOOKS AND PURCHASED BOOKS

"A few weeks ago librarians were calling for more books; to-day the cry is 'Hold, enough!' Gift books by the thousands have been pouring into the camps with the evident purpose of swamping the libraries, as was stated to me by one high in authority.

"The indiscriminate sending of gift books from city libraries, without proper sorting and without knowing what is actually wanted at any particular camp, is already having a bad effect. Books are being sent before being properly sorted (thus incurring additional freight charges) and without any sort of labels on them, or if labelled, with labels on the bad as well as the good books. Almost without exception camp librarians report unnecessary duplication, and they also complain of the character of books sent from certain sections of the country (of a consignment from one of the important libraries of the country 70 per cent had to be thrown out). . . . Our professional reputation is not increased when books poor in character, printed from worn out type on cheap paper, are seen at the branches in the camps.

"Probably the greatest need is for purchased books for use at the main library and the branches; and requests are frequent for current books, particularly new fiction. The demand from librarians and camp secretaries for new books at all the huts seems to be reasonable and warranted. . . .

"The poor selection and unnecessary duplication of books sent to the camps shows quite clearly the desirability of distributing centers—such as New York, Philadelphia, Chicago, Kansas City, St. Louis, Los Angeles, San Francisco, and probably eight or ten other places—for collecting, sorting, selecting and distributing books

sent in by nearby libraries. Such centers would tend to centralize this important phase of the work, and avoid complaints of camp librarians. A department like this would cost more than the inspectors which it is proposed to put on the road, but would be of inestimable value to Headquarters, to camp librarians and to the American Library Association itself. I wish it might receive serious consideration.

"Everyone in camp agreed that the scheme of classification sent out by Headquarters was excellent, but some librarians expressed the hope that they would not be obliged to reclassify the books if they were satisfied with the present arrangement. . . .

PUBLICITY

"It would lead to greater clearness if the full name 'American Library Association' were used everywhere—on buildings, on auto trucks, at street corners and in all huts where books are on deposit. We should make more evident the fact that the American Library Association is supplying books to all other organizations, to soldiers leaving camps and to those on the other side. The Y. M. C. A. often gets credit for what really belongs to our organization. At present the name 'American Library Association' means nothing to the soldiers. Not one man in a hundred knows that the Library Association is supplying books, and a still smaller percentage know that the large fund of \$1,750,000 was given to the American Library Association to provide books to American soldiers and sailors everywhere.

"The letters 'A. L. A.' stand for but one thing down South—Alabama. All camp librarians state that the use of the letters causes trouble, confusion and sometimes embarrassment. The men often think the library is for Alabamians only, and one man from Mississippi said that he wished his state would put up a library building for the men. The suggestion has been made that for camp library work the association use the letters 'W. S. L.' or 'L. W. S.' Whether or no a change is adopted the name on the book label and the name on the committee stationery should be the same. Now one is 'War Service Library' and the other is 'Library War Service.'

"It would serve a useful purpose if signs

were placed at prominent street corners in camp indicating the location of the library. Signs might also be placed over the shelves at the different branches indicating that that was a branch of the main library; and a conspicuous notice placed in each branch stating that books not at the particular branch could be obtained from the main library by application at the branch. Camp secretaries were quite willing to agree to such publicity. Offers were made by the managers of the local and camp theaters to show slides advertising the libraries. This certainly would be a good means of publicity as so many soldiers go to the movies. . . .

"Not much extension work can be done until a larger staff is provided at each library, but the possibilities are as broad as the camp. A system of traveling libraries established in each camp would advertise the fact that the American Library Association is doing its utmost to supply reading matter to every man in every part of every camp."

SUGGESTED CHANGES AT HEADQUARTERS

Dr. Hill goes with considerable detail into suggested changes at Headquarters which have grown out of his observations on this trip. Continuity of service here is even more essential than in the camps, and considering the large number of women competent to hold executive positions who are members of the A. L. A., he urges that every position at Headquarters be filled by those who can continue service without lapse during the war.

CONCLUSION

In closing his report Dr. Hill writes: "I cannot think of any better way to arouse enthusiasm and gain support to our work than to call a conference of fifty or sixty men and women, before the Saratoga meeting, and lay before it the need of help at the camp libraries. It is reasonable to suppose that there would be a generous response to an appeal made by those conversant with camp library service. Such a gathering, when convinced of the righteousness of our cause, would prove an able ally at the general conference where strong efforts will probably be made to secure additional workers. If such a conference is

called it should be at the expense of the Fund and not of the library or individual.

"We must not be content to stand still; we must go forward and spread out. Soon we ought to consider opening branches at the camps under the auspices of the American Library Association and in charge of our own representatives. We are in this work to the finish and everyone must turn to and lend a hand. We have raised the first \$1,000,000, established the libraries and placed them on a good basis. Already plans are being laid for another money campaign; and when the time comes to put thru this campaign we must be ready to show *what has been done*, not *what we are going to do*, if we hope to meet with that success which should be ours."

LIBRARY EMPLOYEES UNION MEETS IN NEW YORK

THE Library Employees Union of New York city held a public meeting Friday evening, May 31, in the rooms of the Women's Trade Union at 7 East 15th street.

Civil service, increases in salary, and efficiency ratings were the subjects for discussion. The speakers were Mrs. Olive F. Shepherd, president of the American Alliance of Civil Service Women, who gave some insight into the workings of civil service; Jane Orcott, organizer of the Bookkeepers' and Stenographers' Union, who spoke on the need for unified organized work for protection of mutual interest; and Solomon Hecht, editor of the *Civil Service Chronicle*, who gave interesting figures on the purchasing power of present day salaries as compared with earlier years.

At the business meeting of the union held on May 17 a resolution was unanimously adopted endorsing the resolution presented to the Board of Aldermen a few days earlier, that all employes paid entirely out of the city treasury receive increases as follows: An additional 20 per cent for all employes receiving \$1000 or less per annum, and 10 per cent for those receiving \$1000 or any sum up to \$2000. This resolution has been referred to the committee on finance.

The union also adopted, at this earlier

meeting, a resolution urging the appointment of a woman to fill the present vacancy on the board of trustees of the New York Public Library.

ALLIED WAR EXPOSITION

THE Allied War Exposition conducted by the Committee on Public Information opens on July 7 in San Francisco for a two weeks' stay. From there it will go to the principal cities of the country, including Los Angeles, Kansas City, Chicago, Cleveland, New York and Boston. It will be without doubt the most stupendous display of war activities ever staged. The allied governments of England, France, Italy, Serbia and Belgium are participating. Among the numerous exhibits will be weapons and utensils of modern warfare, varying from a barbwire clipper to a trench mortar; 4000 patriotic posters from all countries at war; four carloads of British trophies; a shipbuilding exhibit; a Zeppelin wreckage. Some of the spectacular and special events will be a sightseeing tour of trenches, dugouts, shelters, and pill boxes; modern Paul Revere's ride by aeroplane; ten army bands massed under the direction of Belgian bandmaster Alloo; Victor Herbert's orchestra and Sousa's band.

The Library War Service of the A. L. A. will have a booth in the section conducted by the Commission on Training Camp Activities. This section is really a complete exhibition in itself and is known as "Making and keeping our fighters fit." The A. L. A. booth is 12 by 18 feet, the same size as the Y. M. C. A., K. of C. and other twelve affiliating organizations, and represents on a small scale a camp library building. The interior was decorated by one of the best firms making theatrical scenery, and is very attractive. Enlarged photographs of camp library buildings and activities are displayed on several screens. Military, technical and war books are shown in cases and on tables. Copies of a small six-page folder, telling what the A. L. A. is doing in library war service, have been printed and will be distributed from the booth. The local librarian will have charge

of the booth in each city which the exhibition visits.

It is estimated that three million people will see the exhibition and thus many people will become better informed as to the work which the A. L. A. is doing in supplying reading matter for the men in the service both here and overseas. This should be of real aid when the next financial campaign is launched.

RECENT MOTION PICTURES BASED ON STANDARD OR CURRENT BOOKS

A Doll's House, 5 reels, Paramount. Star—Elsie Ferguson.

A film presentation of Ibsen's drama in its original Scandinavian setting. It more nearly presents Ibsen's idea of marital misunderstandings than any other film attempt.

Baree, Son of Kazan, 5 reels, Vitagraph. Star—Nell Shipman.

A Hudson Bay story, by James Oliver Curwood, well pictured with an unusual Alaskan dog.

Cecilia of the Pink Roses, 6 reels, Graphic Film Corporation. Star—Marion Davies.

Based on the novel by Katherine Haviland Taylor in which some pathetic and laughable incidents of a newly-rich family are well portrayed.

De Luxe Annie, 5 reels, Select Pictures. Star—Norma Talmadge.

A photoplay version of the story by Edward Clark which ran in the *Saturday Evening Post*. It is a melodrama of mystery, crooks, and a double personality.

Find the Woman, 5 reels, Vitagraph. Star—Alice Joyce.

A screen adaptation of O. Henry's story "Cherchez la femme," and preserves the atmosphere of old New Orleans. Well told and well directed.

Lend Me Your Name, 5 reels, Metro. Star—Harold Lockwood.

Adapted from Francis Perry Elliott's novel of the same title. Comedy drama fairly well done.

Love's Conquest, 5 reels, Paramount. Star—Lena Cavalieri.

An adaptation from Sardou's sixteenth century drama "Gismonda" of the Duchy of Athens. The drama is in costume and of tragic intensity.

Missing, 5 reels, Paramount.

From Mrs. Humphry Ward's novel of the same name, presenting a fine picture of English military and home life during the present war. The story is vividly presented with pathos, good acting, and attractive photography.

Old Wives for New, 6 reels, Paramount. All star cast.

From the novel by David Graham Phillips. Its unusual photographic touches heighten the effects of well selected characters. A disagreeable subject well handled.

Stolen Orders, 5 reels, Wm. A. Brady. Star—Montague Love.

Adapted from the drama of similar title by Cecil Raleigh and Henry Hamilton. A wartime melodrama cleverly handled and of undoubted value for patriotic propaganda.

Street of Seven Stars, 6 reels, De Luxe Pictures. Star—Doris Kenyon.

Adapted from the novel of the same name by Mary Roberts Rinehart. Some changes made in the story have not improved it. The mountain scenes are well done.

Viviette, 5 reels, Paramount. Star—Vivian Martin.

A screen version of William J. Locke's whimsical novel of the middle class of English society, in which the English atmosphere is well preserved.

The following feature pictures stand in a class by themselves as wartime propaganda:

Pershing's Crusaders, 8 reels, First National Exhibitors Circuit.

This film is constructed from official war pictures by the Committee on Public Information, and contains a running account of the formation of the American Army and its preparation on the French front. While in no sense a story, it is extremely valuable as patriotic propaganda.

Hearts of the World, 13 reels, D. W. Griffith.

The finest attempt yet made to present the spirit and realism of the war thru a combination of drama and officially approved scenic pictures of the Western front. While in no sense a story, it is extremely larger as well as its more intimate phases.

PERSONNEL OF AMERICANIZATION SURVEY

THE specialists have now been chosen for the ten divisions into which the study of the methods of Americanization, financed by the Carnegie Corporation, has been divided. Each division chief is a specialist in different national influence in his field, and will have the assistance of field workers, who will gather material under his direction in different communities. The conduct of the inquiry is under the supervision of Allen T. Burns, but the reports, in their final form, will be the work of the specialists, who will be, individually, the responsible authors.

The following are the divisions of the study, with the chief for each:

Schooling of the Immigrant, Frank V. Thompson, assistant superintendent of schools, Boston, Mass.

Press and Theater, Robert E. Park, professor of sociology, University of Chicago.

Adjustment of Homes and Family Life, S. P. Breckinridge, assistant professor of household administration, University of Chicago.

Legal Protection and Correction, Grace Abbott, director of child labor division, U. S. Department of Labor.

Health Standards and Care, Michael M. Davis, Jr., director, Boston Dispensary.

Naturalization and Political Life, John P. Gavit, editorial staff, Harper and Brothers.

Industrial and Economic Amalgamation, William M. Leiserson, professor of political science, Toledo University, and Grace Abbott, associated chief for women in industry.

Treatment of Immigrant Heritages, Herbert A. Miller, professor of sociology, Oberlin College.

Neighborhood Agencies, Rowland Haynes, director, War Camp Community Service, New York city.

Rural Developments, P. A. Speek, head of Russian section, Library of Congress.

As an auxiliary to all these divisions, a Division of Information, statistical and bibliographical, has been organized under the direction of C. C. Williamson, statistician, formerly librarian of the Municipal Reference Library of New York.

EUROPEAN PICTURES WANTED BY THE WAR DEPARTMENT

THE war department desires photographs, drawings and descriptions of bridges, buildings, towns and localities now occupied by the German forces in France, Belgium and Luxembourg, and likewise in that part of Germany lying west of the line running north and south thru Hamburg.

The Council of National Defense has undertaken to make a canvass thru the newspapers for this material. Postcards or snapshots by tourists in this territory would be of service. A large quantity of material is desired and may be sent without sorting or without any attempt to avoid duplication. It will not be practicable to return the material to the contributors.

All items should be sent by parcel post or express to Colonel A. B. Coxe, 1156 Fifteenth street, Washington, D. C.

THE ban on Hearst papers which has been spreading thru the country has been extended to Hearst magazines also in the Cincinnati Public Library, which has removed all Hearst publications from its shelves.

LIBRARY WAR SERVICE

OVERSEAS SERVICE

Book service to our men overseas is being extended rapidly, to keep pace with the transportation of hundreds of thousands of men to France. Six dispatch offices are now shipping books overseas. The number of books sent across has grown from 163,468 reported May 20, to 285,300 reported June 8.

Dr. M. L. Raney, official representative of the Library War Service in France, has returned to Washington. A warehouse has been arranged for in France, to care for temporary storage of books until they are distributed to Y. M. C. A., Red Cross, or other representatives. A central reference library is needed for answering reference problems submitted by officers and men.

Mr. and Mrs. Burton E. Stevenson now represent the Library War Service in France. Mr. Stevenson is overseeing the distribution of the large number of books now being received. He reports an urgent demand for more books. Technical books especially are needed. In a letter dated May 12, Mr. Stevenson writes:

"For the week ending yesterday, I routed out of Paris 10,600 books, covering ten camps, cleaning out the stock on hand. There is a further supply available on our tonnage shipments which will serve to cover two or three more districts. A Y man, in a letter written to Paris headquarters from one of the most important districts in France, says 'We have now from 200 to 250 A. L. A. books in each of our huts.' And other districts will soon be telling the same story."

Details of the service and plans for the future will be announced at the A. L. A. conference at Saratoga, in Dr. Raney's report.

BOOKS FOR TROOPS ON THE MEXICAN BORDER

For distribution to Mexican border posts, approximately 47,000 books have been sent to Harriet C. Long, San Antonio, organizer

of the eastern border district, and Ethel F. McCollough, El Paso, organizer of the western district. Miss Long's territory includes the border from Brownsville to the Big Bend district. Miss McCollough's territory includes everything from the Big Bend district in Texas to Yuma, Arizona. The greater number of these books are gifts, but many have been purchased by Headquarters to supplement the gifts. Special requests by Miss Long and Miss McCollough have included travel and biography, new war books, technical books, books on cavalry and the care of horses.

Traveling library boxes have been built to carry 50 books each. As the posts differ widely in needs, no arbitrary rules will regulate inclusion of titles in the boxes. In one of these districts the following assortment is used as a basis for each general collection: 5 volumes on military science and tactics, 5 personal narratives and histories of the war, 5 other technical and general non-fiction books and 35 volumes of fiction appealing to widely varying types of men. Books on special subjects requested by the men are added to these unit libraries in order to serve local needs.

In general, the boxes are to remain two months at each post, tho they may be returned sooner, or, upon request, kept longer.

By visits to posts, the organizers in the two districts are learning the special needs of the men, and requests for libraries are being filled as rapidly as possible.

CAMP LIBRARIES

The technical reference use of the camp libraries grows daily. Not only in school camps such as the two quartermaster corps camps, Johnston and Meigs, is the service similar to that in college reference libraries, but also in the general camps, the main library is becoming largely a reference library, while the recreational reading is supplied more thru branches and stations.

Technical books recently ordered for the camp libraries cover a wide field of science

and industry. Lithography, carrier and homing pigeons, military panoramic sketching, aerial gunnery, reconnaissance and liaison, concrete construction, auditing and cost finding, military architecture and construction, cooking, band instruments and music, mental and physical tests, protective coloring, are among the subjects on which material has been supplied recently. A school for aerial observers established in one camp caused a rush order for books on aerial photography. In another the Reclamation Department requested material on processes, economy, possibilities of salvaging and conserving wastes.

The growth of the service demands an increasing number of camp librarians and assistants. A form for recommendation has been sent to all librarians, inviting names of capable men outside the library profession who might be able to serve. A special appeal has been made thru college librarians for students to work during the summer.

Three libraries have been added to the official list of "large camp libraries"—*i. e.*, those with trained librarians in charge. These are Jefferson Barracks, Mo., where a portable building will be erected, Mare Island Navy Yard, Calif., where a library headquarters building has been authorized, and Pelham Bay Naval Training Station, N. Y. Large camp libraries now number forty-two.

At Camp Humphreys, Va., which is an intensive training school for engineers and skilled mechanics, the library, at the invitation of the camp officials, has been placed temporarily in a large room of the new administration building.

One feature of service very popular with the men is the placing of books on troop trains leaving camp. As a Y. M. C. A. representative accompanies every troop train, he can always take charge of the books.

It is urgently recommended that home libraries place gift magazines on trains carrying drafted men to camps and on troop trains.

HOSPITAL LIBRARIES

The hospital librarian at Camp Funston writes:

Cases have been installed in 65 wards, and the book service is appreciated. We have the assistance of three Y men with magazines.

The Red Cross building is located in the new convalescent hospital, and is to be used for convalescents only. We have arranged for the books, have a fine collection to start with, and will install them just as soon as the building is completed. This hospital has 800 beds. This gives a total capacity of 3,000 beds for the base hospital.

In the Camp Wadsworth hospital, the librarian visiting the wards overheard an old patient say to a new arrival: "There's one thing they do for the patients. They furnish them with plenty of reading matter."

From Camp Greene the hospital librarian writes:

The library is part of the building occupied by the Post Exchange, and I found everything prepared for immediate use. Shelving had been built and about a thousand books ready for circulation to which additions are being made. Books and magazines are in the wards, and I am doing all that I can to continue the work that has been so well begun.

I am living at a farm house just outside the camp, and am quite comfortable.

As this library is used by the Medical Staff and nurses as well as the enlisted men, the visitors are of a variety of type ranging from the Harvard graduate to the man who lowers his voice as he confides to you that he cannot read. For him we have the scrap books, and they are well used in the reading room as well as in the wards.

One man looked over the place and said "I have not seen anything in camp that in my estimation counts for more than this library." The next exclaimed "Gee! this is fine." Which shows the unanimity of sentiment.

The thing that has made the greatest impression on my mind is the atmosphere of co-operation. The workers at Camp Greene may be, and undoubtedly are just as human as the groups found in the average institution or establishment, but they appear to be willing to set aside personal differences and join with all heartiness in whatever will further the best interests of the camp. Where such a feeling exists, even a temperature of 98 and over is powerless to prevent good results.

A uniform for hospital librarians has been found necessary. It is to be made of natural color pongee. An A. L. A. brassard is worn, and on the wide brown ribbon band around the small Panama hat worn with the uniform, the A. L. A. pin is worn.

RECENT ASSIGNMENTS TO LIBRARY WAR SERVICE

Large Camp Libraries

Camp Beaugard, Alexandria, La.	J. R. Rutland, librarian Philip A. Miller, assistant
Camp Bowie, Fort Worth, Tex.	W. F. Seward, librarian Louis W. Horne, assistant (transferred from Camp Logan) Leila H. Seward, assistant
Camp Cody, Deming, N. Mex.	John F. Reynes, assistant Anne M. Mulheron, hospital librarian

PERSONAL NOTES

Florence R. Curtis, instructor at the University of Illinois Library School, is now on the Headquarters staff as field representative in the hospital library service.

Ernestine Rose, assistant principal of the Carnegie Library School, Pittsburgh, joined the Headquarters staff the last of May to take charge of the hospital library work during June.

Caroline Webster, organizer of the hospital war service, has returned to her work at the New York State Library.

Arthur R. Blessing, reference librarian, Public Library, Washington, D. C., is serving as librarian at Camp Meade during June.

Maria C. Brace, librarian of the Public Library, Waterloo, Iowa, is in charge of the base hospital library at Camp Dodge.

Charles Harvey Brown, assistant librarian of the Brooklyn Public Library, is supervisor of the Brooklyn Dispatch Office.

Joseph V. Cargill, assistant librarian of the Milwaukee Public Library, is librarian at Camp Grant from July 1.

Annette L. Clark, librarian of the New Albany, Indiana, Public Library, has joined the Headquarters staff.

Glen U. Cleeton, assistant librarian at the State Normal School, Kirksville, Mo., is assistant in the Camp Doniphan Library.

Charles H. Compton, reference librarian of the Public Library, Seattle, has joined Headquarters staff as a field representative.

Reba Davis, librarian of the Iowa State Traveling Library, is serving half time as assistant to Miss McCollough in the El Paso District of the Mexican Border Service, and half time as hospital librarian at Fort Bliss.

Louis H. Dielman, executive secretary of the Peabody Institute of Baltimore, will be librarian at Camp Meade during July and August.

M. S. Dudgeon who has just completed a period of service at Camp Perry, is planning to spend a large part of his time visiting camps as a field representative of Headquarters.

John E. Fitzpatrick of the Brooklyn Public Library, is now librarian at Camp Mills.

Charles R. Green, librarian of the Massachusetts Agricultural College Library, is acting librarian at Camp Johnston.

C. H. Hastings, chief of the Library of Congress Card Division, is a member of Headquarters staff.

Herbert S. Hirshberg, librarian of the Toledo Public Library, has been granted leave of absence for two months, to serve as librarian at Camp Perry.

D. Ashley Hooker, technology librarian of the Detroit Public Library, is acting librarian at Camp Gordon during June, July and August.

Frederick W. Jenkins, librarian of the Russell Sage Foundation, New York City, is in charge of library war service in the vicinity of Pensacola.

Caroline Jones, librarian of the Hazelwood branch, Pittsburgh, is librarian of the U. S. General Hospital No. 1 (Williamsbridge), New York City.

Mary L. Jones, assistant librarian of the Los Angeles County Library, has been appointed associate librarian at Camp Kearny.

Mildred H. Lawson, assistant in the reference catalog division, New York Public Library, is assistant librarian in the U. S. General Hospital No. 1, New York City.

Mary E. Mathews of Brooklyn, is agent in the Brooklyn Dispatch Office.

Noah F. Morrison of Elizabeth, N. J., is assistant at the Camp Upton Library.

Anne M. Mulheron, chief of the order department, Los Angeles Public Library, has been appointed hospital librarian at Camp Cody.

Paul M. Paine, librarian of the Syracuse, N. Y., Public Library, is organizing the library work in the naval, marine and military stations and camps in the vicinity of Charleston. He has general supervision also over the work at Paris Island.

Franklin H. Price of the Philadelphia Free Library, is in charge of the Philadelphia Dispatch Office.

Edythe A. Prouty, supervisor of library stations, Cleveland Public Library, is assisting at the Newport News Dispatch Office.

Charles A. Read, librarian of the University of Cincinnati, is acting librarian at Camp Sevier.

W. B. Rees, custodian of the San Marino branch of the Los Angeles County Library, has been appointed librarian at Mare Island Navy Yard.

Justus Rice has been released by the St. Louis Public Library to serve as librarian at Jefferson Barracks.

Azariah S. Root, librarian of Oberlin College, will be librarian at Camp Sherman July 15 to September 1.

Cecil A. Ross, assistant in the Grand Rapids, Mich., Public Library, has been appointed assistant at the Camp Gordon Library.

W. F. Seward, librarian of the Public Library, Binghamton, N. Y., is librarian at Camp Bowie for three months.

Miss Grace Shellenberger, supervising librarian of state institutions of Iowa, has been released to organize the library service at Fort Des Moines army hospital.

Clarence E. Sherman, librarian of the Public Library, Lynn, Mass., is assistant at the Boston Dispatch Office.

James H. Shoemaker, librarian at Iowa State Teachers College, is an assistant at the Camp Dodge Library.

Truman R. Temple, librarian of the Leavenworth, Kansas, Public Library, has joined the staff at Headquarters as field representative.

Gertrude Thiebaud, librarian, Peru, Indiana, is librarian for June, July and August at the Walter Reed General Hospital, Takoma Park, District of Columbia.

Mary L. Titcomb, librarian of the Washington County Free Library, Hagerstown, Md., has been appointed library organizer at Fort Leavenworth, Kansas.

George H. Tripp, librarian at New Bedford, Mass., is serving for three months as librarian at Camp Dix.

Gilbert O. Ward, technical librarian of the Cleveland Public Library, is librarian at Camp Sherman thru May, June and part of July.

GIFT BOOKS

Librarians report increasing numbers of gift books, indicating that the intensive book campaign has become a continuous campaign. It is hoped this campaign will proceed thruout the duration of the war, for demands for books are increasing with the enlarged draft orders, overseas transportation of men, and with the wearing out of books now in use.

It is important that the need of books be kept before the public. It is equally important that books be more carefully sorted in libraries before preparation and

shipment to camps and dispatch offices. Time used in preparation of books in local libraries, transportation space, storage, time and labor at receiving camps and offices, are all valuable and should not be wasted on books so poor in condition and content that they must be discarded when they reach camp.

Reports of receipts and shipments should be made twice a month, so that the books may be placed where they are needed.

PUBLICITY

The chapter on "What men read—and why" in Edward F. Allen's recent book "Keeping our fighters fit" will probably inform a wide circle of readers of some of the accomplishments of the Library War Service in camps. Newspapers and periodicals, also, are featuring different phases of the work. Librarians are requested to keep local newspapers informed of all developments of the service, so that thruout the summer they will be able to print news notes and stories about all branches of the work.

BOOKS IN CLUBS FOR THE MEN OF THE NAVY

During May letters containing questionnaires were sent from the office of the Navy Department Commission on Training Camp Activities to the directors of the War Camp Community Service in thirty cities near naval stations, asking for information about the book needs in the clubs and other recreational centers frequented by the men of the navy.

Responses to this request show that the public libraries are, in most cases, meeting the need adequately. In one little town the library has just been established and therefore has not had time to expand its services. In another the library had done its "bit" but could not meet the entire demand for reading material. The sailor boys have a voracious appetite for books, and, like Oliver Twist, continually demand, "More, more!" There the analogy ceases, however, for all such demands, if they cannot be supplied locally, have been turned over to the American Library Association, "and the empty are filled."

One of the clubs needed current maga-

zines which the commission was enabled to send thru the courtesy of the Woman's Naval Service, Inc.

NOTES FROM INDIVIDUAL LIBRARIES

In Manchester, N. H., the City Library has superintended the making of food conservation slides in English, French, and Greek. These have been shown in the various moving picture houses in the city. Conservation posters made at the library have been circulated among the public and parochial schools.

During the drive for the use of more potatoes a table in the library was used for a potato exhibit which attracted some attention and perhaps helped to emphasize the need. A double line of potato men, made of small potatoes held together with toothpicks, marched across the table carrying American flags over their shoulders. At one side of the line of march there was a miniature fleet, and a card bearing the slogan "The wheat has embarked for service in Europe. The potatoes are serving here as a home guard."

From Los Angeles Mr. Perry writes, under date of May 27:

"Up to date we have gathered 70,000 volumes for the soldiers. Of these, 12,000 have been forwarded to Camp Kearny which is located near San Diego and is our own Southern California camp; 10,000 to Camp Cody in New Mexico; and 10,000 to Camp Travis in Texas. Smaller shipments have been 1000 to the Thirty-Fifth Infantry at Nogales, 1000 to the naval station at Camp Balboa in San Diego, and 6000 or 7000 to the military reservation and naval training camps at San Pedro Harbor in the city of Los Angeles. A certain proportion of the 70,000 volumes have had to be discarded but we still have a surplus of 10,000 volumes that we will send anywhere A. L. A. headquarters directs.

"The Library Board has granted leaves of absence to Jane Dick and Jeannette L. Drake for service at the camp library in Camp Kearny this summer.

"Anne M. Mulheron, principal of our order department, is going to Camp Cody

to take charge of the library in the base hospital there.

"An association known as the Los Angeles Public Library War Service Organization has been formed to encourage and systematize library co-operation in all war campaigns. During the Red Cross campaign just closed, members of the staff contributed nearly \$700 or an average of \$5 for each member of the staff. Over \$6000 of Liberty Bonds were subscribed during the Third Liberty Loan Campaign."

The library of the Missouri School of Mines has extended its hours to accommodate the 160 men of the National Army who are receiving two months' special technical instruction at the school. Instead of closing at 4 p. m., as is the usual summer practice, the library remains open every evening, including Sundays, until the men are required to be in their quarters. The hours for the residents of Rolla, however, remain the same as during the last two summers, 9 a. m. until 4 p. m.

A newspaper room will be open on the main floor of Parker Hall, and in the main reading room upstairs, a good stock of stories, war books, histories, etc., will be prominently placed where the soldiers can help themselves. There will also be an increased supply of current popular magazines, furnished by the residents of the town.

By the courtesy of the Encyclopedia Britannica Co., the library has a large war map on which the daily changes in the battle lines may be followed.

In addition to the reading material, the soldiers are supplied free of charge with letter paper, envelopes, pen and ink. The local Red Cross Chapter is co-operating with the library in providing this free stationery.

PHELPS COUNTY CHAPTER
AMERICAN RED CROSS

THE LIBRARY
MISSOURI SCHOOL OF MINES

"The idea of having them use the library as a writing room as well as reading room has proved successful beyond all our expectations," writes Harold L.

Wheeler, the librarian. "We have stamps and postal cards for sale at the desk. The demand for picture post cards—especially those pictures of their detachment as it appeared at the depot on its arrival—is insatiable. They have been keeping us so busy that it has been necessary to enlarge our staff.

"In the auditorium downstairs, there is a piano for which we have the key. Upon application, the men are permitted to use this piano. It is growing very popular, as there are the inevitable pianists in this group of soldiers."

WAR SERVICE COMMITTEE MEETS

A meeting of the committee was held at the New York Public Library on June 8, with the following present, being a quorum of the committee: Edwin H. Anderson, Charles F. D. Belden, Electra C. Doren, Frank P. Hill, and James I. Wyer, Jr. Thomas L. Montgomery, president of the A. L. A., and Dr. Herbert Putnam, general director of the Library War Service, were also present.

The statement of the total receipts and disbursements from Aug. 17, 1917, to May 31, 1918, showed that \$175,936.18 had been received with assets on hand of \$782,450.83, to which should be added \$300 in Liberty bonds. Since October payments have averaged about \$94,500 a month. A report from Mr. Roden, treasurer of the A. L. A., on his relations to the Library War Fund, will be made at the Saratoga conference.

Dr. Hill's report on his trip to southern camps and cities was presented to the committee, and after discussion an outline was adopted for the committee's report on the work of the year, to be presented in print at Saratoga.

As chairman of a committee appointed in April to organize a second money campaign, Dr. Hill presented a tentative plan of organization. It is expected that the amount secured in the first campaign will be exhausted in about six months, while new opportunities for service are daily presented. The money campaign in 1917 and the book campaign this year have educated the public in the library needs of our soldiers and sailors, and by the time the

new campaign is launched the A. L. A. will have a full year's operation on which to draw for testimony as to its service. The goal of the next campaign will be \$3,000,000 or more as the necessities shall appear to the Library War Finance Committee. The quota will be generally computed at the rate of ten cents per capita except in cities of more than 250,000, where it will be reduced to five cents per capita. It is hoped to put the campaign thru between Nov. 15 and Dec. 1. The chairman announced the appointment of Dr. Hill as chairman of the new sub-committee on library war finances, with power to appoint his associates. Subject to the approval of the A. L. A. Executive Board, it was voted that this committee be authorized to prepare a plan for a second financial campaign and to solicit funds in the name of the A. L. A. to carry the work of library service to soldiers and sailors. Action was also taken to set aside \$75,000 from the general funds as an initial appropriation for the expenses of this second financial campaign.

A GARDEN OF BOOK MOLDS

A FRENCH scientist, Dr. Pierre See, has recently communicated to the Academy of Sciences in Paris the results of original botanical excursions which he has been making in the libraries. By means of microscopic examination of moldy volumes, together with experiments in propagation, he has shown that these blemishes are caused by fungi of low orders. Certain of these molds secrete a pigment whose color is characteristic of the species, and which diffuses thru the paper. The *Scientific American* for April 27 gives a page to his investigation, illustrating the article with pictures both of the molds and of the "weeds" which grow in this unusual botanical garden.

It is demonstrated that all of the germs do not come from late infection, many of them existing in the raw fibres of the paper-making material, while on volumes dating back several centuries the lower fungi are dead and desiccated.

For his cultures Dr. See uses various media—carrots or potatoes, licorice, gela-

tine, paper, or wood, and at the end of from three to six weeks the mycelium elements collected from various sources and planted there, can be identified. In color the molds range from ochre thru brown to black; again they are maroon, cerise, or apple green. But with all the diversity of paper-making materials and of his experimental conditions, M. See has succeeded in isolating only a score of species of inferior fungi, which constitute perhaps the entire flora of his world of paper.

SPECIAL INSTRUCTION IN INDEXING AND FILING LETTERS

A COURSE in indexing and filing correspondence is being given in the Summer Library School at the University of Missouri by Mary E. Baker, head cataloger of the university library. The purpose is to fit librarians and stenographers for positions in the war department. The text book used is issued by the department, entitled "War Department correspondence file." This is one of Miss Baker's contributions to national service. The president of the board on correspondence and filing systems says:

"It is believed that the plan as outlined by you . . . is an admirable one, as there is a great demand thruout the service for personnel having library classification experience and considerable difficulty is being encountered in obtaining clerks with the experience in question."

Library Organizations

MASSACHUSETTS LIBRARY CLUB

The Massachusetts Library Club held its spring meeting at Camp Devens on Wednesday, May 29. Many of the visitors from the neighborhood of Boston and from nearby places west of Ayer came over the road in auto busses and made a tour of the cantonment before luncheon, which was served at the Hostess House. After luncheon the visitors were welcomed at the Camp Library and were given an opportunity to examine the collection of books and the methods under which the work is carried on.

The formal meeting of the club was held in the Liberty Theatre, Miss Katherine P. Loring presiding. At the business session Miss Alice M. Jordan of the Boston Public

Library, reported that a School Library Association, of High School librarians and others, had recently been formed.

The following officers were elected for the coming year. President: John Adams Lowe; vice-presidents, John G. Moulton, Harold T. Dougherty, and E. Kathleen Jones; treasurer, George L. Lewis; secretary, Orlando C. Davis; recorder, Frank H. Whitmore.

Following the business session, Harold J. Laski, lecturer on history at Harvard and a former editor of the *New Republic*, gave a brilliant address on "The choice of books in America." In addition to his observations in this country Mr. Laski spoke from the vantage point of his Oxford experiences. Mr. Laski found many conditions surrounding the selection of books which call for improvement and he made a strong appeal for greater care in the choice of books generally read. One has a sense of bewilderment, he said, as to where the old books are to be found. A number of well-known American book stores were mentioned but he did not find them comparable, either in number or quality, to the book-shops of London. Mr. Laski thought that the thing the libraries can best do is to encourage the purchase of desirable books. He commented unfavorably on the nature of magazines in America. The average American book becomes a remainder in six months and he wondered why this should be so. Mr. Laski considered that the generation which produced Hamilton and Madison can hold its own with any contemporary period in Europe but not as much can be said, he thought, for later periods. He regarded Croly's work "The promise of American life" as a founding point in political thought, however. He wished to encourage better relations between booksellers and librarians and he urged the frequent exhibition of books. If he could have two existences Mr. Laski declared that he would devote the first of these to becoming a bookseller and the second to becoming a librarian.

Following the address by Mr. Laski, J. I. Wyer, Jr., director of the New York State Library, spoke of his impressions, gained during recent visits of a number of camp libraries in the South and Middle West. He spoke with much enthusiasm of the service which the libraries are performing and he reviewed some salient features of the work. The quality of the books already purchased has been commended and it was Mr. Wyer's opinion that the Library War Service of the A. L. A. compares favorably with the work of any other welfare agency.

FRANK H. WHITMORE, *Recorder*.

ALABAMA LIBRARY ASSOCIATION

The meeting of the Alabama Library Association which was held in Montgomery, May 9 and 10, was of unusual interest, and ranks with the very best in the history of that body of earnest library workers. Librarians from all parts of the state were in attendance, as well as visiting librarians from Michigan, Maine, New York and Ohio.

The first meeting of the association was held the evening of the 9th, in the auditorium of the Carnegie Library. Dr. Frank P. Hill delivered the address. Dr. Hill was on a trip of inspection of the camp libraries in the Southern states, and his address was largely devoted to a discussion of library work in camps, conditions, needs, etc.

The Friday morning session was held in the Camp Sheridan Free Public Library, and was entirely devoted to a discussion of camp libraries and library war service.

Dr. Thomas M. Owen, president of the association, in opening the meeting presented a survey of library conditions in the state, reviewing briefly the extent of the work in the past and the wonderful new opportunity for service we are now able to render the young manhood of the country assembled in camps, cantonments and trenches in the United States and in France.

George L. Doty of Michigan, librarian of the Camp McClellan Library, followed with an interesting account of the work being done in that library. The building is situated on a hill, and with its blazing electric sign is a "light that cannot be hid." Mr. Doty said anyone believing that soldiers do not care to read, is much mistaken. Frequently the boys are compelled to sit on the floor for lack of chairs.

Frank D. Slocum, librarian of the Camp Sheridan Library, told something of the interests of the camp of which that library is a part. He said that the men vary as much in their interests and activities as do those in any community, and that the librarian has much the same problems. The camp librarian must be able to give facts and information to men in any line of military work, and also meet the demand for recreational and inspirational reading.

Lila May Chapman, assistant-director of the Birmingham Public Library, described the activities of that library in enabling the people of its city to meet their duties in the war.

During the "round table," there was not a librarian present that did not take active part in the discussions, and with the utmost enthusiasm and interest.

After the adjournment the members of the

association and their friends, enjoyed the unique experience of taking mess in true soldier fashion in one of the near-by mess shacks. After mess the entire party was taken by autos, furnished thru courtesy of friends, thru Camp Sheridan, the Base Hospital and Taylor Aviation Field.

The whole meeting was of much educational value to the librarians. It is believed they returned to their posts of duty with a fuller and deeper sense of patriotic service.

Officers were elected as follows: President, Dr. Thomas M. Owen; first vice-president, Prof. J. R. Rutland; second vice-president, Alice Wyman; third vice-president, Carl H. Milam; secretary, Gertrude Ryan; treasurer, Laura Elmore.

GERTRUDE RYAN, *Secretary.*

RHODE ISLAND LIBRARY ASSOCIATION

The annual meeting of the Rhode Island Library Association was held May 27, 1918, at the Rhode Island Normal School, with the president in the chair. Walter E. Ranger, state commissioner of public schools, spoke in his address of welcome of the splendid library work being done in the state. In connection with the book campaign he stated that 68,000 books had been collected and 33,000 distributed. In closing he spoke of the petition, signed by 40 representatives of the state, asking the State Board of Education to consider providing a course in library training at the Normal School. He stated that he believed that it would be a desirable plan for the benefit of the interests of the state, and that he would co-operate to the utmost in the movement.

William E. Foster presented the following resolution, which was unanimously adopted.

Whereas: There is a great lack of trained workers to fill library positions thruout the State; and, as the need for such trained workers is increasingly felt by the various libraries, and also for school libraries; and as there is an increasing demand for those who have had library training, in the filling of government and business positions; and as there is also a growing demand for vocational training for graduates from our high schools; and as there is no opportunity for them to acquire library training in the State; and since the library interests of the State are under the direct charge of the Department of Education, therefore, be it

Resolved: That we, members of the Rhode Island Library Association, in our annual business meeting, respectfully request the State Board of Education to provide a course of instruction in Library training at the Rhode Island Normal School.

Following the reading of reports, Mrs. Anna P. C. Mowry, librarian of the Manville Public Library, gave a report on "What the summer school library course meant to me."

Robert M. Brown of the geographical department of the Rhode Island Normal School gave a most interesting talk on "Charts and

maps showing food areas." These maps are the result of several years study by Mr. Brown and give interesting, detailed information regarding the agriculture and industry of Rhode Island, that is to be obtained nowhere else. Mr. Brown is writing a descriptive geography of Rhode Island that will include copies of these charts, and will be glad to lend them to any library desiring such exhibits.

Mrs. Walter Stokes Irons, state chairman of the educational department of the Woman's Committee of the Council of National Defense, spoke on "The co-operation between the library and the Council of Defense."

The following officers were elected for 1918-1919: President, Bertha H. Lyman; vice-president, William D. Goddard; vice-president, George E. Hinckley; corresponding secretary, Marion A. Cooke; recording secretary, Amey C. Wilbur; treasurer, Laurence M. Shaw; executive committee, Joseph L. Peacock, Lillian L. Davenport, and Phebe A. Parker.

After a social hour, luncheon was served thru the courtesy of Mr. Ranger and Mr. Alger.

The speaker at the afternoon session was Dr. Samuel McChord Crothers, whose subject was "The awakening of America." This inspiring address was given with a prophet's note.

Mrs. Francis W. Wetmore gave a four-minute talk on "Americanization of alien population." Mrs. Wetmore called attention to the course on this subject to be given at the Rhode Island Normal School, provided enough people register for the course. She urged all patriotic women to register and so fit themselves for a much needed service.

Mr. Peacock offered resolutions thanking the State Board of Education for its hospitality, and the meeting adjourned.

AMEY C. WILBUR, *Recorder.*

NEW ENGLAND COLLEGE LIBRARIANS

The annual meeting of the New England College Librarians was held at the Amherst College Library on May 10th, with sessions in the morning and afternoon. There was a total attendance of 39, representing 13 college and university libraries. Mr. Lane of Harvard presided at the morning session; Mr. Fletcher of Amherst in the afternoon.

The topics discussed included Graduate work leading to librarianship; or, College and University courses specially planned for library work; How to induce the right kind of students to take up library work as a pro-

fession; Foreign source material on the European War; The library staff under war conditions; The college library and special war work; Care of reserved books and prevention of unauthorized borrowing; Forms of request for purchase of books. There was also a discussion of several minor problems, including the accession book, fire insurance, and shelf-reading, or inventory. The first two questions brought out a number of opinions and created so much interest that Mr. Lane was asked to appoint a committee to make a study of the whole situation as regards graduate training for college and university library assistants. This committee will consist of Mr. Currier of Harvard, Chairman; Mr. Barr of Yale, Dr. Wilson of Clark University, Miss Donnelly of Simmons and Mr. Fletcher of Amherst.

Dr. Wilson gave an interesting account of the building up of the collection of war posters and other war material at Clark University and also told of the steps that had been taken looking to the founding of a national war museum and library at Washington.

A number of the visitors took advantage of the opportunity to inspect the library of the Massachusetts Agricultural College as well as those of Smith and Mt. Holyoke.

ROBERT S. FLETCHER.

NEW YORK LIBRARY CLUB

The May meeting of the New York Library Club was held at the Metropolitan Museum of Art Wednesday, May 22, at 3 p. m. The art committee of the club prepared the afternoon's program on "Great illustrated books."

The first speaker was William M. Ivins, curator of prints of the Metropolitan Museum, who read a paper on "Books and their illustrations." He emphasized the importance of the picture books and made a plea for catalogers to pay more attention to prints in books than they have done hitherto. He said the absence of bibliographies which deal with prints in a serious way makes it very difficult to trace the history of a print or to know its value. He illustrated his paper with rare examples from the museum's collection.

George Parker Winship, librarian of the Harry Elkins Widener Library at Cambridge, followed, speaking on "European manuscripts." He brought out the fact that the long reign of peace during the thirteenth century made it possible to accumulate money and to develop the arts, and it was during this period that the most valuable of the

European manuscripts were produced, many of which are now in the Bibliothèque Nationale.

Prof. Abraham Yohannan of Columbia University finished the program with a paper on "Persian illustrated books." He referred to the Persian language as being made for poetry and said that the manuscripts were collections of poetry and stories, that calligraphy was considered one of the highest arts, and that next came drawing and painting. He described Persian art as free, easy, natural and treated with directness, tho the artist used no perspective, light or shade.

The program was followed by the business meeting. The following officers and members of the Council were elected: President, Josephine A. Rathbone; vice-president, Franklin F. Hopper; secretary, Edith H. John; treasurer, Ralph M. Dunbar. For the Council, Harrison W. Craver, Isadore G. Mudge, Florence Overton, Charles C. Williamson.

A motion was passed that the money usually spent on refreshments at the annual meeting be donated to the Red Cross.

Mr. Lydenberg introduced Miss Rathbone as the new president, after thanking all the members of the club for the hearty support given to him and his administration.

Miss Rathbone called attention to the new dispatch office opened at 31 East 15th street, for sending books to camps and overseas, in which help was urgently needed, and she asked members to devote some time to this, the librarians' most legitimate part in war work.

ELEANOR ROPER, *Secretary.*

DISTRICT OF COLUMBIA LIBRARY ASSOCIATION

The regular meeting of the District of Columbia Library Association was held Tuesday evening, May 21, in the Lecture Hall of the Public Library. The meeting was called to order at 8:30 by the acting president, Ethel Owen.

The book campaign committee reported that 57,569 volumes and \$105.75 in cash had been collected. Among the agencies enlisted by the committee in the campaign, three made noteworthy records: the Library of Congress (organized in seven teams) with 17,767 volumes to its credit; the Public Library, with 11,524; and the high schools and normal schools, which collected 18,899 volumes.

Leila Kemmerer reviewed "Dramatic moments in American diplomacy" by Ralph W.

Page, son of W. H. Page, our ambassador to England, considering both the physical makeup of the book and the author's purpose in bringing to the reading public a more appreciative knowledge of the diplomatic service. She compared the book with Prof. C. R. Fish's "American diplomacy," which is intended for the student rather than the general reader, and recommended it for any library large or small.

Dr. Arthur J. Klein of the new Service Bureau spoke at length on its functions, after which the president, following the practice introduced at the January meeting, read the questions submitted prior to the meeting, and these were answered by various librarians present. This is proving one of the most helpful features of the meetings.

Several plans for an association picnic were presented, after which the association adjourned to partake of light refreshments, to get better acquainted and informally discuss picnic plans. Later a vote was taken resulting in a decision to visit Camp Meade and see a camp library in operation.

Alice C. Atwood, *Secretary*.

CHICAGO LIBRARY CLUB

The annual meeting of the Chicago Library Club and the last meeting for the season of 1917-18 was held at the Ida Noyes Hall of the University of Chicago, May 16, Mr. Lyons, the president, presiding.

Reports for the year were read by the secretary, the treasurer and the chairman of the membership committee. At the close of the season of 1916-17 the club had a membership of 282 persons; at the close of the present season there are 415 members, 175 new members having been received during the year.

A report was also heard from the committee appointed to arrange for the volunteer work in preparing the books that are to be sent to our soldiers. Work is being done on these books by volunteers from the libraries of the city, and large numbers of volumes are being prepared to ship.

Following the business meeting, Mrs. Goodspeed of the Ida Noyes Hall read a very interesting description of that beautiful building and its furnishings and activities, after which the club was divided into groups and taken on a tour of the building by students who very kindly and efficiently acted as ushers. Light refreshments and dancing concluded the evening.

The following officers were elected for the ensuing year. President, J. C. Bay, John Crerar Library; first vice president, Mary E.

Ahern, editor of *Public Libraries*; second vice president, L. R. Blanchard, Newberry Library; secretary, Janet M. Green, Chicago Public Library; treasurer, Winifred Ver Nooy, University of Chicago Library.

TWIN CITY LIBRARY CLUB

The annual spring meeting of the Twin City Library Club was held at the St. Paul Public Library on the evening of May 21, with a hundred members present.

Mary Wadden, of St. Paul, delightfully entertained the audience by reading four of Constance Mackay's one-act plays of eighteenth century life.

Official war slides were shown by Edah Burnett of the St. Paul Public Library, followed by a social hour and refreshments.

Amy Cowley, *Secretary*.

NEW YORK HIGH SCHOOL LIBRARIANS ASSOCIATION

The last meeting of the school year of the New York High School Librarians Association has always been of a social nature, and this year was no exception.

On June 5 the members were delightfully entertained by Jean Ely, librarian of the Flushing High School, in the new school library.

Katharine M. Christopher, *Secretary*.

INLAND EMPIRE TEACHERS ASSOCIATION—LIBRARY SECTION

Thru accident the last paragraphs of W. W. Foote's report of the April meeting were omitted from the June LIBRARY JOURNAL.

The officers for the coming year are: President, W. W. Foote, librarian, State College of Washington; secretary, Helen Wilkinson, librarian of the Schools of Flathead county, Montana.

MEDICAL LIBRARY ASSOCIATION

The annual meeting of the Medical Library Association has been indefinitely postponed. Reports of the work done during the past year will appear as usual in the *Bulletin* of the association, and every member is urged to keep in touch with the secretary, giving all news items and matters of personal interest.

Medical libraries in the cantonments and base hospitals are being established all over the country, and if the association cannot give them all the necessary up-to-date material some arrangement should be made by which the medical libraries may lend them needed material. This is being done in several sections and the secretary, Miss M. C. Noyes, of Baltimore, would like to know of the methods employed.

Library Schools

NEW YORK STATE LIBRARY SCHOOL

Commencement exercises were held June 14, Mr. Wyer presiding. The address to the graduates was made by Richard R. Bowker. His subject was "Librarianship as a profession." His general comments on the claims of librarians to professional standing were interspersed with many reminiscences of librarians and library theories in the early days of the modern library movement. Dorothy L. Hawkins, president of the class of 1919, made the official presentation of two tea stands and a hot water pot as the class gift to the school. Mr. Bowker also announced his intention of making an additional gift to the school's tea service.

Degrees were conferred by Dr. Thomas E. Finegan on the following members of the class of 1918: Charles M. Baker, Mary Bunce Brewster, Edith M. Buck, Frances Dorrance, N. Mignon Fisher, Nathan R. Levin, Elinor Edna Randall, Mary M. Shaver, Nancy H. Todd, Florence M. Waller.

The seminar reports required in the senior seminar have been on the following subjects: Baker, C. M., County library laws of the United States.

Brewster, Mary B., Introduction to the care and treatment of archives.

Buck, Edith M., Directory of special libraries.

Dorrance, Frances, Collection of county library material.

Fisher, N. Mignon, Best classification scheme for a steel works library.

Harris, Rachel A., Libraries of Germany: a sketch. Howard, Anna, Historical résumé of the development of the theory of book selection.

Levin, Nathan R., Civics department of the Chicago Public Library.

Randall, Elinor E., Notes on Providence libraries.

Santes, Marie M., Relation between the book-trade and libraries.

Shaver, Mary M., Some remarks on manuscripts and libraries.

Tai, T. C., History of Chinese libraries.

Todd, Nancy H., Handling of government documents in a nondepository library.

Van Sant, Clara, County libraries in Washington, Oregon and California.

Waller, Florence, Technical reference organization.

The summer courses this year (including the library institute for high school librarians) have been consolidated into one three weeks' course (June 26-July 17). The instruction will be limited to cataloging, classification and other technical subjects. The number of applicants has been much below normal, the reason given for the decrease being financial stringency, difficulty and expense of travel, and the demands of the many forms of war service.

Six members of the junior class have been appointed to the following positions for the summer months:

Margery Bedinger, assistant in the technology division New York Public Library.

Elisa Jebson, catalog assistant, Harvard College Library.

Martha Ott, assistant, Franklin, Ind., Public Library.

Julie Rummelhoff and Margaret J. Scott, assistants in the reference catalog section, New York Public Library.

Ruth E. Smith, assistant, Smith College Library.

FRANK K. WALTER.

LIBRARY SCHOOL OF THE NEW YORK PUBLIC LIBRARY

New assignments to camp library positions include Mrs. Katharine Maynard, 1913-15, who has gone to Camp Devens, and Louis Fox, who has been taking work in the school for the past year and who has just left for Camp Upton. Clara Larson, 1914-15, is an index and catalog clerk in the U. S. Bureau of Ordnance. Mrs. Helen Wark Grannis, 1915-17, sailed in May to act as a file-clerk for the American Red Cross in France. Henrietta Mackzum, 1915-17, is in charge of the filing section in the Lubrication Department of the U. S. Signal Corps, at Washington. Alice Rupp, 1913-15, is with the Embarkation Division of the U. S. War Department.

Sarah B. Askew, organizer for the New Jersey Public Library Commission, spoke on May 2 on the topic "How the local library may avail itself of the help of the library commission." Kazu Norisugi, inspector-general of the Japanese Department of Education, gave on May 16 an interesting presentation of library conditions in his native country. On May 22 R. R. Bowker discussed the relation of the librarian to his board of trustees. War service has been represented by a talk by W. H. Brett concerning his work in the A. L. A. Dispatch Office at Newport News, and by an illustrated lecture in which T. W. Koch gave his impression of England in war time and told of some of the conditions surrounding censorship and importation.

The annual meeting of the alumni association took place on the evening of Thursday, June 6, and the commencement exercises at 11 a. m. on Friday, June 7. The commencement speaker was Dr. W. N. C. Carlton, librarian of the Newberry Library, Chicago. Dr. Carlton presented in a most helpful way the librarian's opportunity to serve as the champion of liberal learning. Diplomas were awarded to the following:

Florence Behr, San Diego, California.

Laura Marie Jeanne Bertemy, New York City.

Louise Marie Boerlage, Amsterdam, Holland.

Harriett Boswell, Paducah, Kentucky.

Louise Patterson Bull, North Middletown, Kentucky.

Muriel Augusta Crooks, Staten Island, New York City.

Isabel Davidson, Tallahassee, Florida.
 Florence De Leon, Pleasantville, New York.
 Eleanor follitt Duncan, Dublin, Ireland.
 Edith Gantt, North Platte, Nebraska.
 Marjorie Herbert Holmes, Montgomery, Alabama.
 Helen Hamilton Janeway, Media, Pennsylvania.
 Frances Lamb, Cedar Rapids, Iowa.
 Lurene McDonald, Toronto, Canada.
 Emma Louise Pafort, New York City.
 Jeanie Douglas Macpherson Reid, Peace Dale, Rhode Island.
 Ruth Saxton, New York City.
 Marian Shaw, Brooklyn, New York.
 Leonore A. Tafel, Baltimore, Maryland.
 Sophie Ada Udin, New York City.
 Frieda Johanna Yelgerhouse, Erie, Pennsylvania.

The students named below received certificates:

Marie Le Baron Andrews, Parkersburg, West Virginia.
 Margaret Randolph Bonnell, Plainfield, New Jersey.
 Jessie Reeves Bowses, Rolland Park, Maryland.
 Alice Curley Burns, Rockaway Beach, Long Island.
 Alice Mae Dunlap, South Covington, Kentucky.
 Ruth Nicholas Edmonds, Westfield, New Jersey.
 Mary Elizabeth Ferguson, Colby, Kansas.
 Marjorie Fisher, Danbury, Connecticut.
 Bertha Greenebaum, New York City.
 Margaret Brock James, Doylestown, Pennsylvania.
 Cornelia Johnson, Austin, Texas.
 Florence Jackson Lacy, Richmond, Virginia.
 Adelene Jessup Pratt, Asbury Park, New Jersey.
 Ramona Elizabeth Reed, Dubois, Pennsylvania.
 Gertrude Rhodes, Hempstead, New York.
 Mary Jay Schieffelin, New York City.
 Minnie Farnham Sloat, Rahway, New Jersey.
 Mabel Floy Snyder, West Monterey, Pennsylvania.
 Earle Francis Walbridge, Enosburg Falls, Vermont.
 Jessie Elizabeth Wing, North Troy, New York.

Special entrance examinations will be held on Saturday, August 31.

ERNEST J. REECE, *Principal*.

PRATT INSTITUTE SCHOOL OF LIBRARY SCIENCE

The question is often asked as to how much the high price of living has increased the cost of the year's course. Investigation into the expenses of members of the class this year has shown that prices have not advanced very greatly in this neighborhood. One of the students who has kept careful account reports that her necessary expenses for this year, including board, room, laundry, tuition, carfare, supplies, and the spring trip came to \$520. Another girl who had a more expensive room made it for about \$550, not including, of course, amusements or clothes.

In addition to practical work in our own library, the students this year have enjoyed the opportunity of experience in several branches and the traveling library department of the New York Public Library, the Newark, and the Children's Department of School and Erasmus Hall High School of Brooklyn, the De Witt Clinton High School of New York, the Barringer High School of Newark, and the Children's Department of the Queens Borough Public Library. Two of the students also had a bit of independent cataloging in the school library at Lawrence, L. I.

It was decided to hold the annual supper but to put it on a war basis, *sans* caterer, waiters, and other incidentals. The plan made an appeal and 118 acceptances were received, the largest attendance but one.

At the supper were celebrated three anniversaries—the completion of the 25th year of the vice-director's service at Pratt Institute, the 20th anniversary of the class of 1898, and the 10th of 1908. 1898 is remarkable for having 14 of its original 20 members still in active library work—a record matched by no other class down to 1910. The war supper which was planned and carried out by Miss Homans, the secretary of the Library, was acclaimed the most successful commencement celebration ever held by the School.

Commencement was held on Friday, June 14. Dr. George E. Vincent, president of the Rockefeller Foundation, made the address.

The following appointments have been made in the class of 1918:

Kathleen Ainey, assistant, Public Library, Harrisburg, Pa.
 Inez E. Benedict, children's librarian, Eveleth, Minn.
 Ella R. Bradley, first assistant, Homewood branch, Carnegie Library of Pittsburgh.
 Janet E. Bryant, assistant, children's room, Pratt Institute Free Library.
 Hero Calvert, assistant, New York Public Library.
 Marian Cutter, in charge of the children's department and work with schools, Bridgeport, Conn., Public Library.
 Marguerite M. French, assistant, Utica, N. Y., Public Library.
 Alice M. Fuller, catalog department, Yale University.
 Bernice E. Hainer, catalog department, Philadelphia Public Library.
 Louise S. Harris, children's department, New York Public Library.
 Doris C. Holmes, Public Library, Victoria, B. C.
 Mabel B. Swerig, first assistant, reference department, Columbia University.
 Dorothy H. Thompson, head cataloger, Grand Rapids Public Library.
 Carolyn F. Ulrich, head of the circulation department and of branches, Bridgeport Public Library.
 Edith F. Vermeule, field secretary, Maryland Library Commission.
 Ruth E. Wellman, first assistant, extension division, New York Public Library.

JOSEPHINE ADAMS RATHBONE,
Vice-Director.

SIMMONS COLLEGE—SCHOOL OF LIBRARY SCIENCE

Dr. Bostwick talked on "Socializing the St. Louis Public Library" during his recent brief visit to Boston, and later the lantern slides which illustrate the life of that library were shown. D. N. Handy, of the Insurance Library of Boston, also spoke on "The special library and the library school graduate."

The final visit of the year was to our neighbor, the Boston Book Company.

Examinations occupied May 27-June 7, and were followed by the Commencement festivities, which began with Class Day, June 8, and closed with the senior luncheon, June 11.

The following students received the degree of B.S. at commencement, June 10:

Marion Joyce Abbott	Eleanor Temple Horne,
Dorothy Annable	A.M.
Miriam Rankin Apple,	Agnes Frances Judkins,
A.B.	A.B.
Priscilla Bancroft	Katharine Kilbourn, A.B.
Elinor Isabel Bedlow,	Loretta Aurelia Knightly
A.B.	Katharine McNamara, A.B.
Harriet Edith Bosworth	Sarah Watkins Mayo
Inez Bowler, A.B.	Marjorie Stuart Urquhart
Hazel Beatrice Brown,	Newton, A.M.
A.B.	Margaret Bayly Notting-
Alice Elizabeth Burnham,	ham
A.B.	Nell Adelaide Paschal,
Clara Abigail Clark, A.B.	A.B.
Julia Marie Coombs	Grace Edith Patten, A.B.
Katharine Conover Cowles,	Rachel Annette Payson
A.B.	Mildred Powell
Althea Mabelle Currin	Gertrude Harriet Robinson
Dorothy Hendrick Davis,	Marjorie Russell Rock-
A.B.	wood
Hazel May DeRhodes,	Emma Elizabeth Sampson
A.B.	Gladys Farrington Sands
Elizabeth Sargent Downes,	Olive Sawin

Mrs. Wilda (Strong) Peck, a graduate of Western Reserve University Library School, with special courses at Simmons College in sociology and French, is to join the staff next year for full time, divided between instruction and work in the College Library. She will take over Miss Jordan's courses in "Library work with children," for which her experience in the Cleveland Public Library, particularly in the Children's branch has fitted her well. Mrs. Peck previously assisted in one of the reference courses, and is also associated with Dr. Lefavour's course in sociology.

Members of the graduating class have been placed as follows:

Black, Edythe F., Stamford Public Library, Stamford, Conn.
 Clark, Clara A., assistant, Norfolk House Center Library, Boston, Mass.
 Coombs, Julia, children's work, New York Public Library.
 Higgs, Marguerite, librarian, Meredith College Library, Raleigh, N. C.
 Knightly, Loretta, cataloger, New York Public Library.
 McDowell, Ella, cataloger, A.L.A. Camp Library, Camp Devens, Mass.
 Powell, Mildred, index and catalog clerk, U. S. Signal Corps, Washington, D. C.
 Robinson, Gertrude, half-time assistant, Social Service Library, Boston, Mass.
 Sherman, Elizabeth, index and catalog clerk, U. S. Signal Corps, Washington, D. C.

Currin, Althea, children's librarian, Danbury Public Library, Danbury, Conn.

JUNE RICHARDSON DONNELLY, *Director.*

CARNEGIE LIBRARY OF ATLANTA—LIBRARY SCHOOL

The school had the opportunity of hearing Dr. Frank P. Hill on May 14 when he was in the city on a visit to the Camp Gordon Library. Dr. Hill gave a sketch of the war work of the A. L. A. as he had just seen it in his visits to the camp libraries.

The graduating exercises of the school were held on June 1 in the class room. Prof. Azariah Root of Oberlin College, Oberlin, Ohio, gave the graduation address, choosing as his subject, "The value of a library in a democracy." Certificates were delivered by William L. Percy, president of the board of trustees of the library.

Prof. Root spoke to the class on May 31 on "The use of a college or school library by the community."

At the annual meeting of the Graduates' Association on May 31, it was voted that the association use the funds in the treasury to purchase a victrola for one of the wards at the Fort McPherson hospital as a contribution to war relief work by the association.

Appointments have been made as follows: Serena Bailey, assistant, Public Library, Greensboro, N. C.

Helen Brackett, assistant, Carnegie Library of Atlanta.

Clara Crawford, librarian, State Normal School for Women, Fredericksburg, Va.

Annie Maud Dawson, assistant, University of Georgia Library, Athens.

Irene Holloway, assistant, Carnegie Library of Atlanta.

Genevieve White, assistant, catalogue division, Library of Congress.

Carrie Williams, assistant, Carnegie Library of Atlanta.

TOMMIE DORA BARKER, *Director.*

WESTERN RESERVE LIBRARY SCHOOL

The series of lectures by Mrs. Julia S. Harron of the Cleveland Public Library on "Translations of foreign literature" was supplemented this year by three lectures by Clara L. Myers, associate professor of English, College for Women, W. R. U., on "Modern drama."

A delightful afternoon was spent by the students at President Thwing's home, May 17, where he talked informally about his books of biography and gave personal reminiscences of some of the eminent men whose biographies he discussed.

The annual visit to the Oberlin College Library, May 20, was as always, a very pleasant and profitable trip and the class especially enjoyed seeing Prof. Root in his own interesting library.

The entrance examinations for the class of 1919 were given May 24 and 25. The number of candidates was not so large as that of last year.

Commencement week began with the class luncheon on Monday, June 10. The Founders' Day program, Tuesday afternoon, June 11, was presided over by President Thwing, the address was given by W. H. Brett, dean of the school, on "The great war and the public library"; and Sue Austin read some of the best of the war poems.

During commencement week class honors were announced by the director as follows: First honor, Emily R. Cornell, B.A.; second honor, Adaline Bernstein; third honor, shared by Joyce G. Bisbee, A.B. and Gertrude E. Barth. At the regular university commencement, Thursday, June 13, the address was made by Dr. Henry S. Pritchett. Certificates for the completion of the Library School course were granted to 25 graduates. All are placed in positions for next year or have arranged for further study; the requests that have come to the school for recommendations have far exceeded the supply and graduates are placed at much better salaries than heretofore. The alumni luncheon to the graduating class followed immediately after the commencement exercises, with the class, the trustees of Western Reserve University, and Dr. Pritchett, the commencement orator, as guests.

The School Annual, which has for several years been a pleasing accomplishment for each class, was suspended this year, because of war conditions.

ALICE S. TYLER, *Director*.

CARNEGIE LIBRARY SCHOOL

An examination for entrance to the apprentice class was held Saturday, June 8. Four candidates were accepted. A second examination will be held Sept. 14. The class work will begin Oct. 1.

Thomas L. Montgomery, state librarian, Harrisburg, Pa., spoke to the students on "Library legislation" May 11.

A number of students in the 1917-18 class have accepted positions for the coming year in the following libraries:

Dorothy Beeken, New York Public Library.
Margaret R. Crabe, Carnegie Library of Pittsburgh.
Marguerite Fahrni, Portland Library Association.
Helen K. Fletcher, Detroit Public Library.

Florence Gould, Tacoma Public Library.
Leah Helen Hughes, Carnegie Library of Pittsburgh.
Helen L. Jackson, Detroit Public Library.
Anna Ruth Jamison, Carnegie Library of Pittsburgh.
Mrs. Esther Porter-Bliss, Carnegie Library of Pittsburgh.

Hazel Knobloch, Carnegie Library of Pittsburgh.
Helen K. Carson, Carnegie Library of Pittsburgh.
Julia Starkey, Public Library, Eau Claire, Wis.
Ruth Van Kirk, Carnegie Library of Pittsburgh.
Margaret G. Weatherup, Carnegie Library of Pittsburgh.

Ellen Yoder, East Chicago Public Library.
Susanna Young, Carnegie Library of Pittsburgh.
Ebba E. Zetterberg, Carnegie Library of Pittsburgh.

Miss Bogle, as president of the Association of American Library Schools attended the "Win the war for permanent peace" conference held May 16-18 in Philadelphia under The message of the conference was an inspiring one of patriotic determination and high endeavor.

Ernestine Rose, assistant principal of the Carnegie Library School, has gone to Washington to assume the direction of the library service rendered in the base hospitals in the camps and elsewhere, relieving Caroline Webster, who has returned to her work in the State Library at Albany.

SARAH C. N. BOGLE, *Principal*.

ST. LOUIS LIBRARY SCHOOL

Recent lecturers who have addressed the students are as follows: Ernest R. Kroeger (a brother of Alice B. Kroeger) director of the Kroeger School of Music, "The literature of music"; E. H. Wuerpel, director, Washington University School of Fine Arts, two lectures on "The psychology of design" and "The psychology of the poster"; Mary C. McCulloch, kindergarten supervisor, "The story hour in the kindergarten"; Clark McAdams of the St. Louis *Post-Dispatch*, "Journalism"; Dr. C. S. Boucher, assistant professor of history, Washington University, "The literature of American history"; Thekla Bernays, "Italian drama."

The spring schedule included visits to the Mercantile Library, the libraries of Washington University, Missouri Historical Association, Barnes Hospital, Washington University Medical School, and Missouri Botanical Garden.

Walter B. Skinner gave the class a talk on practical printing and conducted the class thru the printing plant of Buxton and Skinner.

A visit of inspection was also made to the Library Bureau office where the students had the opportunity of seeing library equipment and modern filing systems.

All of the students are under appointment, either permanent or temporary.

UNIVERSITY OF WASHINGTON LIBRARY
SCHOOL

Tuesday evening, May 21, the Alumni Association of the University of Washington Library School held its annual dinner at the University Commons. The members of the present graduating class, the guests of honor, were welcomed into the association at this time. Mildred Pope, librarian of the Queen Anne High School, spoke on the opportunities of library school alumni associations. Mr. Henry, director of the school, spoke on the prospects for graduates of the school, and urged that they go to eastern library schools for advanced study.

The following officers were elected for the new year: President, Mabel Ashley, 1914; vice-president, Mary Gibb, 1917; secretary, Lillian Anderson, 1916; treasurer, Eleanor Owen, 1918; editor, Margaret Schumacher, 1917.

Members of the class of 1918 have been appointed to the following positions:

Edith Cleaves, reference department, Seattle Public Library.
Louise Coleman, University branch, Seattle Public Library.
Helen Corbitt, Ballard branch, Seattle Public Library.
Elizabeth Henry, Yesler branch, Seattle Public Library.
Doris Hoyt, circulation department, Seattle Public Library.
Hilda Plimmer, branch department, Seattle Public Library.
Mary Arney, circulation department, Tacoma Public Library.
Jeannette Hitchcock, circulation department, Tacoma Public Library.
Nell Unger, librarian, Hood River County Library, Hood River, Ore.
Pauline Giudici, assistant librarian, Medford Public Library, Medford, Ore.
Esther Walsworth, assistant librarian, North Yakima Public Library, North Yakima, Wash.
Margaret Martin, secretary to the librarian, University of Washington Library.

W. E. HENRY, *Director.*

CHAUTAUQUA SCHOOL FOR LIBRARIANS

The school begins this year under its new plan of providing a full year's course on the instalment plan, each summer course giving six weeks work. Students coming four summers in succession will complete a course equal to one year in any library school in the country. There will be two groups of students this summer, three in 1919, four in 1920 and years following.

The regular technical subjects will be taken up systematically, and practical work will be given in the Chautauqua and neighboring libraries. Visits are made to the libraries in Buffalo, Niagara Falls, Jamestown, and Westfield, and to the Art Metal Construction Co. at Jamestown.

Besides the library courses the students will have opportunity to hear the many dis-

tinguished speakers who lecture at Chautauqua each season.

CALIFORNIA STATE LIBRARY SCHOOL

Beginning on the first of May, members of the class have visited the Yolo County Free Library at Woodland, a short distance from Sacramento. The girls made the trip two at a time, spending the full day at the library. Each student was supplied with a sheet of questions to be answered, covering in detail the operation of the county library.

During the month several outside lecturers have visited the school. On May 21, Robert E. Cowan of San Francisco spoke to the class on California bibliography. On May 24, Dr. Aurelia H. Reinhardt, president of Mills College, gave a most inspiring talk on what librarians can do to help win the war. On May 31, Dr. Margaret S. McNaught, commissioner of elementary schools, spoke on the possibilities of library work in connection with the rural schools.

MILTON J. FERGUSON.

LOS ANGELES LIBRARY TRAINING SCHOOL

The following bibliographies are being prepared for graduation. Most of the subjects have been chosen in answer to a request from some department of the library.

Cameron, Marguerite. Library work with children.
Dobbings, Dorothy. Mystery stories.
Emmons, Louise. Bookplates.
Graham, Geraldine. Mystery stories.
Gregory, Marion. Interior decoration.
Hout, Frank. Poems and novels of the war.
McDonald, Helen. Chinese and Japanese immigration to California.
McLaughlin, Gertrude. Plays for amateurs.
Miller, Eliza. Short stories for high school students.
Morton, Gabrielle. Psycho-analysis.
Park, Isabelle. Russian novels in English translation.
Railsback, Lucia. The little theater movement.
Schaer, Mildred. California artists.
Williams, Elizabeth. Red Cross.

Genevieve Kelly, Gladys Knowlton, Sidney McClees, Edna Osgood and Geraldine Shipley will present theses on "The library as a social factor in the community" in lieu of original bibliographies.

The faculty and students of the Library School formed one section of the library delegation in the great Red Cross parade May 18. Forty thousand persons, representing municipal, educational and social organizations, marched thru the business district of Los Angeles in appropriate costume with bands and banners.

On May 28 the alumni gave a tea in the school room in honor of Mrs. Brewitt, who has accepted a position as librarian of the Alhambra Public Library. Representatives of the five classes she has taught were present

to assure her of their appreciation of the wonderful work she has done. Under her direction the school has developed from a training class to a library school and the inspiration of her professional ideals has left a marked impression on the Los Angeles library as well as on the other libraries where the graduates of the school are at work. As a tangible evidence of their regard, Mrs. Brewitt was given a mahogany tea-wagon.

Appointments from the class of 1918 have been made as follows:

Geraldine Graham, assistant in charge of work with schools in the Colusa County Library.
 Marion Gregory, librarian of the Sierra Madre Public Library.
 Frank Hout, assistant in the order department of the Oregon State Library.
 Sidney Anne McClees, children's librarian at Vernon branch of the Los Angeles Public Library.
 Elza Miller, assistant in the branches headquarters of the Los Angeles Public Library.
 Gabrielle Morton, temporary position as assistant in the Santa Barbara Public Library.
 Isabelle Park, in charge of the work with schools in the Stanislaus County Library.
 Geraldine Shipley, assistant in the Long Beach Public Library.
 Elizabeth Williams, assistant in the order department of the Los Angeles Public Library.

MARION L. HORTON, *Instructor.*

Review

POWER, RALPH L. Boston's special libraries. New York City: Prentice-Hall, Inc., 1917. 138 p. D. \$1.

It is quite true that the value of a book cannot be judged by its size. This small volume contains a mine of information for the special librarian, business man and research worker.

One of its best features is its simplicity. The author has accomplished his aim to state facts plainly, and to give only facts of real importance to those who have charge of or who contemplate establishing a special library. He describes the methods adopted to solve such common problems as pamphlet filing, duplicate card indexes, binding and routing of periodicals, discusses the question whether the library shall be centralized or made departmental with a general and departmental catalog, etc., and tells the policy adopted towards non-members of the staff who are interested in the library's speciality.

Anyone interested in the controversy regarding the value of the special library to a business house and the duty of the public library to meet the needs of the business man will find the book suggestive of arguments for whichever side of the question he favors. These arguments will be based on the story of how each special library came to be and

a tabulation of some of the facts given as to the number of books and pamphlets in each library.

Mr. Power does not claim to have described all the special libraries of Boston. He has, however, told about a wide variety, and the 66 included in the book are the most important libraries of each class. Location, resources, terms of use by the public, and the name of the librarian, are among the points recorded for each, and in many cases detailed description of classification schemes, methods of filing, or special functions of the library are also given.

The book is carefully indexed, and a suggestive bibliography of several pages is appended for the convenience of business librarians.

JESSIE E. DORRANCE.

Librarians

ABBOT, Mabel, Library School of the New York Public Library 1911-14, who was until May 15 first assistant in the catalog department of the Minneapolis Public Library, has taken a similar position and is also acting as a half-time reference assistant in the Tacoma Public Library.

ABBOTT, Pearl, assistant in the circulation department of the Tacoma Public Library, resigned May 18 to accept a position in the civil service at Washington, D. C.

ADAMS, Louise G., Western Reserve 1917, has been appointed to a branch library position in the Cincinnati Public Library.

ALLISON, Gladys B., New York State Library School 1913-14, has resigned her position as librarian of the children's department, Houston (Tex.) Public Library, to become librarian of the Southwest Texas State Normal School at San Marcos.

AMES, Harriet, has received an appointment as assistant librarian at the Medical Library of the Rockefeller Institute of Medical Research in New York. At the present time she is librarian at the Connecticut State Normal School at Danbury, Conn.

ANDERSON, Mrs. Rachel Rhoades, Pratt 1911, has been made service directory librarian of the Community Clearing House in New York.

ARNEY, Mary, of the University of Washington Library School, 1918, has been ap-

pointed substitute in the circulation department in the Tacoma Public Library, beginning, June 1.

AYER, Thomas P., who was formerly employed in the Library of Congress and more recently has been assistant librarian for the Federal Trade Commission in Washington, has been made librarian, succeeding C. C. Houghton.

BEARD, Ruth, California State Library School, 1914, and assistant in the California State Library and in the Sutro Branch of the California State Library since 1915, was married May 19 to Roy Fremont McDowell of San Francisco. Mr. McDowell has enlisted in the U. S. Navy and is at present stationed at Mare Island. Mrs. McDowell has not as yet severed her connection with the Sutro branch.

BLANCHARD, Alice A., Carnegie 1907, has resigned as head of the children's work in Newark, N. J. Her present address is Montpelier, Vt.

BURGESS, Alice P., Carnegie 1915, has resigned her position in the Detroit Public Library. Miss Burgess' temporary address is Royal Oak, Mich.

BREWITT, Mrs. Theodora Root, Wisconsin 1907-08, principal of the Library School of the Los Angeles Public Library, resigned that position on June 1 to become librarian of the Alhambra (Cal.) Public Library. In her five years at Los Angeles, to which she came in 1913, from the Normal School Library at Lewiston, Idaho, Mrs. Brewitt has carried thru an important constructive work, in building from the training class of the Los Angeles Public Library—one of the pioneers in its field in the United States—a well organized, carefully balanced one-year library school course, standardized according to accepted principles and methods. To its development she brought thorough technical equipment, high ideals, and a quiet and devoted persistence, so unobtrusive that the full measure of her work will not be realized until time has given permanence to the foundations she established. In her new field—the administration of one of the most attractive smaller California libraries—her former associates know that her service will not be bounded by a single community, but will be, as heretofore, an influence for constructive development in the California library world.

BROWN, Margaret W., who was for several years librarian of the State Travelling Li-

brary of the Iowa Library Commission, has become head of the county department of Santa Barbara (Calif.) Public Library.

BROWN, Ruth, New York State Library School, 1916-17, has joined the staff of catalogers in the Office of the Superintendent of Documents, Washington, D. C. For the past year Miss Brown has been engaged in war library work in connection with the Food Administration.

BUCHER, Mrs. Ethel Sherwood, B.L.S., New York State Library School 1910, has joined the staff of the New York Public Library as information desk assistant.

CHAPPELL, Loretta, Atlanta 1916, has been appointed assistant in the Carnegie Library, Columbus, Ga.

CHARLES, Ruth E., Western Reserve 1910, has been appointed reference librarian of the Public Library, Mt. Vernon, N. Y.

CLAFLIN, Helen M., B.L.S., New York State Library School 1915, has resigned the librarianship of the Attleborough (Mass.) Public Library to become head of the Catalog department of the Brookline (Mass.) Public Library.

CLEMENT, Ina, who has been substituting as cataloger in the Municipal Reference Library in New York city, has received a permanent appointment to the position. Miss Clement was previously in the libraries of the American Society of Civil Engineers and the American Bankers' Association.

CLIZBEE, Azalea, Library School of the New York Public Library 1912-14, has been appointed editor of the Readers' Guide Supplement for the H. W. Wilson Company.

COBB, Lucille, Atlanta, 1914, has resigned her position in the Ordnance Department at Washington, D. C.

COLDEWAY, Anna, who has been employed at the Louisville Public Library for the past six years, has tendered her resignation, and it has been accepted. She has taken a position with the Kentucky Title Savings Bank.

CRAINE, Mrs. Mura M., Western Reserve 1916, has returned to the Cleveland Public Library as acting first assistant at the Miles Park branch.

CUMMINS, Catherine Ruth, Simmons 1912, was married May 29 to Berkeley Wheeler, and now lives on Elm Street, Concord, Mass.

CUSHING, Helen G., New York State Library School 1917-18, has been appointed assistant in the New York State Library.

DIXON, Vera M., of the Iowa State College Library, is in Washington assisting in the selection of technical books for camp libraries.

EDMONSON, Mattie Bibb, Atlanta 1906, is acting as assistant in the Public Library in Montgomery, Ala.

ELDRIDGE, Bessie L., New York State Library School 1917-18, has been engaged as first assistant in the State Normal School Library at Geneseo, N. Y.

ENGLISH, Gladys, Western Reserve 1917, enters upon her duties July 1 as reference librarian in the Public Library, Fresno, Calif.

FINNEY, Florence G., Pratt 1917, formerly reference librarian of the Reynolds Library, Rochester, N. Y., has been made assistant in the reference department of the Carnegie Library of Pittsburgh.

GATES, Alice J., compiler of the Catalogue of Technical Periodicals of New York City, and formerly assistant librarian of the Engineering Societies Library, is now the assistant librarian of the Bankers Trust Company.

GIBB, Mary, Univ. of Washington 1917, has been appointed an index and catalog clerk in the Ordnance Department at Washington, D. C.

GODDARD, Alice, Carnegie 1903, has been granted leave of absence by her board of directors (Perth Amboy, N. J.) to do reconstruction work in France.

GOULD, Florence, Carnegie 1918, has been appointed in charge of the children's room at the Main building of the Tacoma Public Library, beginning Sept. 1.

HARRINGTON, Marjorie A., New York State Library School 1917-18, has been appointed general assistant in the New Haven Public Library.

HAWKINS, Dorothy L., New York State Library School, 1918, has returned to the staff of the Wilmington Institute Free Library.

HICKIN, Eleanor, cataloger at the Public Library in Grand Rapids, Mich., has resigned to take a similar position in Oberlin College Library in Oberlin, Ohio.

HINTON, Fanny, Atlanta 1917, has been appointed head of the reference department of the Carnegie Library of Atlanta.

HITCHCOCK, Jeanette, graduate of Leland Stanford University and the Library School of the University of Washington, 1918, has been appointed assistant in the circulation department of the Tacoma Public Library, beginning June 1.

HOUGHTON, C. C., who has been librarian for the Federal Trade Commission in Washington, has been relieved of his duties as librarian to give all his time to certain executive duties which will assist the chief economist. Among other duties he will keep track of outside developments which may concern the operations of the economic division and keep in touch with the several investigations in progress, keeping approximate estimates of their current costs. He will also be expected to obtain data for the economic division and keep its files, besides maintaining efficiency records, etc.

HUDSON, Abbie, has been appointed as assistant cataloger at the University of Missouri. She has been engaged three years as a student helper, receiving her degree from the university this year.

JAMESON, Ethel, who was erroneously reported last month as having resigned from the New York Public Library to do canteen work in France with the Y. M. C. A., has been given leave of absence from the science division and left June 26. She has gone to Paris to work for a time in the Red Cross offices there, with the expectation of going eventually into reconstruction work in the field.

JENKS, Lorette, Pratt 1913, recently of the Chicago Public Library, has been appointed to the reference catalog division of the New York Public Library.

JONES, Margaret, Atlanta 1916, has taken a position of cataloger in the Virginia State Library, Richmond.

KIMBALL, Flor-Etta, Pratt 1914, has resigned from the Carnegie Library at Pittsburgh to take a position in the Military Intelligence Bureau in New York.

LEVIN, Nathan R., B.L.S., New York State Library School, 1918, has returned to the staff of the Chicago Public Library.

LEWIS, Helen B., has resigned from the Public Library of Council Bluffs, Ia., to take a position in the Cleveland Public Library.

LILL, Mrs. E. W., who has been in Mexico City for some time, has resigned as cataloger

at the Municipal Reference Library in New York city.

LINDHOLM, Marie F., librarian of the Public Service Commission, First District, New York City, died Mar. 16.

LUCHT, Ida C., Western Reserve 1916, has returned to the Cleveland Public Library as acting first assistant at Sterling branch.

MCCARTHUR, Muriel A., Western Reserve 1914, has resigned from her position in the Buffalo Public Library to assist in the work of the A. L. A. dispatch office in New York under L. J. Bailey.

MCCAUGHTRY, Ruth, of the Iowa State University Library, has been engaged as assistant cataloger at the University of Missouri.

MCINTOSH, Rosamond, Pratt 1914, of the Carnegie Library of Pittsburgh, has taken a position in the New York Dispatch Office of the Library War Service.

MCKELVY, Esther A., Pratt 1915, formerly assistant at the Normal School Library of Tempe, Arizona, has been appointed assistant teacher of English in the Commercial High School of Brooklyn.

MCKINSTRY, Ruth E., Pratt 1917, has been transferred from the War Service headquarters to the New York Dispatch Office.

MARSHALL, Mary K., Western Reserve 1914, has recently entered upon her duties as head cataloger of the Adelbert College Library, Western Reserve University.

MARTIN, Helen, children's librarian of the Union Square branch of the Somerville (Mass.) Public Library, has resigned to accept a position as head of the children's department of the Public Library of East Cleveland, Ohio.

MAURICE, Nathalie A., Pratt 1906, has been transferred from the inspection division of the Ordnance Department in Washington to the New York district office of the Ordnance Department.

MEREDITH, Roberta, University of Washington, 1917, has received appointment as index and catalog clerk in the Ordnance Department at Washington, D. C.

MULLEN, Mary, Atlanta 1910, has resigned as assistant in the State Normal School, Greensboro, N. C., to take the position of as-

sistant in the Alabama State Department of Archives and History, Montgomery.

PAGE, Mildred, Simmons 1914, has been appointed librarian in the Danbury (Conn.) Normal School.

PALMER, Mary Bell, Atlanta 1909, has resigned as librarian of the Carnegie Library Commission in Charlotte temporarily. In September, Miss Palmer joins the faculty of the Atlanta Library School as instructor.

PEEPLS, Grace Angier, Atlanta 1914, is substituting at the Carnegie Library of Atlanta.

PFIRMAN, Mrs. Ruth Dickinson, Pratt 1917, has been made assistant librarian of the Library of the U. S. Department of Agriculture.

PFLUGER, Benno, assistant librarian at Cooper Union, in New York City, will lose his status as a citizen of the United States if a suit in equity to cancel his certificate of citizenship is successful. Mr. Pfluger, who was born in Germany, was naturalized as a citizen in the New York State Supreme Court in May, 1912. It is alleged that he swore falsely, and did not in fact renounce allegiance to the German Emperor. The Government complaint filed June 4 quotes the following from letters alleged to have been written by him: "Wait only for good news. Just patience and perseverance—that is the secret. I am so glad that the Argentine kept firm in the late crisis. Our hour comes soon. Have patience until our field-gray at last have put an end to this."

PIDGEON, Marie K., B.L.S. New York State Library School 1916, resigned her position as assistant in the Legislative Reference section of the New York State Library to join the indexing and cataloging force in the office of the Quartermaster General.

PIERCE, Annie, Atlanta 1912, has been appointed librarian of the Carnegie Library of Charlotte, N. C.

POWER, Ralph L., librarian of the College of Business Administration at Boston University and editor of *Special Libraries*, has enlisted in the Regular Army and has gone to the headquarters of the American Expeditionary Forces abroad to do statistical work.

PRALL, Beatrice, B.L.S. Illinois 1916, has been chosen to succeed Dorothy D. Lyon as

librarian of the Little Rock (Ark.) Public Library.

PULSIFER, Helen E., of the Norfolk House Center Library, Roxbury, Mass., was appointed to the staff of the Somerville Public Library, May 5.

RANDALL, Elinor E., B.L.S., New York State Library School 1918, has been appointed assistant in the central lending department of the Carnegie Library of Pittsburgh.

REED, Lulu, Library School of the New York Public Library 1915-16, was married at Paducah, Ky., on Feb. 24, 1918, to Fain W. King. Mr. and Mrs. King will reside for the present in Washington, Mr. King being stationed there with the Quartermaster's Department of the United States Army.

RICE, Paul North, who left the New York Public Library last fall to enter the Quartermasters Corps, was in Florida all winter, as an instructor at Camp Johnston. Following his promotion as sergeant he was put at the head of a newly organized school for water transportation, and has recently been selected to organize a school covering all modes of transportation at Camp Meigs, in Washington.

RODGERS, Alice I., of the St. Louis Public Library Training School, has been engaged as assistant in charge of the Agricultural Library of the University of Missouri.

RUPP, Julia, for seven and a half years librarian of the Oshkosh (Wis.) Public Library, has tendered her resignation, to become effective Sept. 1.

SCHABACKER, Muriel J., Pratt 1917, has gone to the Ohio State University Library as cataloger.

SCHUMMERS, Gladys E., Pratt 1915, was married March 30 to Sergeant John G. Vonhold of the 399th Heavy Field Artillery. Mrs. Vonhold will continue in her position as librarian of the Fair Haven branch of the New Haven Public Library for the duration of the war.

SCOTT, Margaret J., New York State Library School, 1917-18, has been appointed cataloger in Haverford College Library. She will begin her duties in September.

SEELEY, Lillian R., for the past two years an assistant in the library at Stockbridge, Mass., died at her home in that town May 17.

SHAVER, Mary M., B.L.S., New York State Library School, 1918, is assisting Miss Downey in the Chautauqua Summer Library School. In the fall she will resume her work in Vassar College Library.

SMALLEY, Marie, Simmons 1912, is now an index and catalog clerk in the Bureau of War Risk Insurance, Washington, D. C.

SMITH, Emily Bird, Western Reserve Library School, has been appointed as assistant cataloger for special work at the University of Missouri.

SMITH, Harriett, of the Tacoma Public Library, resigned May 15 to be married in June to Lieut. Frank S. Buckley.

SMITH, May, Atlanta 1914, was married on March 30, 1918, to Albert A. Rayle, second lieutenant, Medical Corps.

SNYDER, Mary B., Library School of the New York Public Library 1912-13, (Drexel 1902) has left the library of Henry Disston and Sons, Inc., Philadelphia, to organize the library of E. F. Houghton and Company, in the same city.

SPENCER, Mrs. Mary, state librarian in Michigan, has been appointed librarian for the Michigan organization of the Women's Council of National Defense. She has also been made an honorary life member of the Inside Club, of Jackson prison, of the Pathfinders' Club of America, an organization to help prisoners regardless of nationality, color, tongue or creed. She has arranged to supply prisoners in Jackson with pictures to be hung in their quarters and with traveling libraries.

STEFFENS, Laura, on the staff of the California State Library since 1902, and librarian of the Sutro branch of the California State Library in San Francisco, since it was first opened on Jan. 2, 1917, was married on April 27 to Dr. Allen H. Suggett, Orthodontist of San Francisco. Mrs. Suggett plans to remain in library work.

STOKELY, Hattie, Western Reserve 1913, has entered upon her duties in one of the branches of the New York Public Library.

STULL, Maud I., Library School of the New York Public Library 1915-16 (Drexel 1914), who has been an assistant in the Extension Division of the New York Public Library, has accepted a position as librarian for the World Outlook Publishing Co., New York.

SUBERS, Mildred, Carnegie 1914, was married June 12 to Henry Havelock Simpson. Mr. and Mrs. Simpson will be at home after September 1 at 19 Mowry St., Chester, Pa.

SULLIVAN, Lillian, Carnegie 1916, was married June 4 to Dr. Harry Nevin Malone.

TAYLOR, Clara Angell, Western Reserve 1915, is in charge of apprentice training in the Public Library, Dallas, Texas, while her husband is attending the Aviation School there.

TEUSCHER, Lorna J., St. Louis 1917, has been appointed librarian of the Public Library at El Reno, Okla.

THAYER, Gordon W., Western Reserve 1912, has entered military service and is now at Camp Gordon, Ga.

THROOP, Dr. George R., Collier professor of Greek in Washington University, has been appointed assistant librarian of the St. Louis Public Library. Prof. Throop is a native of Tennessee. He graduated at De Pauw University, Greencastle, Ind., in 1901 and received the degree of A. M. there in 1903 and that of Pd.D. at Cornell University in 1905. Besides Washington University, he has held teaching positions in his *alma mater* at Cornell University, and at the Illinois College, Jacksonville, Ill. Dr. Throop has written and published to a considerable extent in the subjects in which he has been interested, mostly in philological journals and in "Washington University Studies." He is a member of various learned societies and has for some time been secretary of the St. Louis Society of the Archaeological Institute of America. Dr. Throop has taken special interest in building up the Library of Washington University and has been of great service to the university in this field. He has recently done administrative work for the Red Cross, and in this capacity he has shown himself an unusually capable executive.

TORRENCE, Mrs. Crown, Atlanta 1917, has been appointed children's librarian of the Columbus branch, New York Public Library.

UPPER, Gezina Thomas, University of Washington 1916, has accepted a position as assistant at the Yesler branch of the Seattle Public Library.

VAIL, Robert W. G., Library School of the New York Public Library 1914-16, was married on June 1 to Inez M. Rogers at Elmhurst, L. I.

WALKER, Catherine, Atlanta 1913, is acting as assistant in the Camp Library at Camp Gordon.

WALLER, Florence M., New York State Library School 1918, will go to the Seattle Public Library in June to take charge of the industrial arts department.

WILBY, Mrs. Stephen W., who has been taking a course in library work at Columbia University, has been appointed a librarian of the new Wilby High School in Waterbury, Conn., named in honor of her husband, Stephen W. Wilby.

WILLIAMS, Carrie L., branch librarian of the East Somerville branch of the Public Library, has been granted a leave of absence for the duration of the war to take charge of the Base Hospital at Camp Devens, Ayer, Mass.

WIRTSCHAFTER, Edith, Western Reserve 1917, has been appointed to the foreign division of the Cleveland Public Library.

YARMOLINSKY, Abraham, has been appointed chief of the Slavonic division of the New York Public Library, and assumed his duties on June 15, taking the place of W. M. Petrovitch, who resigned to join the Serbian army. Mr. Yarmolinsky is an author and a translator of books from Russian into English. He was born in Russia, was graduated from the University of Neuchâtel, Switzerland, and from the College of the City of New York, receiving the degree of A. B., and is at present an instructor in Russian in the College of the City of New York and a candidate for the degree of Ph.D. at Columbia University.

YATES, Marjorie (Mrs. I. Clyde Cornog), Simmons 1916, is doing filing and general office work with the Symington Machine Company, Rochester, N. Y.

YEARGAIN, Harriet, St. Louis, 1913, has resigned from the catalog department of the St. Louis Public Library to accept a position in the Quartermaster General's Office, Washington, D. C.

YOUNG, Frances, Library School of the New York Public Library 1913-15, has left her position with the Montgomery (Ala.) Library Association, and has been appointed librarian for the National Organization of Public Health Nursing, New York.

THE LIBRARY WORLD

New England

NEW HAMPSHIRE

Manchester. A "silver thimble" fund has been started at the City Library for the collection of old jewelry, spoons, or coins of silver or gold which can be sold or melted and turned into money. The proceeds will go to the local chapter of the Red Cross.

Sunapee. Martha H. Abbot, lately deceased, left in her will \$500 to the Methodist church, three-fifths of the remainder of her estate for a Public Library in memory of her husband, and the remainder of the estate to Colby academy. It is estimated that the town will receive upwards of \$12,000 for the library.

MASSACHUSETTS

Abington. By the will of Marietta W. Dyer, filed in Plymouth in May, the sum of \$80,000 is left for a library here, to be known as the Dyer Memorial Library and to be erected on land owned by the testatrix on the north side of Center avenue. Dr. Gilman Osgood of Rockland and William Coughlan of Abington are named as trustees. On the completion of the library these two trustees are to elect a third, and the board is to be self-perpetuating. It is directed that the trustees shall install historical and biographical works in the library, with as complete a set of Massachusetts histories as may be obtainable, with general histories of the United States and the world, and that these are to be accessible to the public. Leave is also given to the trustees to use any paintings and pictures, bric-a-brac and other household effects which they may deem fitting for the embellishment of the library. The residue of the estate is left in the care of the trustees as the Dyer fund, the income of which is to be used for books, manuscripts, maps, pictures and other things for the library, and for the collection of books written or compiled by persons born in or residents of Plymouth county. It is also provided that in the event of the organization of an Abington Historical Society it may meet in the library, and the trustees are directed to provide cabinets and cases for its collections.

Waltham. The Public Library's collection of material about Waltham is steadily growing. Five years ago there were only about a dozen Waltham items listed in the

card catalog at the library, where now there are about six hundred.

Webster. One of the matters which came up at the town meeting in May was the acceptance of the bequest by Mrs. Augusta E. Corbin of \$75,000 for a free public library, \$25,000 for its maintenance, and \$25,000 whose income should be used for the purchase of books.

Middle Atlantic

NEW YORK

Binghamton. The Binghamton Public Library acted as host to the Broome Home Economics Association for Conservation on Saturday, June 1. The meeting was held under the auspices of a local committee and representatives from each district in the county were invited. The business sessions were held in the assembly room and the staff rest room was utilized for the buffet lunch. Guests brought basket lunches to which the committee contributed coffee and ice cream. The meeting resulted in the enrollment of 85 members.

New York City. The Mayor's Committee of Women on National Defense has established an outdoor canteen under the trees at the southeast corner of the Public Library at Fifth avenue and Fortieth street, for the use of soldiers, sailors and nurses. The men can sit there and watch the kaleidoscopic pageantry of Fifth avenue pass before their eyes. Gay blue cornflowers and yellow daisies as well as potted plants, donated by local florists, adorn the canteen, and the railings facing on Fifth avenue and Fortieth street are bright with window boxes donated by Bloomingdale's. The chairs and tables and the flower pots on every table are painted blue. The canteen, which is the first of a series of five, has seats for fifty and hundreds of boys will be served every day.

Newburgh. In the office of the Newburgh Shipyards, Inc., there has been installed a library of about 100 volumes, open to shipyard employees during the hours of 8 a. m. to 5 p. m. inclusive. Every employee can borrow the library books, but not more than three at one time. These must be returned within one week, but a renewal can usually be made for another week, upon application. There is no trained librarian in charge, but

one of the employes looks after the books, each man respecting the rules and regulations as laid down for his guidance.

Salamanca. The common council has adopted a resolution to appropriate \$1750 annually to meet the cost of maintenance of a library which the Carnegie Corporation, on the strength of such appropriation, will erect at an expenditure of \$17,500. The acceptance of the offer must be made by the 3d of next February and the building must be completed before February, 1921. The Federation of Women's Clubs of this city provides the site.

NEW JERSEY

Newark. The Beaver street branch of the Public Library is henceforth to be used almost exclusively for business purposes. All books of fiction have been returned to the main library. A special collection of late books on the war, which will be changed every few weeks, will be added to the business branch. Other branches remain closed, for want of funds, but the work with schools is being maintained.

PENNSYLVANIA

Philadelphia. For the second time within a year the Supreme Court has halted work on the Public Library building, for which foundation excavations have been almost completed on the Parkway at Nineteenth street. The issue decided by the state's highest tribunal in an opinion made public June 3 by Justice Frazier, declares in a clear-cut manner that the city has no right to stipulate whether stone for public buildings can be cut within or without the city limits. The Supreme Court suggests that any stipulation as to where the stone shall be cut is in violation of the Constitution. This decision knocks out the contract with the city held by John Gill & Sons of Cleveland, for \$5,535,000. The history of the case is summed up in the *Philadelphia Record*. It appears that the original contract was executed with the George A. Fuller Company for \$2,219,000, and was based upon the stone being prepared and cut at the quarry in Indiana. John F. Flynn, a taxpayer, attacked the contract, on the grounds that to cut the stone outside of the city violated the ordinances of 1894 and 1895 requiring the preparation of all stone for municipal buildings, "within the city limits." The issue was not decided on the cut-stone question, because Director Datesman had changed the copy of the specifications sent to prospective bidders to get alternate bids, to cut the stone either within or without the city, without changing the form of the

advertisement, which called for the stone being cut within the city limits. This irregularity in the form of specifications was attacked by the Supreme Court, in an opinion by the late Justice Mestrezat. The contract was annulled May 23, 1917, by this decree. The city authorities hastened into the Legislature and had an act passed and approved July 6, 1917, seeking to validate the two doubtful ordinances referred to, to the extent that "any or all of the work" may be done within the limits of the city, and validating all ordinances relating thereto. Specifications were so framed and on July 12 new bids were received. Gill & Sons were low on both provisions as to cut stone either within or outside the city limits. Walter R. Taylor, a taxpayer, filed suit in Common Pleas Court No. 1, which Judge Audenried dismissed. The appeal to the Supreme Court was taken, and Justice Frazier says: "A consideration of the validity of the previous ordinances is unnecessary. If the municipality may require stone cutting to be done within its boundaries, it may also extend this requirement to all materials and supplies, and provide for their production and manufacture within its limits. An escape is impossible from the conclusion that such action would result in a regulation of labor, trade and manufacturing, and must, accordingly, be special legislation within the meaning of the Constitution." No new proposals for constructing the building will be requested until after the war.

Pittsburgh. The Darlington collection of Americana at Guyasuta, comprising 8000 volumes of rare and valuable books, prints, maps, etc., and probably exceeded only by that of the Wisconsin Historical Society, west of the Alleghany Mountains, has been given to the University of Pittsburgh by the two surviving daughters as a memorial library to their parents, William M. and Mary O'Hara Darlington. The collection is especially rich in material bearing on the early West and many volumes are enriched by rare prints, autograph letters of military and men prominent in the early history of the country.

South Atlantic

VIRGINIA

Leesburg. Thomas Willing Balch, of Philadelphia, has offered to erect at an expense of \$10,000, a modern library building in this town in memory of his father, Thomas Balch, who was born in Leesburg, July 23, 1821, and who, later in life, became known as the father of international arbitration, which

finally culminated in The Hague tribunal. The new building will be modern in every particular, artistic in design, fireproof in construction and work upon it will be begun as soon as a site has been selected.

Richmond. The fourteenth annual report of the Virginia State Library contains, in addition to the usual information on the work of the library, a 450-page register of the General Assembly of Virginia from 1776 to 1918, and of the constitutional conventions, compiled by Earl G. Swem, assistant state librarian, and John W. Williams, clerk of the House of Delegates. The fiscal year of the library has been changed to conform to that of the state, which ends Sept. 30, and the report in consequence covers only eleven months. During that time the total number of books added was 3311, one thousand of which were bequeathed by Col. Robert L. Parrish. There were 17,309 visitors to the library, who used 20,330 books, and in addition 6492 were circulated.

NORTH CAROLINA

Durham. The Public Library building and lot was sold at public auction in March to Gilbert C. White for \$21,000. Trustees of the library plan to move to a temporary location immediately. An option is now held on a piece of property to be used as a new site. This property will be purchased and a Carnegie building erected.

SOUTH CAROLINA

Charleston. Public spirited citizens of this city have raised by subscription \$15,000 in cash to be advanced to the Charleston Library Society for the purpose of paying off its mortgage on the building and so securing \$5000 from the Carnegie Corporation, thus extinguishing \$5000 of their bonds. In return for the loan the society agrees to transfer and assign to each individual so much of its interest in the estate of the late John L. Dawson, M.D., left to the society under his will, as will amount to the sum written opposite to their respective names, with interest from the date of payment at the rate of four per cent per annum until payment is made. These sums are to be paid from the estate, when said estate is distributed, before any other payment is made. The plan was devised by Theodore D. Jervey, a member of the board of trustees.

East North Central

MICHIGAN

Albion. A new Carnegie Library is to be erected here. Mayor E. F. Hoaglin has ap-

pointed a new library board to look after the plans.

Belding. The Alvah N. Belding Library was dedicated May 14 with fitting ceremony. Over 2000 persons packed the large Chautauqua tent erected on the grounds adjoining the new edifice. Sickness of Alvah N. Belding, the donor, in his hotel here was the only feature marring the completeness of the occasion. Altho 80 years old, he was driven to the platform and remained thruout a part of the program. His son, Fred N. Belding, acted as his proxy during the afternoon. On the platform were 30 of the heads of the Belding Brothers & Company interests, located in various parts of the United States, Mayor E. E. Fales of Belding, and many guests. Mr. Belding, Jr., gave the library governing board a check for \$1000 and his sister, Mrs. Florence Belding-Knuckols, an endowment of \$100 per year for 10 years, both to be used for the purchase of books. The new edifice was erected at a cost of \$50,000. It stands as a memorial to Mr. Belding's father and mother who were the founders of the city which bears their name. Following the ceremonies President R. H. Hall, of the board of commerce, presented the donor with a handsome gold headed cane as a mark of appreciation. A bouquet of American Beauty roses was presented to Mr. Belding by a school girl in behalf of the boys and girls of the public schools.

Berlin. The Berlin hotel property has been deeded by Charles Wilde to the newly formed Wilde Memorial Library Association. The building is undergoing repairs and when completed will be turned over to the association free of incumbrance.

Detroit. A library station has been opened in the "M" building of the Ford factory, first floor, next to the pay office, convenient for all employees. Books of all kinds are included, in English and in foreign languages, and more will be supplied on request. The station is open every day. Its establishment brings the number of factory stations for employees to an even dozen.

Detroit. The grass plot in front of the Main Library building has been plowed and fenced and will be turned into a big Victory garden, conducted by government experts under the direction of the J. L. Hudson Company, the board of library commissioners having formally accepted the Hudson Company's offer to assume responsibility for the space. A Victory garden in this central local-

ity will serve more than the immediate ends of the ordinary garden, for it will be a constant inspiration to the public to go home and do likewise. Even more important will be the constant attendance of a government expert who will be available for free consultation by the general public. It is probable also that the library will find a way to co-ordinate its resources of books and pamphlets on gardening and preserving of the crops.

Eaton Rapids. Now that the library board has voted to accept the \$10,000 Carnegie library which has been up for more or less discussion for the past few years, the city commission has voted to appropriate the sum of \$1000 per annum for the maintenance of the library, the money to be available for use as soon as the proposed library is completed and opened to the public.

Hastings. The city library in the new high school building was dedicated, Monday, June 10. On the first floor is a fine reading room fitted with open bookcases. Back of this is a commodious stack room. The collection of books numbers about 4000.

Marlette. Last year at spring election a quarter of a mill tax was voted for a free public library for the township. This brings in \$750 a year for library purposes, enough to make a good start. A fairly good-sized room back of the bank and next to the post office is being used for the library. This is an especially good location being so near the business center of the town and convenient to pupils of school. There are about 680 books on the shelves and the circulation averages about 30 per day.

Plainwell. Mrs. M. B. Ransome willed to the town for library purposes her residence on Main street, together with \$3000 to be spent for furnishings, and \$2000 to be invested for insurance and repairs. It is a large house, with rooms opening into each other and all in excellent repair. There is space for two reading rooms, a juvenile room and stack room. The upper floor is to be used for janitor's family and librarian. The grounds are extensive and beautiful and will be used as a public park. Over 2000 books which belonged to the Ladies' Library Association have been given to the library. The newly remodelled building was dedicated May 31.

WISCONSIN

Courses for teacher librarians will be introduced next school year in Carroll College, Lawrence College, Milwaukee-Downer

College, and the Oshkosh State Normal School. Such a course was given this year and will be continued next year in the University of Wisconsin, Beloit College, Ripon College and the Platteville State Normal School.

Eau Claire. The Eau Claire High School will have a high school library next year which will be maintained under the joint control of the authorities of the school and of the public library.

ILLINOIS

The Illinois division of the Woman's Committee of the Council of National Defense has among its sub-committee a very active one on war information, which collects information from all over the United States and from European countries in regard to war work being done by women, and furnishes this material to the committees on speakers for use in showing the women of that part of the country the necessity that each should be doing her part at the present time. This committee has sent letters to the public libraries thruout the state inclosing copies of its literature. It has now in preparation a series of articles on the war work of women in France, England, Russia, and the United States, which will be procurable by all workers in this branch of service.

Rockford. A branch of the Public Library has been opened in the Highland School for the use of the district. A large pleasant room on the first floor has been equipped for library purposes by the Board of Education. Book cases have been placed on the east and west walls and fifteen hundred new books have been purchased. These will be supplemented by loans from the main library. The branch will be open four afternoons and one evening during the summer.

INDIANA

Rockport. Workmen have been engaged in removing the two frame buildings on the corner of Third and Walnut streets, to make room for the new library building.

OHIO

Dayton. A branch of the Public Library has been opened in the Edwin Joel Brown school.

East South Central

KENTUCKY

Louisville. A picture of President Andrew Jackson has been given to the Public Library by Ben F. Atchison, and a portrait of David Castleman, father of General John Breckenridge Castleman, loaned to the library.

TENNESSEE

College credit is now being given for the courses on the organization and administration of a high school library which are given as a part of the work in library economy at the Summer School of the South in the University of Tennessee. Beginning with 1918-19, these courses will be given for a half year as a junior and senior elective in education.

Knoxville. Dedicatory exercises of the new Carnegie library for negroes in Knoxville were held May 6 at the Mount Zion Baptist church, two blocks east of the site of the new building, located at the corner of East Vine avenue and Nelson street, which was thrown open for inspection after the program of music and speaking at the church. The new library movement for the negroes was put on foot by Prof. C. W. Cansler, who was aided in the work by former Mayor S. G. Heiskell in bringing the matter before the Carnegie Corporation. The city commissioners made it possible thru agreeing to maintain it. It is now equipped with 2000 books.

West North Central

MINNESOTA

St. Paul. The petition of the committee of deans and the University senate for a new library building has been rejected by the Board of Regents of the University of Minnesota, insufficient funds being given as the cause for the rejection of the proposal.

West South Central

OKLAHOMA

Norman. Work on the construction of a new library building on the University of Oklahoma campus has been started. The building under the contract will probably be completed in November.

TEXAS

Gatesville. The Gatesville schools—teachers and pupils—have shown their patriotism by their deeds. Among the many things done to serve their country they have bought and donated to library endowment seven fifty-dollar bonds, most of the pupils earning the amount contributed.

Mountain

MONTANA

On April 23, 1918, the Montana State Council of Defense issued an order forbidding the use of the German language in public and

private schools and in the pulpits of the state and ordering the withdrawal of certain German text books from the public and school libraries. The order further requires that librarians are "to withdraw from circulation and use . . . books which, in the judgment of such school authorities and librarians, contain German propaganda."

Butte. No books were issued from the Butte Public Library between the dates of May 4 and May 14. During this time an inventory of all the books in the institution was taken and the rooms given their annual renovating. One of the features of the house cleaning was the removal of all books in the German language from the shelves of the library. This order was in accordance with the order of the State Council of Defense, which has issued such instructions to every library in the state.

COLORADO

Denver. The Byers and Smiley branch libraries were expected to open in May. Each cost \$20,000, defrayed by grants from the Carnegie Corporation. Two other branches have been promised, but construction has been postponed until the war is over.

Denver. On account of the high cost of building materials and the scarcity of labor, the library board has deemed it wise to postpone building the last two of the four branch libraries which were to have been built in Denver and for which the appropriation has been made. The board wrote the Carnegie Corporation asking that the building be postponed and received the reply that the erection of these buildings might be put off provided they be finished by October, 1920. Their location has never been decided upon, altho Park hill seemed to be the most favorable site for one and Globeville or Elyria for the other. The William N. Byers branch library at West Seventh avenue and Santa Fe drive and the William H. Smiley branch at Berkeley park, were ready for use early in the summer. An appropriation of \$80,000 was granted for the four libraries and the two which are already finished have cost approximately \$20,000 each.

UTAH

Salt Lake. The dedication of the new Carnegie library on Eighth West and Sixth South streets was held May 27. More than 500 persons were in attendance, addresses were made and musical numbers rendered.

Pacific

WASHINGTON

Tacoma. The board of trustees of the Tacoma Public Library by unanimous vote have protested to members of Congress against the provision of the War Revenue Act which would establish a zone system for postage charges on magazines and periodicals.

OREGON

Because of defects in the present library law, Governor Withycombe has appointed a committee to draft a bill for a new law to be submitted at the next session of the legislature. The county unit system of library administration will be provided in the bill, since this system is favored by Miss Cornelia Marvin, state librarian, and others who have observed public library service in the five Oregon counties that employ the county system, and which have most successful libraries. Among defects pointed out in the present library law are the requirement that county libraries be located at the county seats, the method of administering finances and the plan of selecting the personnel of the county library boards. Miss Marvin has written the president of each county board in the state asking that committees be appointed to prepare data to submit to the state committee for use in drawing up the proposed measure. The committees are to report by July 1.

Hermiston. The Hermiston Public Library was completed in April. The building was erected with Carnegie funds and the site was donated by J. H. Raley, of Pendleton. It is of Spanish and Italian architecture and the plans were made by Folger Johnson, of Portland. The building contains a main library room 24 x 50, a lecture room 24 x 26, and a committee room 12 x 14, with modern equipment. Mrs. M. E. Benedict has been appointed librarian and is now in charge of the library, which is to be maintained by the city of Hermiston.

CALIFORNIA

Sacramento. The doors of the new handsome city library at Ninth and I streets were opened to the general public April 23. The building has a capacity of 300,000 volumes, which is twice the capacity of any library on the coast. The cost was about \$130,000. On the first floor is the music or class room, which accommodates at least fifty children and opens directly into the children's reading room, which will accommodate sixty readers and holds 3500 volumes. On the left of the entrance is the newspaper and periodical room which accommodates 135 readers. On

the second floor is the large delivery room, reference room, accommodating 85 readers, and a special library reading room where physicians, lawyers and other professions may deposit valuable reference books. On the third floor are the staff rooms, and in the basement is located the large oil-burning furnace, the lighting and floor cleaning apparatus. The woodwork is oak thruout, and the desks, tables and chairs corresponding to the wood work were furnished by the city school carpenter shop. Messrs. Knowles and Mathewson of San Francisco were the general contractors, and Loring P. Rixford of the same city drew the plans which were selected by a jury from 56 designs of other architects

San Francisco. The dedication exercises of the Golden Gate Valley branch of the Public Library were held in front of the library building, at the corner of Green and Octavia streets, May 5.

Foreign

ENGLAND

Bradford. The city authorities have established a Commercial Library for business men. The needs of retail dealers as well as of merchants will be considered. Government publications on trade matters and reference works of all kinds, commercial and technical magazines and journals, trade lists and catalogs will be kept on file. Augustus E. Ingram, American consul at Bradford, reports that the consulate furnishes the library with all possible information as to American trade publications, and will supply it with sample copies of such journals, so that the authorities can display them and find out which are in demand. Reports, year books and directories issued by chambers of commerce would no doubt be excellently placed for service in this library. All publications should be addressed to the Bradford Commercial Library, 53, Market Street, Bradford, England.

Oxford. The Bodleian Library is planning to have made a card catalog of all English books issued between 1501 and 1640 now in the library. H. R. Plomer, author of a "History of English printing," a "Dictionary of English booksellers to 1640," and other works, has been engaged by the curators for a year to compile the list from the General Catalogue of Printed Books. G. R. Redgrave, a past president of the Bibliographical Society, is expected to co-operate in the addition of printers' and publishers' names not given in the General Catalogue.

LIBRARY WORK

Notes of development in all branches of library activity, particularly as shown in current library literature. Material printed in this department is cumulated each year in the "American Library Annual."

CERTIFICATION

The standardization of librarians. Frances Simpson. *Iowa Lib. Quar.*, Jan.-March, 1918. p. 65-68.

The question of why librarians need to be "standardized" or "certified" as tho we were some superior kind of dairy product, can be met by the question: Why do we call ourselves members of a profession? If law, medicine, dentistry, pharmacy, architecture and other professions need to be certified, it is quite likely that the guild of librarians will be expected to receive the cachet of public confidence in some similar time-approved fashion. It is only now and then that the standards of professional equipment which librarianship has evolved are matters of general knowledge, tho almost anyone knows that physicians must be licensed or certified to practice medicine, the law providing the method and machinery for such certification. Therefore, a reasonable plan for the standardization of libraries should not be opposed.

Altho the teaching profession was not included in the list of professions, it too is under a system of standardization, as city, county and state teachers' examinations show.

If we demand the respect and recognition accorded to members of other professions, libraries and library staffs should be brought up to the required standard. One method is by raising the tone of the library thru demanding better and more intelligent workers. California has passed legislation establishing grades of library service and providing for examination of its library workers. An aid in this standardization will be the adoption of uniform designations instead of the looseness of terms found in all divisions of the library's service. The chief executive officer of a library may be called "librarian," "head librarian," "chief librarian," "superintendent of libraries," "director of libraries," etc. "Assistant librarian" may be applied to the one who ranks next to the librarian, or it may be applied to one or all members of the library staff; or these may all be termed "library assistants." So it is with the cataloging department.

How the proposed standardization shall be applied will be considered by the A. L. A. committee the coming year. Civil service has

been a great bugbear almost equally to library candidates and to library executives, . . . but "does help toward permanency, of that there can be no question." "The A. L. A. committee proposes a plan for certification sufficiently elastic to be feasible in various types of libraries, and yet definite enough in its provisions to satisfy the movement towards the inclusion of library service in a threatened or an already working civil service system."

If certification is legally adopted in a state, the State Library Commission or similar body of persons would have the power, granted by the state legislature to establish such grades of library service as seemed expedient in its judgment, and to conduct such tests for admission to those grades of service as it deemed wise.

CHILDREN, WORK WITH

During the coal shortage last winter, when the schools of Providence, R. I., were closed for want of fuel, several public spirited citizens, including Harold L. Madison of the Park Museum of Natural History, and Mr. Rowe, of the Rhode Island School of Design, united with Mrs. Mary E. S. Root, the children's librarians of the Public Library, in working out a practicable scheme for keeping the children off the streets. By the program which was then adopted (with the consent of the superintendent of public schools), it was decided that in the case of certain selected classes, the pupils should go to the library on certain days of the week, to the museum on other days, and to the art gallery at the Rhode Island School of Design on still others. Moreover, since the program provided for the treatment of one subject at a time (developing certain phases of it at the library, certain other phases at the Natural History Museum, certain others at the art gallery), the scheme possessed a certain unity.

The work was arranged under four topics:

I—Animal life—Jungle book story told.

II—Field and forest—Robin Hood story.

III—The ocean and its inhabitants—Captains courageous.

IV—Indians and warriors — ("vacation" ended before this was reached).

This promising plan, however, could never

have been carried out except for the prompt and cordial co-operation of all concerned, including not only the heads of the institutions above named, but the teachers, the parents, and, above all, the boys and girls themselves, who embraced the opportunity not only willingly, but with enthusiasm. Those who had the opportunity of coming in contact with these eager young minds will not soon forget their keen interest and their intelligent questions.

Side by side with this program, which was planned to include the three institutions above mentioned, there was a series of familiar talks to children given at the library each afternoon except Saturday. The natural history talks by Mr. Madison proved so interesting that they were continued long after the school buildings had been re-opened, in fact, extending thru April. In these instances, as in the other series, the opportunity was freely given for questions on the part of the boys and girls; and this privilege was frequently availed of.

EXHIBITS

"Fifteen library exhibits, composed of books, magazines, and other literature on important war subjects such as: food economy, production and conservation; war-time thrift; business efficiency, etc., were placed on display in various business houses for a week during the early part of November," writes Clarence W. Sumner, librarian of the Sioux City Public Library, in his report of the work in 1917. "Each member of the staff had charge of an exhibit. There were eleven exhibits for the down town districts and five for the branch libraries. A novel feature was that of the interior exhibit in Davidson Brothers department store, with a member of the library staff in constant attendance to show and talk about the books on display. A three-cornered booth on the main floor, draped with tapestries from the furniture department, was placed at our disposal. Posters and signs mentioning the library and the books on the tables were used. Many people were attracted by the display and many new patrons who had not used the library before signed library cards. There were numerous requests for the books on display, and names were taken and the desired books were reserved, notification being sent as soon as the books were returned to the library."

LANTERN SLIDES

A circular letter has been sent by Bernard C. Steiner to all Maryland libraries, informing them that thru the Federal Food Admin-

istrator for Maryland, Edwin G. Baetjer, stereopticon slides have been provided for three illustrated lectures upon the war. These lectures are—Soldier life on the battle front in France, Some things the British are doing in the war, and How to save food and avoid waste.

The slides for these lectures are available for the use of libraries thruout the state of Maryland, without cost, except for transportation charges, and even this payment in some cases may not be necessary. The library borrowing the slides will be responsible for the care and preservation of the slides while in its custody. A description of the lecture will be sent with the slides. A lecturer may be provided by the town, if possible; if not, correspondence with the Library Publicity Director or Miss Emma W. H. Scott, Field Secretary of the Maryland Public Library Commission, may secure a lecturer.

Each lecture consists of about 70 slides, and the slides comprising lectures 1 and 2 are made from the Official British War Photographs, which are not often shown in this country. A large number of these photographs, including many not shown in the lectures, have been mounted, and will be sent to libraries for exhibition therein, upon application, under the same conditions as the slides. Ordinarily such exhibitions are for a period of two weeks, in order to allow other towns to have an opportunity to see the photographs.

LOCAL HISTORY COLLECTIONS

The library's relation to local history. Lucy Elliot Keeler. *Pub. Libs.*, April, 1918. p. 161-163.

Mrs. Keeler is secretary of the Birchard Library, at Fremont, Ohio, which is itself an object lesson of the proper linking of library to local history. Thru the efforts of ex-President Hayes, first president of the board of trustees, the library was located on the site of the old town fort. President Hayes' son, who succeeded his father on the board, was instrumental in having other historic places in the city suitably marked. The library's secretary prepared some years ago a series of questions and answers on local history, which were used in the public schools. This pamphlet of some thirty pages was compiled from a fifty-year file of local papers. This was followed by monographs on special subjects, which are in constant use.

Whenever any event of special interest takes place in town, the library prepares a special

bulletin relating to it, and library notes in the daily papers always include some item on local history.

The library is the depository of the Sandusky County Pioneer Society, and the local history shelves are conspicuously labelled. This work has been done by the secretary and individual trustees, who felt that the librarian had enough to do in making all the books, pamphlets, files, clippings and scrap books accessible.

"I have often thought of how much might be accomplished if each member of a library board would take some field of the work for his or her special hobby, consulting with fellow members and with the librarian, but evolving it as an individual accomplishment: local history, perhaps, or exploitation of the library before chambers of commerce, city and study clubs, the schools, etc.; the development of the museum; establishing docent service; visiting and reporting upon other libraries; decorating the grounds with shrubs and labelling the trees; inaugurating an annual flower show or some occasional loan exhibits."

LOCAL HISTORY MATERIAL

A war history commission. John W. Oliver. *Wis. Lib. Bull.*, Apr., 1918. p. 88-89.

Magnus Swenson, chairman of the State Council of Defense, has adopted the plan of the National Board for Historical Service in Washington, laid down at the beginning of the war, and has appointed a war history commission for gathering for permanent preservation all the material that can be obtained relating to Wisconsin's share in the Great War. Dr. M. M. Quaipe has been appointed chairman, and Dr. John W. Oliver director of the commission. The commission expects to co-operate with the county councils, local libraries, historical societies and the schools, and by their combined efforts will see to it that no act of Wisconsin in this war goes unrecorded.

A local war committee is to be appointed in every county and a special effort will be made to collect and preserve official documents, semi-official documents and military material; also economic and industrial material, soldiers' letters, material relating to Red Cross and other relief work, and newspaper clippings.

LIBRARIES—SCOPE AND PURPOSE

The public library and the public need. Babette Deutsch. *Dial*, May 23, 1918. p. 475-477.

Starting on the premise that the public li-

braries are "storehouses of information of local interest" rather than "national banks of thought," Miss Deutsch, a free lance writer, accuses the majority of them of serving the student to the exclusion of the "citizen working for a healthy government, the business man who wants knowledge of other men's experiences," and "that too large majority of our population which has not had any organized learning since the meagre offering of the public schools."

Isolated exceptions cited are the Business branch of the Newark Public Library and the Carnegie Library of Pittsburgh, which "attempts to make itself an aggressive social force."

"Yet such instrumentalities are shining exceptions. For too long a period the library, like a sinking ship, has provided for women and children first. Unless adequate steps are taken, the library will fulfill the analogy and go down. Indifference to its potentialities of service to students and business men is largely due to the lack of co-ordination. There is neither co-ordination between the libraries in different cities, nor between the libraries and the public, and occasionally it is lacking within a given library itself. The result is general dissatisfaction, and a steady drain of its best workers into other professions, with a mortal effect upon the institution."

Independent and unrelated systems of administration and employment, and a lack of standardized training, are held responsible in part for this condition.

"The average librarian is schooled to be a combination filing-clerk and social up-lifter. A library cannot be run without efficient filing-clerks. The circulation department can doubtless be run best by people who make efficient sociologists. Neither of these types of workers, however, is desirable in the reference departments. There the need is for men as well as women (ability as a librarian has not yet been proven a sex-link characteristic) who are capable of scholarly research and sympathetic collaboration. There are a few such people in the library today, but they are either underpaid or undervalued, and sometimes both."

Discussing the much-vexed salary question, Miss Deutsch quotes statistics of salaries paid to library school graduates and other library assistants, and in view of these figures upholds the invitation of the Library Employees Union last March, organized "with

the object of standardizing jobs and salaries and encouraging promotion from the ranks."

The effort of the A. L. A. to secure a satisfactory basis for standardization of libraries and certification of libraries is summed up, and the paper closes with this:

"Standardization means a long step toward complete governmental control of the library. In a democracy such a control presents no terrors to those who set high value on the independent intellectual life. In its purpose the library is already a public institution; no one questions that it ought to come into more popular use. And in the long run, of course, popular use will mean popular control. In fact a nationalized library would function not very differently from a national bank. It would mean a federal reserve of information, on which each locality could draw as need dictated. Neither the militant concern of the librarians nor the efforts of library administrators, however, can achieve this end without active popular interest. The public must appreciate the library as its own instrument—not a literary museum, but a bank where intellectual currency may be 'lent, borrowed, issued, and cared for,' to promote social intercourse and accomplishment."

MAGAZINES—REBACKING

A method of reenforcing magazines for circulation, which has been tried out in the Edgerton Public Library with satisfactory results, is described in the *Wisconsin Library Bulletin* as follows:

"Since the reading material on the front and back pages of most magazines consists largely of advertisements, the covers may be strengthened by pasting to them two or three of these leaves. A strip of brown kingcraft paper (cut at the printers in one, one and a half and two-inch strips to fit the thickness of different magazines) pasted along the back of the magazine and extending over the covers about one-half inch, rebacks the magazine firmly. On this half-inch extension three holes (one in the center and the others near the ends) are drilled by means of a steel drill. Hard twine is run thru these and securely tied. This holds the leaves well in place. A pocket formed by a slip of paper pasted on three sides and cut (also at the printers) to contain a P slip will serve the additional purpose of a date slip. On this pocket and on the P slip, which is used as a book card, may be typed the name and date of the magazine."

MUSIC COLLECTION

The music collection in Salt Lake City is growing in popularity. It was increased last

year by a notable gift from Mrs. R. C. Easton of Salt Lake, who presented to the library the music which had made up the collection of the late Spencer Clawson, Jr., a well known and talented musician of that city. The music is bound in morocco with the name of Mr. Clawson inscribed on each book, and consists of about one hundred large volumes. A special closed case has been built for this gift with a bronze inscription to indicate the original owner.

PUBLICITY

Publicity for libraries. John Boynton Kaiser. *Pub. Libs.*, April, 1918. p. 165-167.

Successful publicity within the library itself consists largely in displays of new books, small collections on subjects of current interest, of exhibits of pictures, paintings, etc., of booklists conveniently exposed, of attractive posters, of timely comments on books by staff members, and, above all, of effective and satisfying service. The unsatisfied patron of the public library is, perhaps, a more efficient publicity agent than the satisfied patron who takes his satisfaction too quietly.

The most effective and least expensive measure for external publicity is the newspaper, of course. Most preferred are news items concerning new policies, methods or efforts to improve the library. Second come news items as to increases or decreases in the library's collection or circulation. Short title lists of new additions of recent and interesting books form the third class, and short title subject lists on topics of current interest or in controversy, constitute the fourth class.

Many "stories" find their way into the Sunday paper: a chatty article on garden books, an interesting writeup on Indian Wars in the Northwest, a delightful illustrated account of the telling of fairy stories to little children at the public library—all these and more have found their way into Sunday editions.

All appointments and resignations of board and staff members have decided news value. Care should be taken to supply full names and some biographical data to save editors and reporters much trouble.

News items or stories written at the library in journalistic style, or an interview type-written in advance—and in duplicate—may save time and future embarrassment.

Post card notices calling attention to new books are good, but expensive; sending mimeographed or printed lists on special subjects—to organizations and selected groups—

is profitable; notices in department store delivery packages or in pay envelopes, window exhibits of books and posters, lists in trade journals and organization organs, and co-operation with the moving picture theater—all are good methods of publicity.

Of course "word of mouth" publicity is the most powerful of all. Talks here and there bring returns in good measure, for the circulation of the librarian and the resources of the library go hand in hand.

Just two points more. Standardize and nationalize library publicity wherever you go and in all the magazines of national repute. The aim of library publicity is to have all prospective library users "Think library first"—whenever occasion arises.

SCRAPBOOKS—OF SOUTHERN HISTORY

Certain phases of museum interest are so interrelated with library interest as to claim a place in library chronicle and comment, a recent example being a gift that has been received by the Confederate Museum of Richmond, Va., from Mildred Lewis Rutherford, for five years the historian general of the Daughters of the Confederacy. Miss Rutherford's gift consists of 70 volumes of scrapbooks averaging 400 pages each, the contents covering comprehensively the origin and development of the Southern States from plantation and colonial times, thru the Revolutionary period and down to the present time. Some of the material is biographical of Jefferson Davis, Lee, Jackson, and other leaders of the Confederacy, and of Southern authors. One volume contains material concerning Washington, the Declaration of Independence, and the origin of the United States flag and seal. Another covers the reconstruction period, the history of the Ku-Klux, and disputed points of Confederate history. A few of the titles are: "The White House and the South in it," "The South of yesterday," "The South of today," "Tributes to faithful slaves," "The resources of the South," "Where the South leads."

SCHOOL LIBRARIES

A library view in a technical school. Mrs. Ellen M. Linton. *Pub. Libs.*, Feb., 1918. p. 70-71.

In a technical school no one is educated in the true sense of the word unless the unity of mind and body has been recognized. So many of its pupils come from homes where formal education ends with the high school that responsibility is very great to get them acquainted with the best in literature. As

reading is a habit that persists thru life, the aim should be to train the student to discriminate between the good and the bad and to form a taste for the best. An education for life should be one that "broadens the mind, seasons the judgment, gives poise and flexibility, makes men tellers of truth and tolerators of the average weakness of human nature."

At Cass Technical High School a splendid group of English teachers is each day leading the students into the pleasant ways of books. Classics are read and discussed in round table conferences. The members of the journalism classes subscribe for a newspaper of high standard and by subscribing in the library for many magazines to which the student has access, all reference material is supplied.

Each student is required to read at home at least two short stories and one long book of biography, travel or fiction, credit being given by points that indicate the relative importance of each. Students are encouraged to browse in the library as much as possible without interfering with their other work. The Detroit Public Library co-operates splendidly with the school and sends librarians to issue cards to the students, so that they will feel at home in other libraries after they leave school.

STAFF MEETINGS

Staff meetings. Julia Wright Merrill. *Wis. Lib. Bull.*, Apr., 1918. p. 91-94.

One of the best factors in creating a staff of wide-awake, intelligent, enthusiastic workers who will be a credit to the library, is the staff meeting, a regular part of the program of most large and many small libraries. An hour's time is all that is required, while the total time taken to talk over the plans with each assistant would be far larger.

The time chosen for the staff meeting should be when all can attend. If the library opens at noon or at two o'clock, the meeting should be in the morning, but if the hours run from nine to nine, it may be necessary to gather the staff together at eight unless the first hour of opening is quiet enough to permit a meeting to be held without interruptions. The plan of leaving one assistant in charge of the desk is undesirable, for she may be the very one whom the meeting would benefit most.

Meetings may be weekly, fortnightly or monthly, but whenever they are held they should be recognized as part of the day's work, and subtracted from the working hours.

The meeting should be informal, and tho the librarian is the presiding officer, each

should be given an opportunity to take part. Books asked for that were not in the library as well as those in greatest demand, criticisms fair or unfair, the formation of clubs, a bit of impersonal criticism to express the attitude the staff should hold toward the reading public, a new staff ruling or the vacation schedule, all can be openly discussed at this meeting.

Consideration should be given to matters of larger professional interest such as a report of the state library meeting by the one or two who were fortunate enough to attend it. The assistant should have some knowledge of the personnel and achievements of the profession as a whole, and not be limited to the happenings of her own town or state. Book reviewing, magazine reporting, reports on current events in your own city, will keep the staff up to date and sustain interest. This year the discussion of plans for war service should come first of all.

The article includes reports from a few Wisconsin libraries, showing the divergence in practice in different parts of the state.

Janesville reports that their staff meetings, which are usually "book conferences," have been found very helpful. New books of fiction are apportioned to each member of the staff to be read in advance, and at the meeting each gives a résumé of her story and tells the class to which it will appeal.

La Crosse holds its staff meeting every Friday morning at 8:30. It usually lasts one hour and is sometimes devoted to the discussion of rules and regulations and general library policy; sometimes to the discussion of new books. Again, the librarian gives a book or a pamphlet on some special subject (such as vocational guidance, child welfare, salesmanship, war gardens) to each member of the staff and asks each one to give a report on the book or pamphlet assigned her after fifteen minutes rapid perusal. Extracts from specially good war pamphlets or entire articles from general or library periodicals are read, and if a specially difficult reference question comes to any member of the staff, she reports on that and each one is asked what books or pamphlets she would consult in answering it.

At Madison the experiment has been tried of letting different members of the staff plan several successive meetings, with the result

of varied programs. Matters of policy and administration are generally discussed, reports given, and new books reviewed. Meetings are held every Saturday morning from eight to nine, just before the library opens.

At Oshkosh meetings are held once a month (from 8.30 to 9). The staff discuss library problems, review new books or read articles published in the library periodicals.

At Sheboygan the meetings are very informal but productive of good results. Every subject pertaining to the library is discussed freely with the staff. By keeping the girls interested in the policy of the library, an invaluable *esprit de corps* is developed. Interesting articles in the library periodicals are discussed.

Superior holds its meetings every other week from 8.30 to 9 a. m. Each member is assigned one monthly and two weekly magazines to report on. Then besides at each meeting one member of the staff gives a book review, usually of a new book, which is sometimes assigned and sometimes selected by them. This is followed by official announcements, and discussion of problems that come up.

At Wausau the weekly mending time is used for discussion of general topics and of work planned or done. Special articles marked in library magazines are discussed, also new non-fiction.

STORY-HOURS

The St. Paul Public Library has secured the co-operation of instructors in the high schools and in the University of Minnesota and officers of the National Security League in the collection of hero stories of the war for use in library story hours. With regard to the matter Professor McElroy of Princeton, educational director of the Security League writes: "I would be delighted in any way to carry out your plans, which I think would be of very great value. I can secure the services of an indefinite number of prominent literary men to do the work if you have the collection of incidents upon which to base the stories."

The Vikings of today, the Last Crusade—the taking of Jerusalem, and Alice Brown's *The flying Teuton* are good examples of subjects and material already suggested.

Bibliographical Notes

The March-April copy of the *Michigan Library Bulletin* was a special Red Cross number, with reports from 27 chapters in different parts of the state.

Owing to shortage of paper and the largely increased cost of production the English *Library World* raises its yearly subscription rate from 7s. to 8s. 6d., beginning with the July issue.

A revised edition of Col. W. F. Prideaux' Bibliography of the works of Robert Louis Stevenson, edited and supplemented by Mrs. Luther S. Livingston, has been put out by Frank Hollings of London.

The St. Paul Public Library has just completed an index to the ordinances of the City of St. Paul, 1906-1917. Three copies of the index have been made, one for the city clerk, one for the corporation counsel, and one for the social science room.

The *Bodleian Quarterly Record* for January-April, 1918, prints a short glossary of war terms which received the prize in an open competition in one district on the Western front. It includes corruptions of Hindustani, French and German words, rhymed slang, and ordinary slang words and phrases.

Professor Marshall L. Perrin of Boston University is assisting officers of Camp Devens in compiling handbooks to be used at the front, his part being the collecting of German military expressions and conversations to be employed interrogating German prisoners.

A catalog of the Armenian manuscripts in the Bodleian Library at Oxford, almost completed before the war broke out, has been published by the Clarendon Press. It is the work of Dr. S. Baronian, completed and revised by F. C. Conybeare, and was begun as long ago as 1883.

The Library Bureau has combined in its latest booklet "School libraries," simple and practical suggestions for planning and administering a school library with information on the furniture and supplies which it can instal for their equipment. The booklet is handsomely printed and illustrated.

The "Wisconsin Memorial Day annual" for 1918, compiled by O. S. Rice, supervisor of school libraries, with the co-operation of

H. W. Rood, patriotic instructor of the G. A. R. for Wisconsin, has been issued by C. P. Cary, state superintendent, and printed by the Democrat Printing Co., at Madison, Wis.

"The standard index to short stories," on which Francis J. Hannigan of the Boston Public Library has been at work for a number of years, has been published by Small, Maynard & Company. It indexes all the short stories in 24 American magazines for the years 1900-1914 inclusive, and contains more than 35,000 entries.

Carry On is a new magazine on the reconstruction of disabled soldiers and sailors, edited by the office of the Surgeon General, U. S. Army, and published by the American Red Cross, which should be in every library. Its first issue came out in June, and it will be sent free for a year to those who send their request to 311 Fourth avenue, New York City.

"The navy and filibustering in the fifties," by Louis N. Feipel, editor of publications of the Brooklyn Public Library, is being reprinted from the United States Naval Institute Proceedings. Part I has already been put out separately, from the April, 1918, issue, and the whole will be completed in seven instalments.

The Federal Bureau of Education has issued in bulletin, 1917, no. 39, a bibliography of textbooks, dictionaries and glossaries and aids to librarians for teaching English to aliens, compiled by Winthrop Talbot, M.D., adviser in alien education for the bureau of industries and immigration of the New York State Industrial Commission.

Library of Congress catalog cards for the bulletins of the Portland Cement Association (111 West Washington St., Chicago, Ill.) are furnished free to libraries upon application to the librarian, Mary B. Day. The association has recently issued a catalog of the books, periodicals and pamphlets in the highly specialized technical reference library on cement, concrete, and related subjects.

Public Welfare is the new organ of the National Public Welfare League, incorporated in Missouri in 1916 and with a membership now of about fifty municipal boards of public welfare. Information in regard to the work of the league may be obtained from its vice-president, Mr. L. A. Halbert, who is general superintendent of the Board of Public Welfare of Kansas City, Missouri.

The Connecticut State Board of Education has published in a leaflet entitled "Our flag—how shall I honor it?" its bulletin 57 outlining the mold loft and shipfitting course for apprentices in practical ship construction in the State Trade Education Shop. Other courses are given in the trade school and all are free to boys or girls fourteen years of age or over. Leaflets and other information can be obtained from the State Board of Education, Trade Instruction Department, Room 42, Capitol, Hartford, Ct.

The January-April issue of the Papers of the Bibliographical Society of America contains a discussion of "The Wittenberg originals of the Luther Bible" by L. Franklin Gruber; a bibliography of the separate publications of James Kirke Paulding, by Oscar Wegelin; a list of incunabula herbals, by Arnold C. Klebs; additions to a bibliography of Gray, by Ronald S. Crane; and a short sketch of the life and bibliographies of Francis Asbury Sampson, by Henry O. Severance.

Every librarian interested in helping develop export trade for American manufacturers, should get from the Foreign Trade Department of the National Association of Manufacturers (30 Church street, New York City) a copy of its excellent booklet "An export order and allied topics." The booklet visualizes thru a series of letters, documents and forms, the steps involved in handling a typical export transaction; gives forms and tables of special interest to exporters; and in conclusion describes the work of the association's foreign trade department.

The "Soldier's first book," a simple course of lessons in reading and writing prepared by Cora Wilson Stewart for the use of the thousands of illiterates in our new army, has been published by the Association Press in New York City. Mrs. Stewart, whose "moonlight schools" in Kentucky have done remarkable work, began last June the preparation of these lessons, first issued in leaflet form, when the number of Kentucky men registered by mark was learned. The series has been given to the National War Work Council of the Y. M. C. A. for the soldiers' use.

The Massachusetts Credit Union Association, (78 Devonshire street, Boston, Mass.) will be glad to send without charge to any library in the country a copy of its "Credit union manual" together with other literature explaining the operations and accomplishments of these "people's banks," the latest

addition to the banking system in Massachusetts. Over 60 of these thrift-promoting institutions have been chartered and put in successful operation in that state, and rapid progress has also been made in their development in North Carolina and New York, where the Russell Sage Foundation assists in their organization as does the Massachusetts association in its own state.

LIBRARY ECONOMY

SERIALS

Union list of serials in the libraries of Rochester, including periodicals newspapers, annuals, publications of societies and other books published at intervals. Rochester, N. Y.: Rochester Public Library, 1917. 147 p.

librarian of Luton, Bedfordshire, England, make it clear that for local correspondence in the Island Empire, the word "England" is superfluous.

A number of good friends have suggested how I might have found where the letter first mentioned in this controversy came from. I did make a pretty good guess, but the point I wish to make is that one's stationery or other printed matter should be so clear that it would not be necessary to study the post mark and look in a half dozen books of reference to find how and where to direct the answer to a letter. We may forgive our English friends, but American librarians are the greatest sinners, and are still at it. Only last week we received an annual report, very well written and full of information, which we were unable to acknowledge, because it had only the name of the town, not the state, and there are several large towns of the same name in different states. I could have guessed what state it came from in two guesses, right at the start. On reading thru the report I found one inscription quoted that settled the question. But why not make it clear by printing the name of the state on the cover, immediately following the name of the town?

Open Round Table

LIBRARIANS' SHORTCOMINGS

Editor Library Journal:

I hope Mr. Lamb and other librarians in America will not judge British librarians too severely when their official stationery does not bear the name of the county and country, as we do not experience any difficulty in identifying library place names in this little country. In case Mr. Dallimore does not see the LIBRARY JOURNAL, I may say that the Edward Pease Library, Crown Street, is in Darlington, Durham, England, and could easily be identified by reference to Philip's Libraries Year Book, 1910-1911, or the 1914 issue.

Yours faithfully,
T. E. MAW.

*Public Library,
Luton, Bedfordshire, England.*

THE INCOMPLETE ADDRESS

Editor Library Journal:

Judging from my mail, my criticism of librarians in April LIBRARY JOURNAL for not having their stationery and reports sufficiently explicit seems to have struck a popular chord. Two letters from England, one from Mr. Frank Dallimore, librarian, of Darlington, England, the other from Mr. Thos. E. Maw,

This particular sin of omission is not limited to letter-heads and annual reports. We have just received an attractive leaflet called "Our flag—how shall I honor it?", outlining the course in shipbuilding given in the "State Trade Education Shop." For fuller information the invitation was extended on page 7, to "write the State Board of Education, Trade instruction department, Room 42, Capitol." On re-reading the text of the leaflet carefully we found on page 3 that the state in question was Connecticut, and being ourselves of New England extraction we knew that Connecticut's Capitol is in the city of Hartford. But why not give a complete address in one place, and eliminate the necessity for this annoying thumbing of leaves and piecing together of information from various sources?

Library Calendar

- July 1-6. American Library Association.
Annual conference, Saratoga Springs, N. Y.
Sept. 23-28. New York Library Association.
Library week, Lake Placid Club.
Oct. 9-11. Wisconsin Library Association.
Annual meeting, Milwaukee.

WILLIAM WARNER BISHOP, NEW PRESIDENT OF THE AMERICAN LIBRARY
ASSOCIATION AND LIBRARIAN THE UNIVERSITY OF MICHIGAN

"An amazing achievement" was the exact and happy phrase in which Mr. Orr, educational director of the Y. M. C. A., summarized the work of the A. L. A. and the "Ys" for the book in camp. The Saratoga conference, with about 600 in attendance, largely leaders in the profession, was even more than that of Louisville a war conference. Notable were the service flag with its 297 stars hanging from the Grand Union Hotel as the official photograph was taken and the service uniform worn by many men and some women from camp, hospital and dispatch library agencies. In the year between Louisville and Saratoga, a million and three-quarters dollars had been subscribed, 36 library buildings erected, library service established in hundreds of stations at home and abroad, nearly four million books contributed by the public, books shipped abroad by hundred thousands—a work which no foresight at Louisville could have prophesied. The Fourth of July was celebrated here by a continuation from Tuesday of the inspiring experience meeting on war service and the presentation by Dr. Raney of his effective and eloquent report of what had been accomplished in France, while a telegram from Mr. Stevenson in France reported the celebration there by the placing of an A. L. A. library service on every French hospital train. Altogether, the conference was a wonderful summing up of a wonderful year of wonderful work, and it laid the foundation for even greater work in the future.

It was universally agreed that the greater work was yet to come. When the war is ended, both during the peace negotiation, while the soldiers rest on their arms, and during the transition to civil life, there will be these great bodies of men with leisure to read and study. It is then that there will come the large opportunity for making

these men readers, so that on their return the libraries will find in them appreciative users and cordial supporters. In the future years the investment made by the American people in their library service to our boys will be returned many fold in this new education of the people, this new work of Americanization thru the medium of the book. There was no hesitation over the proposal to ask the public later in the year to contribute three million dollars more to this work, and if the public again over-subscribes the asking, five million dollars can be effectively utilized. The raising of this Library War Service fund was entrusted to the same committee of which Dr. Frank P. Hill has been the energetic chairman, with a stronger organization of state directors who came together on telegraphic call and held several meetings during the conference. Of the first Library War Service fund, somewhat over \$800,000 has been spent, and a professional audit certified to the A. L. A. finance committee that every penny passing thru the General Director's office had been properly spent and properly accounted for. The current expenditure is approximately \$150,000 per month, so that the first fund will last about thru the present year.

Too much praise, it was felt, can scarcely be given to the war personnel, from the General Director, whose slow but sure method of organization is now bearing full fruitage, thruout the staff of 212 persons reported as enrolled in war work. It was felt that no less recognition was due to the stay-at-home librarians for their war service, not only in supporting the War Finance Committee in raising money and the War Service Committee in collecting books, but in the everyday work for the community, especially for the children, which means so much during the war as well as after the

war in fulfilling its ideals and making these permanently American. Dr. Putnam happily emphasized the thought that a children's librarian is doing vastly more effective war work in her library than by seeking government service for filing and like routine work, however well paid. This true spirit of patriotism on the part of library workers, who wear no uniform and obtain no specific laudation for their work, should not pass without high appreciation.

An amusing feature of the Saratoga program was the clever and witty journal of a morning's work from hour to hour and minute to minute at one of the library dispatch offices, presented by Mr. Dickinson from Hoboken. The light touch of fun-making at the supposititious and conflicting telegrams from "Headquarters" afforded a safety-valve for the criticisms of slowness of routine, conflict of direction, etc., etc., sure to come forward and be only too well justified in a movement of this sort. In the formative stages, the nation has done extraordinary work thru its War and Navy departments in landing a million men on the soil of France, but each department has made flagrant errors in details of administration. Perhaps there has been less reason to criticise the library work than any other branch of the service, but criticism, whether in jest or earnest, is desirable to bring any organization to full effectiveness. The slowness at the start, which irked a good many, has been justified by the fact that so few cardinal mistakes have occurred, and the public may well feel that every dollar it has contributed has been well used, with the proportion of expenditures for salaries abnormally little.

Another feature of interest at Saratoga was the presentation by Dr. Locke and others of the achievements of our Canadian brethren. They indeed have suffered the burden of the war, as we have not, in loyal support of the cause of the mother country, within whose great empire they are a do-

minion practically as independent as our own nation. The conference provided for messages of sympathy and co-operation to the library organizations of the allied countries abroad, but none was needed for Canada, which is at home with us and with which we are now united in a common cause. New Yorkers of the city must recognize that beyond Greater New York there is a New York greater still in the Empire state. In like manner, we who are called Americans, must recognize that there is a greater America, which includes not only countries to the South speaking another language, but our sister nation speaking the same tongue in the intimate relationship of a borderless unity. Thus the American Library Association has always considered the provinces of Canada as in parity with the states of our own union. And while the war service of the sister nation, as Dr. Locke pointed out, has to be of separate method, it is a common cause, in common purpose, and with common ideals.

The conference had a pleasant ending in the function at Albany celebrating the centenary of the New York State Library. The large number of members who took part in this function, enjoyed the hospitality of Regent Alexander and listened with gratification to the worthy addresses in the auditorium of the finest Education Building in the world. Notable especially was the address of Melvil Dewey, who had come to Saratoga despite the doctor's orders, and could not do himself full justice until his remarkable and eloquent address in the field of his former activities at Albany. His significant remarks that democracy would not be safe until it was as safe for the minority as for the majority, gave an important cue for the political work of the future, in which, as he pointed out, the book must be a large factor in educating the masses to do justice to the classes, that both may unite in making us a greater nation in the future than ever we have been in the past.

A CALL TO SERVICE

BY WILLIAM WARNER BISHOP, *President, American Library Association*

WHILE the Saratoga Springs conference is still fresh in our recollection, and before the feeling and enthusiasm engendered there become dimmed, may I venture to urge on all librarians the imperative call of the present day to our best, our most devoted, our highest service?

The war has shown us two great lines of work, peculiarly our own, which can be done by no other agency so well as by libraries and librarians. These are our own library service at home in meeting the enormously increased need for popular education and information, and our direct provision of books to the soldiers and sailors at home and overseas.

Never before have libraries had laid upon them such a burden of duty as in the dissemination of sound and informing knowledge regarding the war, its aims, its conduct, the relation of the citizen thereto, and the whole array of problems arising from an unusual condition of society. Next to the public press, the one agency which can best supply such information to all classes of the community is the public library. If the library was vital before the war, it is ten-fold more vital now. Our cities, towns and villages need the best in books and magazines, need the best effort of librarians as never before. The hour calls for definite, earnest, well-thought-out plans for the unifying and bettering of our daily service. And the times are not easy. Our libraries have already contributed to the military and civil branches of the Government numbers of their best folk. On us who "stay by the stuff" falls the increased burden. Our call is plain—no falling off in efficiency because of war; rather a higher devotion and a greater service!

Further, and no less vital, is our Library War Service; the provision of books in an effective (because organized) manner to our troops and our sailors. The American Library Association with splendid enthusiasm promised its aid to the Government at the Louisville conference, hardly realizing, perhaps, the magnitude of its task. Last summer the Committee on War Service, thru various agencies, planned a great campaign for money and for books. Largely

thru the efforts of librarians in every part of our land an imposing sum was gathered in the fall. The Librarian of Congress became General Director of the Library War Service. Library buildings were erected in the great camps, innumerable stations were set up in every "Y" hut and house, on the ships, in smaller camps. Slowly and with great difficulty in the midst of a nation-wide dislocation of energy, a splendid service has been developed by the hard and long labor of our devoted colleagues at headquarters and in the field. The dispatch of books to Europe and their supply to the troops there have been well begun. The attempt has proven the value of books in army life.

On us now rests the burden of carrying onward this work so admirably begun. There will be need of money, much money. Prepare now to bring every effort to bear in your home towns to raise your share; yes, and more than your share. Let your people know what the association is doing, get the papers to print accounts of the Library War Service. Inform yourself by visits and by letter. If our members actually *know* what is being done, here and in France, the money will raise itself.

There is need of personal service. Offer yourself, and like soldiers, obey orders. If you are called, for whatever work, that is your special call to duty. If you are not called at once, remember that the home service needs your every thought and action. The Library War Service *must* be a selected service, a choosing of men and women for special needs because of individual qualification. It will require every one who can work in it, sooner or later. It will hearten every officer of the association, every camp and hospital librarian, to know that that volunteer list is embarrassingly large.

These words, my fellow librarians, are not preaching. Some one must voice the needs of the hour, and you have called me to lead the association for a year in the time of our country's peril and mightiest effort. Therefore I write this call to service, confident both in your response and in your welcome of the message.

CIVILIZATION*

PRESIDENTIAL ADDRESS OF THOMAS L. MONTGOMERY, *President American Library Association, 1917-18, and State Librarian of Pennsylvania*

I WOULD not for a minute keep you in suspense in the adopting of such a title as I have given nor alarm you with the thought that the whole of this meeting is to be given to a discussion of things from their beginnings. In the choosing of this title I have had in mind certain subjects that are interesting to me, tussocks, so to speak, in the oozy swamps of human activities, which enable one to bound lightly over the intervals of time and arrive at a triumphant conclusion within forty-five minutes. I hope to be pardoned for the few allusions that I make to my native state in a discourse of this kind. It is much better for a person of my limited horizon to speak of things with which I am familiar rather than to adopt sounding phrases dealing with illimitable space.

If you will look in the dictionary as I have you will probably agree with me that the word "civilization" is the most unsatisfactory in the whole Webster concatenation. It bears very little relation to the word "civil" which precedes it and is even less satisfactory than the word "civilize" which follows it. Its definition contains no thought of charity, kindness, literature, music, nor goodness. It refers simply to advancement in the arts with a rather weak notion of refinement. Until it has been reorganized and rehabilitated it does not as a term deserve the respect of man. But grant that after this war is over it should be made to mean more, that some of the qualities which I have mentioned are included in its definition. Where should we look in the past for inspiration? The Egyptians were advanced in the arts but you would not seek it there, nor in Babylon, nor in Persia. Rome would give us little satisfaction and even Greece can only inspire us with a few years of her history. Her wonderful literature we are told by statisticians was produced by some eighteen men only, nevertheless Greece was and is a sat-

isfaction. In her architecture and in her sculpture the Greeks sought to make things more beautiful. It would have been impossible for a Greek to follow Rodin's example and depict "A man with a broken nose."

True civilization was not found in the time of King John in spite of Magna Carta and all that meant to mankind. It was not much bettered by the introduction of the printed book and in the times of Charles II people were robbing each other and the Government and acting as if they were possessed of devils. Yet in the reign of the Merry Monarch a son was born to a distinguished man, who was probably one of the worst grafters of his time, a youth who was to become, in my humble opinion, the greatest contribution to civilization in the two hundred years that preceded and the two hundred years that followed that event. I allude to William Penn, the founder of Pennsylvania. His history is familiar to all of you. He is pictured in the beautiful series of paintings in the Pennsylvania Capitol as a student at Oxford where he had been sent to fit himself for the life of a courtier. He listens to the argument of the traveling Quaker and is impressed by the honesty and simplicity of his ways. Having adopted this faith he is driven from home by his father and is thrown into prison for his profane utterances. He is even shown writing tracts in his cell and upon his release visiting the prisoners and performing kindnesses to the poor and neglected. Another picture shows him in the act of receiving the Charter for the State of Pennsylvania from Charles II. Whenever Charles II was not engaged in anything else he gave Pennsylvania to some one. Lord Baltimore thought the land belonged to him but Charles II owed a large sum of money to Penn's father and this had to be liquidated whether Lord Baltimore liked it or not. The King jestingly alluded to Penn's ultimate consumption by the savages. He replied that he would have little

*Address delivered at the A. L. A. conference at Saratoga Springs, July 1, 1918.

trouble with them as he intended to buy their lands equitably. "Why," said the King in astonishment, "Is not the land mine?" "No," replied Penn. "They are the original occupants of the soil and you have no more right to claim them by discovery than they would have for discovering Great Britain." His famous treaty with the Indians was never sworn to and never broken.

Such was the influence which he exerted by his kindness, consideration and tact that for seventy years from the time of his coming there were neither wars nor even rumors of wars. Penn wrote to Thomas Holme: "When the great God brings me among you I intend to order all things in such a manner that we may live in love and peace one with another which I hope the great God will incline both you and me to do." Even the Walking Purchase of 1737 did not in its rascality cause a break with the redskin altho by it the Delawares lost their most highly prized lands. It was not until the Indian learned that the white man could not keep his word that the Delaware, the Shawnee and the Mingo, oppressed from without by the unfriendly Iroquois and cheated from within, moved gradually westward, pressed by the throng of land-thirsty settlers who invariably by their association with the rum traffic made the Indian more savage than he had been before, and this disgrace has been perpetuated to the present time. The Indian has been routed out of each place assigned to him by the greed of those having charge of his affairs, but a kind Providence has always seen to it that the place to which he is banished provides riches for him in the form of mineral wealth or oil so that he again becomes subject to the cupidity of those who should be his best friends. The utter absurdity of the provisions which allow uneducated foreigners the full rights of citizenship and deny to the native American the right to dispose of his property except thru a trustee must be manifest to the crudest intellect.

I like to think of American democracy as having had its birth at Valley Forge. It is impossible, however, to include the

history of the Iroquois in such a conclusion. Its confederacy of five tribes, the Mohawks, Oneidas, Onondagas, Cayugas and Senecas to which the Tuscaroras were afterwards added was associated under a plan which has lasted for more than three centuries and still exists to-day. Their importance is not due entirely to their early acquirements of fire-arms but to the wisdom of their system of Government. The Council of matrons, the construction of the clans (the members of which were not allowed to inter-marry within the same clan) and their admittance of captured enemies to full tribal rights, all stamp them as of an advanced intelligence. Thru a long series of years they held the balance of power between the French and English in America. They were good agriculturalists and grew corn, tobacco and fruits. They also made splendid pottery and kept their public records upon wampum. Most certainly those who are interested in the Equal Rights of Women must regard the Iroquois as a very advanced type of civilization. The limitation of descent belonged exclusively to the woman. A chieftain's son did not succeed him in office but his brother. If there were no brother then a son of his sister or some descendant of the maternal line was chosen. When a decision had to be made it was by unanimous agreement. It was no wonder that such a people approved of Penn's League of amity.

Unfortunate as it was that warfare had to enter into the relations of the three nations, now joined together for the protection of the rights of man, these early contests with the Indians unquestionably developed a hardy people whom even the sufferings of Valley Forge could not overcome, and the subsequent victory at Yorktown was due in no slight degree to the heroism engendered here in spite of privation and disease.

The free public school system forms another attractive stepping stone in the path of general civilization. In my own state a system had prevailed for years of furnishing free schooling only to self-confessed paupers. This was based upon the old Friends' public school established in 1697.

whereby the rich were schooled at reasonable rates and the poor for nothing. A class distinction was thus engendered which resulted in the poor people staying at home. Philadelphia was the first to cast aside this system and provide free schools at public expense. Agitation for the extension of this system finally culminated in an act of the Legislature presented in 1834, which was passed with only one dissenting vote. On account of the taxation necessary for carrying out the act about one-half the districts rejected it and sent representatives to the legislature to have the law repealed. The Governor was told that any favorable consideration of the act on his part would result in his defeat for re-election.

At this time there appeared upon the scene one who by his energy and ability immediately took front rank in the affairs of the Commonwealth. When I was a small boy I used to be told of the pithy remark of Mr. Chauncey Depew that the three great Pennsylvanians were Benjamin Franklin of Massachusetts, Albert Gallatin of Switzerland, and Thaddeus Stevens of Vermont. Slightly worn by the repetition of this *bon mot* I remarked that I would like to add another, George Washington of Virginia. Whenever George Washington wished to do anything he came to Pennsylvania. His expeditions thru Western Pennsylvania in 1753, 1754 and 1755 are well known. He was at Brandywine, Whitmarsh, Germantown and Valley Forge, and while President of the United States he resided in Philadelphia except during the short visits that he paid to New York. Incidentally I believe it is part of the education of every gentleman that he should pay short visits to New York. George Washington, however, seldom went to Virginia except to look after the crops or to attend a fox hunt.

The speech of Thaddeus Stephens in saving the free school act from defeat was one of the most masterly in his career. "If," said he, "the opponent of education were my most intimate and personal political friend and the free school candidate my most obnoxious enemy I should deem it my duty as a patriot to forget all other considerations and I should place myself un-

hesitatingly and cordially in the ranks of him whose banner streams in light." People who had no children said that the tax was unjust to them and he replied that the wealthy farmer was taxed to support criminal courts and jails altho never tried for a crime nor having enjoyed the hospitality of a prison. Of course it was understood that a great part of the opposition to the free schools was on the part of the sectarian institutions, the projectors of which did not wish to be taxed for both.

Only second to the public schools has been the civilizing effect of our public library system. In some respects it is more important, for its influence extends from the cradle to the grave. I don't know whether it is a general feeling, but I have myself an intense and loving respect for the men who first forwarded the idea of the free distribution of books. Of those of our guild who met in 1853 Mr. Lloyd P. Smith, Dr. W. F. Poole and Dr. Edward Everett Hale are the only ones whom I knew and of these Dr. Poole was the only one associated with the free library movement. It is wonderful, however, to think that such an assemblage of librarians could take place at that day. The opening remarks of the president show why. "To every one who knows the nature of the librarian's duties, the details which consume his days and render absence from his post impossible except at the cost of severe labor on his return, it must be manifest that we have met at considerable sacrifice. We obey some strong heart-felt impulse in incurring the expense of this gathering." How expensive it was may be gained from the report on salaries. Only twelve men at that time received for their services \$1000 or upwards and the highest salary in the country was \$1900 given to the State Librarian of Massachusetts. Nevertheless we find these men going forth to spread the doctrine thruout the country and in 1876 they met almost spontaneously to form the association of which you and I are proud. It is no easy task to accomplish the results which have been attained by enthusiasm alone, yet such has been the fascination of our propaganda that it has increased in influence year by year with but one important

gift to help the cause, and now in this year of the war we find ourselves the trustees of books and dollars by the million in the effort to preserve civilization in the soldiers' and sailors' rough life. This work has been well done. It has been well done because the former president of the association had a thoro grasp of the situation and appointed a committee upon which it would have been very hard to improve, and that committee being thus intelligently constituted knew that the Librarian of Congress should be given the widest latitude in prosecuting the work.

I shall refrain from speaking of the events of the past year. The future I have consigned to one far abler than I, but I should like to bring this before you. After the war is over, where are the youths of the nations to assemble to accomplish their post-graduate work under competent supervision? It is not likely that they will submit themselves to the influence linked with the Prussian propaganda. England cannot receive them. France is far-spent. It may be that America may be called upon, with its great educational foundations, to provide a center for the students of the whole civilized world. God grant that she may prove equal to the demands which may be made upon her! It is evident that the German language is to be driven from our schools. I hope that Portuguese and Spanish may be substituted so that we may better understand our neighbors to the South and thus lead up to a United States of America extending from Terra del Fuego to the Arctic Ocean, its citizens fighting shoulder to shoulder for the protection of the rights of man.

MRS. GUDRUN THORNE-THOMSEN IN HAWAII

"SELDOM has there come to the Hawaiian Islands an educator who has given more inspiration and pleasure to teachers, mothers and workers with the young than Mrs. Gudrun Thorne-Thomsen, who spent May and June in these islands of the Pacific," says a letter recently received from Honolulu.

"The opportunity of bringing Mrs. Thorne-Thomsen to the islands was made possible thru the efforts of the Library of Hawaii, where her main course was given. Punahou Academy and the Kamehameha Schools, the latter schools for Hawaiian boys and girls, also engaged her services, and at each of these institutions she gave story hours and courses in Children's literature.

"Besides several story hours at the Library of Hawaii, the main course was one to teachers and kindergarten workers, consisting of the following lectures:

1. Literature in child life
2. Poetry
3. Fairy tales (Ancient)
Modern Fairy tales
4. Story telling, a folk art
5. Odyssey
6. Norse myths
7. Volsunga saga
8. Robin Hood, the Ballads
9. Realistic stories
10. Symbolic tales

"At the end of this series Mrs. Thorne-Thomsen very kindly gave an additional lecture on 'Schools of to-day and to-morrow.'

"A special course of lectures to mothers held at Laniakea, an art center in Honolulu, covered such subjects as: Value of literature in child life; Poetry; Folklore; Children's reading in the home; Dramatization of stories; and Hero tales from the Norse.

"After spending about six weeks in Honolulu, Mrs. Thorne-Thomsen visited the islands of Hawaii, Maui and Kauai, making a trip to the volcanoes Kilaua and Haleakela, and giving story hours and lectures on Maui.

"Wherever this gifted story-teller went, she was greeted with large and enthusiastic audiences. All who heard her felt that she had left a lasting impression of her own theory that 'we fail in our great responsibilities and opportunities, unless we create thru literature for children a pure and lasting joy.'"

"A LIBRARY will never become first-class while its librarian is second-class."

THE A. L. A. FOLLOWS THE FLAG OVERSEAS

BY M. LLEWELLYN RANEY, *Librarian of Johns Hopkins University and Director of Overseas Service for the A. L. A.*

THE road turned sharply to the west. Standing at the turn, if one dared, and stretching out his arms along the highway, he would grasp, in each hand, as it were, a village three-quarters of a mile off—a French village ruined and deserted. The one to the right was the first behind our trenches; that to the left the last in the line of communication. The bend half-way was, therefore, an important link in the chain, and the enemy hammered away consistently in the hope of breaking it. An attractive target was it, not only because a direct hit on the roadbed would impede the movement of supply trains, but couched in the lee were hidden officers and material, while on the convex side sat tangent and camouflaged an American battery, so that a shot long or short might be equally effective. The ground in the triangle bore mute evidence of the intensity of the endeavor, for it was filled with shell holes. They called it "Hell's Half Acre," and the turn of the road "Dead Man's Curve."

We left our machine in the nearer village, behind the shield of a fragmentary wall, and followed the custom in reaching the farther village on foot, along the hypotenuse, across fields and thru wire entanglements. So enticing, however, was the scene, that I was back again part way that night, and on the following day we swung at top speed around the horseshoe itself and down the full length of our line—an adventure which the Army authorities have since found it necessary to forbid, except under cover of darkness.

My first visit was made in the shank of a beautiful day. Our guns had already started the argument of the night. Slipping down the incline on the other side of the road, we found ourselves at the dug-out doorway of two young officers. It seems that a gas shell had fallen in that

vicinity the night before and taken toll of their comrades. Their minds went back to that event, and, in the case of one of them, back further to a wife and four little ones in the West. Went back with that quiet, determined smile, which, please God, the Hun shall rue the day he ever awakened by his ruthless barbarism!

And what were these our defenders doing, as we chanced upon them in the gathering shadows? On the little table lighted by a single candle, were spread out for the one a *National Geographic Magazine* of a bygone day, and for the other a *Literary Digest* recently issued. Such was my first glimpse of the American zone of advance. Our promise of an adequate library service from home was received with hearty appreciation, and the promise has been kept. If those young lieutenants be still there alive, they can find, ten minutes' walk away, a good stock of A. L. A. books and magazines. But before our first shipment could reach and leave Paris, a special messenger was sent to us all the way from the front, begging immediate dispatch of our wares, since for them had grown a clamorous demand.

Into the farther village we tramped, entering thru the little gardens and orchards of once happy homes, now the resting place of our first fallen, with the grass green above them and at their feet flowers, planted by the hands of unforgetting comrades. A place of utter desolation—only one roof remaining and not one inhabitant, nor even a dog or cat left within its shattered walls. But in subterranean retreats lay our Crusaders from over the Atlantic and after the rest of the day, were crowding about the counter of civilization's only vestige—the Y. M. C. A. canteen—installed under that sole remaining roof.

The next village found the busy hour of barter passing. Trench time was just ahead. Down in the Y's "cave voutée" the men were standing about in the

* Report read at the Saratoga conference, July 4, 1918.

gloom pierced by a lone candle—full-panoplied and with masks alert. It was a quiet, subdued, knowing crowd—not a word of profanity or one smutty remark. Someone turned to the phonograph and put on "Mandalay." A whistle started up from the corner and soon all inside and out had joined in, but joined so softly that, despite a fiber needle, the instrument was allowed to carry over them all. Then a negro piece, and they laughed quietly at the crude but cleanly jokes, so quietly that not a word was lost. Outside, in the glory of a declining sun, they were lolling under the remnant walls which shielded them from the enemy's eye and his sniping—reading, nearly all, or turning lazily thru the illustrations or the columns of humor. The devoted secretary told me that if his scanty store of books and periodicals were multiplied manyfold, he would not have enough to satisfy these hungry souls. Thus they were spending the only normal hour, which, in twenty-four, was vouchsafed them in such advanced post. A little later they were off down the concealed roadway, and dropping beneath the hedge into communicating trenches, had passed into the night to have it out with death.

Since then our supply has come, and you will not exaggerate the rejoicing consequent.

Such are the doughboys in action, but at any given time a much greater number of them are detailed to other necessary work and have a different schedule. And if we add the supply trains, headquarters police, veterinarians, etc., as well as the upwards of twelve hundred officers, we shall not have accounted for two-thirds of the 27,000 men that go to make up a combat division. Thus there are about 4500 artillerymen, 2500 machine gunners, 1500 engineers, 1500 engaged in medical and sanitary work and 500 belonging to the signal corps—groups having each a life peculiar to itself, and calling to us in its own tongue. For example, strong representations are made in behalf of the gun crews, because they are not only men of technical training, and, therefore, accustomed to richer

mental pabulum, but they are confined to a square which cannot be left by them or entered by another; and yet, tho on duty for twenty-four hours a day and perhaps for days in succession, they may have waited in vain to hear the telephonic command to fire. So time hangs heavily. Special means must be devised to reach them. We hope we have found them thru the chaplain, in his usual function of regimental postmaster, since reading matter can be sent with the mail on munition trains moving at night to the outlying gun positions. As for detached units, the military have agreed to forward our parcels directly for us.

Back of the fighting zone lie the so-called Divisional Areas, where the final training takes place and where after action they go for repose. Here the troops are billeted in strings of French villages set along the great arteries of travel and their principal feeders. Perhaps nowhere do most men miss the comforts of home—the customary diversions of civil life, more than among these kindly neighbors of a foreign tongue, with their mocking reminders of native land and loved surroundings. Here, whether in anticipation of the trial by fire, or relaxation from it, they miss keenly the presence of women and children. It is a good lesson to learn and should deepen the wells of domestic affection when they return. Meanwhile, one cannot but be touched by their brave improvisations, their good-hearted endeavors to bridge the chasm. Like rain to parched ground is a cheering entertainer to them, and how ravenously they read. Eagerly they are hunting substitutes and escapes. The great thing about a noble book is that therein they are apt to find better than they sought or had known.

One evening I came unannounced upon a crowd packing a hut to the doors in anticipation of a performance put on by their own talent. They had their own volunteer band and there were to be lots of stunts. Just as the instruments were tuning up, it reached the ears of the officer in charge that a library man from America was in the building. So I was

ushered to the platform and the story of our proposed service became the first number on the program. The idea was vigorously applauded. In fact, before I could settle down to the evening's schedule, I had to go out and reassure an eager group of distant listeners that they had heard correctly and the news was reliable.

In this great finishing region is the center of Army Schools for the training of staff officers, as well as the Corps Schools where line officers are bred. Thus at the former there are no less than eighteen sections, such as for example, Anti-aircraft, Camouflage, Carrier-pigeons, Dentistry, Engineering (with several subdivisions, like Mines, Flash and Sound, Bridge-building, and Construction) Gas, Infantry specialties (e.g. Bayonet, Machine gun, Marksmanship, Sniping, etc.), Signal Corps, Tanks, Trench Mortars, and so on, together with a General Staff College, at which a former Secretary of War was a pupil when the present Secretary made his visit.

Textbooks the Government provides. The matter may be so new as to be issued in mimeographed form alone. But we can be very useful in our supply of collateral technical reading. Thus the cablegram calling for 500 copies of Jeanne d'Arc, demands 30 of Metal workers' pattern book. We have already made such contributions as we had on hand, and the staffs of instruction have promised to suggest bibliographies supplementary. They, of course, get their share of recreational reading also.

In this zone of advance, the unit of library service must be the Division, even tho it may extend thru forty villages. It arrives suddenly, stays an indefinite but relatively short period, passes up to the front for the fire-test, comes back after a few weeks to a divisional area, but likely enough not to the same one, for re-fitting, thence to the front again. Thus a certain division occupied in the course of six months four different and widely separated positions. Before you could make a library survey by villages and get them supplied fittingly, the area might

be emptied, and then either remain so or be refilled by another with quite dissimilar distribution of personnel. An organization like the Y. M. C. A., Knights of Columbus or Salvation Army, that aims to get a hut in all of the chief villages, is severely taxed to keep abreast. It seems best for us to compose a proper divisional equipment, send it to a center for fitting distribution, and then when the division moves out, restore our collections to the central warehouse of our host organization, unless there be reason to suppose that the area is being abandoned. A fresh layout is then to be sent along for the division's use, in its new position. Wastage, of course, there must be, but the loss is not absolute, as long as a worthy volume remains in somebody's possession.

We cross the line now into the Intermediate Area, where the Divisions, except Replacement, are in disintegration. The exception feeds the front and is fed from the coast—a pool of men in the midst of a steady stream. Here are the camps of Casuals—unfortunates from both directions meeting. They have gotten separated from their units, perhaps missed the paymaster, and await reassignment. Coming the other direction are fellows incapacitated for one reason or another. The place is a mixture of barracks and hospitals. The fellows are apt to be low in spirit and pocket. Here we had no difficulty in getting our doctrine of free service accepted, for the Y. M. C. A. did not have the heart to exact its usual deposit.

Here too are great training camps, especially for artillery and aviation. For example, out in the fields, miles away from the nearest village, an American city, with a population of 10,000 has been laid out. It has its own macadamized roads, electric lighting plant, water works, sewage disposal and railroad—a city of huts, offices, warehouses, sheds—an aviation center. When you reflect that we have in Europe scores of such camps, with three dozen to ten thousand in each, and that there are 150 mechanics to every eighteen fliers, and that the pilots also have their term of ground

training, you can appreciate the importance of the service, when we meet the urgent demand of the officers to supply books on aeronautics for the men in the shops.

Here are the great midway depots and plants. For example, one of these depots is an ice factory and the third largest producer in the world, furnishing daily ice for the cold storage of eleven million pounds of meat. It is six and a half miles long and at parts two miles broad.

Salvage plants and bakeries, camouflage factories and ammunition caches all find place here. This brings concentrations of specialists in training centers, labor and technical troops, ordnance and warehouse men, forestry and engineering or construction troops, guards and headquarters contingent—units living largely in barracks and making a very definite demand on us which we are steadily advancing to meet.

Finally there's Aix-les-Bains—that unique experiment of our Army, upon which the eyes of our Military and the Allies are earnestly fixed. Will it take? Will the fellows call it vacation if their leave be spent under the eyes of officers, no matter how crowded the pleasures? If it succeeds, such places will be multiplied. All the hotels in this popular bathing place have been taken over by the Army and rooms are drawn by lot. The magnificent suites of wealth and nobility are now occupied by our dough-boys from the trenches. There are excursions, boating, bathing and other sports; Europe's band and a theater, and in the Y's casino at least we shall have a fine show of books, with a trained librarian in charge.

In this region, and the third to which we now turn, the Base Areas surrounding the ports—for all Gaul is divided into three parts, each of which the Americans inhabit—the engineer comes into his own, tho his work runs from water's edge to No Man's Land. They are the sapper, searchlight and sound-ranging troops; theirs are the gas and flame, the electrical and mechanical regiments; they build the bridges and railroads and operate them as well; they put in the docks,

warehouses, barracks and hospitals; they operate the cranes, autos, trucks and depots. A year ago at a certain French port there were a few small wharfs, approachable by light draft vessels, which were emptied and loaded by hand labor. To-day we have driven 30,000 piles with machinery and constructed four great docks capable of accommodating sixteen heavy cargo vessels at the same time and deepened the channel for their entry. American railways have been laid, cranes installed and 150 warehouses are in various stages of construction, and here they put together American locomotives and not far away the cars.

At another port you can now walk along three miles of landing stages and see 375,000 square feet of wharf space, where last October there was a swamp. Nearby is a remarkable system of warehouses which will cover nearly 2000 acres; not to mention a mighty railway system. A hospital of 25,000 beds, the largest in the world, is here being built, while in this area is accommodation for 25 per cent. of the command. This means a concentration of 12,000 laborers in this region. Then there are the naval stations and rest camps for troops arriving. But time does not suffice to enumerate all the types of concentrations in these Base Areas, or the kinds of library service patently appropriate. Suffice it to say that it was in these areas that we felt it necessary to place our first consignments. One case only I must specify, and that because it might generally be overlooked. I wish there were space to print in full a stirring appeal sent us for books by a commander of stevedores in one of these port cities. He wanted recreation books to combat the social evil. Two months of very careful study had convinced him that they were the best antidote. "A man who can get hold of a book," he writes, "stays at home and reads it, soon improves in the matters of dress and military conduct and shows improvement in morals and self-respect." And the illiterate hear and learn from them.

Now that, backing from the front, we have reached the water, I am reminded

that it was due to the Navy that I landed at all and the Commander of the United States Naval Forces Operating in European Waters was the first consulted. I might, therefore, with propriety obey chronology.

Well, the Admiral had had an experience and so was shy of welfare organizations. Besides, the larger ships possessed libraries and a fund from which to replenish them. And then at our chief naval base friends had erected and presented to the Navy a fine club house, with books abundant as part of its equipment. Perhaps a little patience would bring a similar boon to the bases. Still the reception was cordial and he matched the Secretary's letter with a pass to all naval stations under his command and an instruction to his officers that they extend every facility for carrying out this work.

If fortune began thus faintly to smile, she beamed upon us in France, for, repairing thither without disturbing the balance in Ireland, I stumbled at Naval Headquarters in Paris upon a group of officers who at once set up a vigorous plea in behalf of the aviation stations. These boys, with a good percentage of college graduates among them, were choice fellows, and yet set usually in out-of-the-way places, with recreational provision scanty or none. Their Admiral out at the coast endorsed what they had to say, but wanted it distinctly understood that his boys on the boats were just as deserving of our remembrance. Of this he was good enough to give me a demonstration at first hand, for out to sea I went for two days and nights in the flagship of a convoying fleet in its work down the French coast. Those full hours we must not now peer into. Suffice it to say that I was given the freedom of the vessel, running from bridge to boiler-room, bunking with the surgeon, dining with the officers, chatting with the crew, sighting the guns—filled with the lore of those wonderful months. Hundreds of impressions have since been recorded on the privileged plate of my mind, but that first one cannot be effaced. These heroes of the sea, their every hour

uncertain, whether tracking the serpent beneath the waves, or scouring for his horned eggs, have won my heart for aye and shall have the A. L. A.'s warmest hand.

Did they have time or inclination for books, as some had denied? I spent an evening with them in the crowded quarters under deck and there I saw a dozen of them lying in their bunks reading. Many of them had fastened soap boxes on the side of the hull opposite their narrow beds, and these were the little libraries of their very own! It seems that they used to make a continuous run of it, but the losses at night were so considerable that our Naval authorities had finally prevailed on the British and French to run their merchant vessels down the coast only in daylight. So the fellows had their evenings to themselves. The opportunity was there and the desire was not lacking. The body was constrained, but the mind was eager to wander. Travel they wanted, adventures of the sea, stirring Western fiction from home, and good tales of the war. Empey they instanced, and called for Jack London, Zane Grey, Ralph Connor, Stanley Weyman, Joseph Conrad, Kipling, Stevenson, and someone mentioned French text-books. Oh, yes, they knew what they wanted, and what they did not too; for example, religious books, tho they confessed there was one fellow who did a lot of such reading and had also distinguished himself by keeping clear of their pet vices. After all, their minds went back to him, I noticed, and I believe they would not like it if our selection had nothing to please this peculiar comrade.

The water trip past, I went by land on to the U. S. naval aviation headquarters in France. There the same cordial greeting was given and the Commander was so interested that he said he would, if necessary, appoint a special officer whose sole duty would be the management of the collections sent his stations. Distribution by a naval vessel was arranged. We could be assured, he said, that not only would this material not be abused, but it would be husbanded by appreciative fellows as a treasure. We hope, indeed, there is soon to be a Y. M. C. A.

hut at all stations, so as to afford adequate shelter and attention to our collections.

The service began on the spot, as a matter of fact. Men in some of the stations were to take Annapolis examinations the next month. They did not have the necessary text-books and a preliminary test showed they were sure to fail without them. Could we help? We could and did. A cablegram was sent at once to London. The books came promptly and were immediately distributed to the candidates, "each one of whom" so the officer writes, "expressed sincere thanks." And he added: "No doubt this is the beginning of a very useful mission which you ought to perform with our men in Europe."

A cablegram was then sent to Washington, calling for shipment of 8000 volumes, equally divided between the vessels and hydroplane stations in France, addressed to our Commanding Officers at two French ports, and brought over in naval supply vessels. This has been supplemented by other consignments, including a hundred different periodicals by subscription.

Well, I saw Admiral Sims again, and then it was a different story. If fortune had first smiled and then beamed, she now laughed outright. He had heard from France, and as a result he wanted books sent to every arm of his service, Naval bases, aviation stations, mine-sweeping bases, and even his pet battleships that in February would never, never need us, he asks us in May surely not to forget. And for good fellowship they want to exchange books with the British fleet.

I could go back home on a transport if I wished and was given a letter to the Secretary of War, in which he says: "We recognize, of course, the great value of Mr. Raney's services and those of his Association in increasing the contentment of our forces, and he may be entirely sure that his efforts in this respect will be appreciated by many thousands of men over here."

At his request routes have now been mapped out with the Navy Department

for supplying books to our far-flung line in Europe. Whether hovering about the British Isles, slipping thru the Bay of stopping the rat holes in nameless islands, we shall follow them in their devoted task and at the odd hour of rest hope to give them cheer from home.

If the navy situation had been delicate, it was child's play compared with the difficulties faced when we turned to the Army, whether in England or France. There stood a decree fixed in General Orders, which seemed to allocate the field of civilian activity to the Red Cross and Y. M. C. A.—the one to handle the ill, the other the well. Accordingly both had been militarized; the one holding the hospitals, the other operating the canteen. They rode about in army machines, drew upon the commissary for supplies, shipped in Government bottoms, and travelled at military rates. The arrangement was logical, there was no use in denying it. If you were a military commander, you would demand the same simplification, and, moreover, it was due the American people, who have to meet the cost. You could accordingly feel in the atmosphere a working agreement to kill off newcomers, and the backyards of all three parties were white with the bleaching bones of would-be associates.

If thus they had the support of law, they had added the effectiveness of possession—proverbially the more important—holding, that is, both credentials and chronology. They had been in the field for months and were amazing Europe by the magnitude and uniqueness of their programs. Both had taken the world for their province, and the press was full of their doings. While the army was necessarily struggling to reach its feet, here were two magnificent American organizations which were winning us plaudits for daring performances on a big scale.

And they had preëmption not merely in general, but in particular had been at library service since the summer of 1917. On each side of the channel, they both had library departments, with staffs of size and budgets boundless. Active buyers sat in the London market, sending

books and periodicals across and afield.

Finally in hut and hospital they had ready to hand the only establishments which were strategically in position for rendering the service.

There was nothing theoretical about this, you will agree. My instructions did not cover the case, tho the diplomatic character of the mission was underscored. So taking stock of our resources, which included (1) a letter of introduction and authorization from the Secretary of War to General Pershing, (2) command of American book resources, and (3) trained personnel, I determined to stake our future overseas on a single throw, and that was the following communication presented in person at General Headquarters:

*February 20, 1918,
c/o American Embassy,
Paris.*

*General John J. Pershing,
Commander-in-Chief,
American Expeditionary Force,
France.*

Sir:

As seen from the letters of Secretaries Baker and Daniels, the American Library Association has been engaged by the War and Navy Departments as the agency to supply our forces at home and overseas with reading material during the war.

For this purpose a fund has been raised by popular subscription, while books and magazines are being systematically solicited in the United States.

The Headquarters of this service are at the Library of Congress, and Dr. Herbert Putnam is General Director.

First attention was given to the training centers in America. Thru a generous gift of the Carnegie Corporation, it became possible to erect and furnish in each of thirty-five camps and cantonments a central building with ample accommodations for books, readers and attendants. A month ago 500,000 volumes had been installed, one-fifth purchased, the rest given.

I am now sent to Europe to map out a line of action appropriate for the Association. After study of British methods which, under the aegis of the Government, are carried out on a huge scale, and after a rapid survey of the local situation, the rough outline of our obligation can be discerned. Let me briefly sketch it.

Our Association has but one concern and that is to reach the man with the book that's needed. Whatever procedure will accomplish that shall be adopted, no matter whether an old one or a new one. You welcome us; we

shall not abuse the confidence. Our business here is to win the war and every proposal is to stand or fall according as it helps or hinders this business. We do not offer to add a fifth wheel from vanity or upset the carriage to get credit for fixing it. But we do want to meet our obligation to the American people who give the money and material, to the Government that appoints us, and especially to the boys, who have the right to command us. If library service fails, our Association will reap the dishonor. We must, therefore, under your sanction, proceed with care, tho in a spirit of utter unselfishness.

Now the man, well or ill, needs to be reached. There are found already at hand two great trusted organizations which have established that contact—the American Red Cross and the American Y. M. C. A. If these (and in less degree) other agencies can receive, deliver and administer effectively our wares it is the part of wisdom and should be of pleasure for us so to consign those wares. That is what under conditions we propose to do.

To receive such material they are patently able. Their ability to convey it efficiently has yet to be demonstrated, and to dispense it wisely requires the finest thought that our combined heads and hearts can from day to day conceive.

No new name needs therefore to be added to the receiving agencies, no warehouses by us engaged. What we require here, so far as France is concerned, is a trained man of high executive and interpretative ability, who shall serve three ends: (1) Be a balance wheel between the Red Cross and Y. M. C. A., passing upon their claims for percentage of shipment; (2) key up the executive centers and field services, as of authority, to effective performance, by freely examining and freely prescribing; (3) interpret systematically to us in America the situation as it develops, so that we in turn may on the other side meet our obligation.

And what is that obligation?

To be the reservoir, and the only one, under Governmental decree, from which to draw supplies of this sort.

And why one only?

To prevent duplication of effort and shipment of useless material; therefore, to save tonnage, which is precious.

Why the American Library Association, rather than another organization, entirely aside from the Governmental status?

Because in the finely and widely ramified public library system in the United States we have at hand without cost an agency for collecting and sorting material, and in purchases we have been granted unparalleled discounts by publishers and cession of royalties by authors. In our various depots and especially the two terminal ones at Hoboken and Newport News, we can separate the fit

from the unfit and dispatch material in classified form and economic volume ready for immediate consumption on arrival overseas. We become, therefore, the neck of the American bottle.

In this rough sketch of our proposed European work on both sides of the Atlantic, some qualification is now seen necessary and more may appear hereafter.

As here defined, our representative in Paris (or London) has mainly an advisory and ambassadorial function, tho since our material is in question it might be expected that his advice would get adoption. It may become quickly necessary, in order that we should meet our contract with the Government, that our Association should become the apex of an executive pyramid with the two associative organizations the base, establishing policy and exercising authority.

On the other hand, the American Library Association does not touch what may be termed the technical library work of either associate, tho its advice where requested must be freely given. I refer, on the one hand for example, to the Central Medical Library being established in Paris by the American Red Cross for American doctors in military service, tho it happens that we were in position to render here a marked service; and on the other hand, reference is here made to the religious, educational and other stock which the Y. M. C. A. assembles as apparatus for its special courses and work.

If the American Library Association, in your judgment, is thus meeting its obligation in the right spirit, and if the scheme seems commendable and the service welcome, I might respectfully hope to receive from you, (1) a statement to such effect; (2) a status, which under continuous control, might enable me (and anyone who might succeed me) to make the necessary inspection of possible book centers, as Admiral Sims has accorded, at military rates of travel; (3) a request of Washington that we be secured the American shipping monopoly above suggested; (4) a small concession of tonnage to us, (say 50 tons a month) which may in fact be no greater than at present consumed in purposeless but inadequate shipments; (5) communication from time to time of sufficient information to make our organization responsive to your growing and changing need.

I am, Sir,

Yours respectfully,

(Signed) M. LLEWELLYN RANEY,
Director of Overseas War Service, American Library Association.

To this was appended the following endorsements:

If the general plan of the above meets with the approval of the Commander-in-Chief, the A. E. F. Y. M. C. A. will be glad to co-

operate along such lines as the Commander-in-Chief may designate.

(Signed) E. C. CARTER,
Chief, A. E. F. Y. M. C. A.

The American Red Cross will be glad to co-operate along the same lines as the cooperation given by the Y. M. C. A.

(Signed) J. H. PERKINS,
*Major O. R. C., U. S. A.,
Commissioner for Europe,
American Red Cross.*

The official reply follows:

G-1

*From: C. in C.
To: Director of Overseas War Service,
American Library Association
Subject: Supply of Library Material to A. E. F.*

1. In answer to your letter of February 20th, which has been received and considered with great interest, the following conclusions have been arrived at.

2. The scheme which is proposed is commendable and the service is welcome. The details of distribution, due to the present tonnage conditions, make it desirable that the plan of working out the scheme for the distribution of proper reading matter to the A. E. F. be handled in connection with the existing agencies now working for their well being, that is, the Y. M. C. A. and the Red Cross.

As indicated in your letter, both of these organizations have expressed their willingness and desire to co-operate and it is believed that a mutual exchange of information and facilities will enable your scheme to be carried out to the great advantage of all concerned.

3. For the present, a tonnage of not to exceed 50 ship tons per month has been requested from Washington for this purpose, and it is believed that this should be sufficient, and that no allotment of tonnage for a similar purpose should be made.

4. The intent of the above recommendation is that there should not be any competition in supplying this matter to the troops, but that the work should be centralized in the American Library Association.

By order of the C. in C.

JAMES A. LOGAN, JR.,
*Lt. Col. G. S.,
A. C. of S., G-1.*

This was backed up by a cablegram from the Commander-in-Chief to the Chief of Staff in Washington, recommending the desired grant of tonnage to us, with the proviso that none be allotted to any other organization for similar purpose.

To this the Chief of Staff in time acceded, with in turn a proviso that such consignments be addressed to the "Chief

Quartermaster A. E. F., France, for distribution."

That official countered with an offer to erect us without cost a warehouse at an important interior point, to which he would dispatch our shipments at Government expense. The offer was of course accepted, the warehouse is about completed, and books in quantity are en route thither.

Fifty tons, I explained, was a small amount, but it would suffice, provided, first, that we had the monopoly, because duplicate and unfitting material would thus be turned away from the ships; and provided, second, that we had military support in the conservation of what we did send. The latter came to be afforded in a peculiar and gratifying fashion. The General whose famous sayings "Nous voici enfin, O Lafayette" and "Disposez de nous comme il vous plaira," so stirred the heart of France, gave us also his signature to a sentiment, which, used in or with the books, records his moral alliance without invoking his official authority, which would have involved penalties and consequent alienation. So above our cases stands a placard which is headed:

WAR SERVICE LIBRARY

provided by the

People of the United States
through

The American Library Association

and, following then with an announcement of a service without any charge, and a few simple rules, concludes with this quotation:

These books come to us Overseas from home.
To read them is a privilege;
To restore them promptly unabused a duty.

(Signed) JOHN J. PERSHING.

Of course before that first fruitful visit to General Headquarters a deal of water had gone under the bridge, and after it a great deal more, before a final settlement was reached. Our Overseas Constitution, as we may call it, bore the written endorsement of the two great associated organizations. The negotiations which led up to this and tediously followed it need not here be recounted. Men of vision were at the head of each,

and it was a pleasure to deal with them. The Red Cross found us useful in strengthening its Medical Library established in Paris for American doctors in military service, since, by cabled exchanges with Washington, conferences with French officials, and a visit to Switzerland, we put them in the way of securing their much needed journals from enemy countries—found us so useful in fact, that they finally agreed to have us run this central library for them and have its fine suite of rooms in the Reinhart Galleries for our headquarters, if we liked.

As for the Y. M. C. A.; its library department was suffering from growing pains. We were called in consultation and in the end our prescription was accepted. It is now pretty well settled that our European staff, headed by Mr. Burton E. Stevenson, will occupy a rented floor in the same mansion as the Y. M. C. A.'s Educational and allied departments are about to enter. We shall in any case maintain at our headquarters a reference library and take over their reference work. Aside from their own religious and similar technical stock, it will be our books that go to the huts, and they will maintain an experienced business manager, who will see that requisitions are carried out, and a competent field secretary, who will greatly aid us in keeping abreast of conditions.

But more potent than either of these considerations was our promise of American books. The men did not like the English substitutes which the Y. M. C. A. had felt compelled to use. Besides, the London market was going dry and prices were advancing. Editions were not being reprinted, owing to shortness of paper and labor. Furthermore, the great British organizations, which were feeding the British armed forces on a huge scale, looked with anxiety on American competition, so that a moral issue was raised. The Red Cross was so desirous of escaping from this dilemma that it offered to share its present tonnage with us to bring over American reading material for our hospitals in Europe. Indeed, under this arrangement, we have

made an initial shipment of 25,000 volumes to France, and instructions have been issued for similar dispatch of 5000 volumes to England, with regular monthly service to follow in each case.

The Y. M. C. A. had no tonnage to spare, but it could help in another way. Men needed books *en voyage*. The military authorities consented to have us put boxes on transports for deck usage. The Y. M. C. A. secretaries and the chaplains agreed to look out for the books en route, to re-box and deliver them in port. Here going into their warehouses, they would be subject to our further orders for distribution. While there has been an enormous amount of loss in this service, and we are consequently in negotiation with Washington for a change of method, it has been immensely popular, and thus far our chief source of supply overseas.

And here it is fitting to say that in the British Isles our interests are for the time to be looked after by Mr. G. H. Grubb, of G. P. Putnam's Sons in London, whom we succeeded in attaching to the Y. M. C. A. staff there. A little later, when the situation develops more, we shall doubtless find it expedient to send a special representative over.

I spoke above about keeping abreast of conditions. This reminds me of the fifth and last request set down at the end of our constitution — "communication from time to time of sufficient information to make our organization responsive to your growing and changing need." Headquarters' frank compliance with that petition constitutes my chief embarrassment in appearing here today and draws perforce a veil about the British Isles. So much the best remains untold. Never did our army more strikingly evince its essentially democratic character than when it suffered us to set up in the military zone a library service based on scientific surveys. We were not required to sit off in Paris and conduct correspondence. We could rather move freely among the men, make our own observations and apply our own conclusions. Nor were we censored.

The result is going to be a unique record, and the betrayal of confidence would be unthinkable. We are of the brotherhood that means to bind the madmen of Central Europe and it is ours to warm the hearts and clarify the vision of our comrades.

Survey? The word had not been uttered in Paris before we came. There were no field reports, no visitations. We began with a demonstration of the military map at General Headquarters. My time in France was spent in keying up Paris and plotting the field. Consequently when our material at length began to arrive, it knew just where to go and it cannot come too fast to embarrass us; nor will the stevedore get a book on trench mortars, or anybody the castoffs of the garret.

Again the constitution speaks about a pyramid. It is already in course of construction. We have persuaded our associates to enter a Library Council, of which our representative is chairman. The other recognized organizations, such as the Knights of Columbus and Salvation Army, will of course be accorded membership also. Overlapping of effort will thus be checked; systemization and improvement of practice secured.

And here let it be said once for all that if we seem to be stressing unduly the importance of our liaison with the two largest of our associates, we do not fail to value the opportunity offered thru the smaller ones.

The Knights of Columbus promise an interesting opening a little later. When I left France they were deep in plans and busy with the cables.

Make no mistake about it, the service of the Salvation Army is keenly appreciated by the men. It is ably led, evinces good strategic sense, has mobility and displays its traditional sympathy for the sorely tried by planting its huts along the fringe of fire. The boys speak of simple affection shown them and I can well believe it, when I recall, as needs must, one shining face of which I caught a glimpse behind the counter as I peered into the doorway at twilight. It is with

pleasure and assurance that we have made all their huts an initial shipment.

And the Y. W. C. A. shall not be forgotten. How fine a conception to offer what the men so highly value—normal relations with normal women. It was in a hostess house that one of the prettiest services I heard of in my whole stay in Europe was being rendered. It is a classic of benevolence, literally too sacred for publication. Right cheerfully will our books be sent there.

Finally, thru the co-operation of Red Cross and Y. M. C. A. we have been enabled to make arrangements in Switzerland for serving our prisoners of war in Germany and Austria. The Red Cross is to furnish foodstuffs, clothing and medicine, we are to provide books, and the Y. M. C. A. to make other recreational provisions, their proposed independent appeal for reading material being abandoned. I visited Berne and Geneva for this purpose and left behind an order for 6000 volumes as an initial stock. Further appropriate shipments will be made from our stores in France, and we shall have the aid of the Y. M. C. A. in their distribution.

To meet all these demands, we have established six Dispatch Offices in America at points of embarkation. According to their reports, more than 400,000 volumes have been sent to the docks so far. Mr. Stevenson cables that up to June 12th 203 points in France had been reached with first shipments.

The material goes in classified form in standard cases, holding about fifty or sixty volumes each. Strongly and neatly built, with screwed-on top and medial shelf, they have, when stacked, the value of a sectional bookcase. The inauguration of the service was announced originally in the Paris newspapers; then by a formal circular, mailed out to all custodians. Finally, each box contains a copy of the placard to surmount it, as already mentioned, and a set of instructions for the librarian in charge. The volumes are all labeled and pocketed ready for use.

The miscellaneous box, which naturally predominates, is made up of three-

fourths fiction and one-fourth other recreational material. About one book in ten in such cases we aim to take from purchased stock.

The reference and technical books are, of course, largely bought. They go in cargo for the most part, and their character is plainly stenciled on the lid, so that they may be appropriately assigned in the field without the necessity of breaking bulk.

As to magazines, we have proceeded with caution. Displacing, as we have so largely, the library work of our associates otherwise, we have hesitated to take over also the magazine service, which they are maintaining with regularity and at great expense. However, we have made a beginning by inducing a certain number of publishers to turn over unsold remainders to us, and if the Burselson sacks are to resume Overseas dispatch and get effective use, we shall have to receive, sift and forward them. These magazines of ours are all for trench usage, non-returnable.

Thus the cycle is complete from training camps in the United States to troop trains (as we contemplate) and transports, from port to the front and back to rest station, hospital or captivity; with the naval units, whether ashore or at sea, from the British Isles to the Mediterranean, we follow the flag.

Complete, did I say? Not till the boys get home again. The war is going to end one of these days, but repatriation will take a year or two. To combat the perils of reaction and to prepare for civilian life, the army is to be put to school during that period. We have our eyes already on that wonderful opportunity.

And then, France, glorious France, blood-redeemed, has heard of the American public library, which, finding literal translation inadequate, it dignifies with the sobriquet, *Maison de Tous*, The People's House. A great organization headed by the President of the Republic, planning for the social reconstruction of France after the war, has decided to transplant this unique institution and make it the center of the plan. Our aid is asked. Who can foresee the result?

HOSPITAL LIBRARY SERVICE: ITS ORGANIZATION*

BY CAROLINE WEBSTER, *Library Organizer, New York State Library*

THOSE of us who have been interested in the library war service realize very fully the effect upon our own work of America's leisurely method of entering the war.

If our own soldiers had been on the firing line 72 hours after Congress declared war, if we had heard the tramp, tramp of soldiers' feet going by all day and all night from the moment the President signed the declaration of war, or if we had known that our fleet was playing watch dog in the North Sea and that a battle was imminent at any moment, our whole trend of thought for the development of library work would have been different.

Those of us who were especially interested in ministering to the sick and wounded would have spent sleepless nights planning how we could best serve the wounded who would be in our midst within a few weeks. We too would have thought first of the men in the hospitals and on the hospital ships. We would not have had to wait for one of our own hospital ships off Panama to signal to the Australians coming thru the canal, "We want books."

Thanks to our first line of defense, the British navy, and our second line of defense, the armies of our allies, library work like almost all other war work for the first year has been given over to preparing our fighting man for the part he is to take in the conflict. But he is over there now and is in the fight, so it is Sammy wounded and Sammy sick, perhaps never able to take his part in the front ranks again, of whom we must now think.

It was late in February that the War Service Committee decided that some systematic service to the hospitals should be undertaken. Before that a few camp librarians had felt the importance of this branch of the work and had sent collections of books to the hospitals, some-

times to a chaplain, sometimes to the Y. M. C. A., Red Cross or medical officer in command, but in the flood of other work no "follow up" had been possible and often the books sent were not even unpacked. The Red Cross or the Y had at many of the hospitals collections of books numbering from three to four thousand miscellaneous books. They were donated in most cases by loving friends, and evidently donated on the supposition that anything was good enough for a soldier. The representatives of the Red Cross and Y. M. C. A. at the hospitals were already overworked and their interest in books, except in rare cases, was secondary.

The first step of course in establishing library service was to get authoritative information from the Surgeon General's Office and the Navy Department concerning the number of hospitals and their size, and from the Red Cross the plans for the development of their work at convalescent houses and their attitude toward library work.

Second, to learn the attitude of the medical officers in command to the work of the A. L. A., for in the last analysis it is the medical officer in command who controls hospital life and no matter how enthusiastic a chaplain, a Red Cross or a Y representative may be about library work, it can have no official recognition until approved by the M. O. C.

Last but not least in importance was to find suitable people for the work, for many who seem especially adapted to hospital library work have a distaste for it, and some in their zeal for war service sign for hospital library work when they are in no way adapted to it.

For a hospital librarian personality counts high, book knowledge and a love of books are essential, but alas this taste is often left out of one who would pass muster on technical training and organizing ability. This last is essential where new work is to be started. (Immediate availability and geographical proximity

*Read at A. L. A. Conference, Saratoga Springs, July 2, 1918.

must also be given consideration, which complicates selection.)

After the Surgeon General, the Navy Department and the Red Cross were approached and their co-operation assured. Headquarters sent to every camp librarian a request that he take up with the medical officer in command the question of a library at the base hospital and the appointment of a base hospital librarian, but at all the army and navy hospitals Headquarters dealt directly with the medical officer in command sending him a personal letter enclosing a questionnaire which he was asked to fill out and return. The responses from this questionnaire gave a basis for procedure. The hospitals seemed to be interested in book service solely. It was only after personal interviews with the medical officer in command at some of the hospitals that the latter was willing to have an organizer or library visitor go on the wards. The army hospitals all wanted books, and the replies to the question "Would a representative of the A. L. A. be acceptable" to take charge of the library, ranged from "We do not need a librarian, the chaplain has charge of the library" to "Please send some one immediately." It is a tribute to the women sent to these hospitals that in every case where the medical officer in command was sure that all he needed was an organizer to get the work started, when the work of organization was completed, it was the same medical officer in command who insisted that a permanent librarian be appointed to the staff.*

The demand for books for the hospitals in this country has been very much along the lines asked for at the camps. Technical books, simple French books, primers for the foreign born who are just learning to read. One hospital librarian reports in one day requests ranging from a primer by a man in the wards to a book on ancient Greek scales in which a musician was interested. The man in

* When Miss Kathleen Jones, who had been organizing the library work at Williamsbridge (U. S. A. General Hospital No. 1) completed the work the medical officer in command was so upset at the thought that he was to be left without a librarian that he wired headquarters "Competent librarian needed and demanded."

the hospital in this country is rebellious at being there, rebellious because he is missing so much of his work and will be so far behind his companions when he gets out, so beside the story and picture books for the sick man the convalescent must have the books that will make it possible for him to keep up with his work. Following is a list sent in by a Red Cross worker for books that were requested after an afternoon's visit to several of the wards:

- Books on applied chemistry
- Books on radio activity
- 25 military books (regular list)
 - 1 The work-house ward. Lady Gregory
 - 1 Military aeroplanes. Loening
 - 1 Flying, some practical experiences
 - 1 The aeroplane speaks
 - 1 Book on the manufacture and grading of lumber
 - 1 Book on instruction for a beginner in the Quartermaster's Dept.
 - 1 Columbia War Paper 17
 - 1 The future of the disabled soldier. William Wood Co.
 - 1 Publications on different subjects connected with motor mechanics. Govt. Printing Office

The hospital from which this list came is largely filled with men who have not been over, but for the hospitals on this side which are receiving men from over there, the demands are different. Books are selected by the librarians for their therapeutic and remedial value. It is not technical books teaching the soldier how to fight that are asked for, but books that will help him to live, bright picture books that will take his mind from the horrors he has seen, good stories, poetry, books dealing with the fundamentals in life. Books that help him to adjust himself to life under entirely changed conditions.

There is not time to go into details connected with the organization of libraries at particular hospitals and the line to be drawn between service rendered by the Surgeon General's Office and the American Library Association.

Suggestions for the organization of hospital libraries have been sent out from headquarters which will probably have to be modified to suit particular cases.

These take up on general lines the problems that will be met by every hospital librarian. They consider service to the medical and nursing corps, the enlisted men and orderlies, as well as the service to the very sick, the wounded and the convalescent man.

Altho the American Library Association is now giving book service to a chain of hospitals reaching from San Domingo to Pearl Harbor, Hawaii, altho satisfactory relations have been established with the Red Cross for library work in convalescent houses and they are giving not only the use of a room and shelving for books but in their new houses are providing living quarters for librarians, and altho the American Library Association has given the Red Cross 25,000 books for the use of the hospitals in France, nothing more than a start has been made as far as hospital work is concerned.

Little or nothing has been done toward co-ordinating our work with the occupational and vocational work to be done in the hospitals and little or nothing has been done for the hospitals overseas.

A great reconstruction hospital is being built in Boston which is to be devoted entirely to the re-education of the handicapped. In Canada there are training shops in connection with the convalescent hos-

pitals. It is not unlikely that shops of the same kind will be built here. If this is so librarians with specialized training in all branches of technical library work will be needed.

The 25,000 books sent to the Red Cross will stop the gap over there for a time but when one considers the size and number of the hospitals in England and France for our troops, the gap will not be filled for long. The Red Cross reports 50 Red Cross Units that have gone over, each equipped to care for a hospital of from one to two thousand beds. We know of two ten thousand bed hospitals that are being constructed in southern France. We know that the Red Cross is calling for 25,000 nurses between now and the first of January. This means a provision for 250,000 men, for the Red Cross estimates ten men to a nurse. This much we do know and there are doubtless other hospitals about which we know nothing, but with these figures before us it takes no great flight of the imagination to know that as far as hospital service is concerned our big work is before us.

And as the aim of the first part of library war service has been to make better fighters of our men, the aim of this second and equally important phase will be to make better men of our fighters and defenders.

WHAT A MAN READS IN HOSPITAL*

BY MIRIAM E. CAREY

WHAT a man reads in a hospital depends on two things: the man himself and the supply of books.

To put a man to bed does not alter him fundamentally. He is the same in most respects that he was before he took off his uniform and donned pajamas and a bath robe. His education, tastes and habits are unchanged and what he reads in a hospital will be influenced by these and other endowments and personal qualities.

If he is an educated man with a taste for books and the library habit, he will

call for something to read almost as soon as he comes out from the ether. But if he is ignorant and illiterate it will never occur to him that books could make hospital life more endurable and he will as a rule make no effort to get in touch with the library.

To have the reading habit, therefore, is all to the good. Foreseeing his condition after the operation is over, the bookish man often secures a story in advance in order to insure its companionship when he is in pain. What he will want to read at this stage of his hospital experience will not be something classical. Far from it. He wants something crude and thrilling and

* Read at the A. L. A. conference at Saratoga, July 2, 1918.

absorbing. Therefore, a hospital librarian, desirous of getting a soldier what he wants to read, must be prepared to brave the censure of other librarians, and sometimes set aside the sacred standards of the profession.

The character and degree of his illness will govern the amount of reading he will wish to do and be permitted to do. If he is a surgical case—to speak in the hospital vernacular—books will be his greatest resource. They will distract his attention from his pain and will help to pass away the long days of convalescence. The surgical wards of a hospital are the liveliest district which the librarian visits. She goes to them prepared to make a leisurely survey of the ward, visiting with the patients who dearly love to talk things over, and taking notes everywhere of special books which are wanted. On a Monday, I am told, the men on the surgical wards are positively hungry for books. The easy-going charging system which we found adequate encourages them to pass from hand to hand the books they specially like, but by Monday they feel that they have exhausted all resources and expect something directly from the hands of the librarian.

Very sick men—men with fevers and other troubles that reduce the strength and weaken the mentality, do not wish to read nor would they be able to withstand the fatigue of holding a book and concentrating attention upon it.

To be laid up in a hospital is undoubtedly a great trial for an ambitious man eager to master his work and excel in it. A soldier who has reached the height of being willing and glad to die for his country if necessary may be forgiven if he grumbles a bit over being quarantined for three weeks because he has contracted mumps or measles. Very many of the soldiers in the camps have had this trying experience. And the "state of mind" produced by it will create a need which books can satisfy more easily than any other medium. A sick officer is a very unhappy man. What he wants at first is distraction, pure and simple. Detective stories, the more lurid the better, are his initial demand. Later on, if he is a bookish man he will browse

in the library by the hour and enjoy its choicest contents. All the men who are quarantined want first of all distraction, as does the officer, but before they are released they will ask for the sorts of books they liked and were accustomed to have before their sickness began. It is not unusual for such men to wish to keep up with the studies they were pursuing so that the range of the demand for books is about as wide as the universe and the librarian needs to be both resourceful and energetic to supply all that is asked for.

Thruout the hospital there will be many men who are anxious about their families; perhaps they are afraid the mortgage will be foreclosed and the old mother turned out of her home. Very many others are frankly home-sick. The doctors say that there is nothing really the matter with most of the sick soldiers except sheer home-sickness. What does a home-sick man choose for his reading? Probably what he secretly craves is an old-fashioned love story and the librarian always takes a few with her altho at the outset she did not expect to find much call for such books. However, human nature is very much the same everywhere and the man who is sick is more like his mother than his father. This state of mind is, however, fleeting and the home-sick man will be wanting western yarns and other former favorites very soon.

Among these sick soldiers there are large numbers in every ward who have never formed the reading habit. Some of these are wholly illiterate and cannot read in any language; others are of foreign birth and can read only in their mother-tongue; still others have some education but no taste for books. Yet the hours of convalescence drag as slowly for these men as for the others. Cannot the librarian do something? For hers is the only service that can reach the minds and spirits of these men with something tangible. To these men the scrap-books which have been so carefully prepared at certain points are a wonderful source of distraction. To attempt to carry on a hospital library without scrap-books would seem impossible. They can be put into the hands of all sorts of men and sel-

dom fail to give some pleasure. Pictures also are of great service. The secret of successful and continued use of scrap-books in hospitals lies in the librarians' method of issuing them regularly from the library, inspecting them carefully after they are brought back from the wards, and never allowing them to accumulate and become idle there.

Scrap-books and pictures are used on the wards set aside for the men returned from overseas suffering from shell-shock and in other ways nervously shattered. The *National Geographic Magazine* has proved very helpful especially as the old numbers are as entertaining as the current ones and therefore can be had in larger numbers. The pictures will attract and hold the attention of a man sunk in despondency and difficult to arouse in any way. It was thought by some of us that small editions of good books would be gladly taken by sick and nervous men who would dread to undertake a large book and incur the fatigue of reading. But in "real life" we have found only a moderate demand for small books. A book as large as Hornaday's "Camp-fires in the Canadian Rockies" was changed from a bright clean copy to a soiled and worn one because it made a hit on a ward and was passed from hand to hand and read many times in spite of its size and weight. *Hic fabula docet* that a man will read "what he'd ruther" no matter what the drawbacks.

What a man reads in a hospital depends on whether he ever had the reading habit and on the character of his sickness and his state of mind. If he is discontented he wants diversion pure and simple and wants it sufficiently vigorous to take him out of himself; if he is home-sick he may want a love-story; if he is nervous and broken down he may need to be coaxed and encouraged to make an effort to read.

But what a man reads in a hospital must depend first of all on the book supply. As you are well aware, the books for the soldiers are gifts from the whole nation. Fiction is supplied almost wholly from this source and much of the non-fiction. In selecting books from the "drive" for the hospital branches of the camp libra-

ries bright colored and clean bindings, clear print, and medium size are to be first choice. As one librarian says, "A cheap book queers a whole collection."

Technical books in large numbers must be supplied for student soldiers of whom there are many in every camp. They long to keep up with their work, and the A. L. A. has met their needs splendidly. Books in foreign languages must be on hand also. There is nothing more wistful than the Italian who asks "Have you a little poetry maybe?" Or the Pole brooding over the tragedy of his country and longing for a sight of the literature he is familiar with.

But what shall be done for the large numbers of illiterate and under-educated men in the hospitals? Is there nothing for them until they learn to read? If a man can read even a little his case is quite within our reach. There are many books written in simple English which must be furnished to hospital libraries if anything is to be done for these men. The "book drive" with all its prodigality failed to bring many so-called boys' book. These and other books which boys have tried out and adopted would be most valuable in every camp for many of them are of lasting interest to all men.

In most respects it would seem that the problem of book supply for the hospital library is similar to that of the camp library. In fact, there is not much difference except that the hospital needs recreational and inspirational books primarily but must be able to meet other demands as well. And as the source of supply of most of the hospital libraries is the camp library of which it is a branch, its ultimate success depends largely on the equipment and management of the central plant.

What a man reads in a hospital depends on the man himself and upon what he can get to read. It also depends upon the way in which books are presented to him almost as much as the books themselves. Given a suitable selection of books and the personal attention of a sympathetic, resourceful, competent—which means trained—librarian and the man in the hospital will read more books in a given time than the man who has more liberty but less leisure.

WHAT A BASE HOSPITAL LIBRARIAN SHOULD KNOW—OUTLINE OF A COURSE OF TRAINING*

BY EDITH KATHLEEN JONES, *Librarian, McLean Hospital, Waverley, Mass.*

OBVIOUSLY, the first thing a hospital librarian should know is something of hospital organization. To all outsiders, the information that every large hospital, even in times of peace, is organized and administered under such strict rules and discipline and with such regard to rank of staff and employes as to be almost military in character, comes as an amazing discovery.

Do you know that in the ordinary hospital—general, state or private—the Superintendent is the apex of the cone, so to speak; that immediately surrounding him are the widening circles of the medical staff: first and second assistant physicians, junior assistants, internes, then the matron or superintendent of nurses, the heads of departments, as steward, dietitian, chief clerk, gymnasium instructor and librarian (if there is one); next the assistants, under clerks, stenographers, etc.; then the training-school: supervisors, head nurses and pupil nurses; last the other employes—engineers, firemen, electricians, carpenters, porters, cooks, laundry and ward maids—all the vast army needed to keep the machinery running smoothly. Each department is under its own head, who, in turn, is responsible to the medical superintendent or the chief administrator, and every person has his fixed place and rank. Nurses must rise when a physician enters the ward or room and remain standing till he goes out. If there is a training school for men as well as women nurses the discipline is especially strict.

Now translate all this into military terms and you have the commanding officer, who is a colonel, in place of the superintendent, surrounded by his majors, captains and lieutenants, who comprise the medical staff. The administrative staff is composed of the adjutant, the quartermaster, the chaplain and other officers; the non-commissioned officers, wardmasters, clerks, stenographers,

carpenters, etc., who are enlisted men; the nursing corps, consisting of women, headed by the chief nurse who is responsible for their work and behavior and must discipline them if they break rules. The nurses and the enlisted men are not allowed to speak to each other except to give and receive orders.

The chaplain is in charge of the educational and recreational as well as religious activities of the hospital, therefore the library nominally is under his command, tho in most cases he has so many other things to attend to that he is glad to let the librarian take the initiative and go to the commanding officer for orders and permissions.

Besides all this personnel, there are the patients, for whose benefit the hospital is organized and carried on. The library must take into consideration the needs of all these persons—patients, officers, nurses and enlisted men—numbering anywhere from a few hundred to several thousand.

Now there are several varieties of army hospitals, but the only ones which concern us are: the base hospitals connected with training camps, the general military (or naval) hospitals and the "reconstruction hospitals," not connected with any camp. In the first, therefore, the library has the camp library to draw upon for help and for books; in the second and third she must rely upon the nearest large public library and dispatch office.

The training-camp base hospital receives the men from that camp; cases of measles, scarlet fever, pneumonia, etc., which go into the medical wards; accident and operative cases, assigned to the surgical wards; mental cases, including epileptics and feeble-minded, who are put in the psychiatric wards.

The general hospitals, unconnected with any camp, receive the chronic or severe cases from the camp hospitals, the troop ships or the various fronts; shell-shock, gassed, sick and wounded men from France.

* Read before the A. L. A. at the Saratoga conference, July 2, 1918.

The reconstruction hospitals take the crippled soldiers and teach them trades and occupations, fit them with new arms and legs, and turn them out prepared to earn their own livings. In addition, there will be, of course, the hospitals for chronic cases who must be cared for all their lives by the government. All these hospitals will be more or less permanent institutions and the libraries in them should be placed at the outset on a permanent footing. Here, especially, the librarian should be enlisted for the duration of the war or longer; frequent changes will be disastrous.

In these hospitals, then, we have a large community of men and women isolated from the rest of the world (for even in the training camps the base hospital is placed way off in one corner), away from camp activities or outside recreation. They must have recreation, so along comes the Red Cross and puts up a house for the use of the convalescent patients and makes it as homelike as possible. They must have books and magazines, for these armies of this world war are reading men, called from all walks of life, so the A. L. A. offers to provide books and certain periodicals and a librarian if the hospital will provide the room or building, the shelving and a few other things.

Now arises the question of housing the library. Shall it be in the Red Cross building, which generously offers its wall space and perhaps a room for its use, or shall we ask for a separate building—the chapel, perhaps—and set up housekeeping for ourselves? This is a nice question, for there is much to be said on both sides. The Red Cross house furnishes a pretty and very popular place, but it is noisy, for either the pianola or the piano is going from morning till night and sometimes there is a billiard room also; the nurses and enlisted men are not supposed to use these rooms till after hours (late in the evening) and, when all is said and done, the librarian is a guest in the Red Cross house and has not the same freedom which she would have in a home of her own.

On the other hand, while the separate room or building will not prove so popular with the convalescent patients, it is a boon

to the enlisted men, who can run in at noon mess and from supper till bedtime, read the papers, magazines and books and have a pretty, quiet and comfortable place to sit *and* a woman to talk to—things he cannot get at the Y. M. C. A., which is the enlisted man's only recreation room. Moreover, in a separate house, the librarian can impress her own individuality upon it, making it pretty and attractive, with lots of color, yet keeping it masculine; can put up maps, pictures, and use bulletin boards for publicity purposes as she pleases, can have a quiet place in which to work and to make her plans for the different branch libraries in the Red Cross house, nurses' quarters, officers' quarters, etc., and plan her ward libraries for the next day. For the hospital librarian will spend her mornings on the wards, taking magazines, books and scrapbooks to the bed-patients, talking to them and cheering them up.

Whichever plan is carried out, the librarian must work in close co-operation with the Red Cross people and the Y. M. C. A., for all are doing the same sort of work. And there is always at least one woman resident in the Red Cross house with whom the librarian will naturally associate.

This brings us to the next thing a hospital librarian ought to know—her living conditions and social status. Both of these are rather unsatisfactory at present, for women are now for the first time in the history of the world being admitted into army life in other capacities than that of nurse, and, naturally, there is no place for them and they have no rank. The nurses' quarters, where most of them are now housed, are crowded and not very comfortable. In some hospitals, in or near a town, the commanding officer prefers to furnish transportation and have the librarian live outside. This is really the most comfortable for the librarian. It has just been arranged with the Red Cross Headquarters at Washington to have the librarians room and eat in their houses, but this is possible only in the new type of house with several chambers, and then only when these chambers are not needed for families of very sick boys. There are, then, three possibil-

ities of housing, all of them calling for meals in the hospital either in officers' mess, nurses' quarters or Red Cross House. Under the very best conditions living is not luxurious to say the least, and sometimes it is disagreeable, but the librarian should thoroly understand all this before she undertakes the work and remember always that we women were not invited to enter this world of men and if we do intrude we must bear ourselves as good soldiers and not complain of hard beds, soiled table linen, lack of bathrooms, suffocating heat and dust in summer, freezing cold in winter, and tobacco smoke all the time.

All this brings us to the librarian herself—her qualifications for a position involving delicate readjustments of all her previous conceptions of living and working. What is the first qualification demanded? Library training?

Now I expect a storm of protest from all you A. L. A. people, but I most emphatically put that at the very end. Mind, I do not say she need not have any library training, for she should have the fundamental principles, but first of all she must have certain traits of character which are indispensable if we wish to make these base hospital libraries a success—and we cannot afford to have a single one a failure!

First of all, she must be mature. A camp is no place for a young girl anyway, and in a base hospital, where the librarian comes into such close contact with so many men, she must be able to meet officers with dignity, chaperone the nurses, and mother the boys. The officers do not want a young girl—in fact, they will not have her! She is only an embarrassing adjunct. The chief nurse does not want her—she already has the responsibility of from one to three hundred other girls. The enlisted men don't want her—they are so keen on their job that girls (except the one girl back home that almost every one of them has, apparently) do not exist. The patients don't want her—they want some one they can talk to as they would their mothers, for when these soldiers of ours are sick in hospital they are just homesick boys and they want to be mothered, and a young girl can't do that. As one sailor affectionately

told the librarian at his naval station, "You are mother and grandmother and aunt and sister and sweetheart all in one." Obviously a young girl can't be grandmother to a lot of boys! Accept this great, outstanding fact, then, that young girls are not wanted in camp and that for once middle-aged women are at a premium—if they are the right kind.

Second, the librarian must be dignified. In any institution where so many men and women are living in such cramped quarters and pursue the same routine day after day, there are bound to be petty jealousies, gossip, scandal and quarrels. The librarian must keep her dignity, take sides with none, be friends with all. She must bear herself so that neither officers nor men will dare to be familiar with her.

She must be loyal to the hospital and her superior officers. No longer is the library the supremely important thing—the hospital and what it stands for is that—and only as the library is subordinated to and serves the needs of the hospital is it efficient or necessary.

The librarian must be able not only to take orders and accept a reprimand in a soldierly spirit but she must be able to give orders tersely and explicitly. The common soldier is not supposed to think for himself but he is trained to obey orders. She must know how to approach the commanding officer or other officers with a well-formulated plan to be accepted or vetoed by them; she must not waste their time and patience by asking help in deciding which of two or three plans might better be carried out; she is liable to a curt dismissal if she does.

She must not be sensitive and she must not be sentimental. Sympathy the boys want, but how they do hate to be wept over!

If in addition to all these admirable traits the librarian can sing, play, draw, paint, play games, get up impromptu entertainments on rainy days or dull evenings when the boys will not respond to ordinary methods of cheering up, or if she is skilled in any branch of handicrafts and can teach the boys to do things—then she is indeed a treasure and the possession of any of these

accomplishments might well balance a lack of library training.

Still, we cannot overlook the undeniable fact that a librarian is supposed to deal with books, and it is very essential that she should know them well, have read them, enjoyed them and be able to interest the boys in them. The boys want detective and "wild west" stories, adventure, romance and poetry when they are sick; she must be able to select them off-hand. When they are convalescing they are restless, eager to get back into the game, and they fret for fear they will get behind in their classes and the other men will get to France before they do. Then they demand books on gas engines, turbines, radio and wireless, trigonometries, all sorts of things a woman knows little about. The librarian must know how to get these books and, what is more, must be thrilled when the eager boys show her pages of "beautiful" tables of logarithms, pictures of milling machines, and explain to her "how the wheels go round." Emphatically, she must know books as well as love boys.

Don't I advocate library training? Most assuredly I do! I have been trying for seven years to get the large private hospitals to put in good libraries and trained librarians just because I know how much more efficient training makes a person. Yet it is a fact that in a hospital library you must forget all the rules you have learned except the fundamentals. The camp libraries have learned this too. They have found that it takes all their time to get books out fast enough for the men to read them—so eager are they—and that a book circulates just as well and isn't lost any oftener if it isn't in an accession book or a card catalog or even a shelf-list, and if it hasn't an elaborate book and name card. These camps have taught us librarians many things and one is to forget rules and remember only books and people. I have heard of a librarian who "is the sort of librarian to whom a book is something to be cataloged." We do not want that sort in our base hospitals.

Nevertheless, in order to forget things one must first have learned them, and even

a hospital librarian must have some rudiments of librarianship, tho these can be learned while personality cannot. Given two applicants of equally charming personality, knowledge of books and love of boys, one a trained librarian and the other not, I would give preference to the trained librarian. *But*, given a rather colorless, ineffectual sort of person who is an expert librarian and another applicant who has traveled extensively, speaks French, Italian and a few other languages, has a keen sense of humor and is interesting to meet, but has no library experience except a knowledge of books, certainly I would prefer the latter, tho I would suggest that she learn enough about classification, cataloging and a few other things to enable her to carry on the library.

Even a trained librarian going from a public or a college library into a hospital must, I think, be bewildered at first by the utterly changed conditions and new problems. It is no longer library first, everything done according to approved method, books all in order, readers coming to you, but hospital first, last and always, books suited to the patients to whom you must take them, previous methods often inadequate, individuality and ingenuity needed. In the fifteen years since I left a college library to enter that of a hospital I had forgotten all this till I found several of the base hospital librarians confronting these same problems and just as bewildered as I remember to have been. One such librarian said to me, "I see I must revise all my ideas of library work."

Realizing something of this and knowing the value of personality even without training, it was suggested by Headquarters that a short course of supplementary training for base hospital work might be introduced into some of the schools for library science. Such a course is being worked out at Simmons College this summer. This library school was chosen because it is near several large general hospitals and near McLean Hospital, which is acknowledged to have the most beautiful library of any hospital in the country, near a training camp, a naval base hospital, a large public library which is the center of war activities, an

A. L. A. Dispatch Office and several schools for training teachers in occupational therapy and trades for reconstruction hospitals. Visits to such places give an idea of all kinds of hospital and war library service.

This course, as it is organized, includes lectures on hospital and camp conditions; housing the libraries; qualifications and duties of librarians; care of the medical library; publicity methods; relations of base hospital libraries to A. L. A. Headquarters and to camp libraries. Also lectures on book selection and ways of getting books to patients, officers and nurses, with brief analysis of detective, mystery and secret service stories; wild west and adventure; romance and love stories and the little books for bed patients (including scrap-books); poetry, essays, drama and art; books in French and other languages and the opportunity to teach foreigners English and our boys French; travel, history and war books; outdoor books, games, occupations and handicrafts; books on mechanics, engines, etc.; some of the camp reference books. These lectures are for all the students. In addition, those who are not trained librarians have lectures and practice work in simple classification, cataloging, shelf-listing, charging, filing, alphabeting, care of periodicals and newspapers. The whole class should also have some practical experience in sorting gift books and discarding the problem novels and trash.

In order to ascertain the amount of initiative of the students, examination might be given along these lines: Make out lists of forty or fifty books suited to bed patients, convalescents, officers and enlisted men. Plan a library housed in the Red Cross house (new type) and also in a separate building or room. Outline a plan of advertising the library thruout the hospital. Tell what special qualifications each applicant thinks she has for entertaining boys or being helpful to them.

Such a course should enable the base hospital librarian to approach her peculiar problems with confidence instead of bewilderment, and so prove of practical value. It also should provide an especially well-

equipped personnel from which A. L. A. Headquarters may draw to provide satisfactory librarians for the rapidly increasing number of base hospitals thruout the country.

INFORMATION FOR WOMEN SEEKING WAR SERVICE

WOMEN who want to prepare themselves for war service will find in the Free Reference Library conducted by the Woman's Educational and Industrial Union (264 Boylston street, Boston, Mass.) announcements of a number of special training courses. These include courses for war nurses, for Red Cross Home Service workers, draughtsmen, employment managers, file clerks, secretaries, dietitians, and reconstruction aides.

Notices of civil service positions open to women both state and federal, are kept on file and may be consulted by anyone interested.

A list of summer war-time training courses has just been prepared by the library. Reading lists on a number of new occupations for women is another part of the library collection. The library is freely open to the public for reference use.

An extremely valuable publication in the collection is a compilation on "Opportunities for war-time training for women in New York City in the summer of 1918." This is prepared by the Clearing House for War-Time Training for Women in co-operation with the Intercollegiate Bureau of Occupations, whose headquarters are in New York. It is a printed directory of 107 pages, giving detailed information regarding all forms of special war courses open to women in New York. The arrangement is alphabetical by subject with a list of the schools giving such work. Length of course, admission requirements, and scope of course are given.

There is no printed list covering this field for Boston. A list of the courses given last winter was published in the January number of *Special Libraries*, which was devoted to the subject of women and war-time problems.

SENDING BOOKS "OVER THERE"—THE DAY'S WORK IN HOBOKEN*

BY ASA DON DICKINSON, *Dispatch Agent*

OUR days at the Hoboken Dispatch Office are full of interest and incident. Starting in January with one, we now occupy four of the pleasantest saloons in a town which has ever been famous both for bar-rooms and Germans. We are but one block back from the waterfront. The *Leviathan* docks just around the corner. Daily an intermittent stream of very sober-looking soldiers passes our door. They are on the long trail which in another moment will bring their feet to the gang-plank of a transport.

But we cannot afford to gaze long at the surroundings. The day's work at Hoboken means that 6000 books must be sent overseas, and this involves a good deal of hard work. Six thousand a day means 750 an hour, 12 a minute, 1 every 5 seconds. If 6000 books are to be dispatched daily, 6000 must be received, acknowledged, unpacked, and prepared for shipment daily. They come in lots of all sizes, from a single "Baedeker" up to 20,000 books at once. Ten per cent are purchased books, and these entail ordering and bill checking. They come in all sorts of ways: by quartermaster's freight, by freight prepaid, by freight collect, by express prepaid, by express collect, by parcel post, by moving van, wagon or limousine, by lighter and by hand. They come with all sorts of addresses, they come in every possible sort of package—nearly 100 packages a day, which should all receive attention on the day of their arrival, for the next day will bring as many more. The books must all be carefully inspected, of course, and a certain number of "unsuitables" will have to be disposed of. The very large majority of books which pass inspection must be roughly classified, and each must contain our bookplate, book-pocket, and book-card bearing the author's surname and a brief title. (Blessings on the librarian who sees that the books he sends us are *carefully*

prepared for shipment. The shelf-list card is *not* required in our work. Co-operating friends, all please take notice if you would save useless labor.)

After the books are made up into carefully proportioned little libraries of about seventy-five volumes each, they are packed in our regulation shipping book-cases. In each box are placed directions to the amateur librarians who are to care for the books overseas. And finally there is the sealing, stencilling and shipping of the boxes. Some are for use on the transports and later "over there"; some for cargo shipment as part of 50 tons a month asked for by General Pershing; some are for shipment to one or other of the Naval Bases; or to the Red Cross; or to some particular ship in local waters. About 80 boxes go out each day. Ninety-nine, 7425 books, is the one-day record so far. Each should bear three pasted labels and on the average five stencillings, and if a box is wrongly marked it will *surely* go astray.

Suppose we note the events of a busy hour or so at 119 Hudson street.

8:15 a. m. The Dispatch Agent arrives, to find a truck waiting to be loaded for the piers. Porters and truckmen are enjoying a cozy social hour.

8:16. The dynamo begins to buzz, galvanizing porters and truckmen into more or less strenuous action.

8:20. Morning mail arrives: 25 letters and 50 pounds of newspapers and periodicals.

8:25. Truck arrives with load of 50 cases of books received per quartermaster's freight—five lots in the load—two lots are "short" one case apiece.

8:30. Parcel post wagon arrives with 27 parcels: books from publishers, libraries, and individuals, and supplies from Headquarters.

8:35. A limousine stops before the door and an early-rising Lady Bountiful enters bearing three issues of the *Saturday Evening Post*, and one copy each of Owen

* Read at the A. L. A. conference at Saratoga, July 2, 1918.

Meredith's "Lucile," Irving's "Sketch book," Mitchell's "Reveries of a bachelor," Drummond's "Natural law in the spiritual world," and "Mr. Britling." She naturally wishes to know all about how we send books to soldiers, and holds the Dispatch Agent in gracious social converse for seven precious minutes till

8:42 when an irate policeman enters to say traffic on Hudson street is completely blocked by vehicles standing before our premises.

8:45. Loaded truck departs for the pier, and the traffic begins to trickle thru the jam, but at

8:50 a big express wagon arrives to clog things up again, and at

8:50½ comes a giant "seagoing" motor truck 9 hours out from Philadelphia with 185 of our shipping book-cases.

8:51. Three newly hired porters take a good look at this load; then two of them remember that they have been drafted and must leave "for the front" at once; the third candidly says the work is too hard for him.

8:52. Telephone bell rings: "One hundred eight boxes of books are lying on Pier 1. They have just come off a lighter from Cheyenne, Wyo. They weigh about 300 pounds apiece. I suppose they belong to you folks. The major says to tell you they must be taken away before noon, or he will dispose of them as he sees fit."

8:53. Telegram from Washington Headquarters: "Congratulations on your last weekly report. Kindly arrange to double your output next week and hereafter."

8:54. Wagon arrives with load of packing boxes.

8:55. Another telegram from Washington Headquarters: "Use only our standard shipping book-cases. Discontinue at once all use of packing boxes."

8:56. Telegram from manufacturer of standard shipping bookcases: "Can't get labor or lumber. Don't expect any more boxes for at least a week."

8:58. Distinguished librarian of leisurely habits and a fine conversational talent arrives to inspect our work.

9:00. Class of Y. M. C. A. transport secretaries arrives to receive instruction in the care and administration of our transport libraries.

9:10. Red Cross chaplain enters with an urgent demand for "Lady Audley's secret." "There is a boy in St. Mary's Hospital who must at once have that book and no other."

9:15. Read letter from Headquarters. The gist is as follows: "Don't stick so close to your office. Get out, man, and cultivate diplomatic relations with admirals and major-generals."

9:16. Wire from Headquarters: "Please release your first assistant." (He has gone already to Boston to establish Dispatch Office there.)

9:20. Base hospital chaplain enters with a list of 450 titles. He tells us that he has selected them with great care, and hopes there need be no substitutions. They must be on board his ship at 9 a. m. tomorrow. She sails at noon. He doesn't know her name or number or whether she sails from New York, Brooklyn or Hoboken.

9:21. Quartermaster's truck arrives with load of Burleson magazines.

9:23. Three loud explosions in rapid succession on the waterfront. Many windows are broken by the concussion. All hands rush into the street. German woman from delicatessen shop next door in hysterics, demands first aid treatment. She gets it—good old-fashioned cold water.

9:25. Moving van arrives with load of 8000 loose, unsorted books, collected by the New York Public Library.

9:27. Second-hand packing box dealer arrives to take away old boxes, and paper dealer arrives for a load of discarded books.

9:28. Military authorities threaten drastic action if we continue to block traffic on Hudson street. A string of 75 quartermaster trucks is being held up.

9:29. Sell two copies of "The four million," first editions, to a book dealer for \$60.

9:30. Long distance telephone from Washington Headquarters: "Our representatives abroad report very few books arriving in France. Why is this?"

9:31. Director of Library War Service concludes an unobtrusive visit of inspection by saying a few kind words as to the progress we are making, and by advising us not to overwork.

9:32. The Dispatch Agent falls heavily to the floor. He has fainted.

WORK OF THE DISPATCH OFFICE AT NEWPORT NEWS*

BY WILLIAM H. BRETT

I AM asked to speak of getting books overseas and assume that to be an invitation to tell something of what the particular dispatch station with which I have the honor and good fortune to be connected is doing in this work. You all know how the books and the money for this purpose have come to us, for you have all taken a part in securing them. You will know from the reports of Dr. Raney and Mr. Stevenson what use is made of them on the other side; so I shall tell you something of the Newport News station.

This was the second station established and the work was begun early in March, that at Hoboken having been opened some months earlier. These points were selected, as they were the two largest ports of embarkation for men overseas. In addition this station was planned to supply the needs of the camps and stations in the Tidewater District. Newport News is a place of great historic interest; a plantation at the time of the Civil War, it has grown from 15,000 to 60,000 since the beginning of the war. It has a shipyard, one of the largest in the country. It stands on the promontory between the mouth of the James river and Hampton Roads. Just off the point the *Cumberland* was sunk on an April day in 1862, a day which marked the passing forever of the wooden warship, and on the next day the historic duel between the *Merrimac* and the *Monitor* took place in the open water beyond. Across the peninsula lies Williamsburg, the first battlefield of the Peninsular campaign, and farther up Yorktown, whose surrender practically ended the war of the Revolution, and now with Gloucester on the opposite side of the river, an important naval base.

Across the bay to the south is the great naval base, covering the site of the Jamestown Exposition of 1907 and much additional territory, and farther south up the

Elizabeth river are Norfolk and Portsmouth, with the Navy Yard. Newport News is surrounded by camps and the station was established to supply these camps as well as to send books overseas.

The station, which opened in March, occupied offices in a business block. These were inadequate, and a building was erected similar to other camp library buildings, on the opposite side of the street from the embarkation headquarters of General Hutcheson, commanding the military district, and his staff, and only a short distance from the embarkation piers. This building was occupied early in May. The first librarian who did much to organize the work was Miss Margaret Mann, head cataloger of the Pittsburgh Library, who was succeeded in April by Miss S. K. Hiss, head of the catalog department of the Cleveland Library. The trained members of the staff have been drawn from the Cleveland and St. Louis libraries, with a recent addition from the library of Davenport, Iowa. To the librarian and the staff most of the credit is justly due for whatever success the work may have had.

The work of this station for overseas is the same as that of the other stations, of which you have heard and will hear from their representatives. Books are packed in boxes made especially for the purpose, from 30 to 38 inches in length, about 20 inches in width, and 8 or 8½ inches deep, with a shelf. The cover is removable and the box forms a convenient bookcase. These are placed on the decks, usually in charge of Y. M. C. A. secretaries, are opened and used on the voyage over and are then consigned to some of the agencies on the other side.

Books are also packed in boxes for the cargo space in the hold, to go directly to the other side. For this purpose we are using largely a box of similar shape and size as the bookcase, but factory made, not so well finished and very much cheaper.

* Read at the A. L. A. conference at Saratoga Springs, July 2, 1918.

We have had some difficulty in securing a sufficient number of boxes, but have now standing orders for 100 boxes weekly of each kind. We also, to some extent, use packing boxes in which books are sent to us, but only small, strongly made boxes weighing not over 150 pounds packed, are desirable for this purpose.

We provide books for individual units going over, when they want them and agree to take care of them and turn them over to authorized agencies on the other side. We supply books in some cases to individuals to meet their personal needs. We also supply books for the use of the crews of the vessels.

Among the most interesting of our experiences have been occasional visits from New Zealanders and Australians. They usually make this the first stopping place for shore leave after a five weeks' voyage, coming thru the Panama Canal. They may have two or three days ashore and are naturally eager for entertainment. They have visited the station in considerable numbers and we have treated them just as we do our own men, placing books on board for their use. Some time ago we had a visit from a group of disabled men who were on the way back, Anzacs, some of whom had been at Gallipoli and wore service stripes and wound badges. We placed ten boxes, about 600 volumes on board, with the understanding that these would be returned on another transport going from Australia to Europe. Nothing that I have seen has given me to realize so fully the malevolent power of Prussia and what it has done to this world of ours as the fact that these men, all volunteers, loyal to their ideals of freedom and democracy, should come half way round the globe to fight for them, determined as we all are that there shall be no stopping until a mastered Prussia is powerless again to disturb the peace of the world.

As you can imagine, there are very interesting episodes occasionally, but in the main it is pretty steady work and plenty of it. The report for the end of June shows that we have sent about 80,000 volumes over and placed 40,000 in neighboring camps and stations, most of this since the

second week of May. The shipping of books goes very rapidly and is increasing. The placing of books in this district involves a great deal more time, as it is necessary to visit the camps, arrange with the Y. M. C. A. secretaries, chaplains and others, and after the first supply of books is sent, to visit them from time to time, look over the collections and make additions and replacements, fill many orders for individual books, make suggestions to those in immediate charge, and do whatever is necessary to make the work successful. There is in our experience the same difference between the local work and that of shipping books as there is between a retail and a wholesale business as to the time and effort required compared with the output. I have no doubt that much more of the effort and time of the staff have been required to place 40,000 volumes in this vicinity than to send 80,000 overseas.

The station is being used increasingly as a direct circulating library by the men of the headquarters guard and others in nearby stations. It has been so crowded thus far that there has been no space for a reading room. I am hoping to arrange additional storage room and thus provide better circulating library service and reading room, which I am confident will be appreciated and largely used. There are many other local opportunities. Books are placed in the hospitals and in the camps of detached guard units of one or two companies. A selected collection is placed in the ante-room of the General's office at headquarters under the care of one of his aides for the use of approximately one hundred officers and three hundred or more men on duty there. An addition now being built will double the size of the headquarters building and the number on duty there will be greatly increased. The General plans in this a convenient, well lighted corner room of adequate size in which we may establish a headquarters library. I have found both the military and naval authorities interested in our work, appreciative of its value, exceedingly courteous and always ready to help in every possible way.

To General Hutcheson, the Commanding

THIS BOOK CASE AUTO, WITH 250 BOOKS, GOES TO KELLY FIELD NO. 2 TWICE A WEEK, STOPPING AT TWO OR THREE LOCATIONS. A MAN GOES THRU THE BARRACKS TO NOTIFY THE MEN THAT THE BOOKS HAVE COME. FLYERS WHO HAVE BEEN IN THE AIR ALL DAY WANT RECREATIONAL READING; THE MECHANICIANS ASK FOR TECHNICAL BOOKS

A "SOLDIERS' LIBRARY" AT VANCOUVER BARRACKS, WHERE EACH COMPANY IS QUARANTINED FOR 21 DAYS UPON ARRIVAL. SIMILAR BOXES ARE SENT TO ALL SPRUCE CAMPS IN OREGON

Officer, I am especially indebted for his ready help in time of need repeatedly and most courteously given.

On the whole, life is very interesting at Newport News. To be sure it is very hot sometimes, but so it is almost everywhere. It is difficult to get anything good to eat or a comfortable place to live, and the prices for everything else you want are higher than in most places, but these are mere incidental details. One is too much interested in the great things that are going on about and of which in a little way we are a part, to bother about the comparatively unimportant things. We have camps on two sides of us. The men who are fortunate to live in the building are awakened by reveille and reminded of bed time by taps. Most of the women on the staff go eight miles for living in Institute quarters at Hampton on its beautiful peninsula.

Men from all points of the country come into the library; men with Philippine, Mexican border, Vera Cruz expedition and other service badges, sailors on transports who come in repeatedly between trips to see us. Day after day we see the long lines of brown clad, luggage loaded men, marching down to the piers, some detachments singing, some striding quietly along. Sometimes at night we hear the rumble of moving wheels and the ground is shaken by the heavy artillery and great trucks. The railroad trains come in loaded with other men to take their places in camps. Over the bay you may see the naval airplanes soaring overhead or gliding down to the surface of the water.

One who sees what we see here and who knows that the same things are being done at the other ports of embarkation, and feels sure that this great country of ours is at last back of all cannot doubt for the future. We know that we shall win and that we shall make the world free.

ONCE a week a class in French has been meeting in one of the rooms of the Evans-ton, Ill., Public Library, and has been reading French with an ever increasing appreciation of its literature. The proceeds of the course are donated to French War Relief.

SEVEN WEEKS AT A NAVY TRAINING CAMP

WOMEN have been so "taboo" at military and navy camps, that I felt it a great honor to be asked to go to the U. S. Navy Training Camp at San Diego as their librarian. It was impossible for me to leave for the indefinite period of the duration of the war, but my trustees most generously granted me a leave-of-absence for a few weeks so that I might organize the library and start it in good working order.

Altho I have not been to other camps except as a visitor, it did not require much knowledge of such places to see that the conditions here were unique and that the demands on the library probably were quite different from those of other camps.

The Navy Training Station is located in Balboa Park, the old exposition grounds. The buildings and all the surroundings are the same as then and are kept in good order by the city of San Diego. So that we are surrounded with the beautiful at all times. The buildings are used for the various purposes needed by the navy and no tents are visible as in other military camps. Climatic conditions are such that the meals are served in the open, and the daily sight of three thousand men enjoying their "chow" in the bright sunlight is sufficiently refreshing to banish, *almost*, one's own hunger. The daily drills on the Plaza with the boys in their blue uniforms, the dances in the evenings in the moonlight, the hurry of many feet as the men go to and fro to their duties, are perhaps the same as in all camps, but here the surroundings and the clear blue sky, together with the glimpses of the blue ocean beyond, give it the glamour of fairyland.

The library is located in the Science of Man building. As is fitting in a library, much of the large room is given over to the museum, but still there is sufficient room to provide tables and chairs for five hundred. These are filled to their capacity at all times when the men are at leisure. "Liberty" is given on Wednesday and Saturday only. At all other times the men are not permitted to leave the grounds, so that the problem of entertainment is an important one. The Y. M. C. A. is most

active here. One building is used entirely by this organization. There is a large reading and writing room, and in addition a safe-keeping system is carried on thru which many thousands of dollars are passed each month. I would like to mention here that this banking business is done entirely by a woman, the wife of the social secretary of the Y. M. C. A. and is regarded as the most efficient system of its kind in any of the camps.

The San Diego Public Library has maintained a branch at the park for some time but when the Navy Training Station was started there the trustees found the work so heavy that they could not meet the demand. So the Navy Y. M. C. A. agreed to take it under its control and now the library at the Navy Training Camp is known as the Navy Y. M. C. A. Library. The 1800 books belonging to the Public Library which were on the shelves of the park branch, are still there, but it is thought they will gradually be replaced by the gifts and A. L. A. War Service purchases. The Public Library furnishes the equipment but the Navy Y. M. C. A. provides the librarian, pays for light, heat, etc., and has general supervision of all the work. The co-operation between the Public Library and Navy Y. M. C. A. is most satisfactory and the relations very cordial.

About half of the 3000 men at the camp belong to the Navy Aviation School. Classes are conducted each day from 8:30 a. m. to 5 p. m., in arithmetic, algebra, geometry and trigonometry. Six of these classes are conducted in the library and the textbooks are kept on convenient shelves for the use of the students. The demand for text-books is so great that it cannot be met, so one book must be used by many men.

I cannot say too much for the excellent work the A. L. A. War Service is doing. We have received about four hundred books from them, all of the greatest importance to the men and seeming to cover every need. There are not nearly enough to go round, but we have shelved them separately and as they are for reference use only, we manage to meet the demand very nicely. The A. L. A. War Service also furnishes the

library with the best technical magazines. The gift books, too, have been of a high order and are in constant use. Of course, the greater part of these are of an ephemeral nature, but nevertheless, are eagerly read.

When one trainload of men was about to start for "somewhere" a young man came to me and asked me whether we could not let him have a play of Shakespeare's to take away with him. "A fellow has to have something good to read on the ship," he said. I found that we could easily spare three or four plays, for we had been fortunate in having a number of duplicates brought in, so I gave them to him and he was delighted, indeed. At another time, a boy not more than sixteen (many in the navy are not older than that) came to me with Spencer's "First principles" in his hand. "Say," he said, "could a fellow learn to know poetry if he should read this? My brother writes poetry and I want to learn to know it." There were many interesting and really pathetic requests, for they showed such a craving for knowledge.

I wish that every *woman* librarian could have an opportunity to learn a little of the daily life of the camps, as I have done. It would broaden her sympathies, and be a valuable aid in her own work back home. Having completed the time allotted to me and returned home, I can realize now as never before that every such experience is an aid in doing one's bit in her own library. The librarian then sees in each youth a possible soldier or sailor, and in each maid, a possible mother of one, and she realizes that here, now, is her opportunity to begin the work that will make the world safe for democracy. Those of us who must stay at home need not despair. We are as important as those whose paths lie in broader fields.

ARTENA M. CHAPIN.

It is expected that a summer library school like the one held last year for the first time, will be held again this season at Aberystwyth in Wales, in connection with the National Library and University College.

THE USE OF PRINT IN MAKING WAR—AND PEACE

IN a letter to the New York *Evening Post* July 12, John Cotton Dana contributes some food for thought in pertinent comment on the recent conference at Saratoga. After briefly stating the sum total of achievement on the part of the libraries in supplying reading matter to soldiers and sailors, Mr. Dana says:

"The details of this work were given to the conference in many reports and speeches, in which was a pardonable note of satisfaction. The keepers of books have always played a modest part in our economy, and here they have contributed far more to the success of a great national undertaking than even they dared to think lay within their powers. But it was perhaps an error to devote a long conference to congratulations and to repetitions by enthusiastic camp librarians of reports of their discovery that the American soldier is an average man; that he reads the same things in the same way which he read before he changed his dress; and that he also reads, if he can get them, books and journals on his own special line of war service.

"Of the need of books for soldiers and sailors there was ample testimony; and between the lines of report and speech and comment it was easy to note the consciousness that the need is far from being supplied. Nor will it be supplied by the renewed efforts librarians are to put forth. They plan to raise about \$4,000,000 more within the next six months and to continue and extend their work. Within the same six months we shall have put into camp and field a total of 2,500,000 soldiers with accompanying workers of nearly or quite the same number. To serve properly this vast army of learners with the text-books of their countless activities and trades and with the books of recreation and enlightenment they should have, will call for many times the sum that librarians can hope to secure.

"In former days civilians were made soldiers by a quite simple process, for a soldier was little more than a mere unit in a fighting machine. To-day it is obvious enough that a soldier should be an efficient,

skilled member of a very complex, quasi-social group, a group with a unity of purpose, but with a unity made up of a very wide variety of immediate aims. The purpose is to win a war. The methods used to gain this purpose compel the soldier class to use knowledge of every kind and to take unto themselves or to develop for themselves experts in all fields. That is, the word that to-day spells success in war, after numbers and money, is education—education of each and every soldier.

"To the insistent demand which the new war makes for the education of the soldier as a soldier is to be added the demand made by the fact that the soldier must be so taught, while still a soldier, that he will reënter, after the war, the restored social order of peace with ease and comfort to himself and with profit to that social order.

"This fact is noted by all military leaders; it is taken up into their practice, to the extent that conditions demand, by very few. This seems demonstrated by two facts: Much, indeed, most, of the formal education given to soldiers, outside of training for routine service, has been allowed to pass into the hands of a professedly religious and almost sectarian organization; and, the task of supplying that indispensable tool of education—the printed page—has been taken over by a small voluntary organization of salaried public employes, the national association of librarians.

"It is to be regretted that this association did not take a portion of the time they gave to the contemplation of their good works for the formulation of a careful presentment of the two facts just noted: The surrender of soldier teaching to the Y. M. C. A., and the surrender of print supplying to a small group of librarians. This presentment, if I may venture an opinion on something the librarians did not take time to note and consider, could have thus proceeded:

"The units of our army and navy should be more than obedient, well-drilled soldiers. By and thru the data which the Government has on their respective origins, early training, and surroundings, their trades and occupations and their native inclinations

and powers, it can discover with some degree of accuracy how each should be taught and for what each should be taught, to the end that each may become more intelligent and effective as a soldier and better fitted for civilian life when the war is over. Here is plainly a problem and a task for the schoolmaster.

"We urge those in control of army and navy to present this problem to experts in teaching and in organization. We note that we are forcibly taking several million young men from the occupations to which their respective talents, tastes, and opportunities had led them, and compelling them to absorbing, wearisome, dangerous, and, in many respects, narrowing activities. We should make part of their recompense for their willing subjection to this treatment, an opportunity for education, an opportunity so wide, so generous, so skilfully disposed that every active war-worker, from the youngest, poorest, and most ignorant, to the oldest, richest, and most cultivated, will every day add to his skill and knowledge for both his army career and his after-the-war career. To argue this point is idle. If the Americanism, of which we boast so freely, has any existence outside the orator's ululations, then it means an obligation to teach, not our children and youths only, but all those adults who are, by the nation's decree, deprived of the advantages of the daily experience and training of civil life.

"We note, further, a very insistent and continuing demand among soldiers and sailors not merely for the books we furnish, but also for books on the technics of present-day war, on occupations and professions of every kind, and for formal instruction in and thru these books. We cannot believe that our war authorities purpose to leave this demand long unsupplied, or that they will long leave the task of supplying it to a voluntary organization, formed and equipped in large part for other purposes.

"We call attention to the fact that in our national system of education and in our closely allied voluntary schools and colleges we have an army of educational experts, and that from these could be drawn

a staff that would quickly fall into step with that vast and active corps of instructors in war routine which is made up of officers of every grade.

"Our own observations, and glowing reports of Y. M. C. A. activities, show that time may be found, and is found, for the systematic teaching we are here urging, at every step of the soldier's progress from his first day in a cantonment to the front-line trenches. The money cost of what we urge is relatively negligible. Every day that this army-education is neglected makes more difficult the task of demobilization that must soon confront us.'

"Going on, the librarians' presentment could say:

"For the war, you in authority are spending at the country's demand billions of dollars. With these billions you are supplying food, clothing, equipment, ships, ammunition, and every conceivable device and aid for the comfort, health, and war-discipline of the men we have devoted to war's ends. To the specific purpose of supplying them with that food, tonic, and soother of the mind and spirit which surpasses all others in both cheapness and effectiveness, the printed page, you have devoted hardly one cent of these billions; and the very small and very humble voluntary organization, which you asked to furnish libraries and books to soldiers and sailors, has been able to spend on that work, in the war's first year, on the war's first million men and million helpers, and on hospitals and ship service here and abroad, a scant million dollars.

"We have explored the field; we know the need of print is far greater than we can supply. We know that to-day our men in France could use with pleasure, and with profit to the service, hundreds of thousands of the best books and journals money can supply; we know that the need of the men in our own home camps is equally great. In New Jersey alone demands come from forty-five different camps, hospitals, and stations, and can be supplied by librarians in pitifully small degree.

"Our Federal Government is the world's greatest publisher. It has in type hundreds of books on scores of the subjects in which

our millions of army and navy men are now intensely interested and in which, whether interested or not, they should be intensely taught. Of these books, only a few have been supplied for distribution and some of those most needed are now reported out of print. Our suggestion is that you cause the teaching experts whom we urge you to engage at once and at first hand to report to you, as soon as possible, which of these books are needed; and that you thereupon cause the Federal printing press, to produce them in ample quantities; that you then cause these same experts to examine the army's needs for books and journals and to name those, by whomsoever published, best fitted to supply those needs, and that you thereupon command publishers to produce them at proper prices for army and navy use in such quantities, in such forms—sometimes as parts of books only and often in cheap pamphlet binding—as will enable you so to equip camp libraries, ships, hospitals, trenches, and all war centers, also instructors, experts, and officers of every grade, that no army-worker, whether he be under formal class instruction or not, shall lack, for one day, the book or journal he may need.

“It is our conclusion that of the many things of supreme importance that you are trying to do, one is certainly the equipment of our army and navy, down to the humblest worker, with the printed page that will help him better to understand America and her part in the war, will make him happier and more contented, will add to his efficiency as a unit in the work of winning the war, and to his efficiency in the difficult days of peace after the war.’

“Of all this much more might be said in explanation; but it must be enough here to have pointed to a great need and to have roughly outlined one method of meeting it.

“As to finding books for librarians to distribute thru present agencies, here is a suggestion:

“From every book distributor who comes in contact with soldiers and sailors, and from the more alert of the officers, we hear of an endless series of requests for books from which one may learn something, and the something includes the whole range

of human knowledge, English, French, mathematics, mechanics, chemistry, and what-not. The books thus called for are often expensive. In many cases those published ten years ago are as serviceable as those published yesterday. In our public high schools and even in the grade schools, in our academies, colleges, universities, and trade and professional schools are reposing idly to-day millions of books of which a large portion are of the kinds the army-workers ask for, or would be glad to get if put ready to their hands. They are largely books which changing methods and whims of superintendents or the vagaries of boards of education have caused to be discarded or set aside.

“Will not the national bureau of education prepare and send to, say, ten thousand cities and towns, or issue thru the public press, a letter which will tell to whom, in each state or city, books for war-workers may be sent from schools, colleges, etc., for examination and distribution; and they will tell with considerable detail just what kinds of books are needed and which of the many kinds must be recent, or “new,” or not older in publication than a given number of years. Such a letter, widely distributed, would bring to the gathering and inspection centers of the libraries next September, millions of volumes.

“If they come, they will be welcome, and we shall have scored one more modest point in conservation of resources.”

At a conference held at the La Salle Hotel in Chicago May 22 the standardization committee of the National Association of Purchasing Agents considered the standardizing of trade catalogs. Many trades were represented. After a six-hour session, a resolution for a single size, $7\frac{1}{2} \times 10\frac{5}{8}$, was lost by a single vote. Three sizes were finally adopted: 6×9 , $7\frac{1}{2} \times 10\frac{5}{8}$, and 8×11 , with the preference for the second of the three. Certain weights of paper were specified, and it was recommended that colors be limited to white and natural. It was pointed out that catalogs which are half or double the standard size can be filed with the others by opening or folding them to the standard dimensions.

CERTAIN ENEMY PUBLICATIONS MAY NOW BE IMPORTED BY A. L. A.*

THE committee has previously reported the successful outcome of the negotiations with the British Government for the release of material in detention, whether at Rotterdam or in London.

The former was put on board ship in midsummer 1917 for dispatch direct to America, but the vessel has never sailed. At the committee's suggestion the Department of State has cabled instructions to our Minister at the Hague to endeavor to arrange for the shipment of all these publications to the United States Dispatch Agent at New York, directly if possible, otherwise via Great Britain.

As to parcels held in London, there has been a deal of distribution, but some appear still to remain. Accordingly the department, again at the committee's suggestion, has sent a like instruction to the American Consul General in London "to request the appropriate British authorities to forward these publications at the earliest practicable date," similarly consigned.

It will be noticed that here the instructions of the department have taken a new turn. It asks that the goods be consigned to the Government of the United States, rather than to the institutions concerned. We appreciate the change, for such a request could hardly be refused.

Following the passage of the Trading-with-the-Enemy Act, the American Library Association, on application of this committee, as it has also previously reported, was granted by the War Trade Board a license, whereby universities, colleges and public bodies of approved character might secure enemy publications of importance to research in science and scholarship, provided the Department of State approved the method and the Censorship Board sanctioned the admission of such material.

Turning its attention first to the periodicals of 1918 the committee authorized and requested the leading importers to have their clients submit their lists, excluding the popular, historical, political and the-

ological titles. One hundred and fourteen institutions responded, with upwards of 1000 different titles. Six of the applicants were ruled out by the department, as falling outside the categories of the beneficiaries of the license.

The titles were classified and tabulated, and the entire record card indexed. In consultation with the State Department and Censorship Board, the list of approved titles was reduced to the 255 titles, of which a copy is appended to this report. The cause of the reduction was the Censorship Board's disinclination to undertake so formidable a task of examination of texts, and then the State Department did not desire to sanction a practice which it suspected greatly to exceed that of our Allies.

In one important respect, the State Department finally, much to the committee's expressed regret, reversed a decision which had been given wide publicity, and required that the association itself, without the intervention of any American agents, should place the orders thru the diplomatic pouch directly in neutral countries.

There was, of course, nothing for the importers to do but acquiesce, and since, having no license, neither they nor the individual institution could legally themselves place subscriptions, the agents passed wholly from the scene and the committee became the only medium of transactions.

The department thereupon requested that the association send a representative abroad, who, in behalf of both the Government and the institutions, might conclude the transaction. As the secretary of the committee was leaving on another mission for the association, it was found possible to comply.

At the committee's suggestion, the department announced the new policy to the British Government and requested the courtesy of uninterrupted passage for such of these shipments as might come thru British territory. This was granted at once, since such consignments were to come addressed to the dispatch agent of the department in New York, and to bear the U. S. seal.

So the order was sent in the embassy mail to The Hague and placed with Martinus Nijhoff, who was found to have rendered satisfactory service to others.

*This report of the A. L. A. committee on importations was read before the association at Saratoga Springs, N. Y., July 3.

Mr. Nijhoff has succeeded in getting the goods, and has made at least three shipments, bills for which have been received. It is likely that twice as many are on the water. The first two are known to have gotten as far as London. The Minister at The Hague was endeavoring, at last report, to dispatch the third directly to America and thought it likely he might succeed. The shipments are prepared at about fortnightly intervals.

At the State Department's request British and French practice was investigated and reported with recommendations. These were based on an examination of the records and shelves of the British Museum, the London Library and the Royal Society of Medicine, and conferences at the Board of Trade, H. M. Stationery Office and the Postal Censor's in England; and in France on consultations with the Bibliothèque Nationale, the Sorbonne, the Minister of Public Instruction; and, in Switzerland, with a special representative of the French Minister of Foreign Affairs.

As the practice of our Allies was found to be much more liberal than ours, the Secretary of State gave cabled approval of the recommendation to raise our policy to the same level.

A cablegram was then sent to the department, suggesting the propriety, in the existing international situation, of placing these additional orders in Switzerland, provided clear passage thru France could be arranged. The Department cabled assent, and the French Government in turn acquiesced.

Switzerland was then visited for conference at the Legation and with dealers, the result being that Librairie Kundig at Geneva was selected as our Swiss agency. Subsequently the lists from a half dozen institutions, forwarded belatedly from Washington, were dispatched thither and have been acknowledged.

Recently a conference was held between representatives of the Department of State, the War Trade Board and the committee, at which the committee, on the basis of the European reports, was asked to undertake the conduct of a bureau for handling the business of importing publications from

enemy countries, not merely for educational institutions, but for all bodies and individuals concerned. The committee felt compelled to decline the offer and it is not yet known whether such a bureau is to be established.

Meanwhile, this committee will see to it that the institutions covered by our present license shall not lose by inaction the new privileges allowed them, at least so far as periodicals are concerned. Books also are covered in the grant, but as yet the committee lacks the facilities for embarking upon any such service, except, perhaps, in cases of great emergency.

It was said above that the Department of State gave consent to have the American policy raised to the level of the British and French. This has been defined as follows: Institutions may order and pay for all their usual serials. Of these the Censorship Board will impound for the continuance of the war those that fall in the categories heretofore entirely forbidden, *i. e.*, the popular, historical, political and theological. Thus for the first time the continuity of all files is assured at least to those institutions which had made advance payments to their agents thru 1917.

Institutions are advised, therefore, to send to the Secretary of the committee, at the Johns Hopkins University, Baltimore, Maryland, desired titles not appearing on the approved list of 255 periodicals already ordered. PLEASE SUBMIT THEM IN ALPHABETICAL ORDER AND DUPLICATE COPIES. SEND SEPARATE FROM THE LIST A COVERING ORDER, ALSO IN DUPLICATE.

Please meet the agent's bills immediately upon presentation. He has made outlays in advance and communication is slow. Remittances to the agent, as well as your necessary correspondence with him, the secretary will undertake to forward, provided the conditions above have been met, and there be in every case inclosed a stamped envelope addressed to the Secretary of State for forwarding same. The committee is making no charge for its services, but it cannot undertake expense of clerical service.

Watch the LIBRARY JOURNAL for further developments, and disregard notices from

all sources other than the committee. It alone has legal right to act in your behalf.

THE oriental library collected by the Carmelite Fathers in Bagdad is reported to have been destroyed by the Turks.

LIBRARY WAR SERVICE

THE usual war service material is omitted this month, and in its place is given the honor roll of librarians now in the uniformed service of the government. The service flag at Saratoga carried 297 stars. Since it was made, several names have been added to the record at headquarters. Of the many others who have left the home library field to enter positions in government offices, or to render other patriotic service, we have no record. The names of those who are carrying on the A. L. A. War Service have been recorded from month to month.

A. L. A. HONOR ROLL

- Young, George F.**, Library of Congress—Private, Marine Corps.
- Young, Malcolm O.**, (Student) New York State Library School—Pvt., 302nd Inf., Co. L., Camp Devens, Mass.

AMERICAN LIBRARY ASSOCIATION

SARATOGA SPRINGS CONFERENCE

Perfect weather, excellent accommodations, and the best of company marked the fortieth annual meeting of the American Library Association in the Grand Union Hotel at Saratoga Springs, N. Y., from July 1 to July 6. While, as was entirely proper in a war year, the attendance was cut down one half (there were not quite 600 registered during the week) the program of meetings was excellent and the general interest ran high. Library war service was the keynote of the week, tho the other sides of library work were by no means omitted. There were no social features beyond the "get together" reception the first night, and the library school lunches and dinners (there was even one breakfast) which are a feature of every meeting.

A number of good exhibits were shown to excellent advantage in the hotel parlors. Largest in point of size was that showing the work of the camp libraries and the library war service in general. Besides photographs from all camps from the Atlantic to the Pacific, there was shown a model of a camp library building of the Camp Kearny type, with reading porch along the side. There was also much interest in a book wagon for hospital use made and donated by the pupils of the Youngstown High School. The Food Administration had a large exhibit, with material changed at frequent intervals. Here were shown files of the numerous series of bulletins issued in co-operation with other government departments; maps, recipes, posters, photographs, and graphic exhibits suitable for small libraries; files of reports from library directors; corn, wheat and food exhibits; and sample maps from the Statistical division and from Boston schools. On Wednesday photographs of library publicity along food conservation lines were shown, and on Thursday, posters from schools of different states. There were the usual exhibits of books by dealers, and the Dayton Library and Gaylord Brothers showed scrapbooks made for hospital use.

There were four round tables for camp librarians, at which the many problems incident to the new work were thoroly discussed, and to many these were among the most interesting meetings of the week. It was an opportunity for the librarians who have been

working for a year collecting money and books for soldiers' service, to hear for themselves just what that money and those books have accomplished, and they went out from the meetings full of enthusiasm for the work and of determination to make the coming campaign by far the most telling one in their communities.

The Library Employees Union of New York city had hoped to have an opportunity to appear officially at this conference, and representatives were present who distributed a bulletin telling why the union was formed and what it aims to do. The question of salaries came up for discussion at several different meetings, and was the subject of much earnest talk. It would undoubtedly have received even more attention had not the war service dominated everything, personal interests being put aside for the time being for the sake of the larger benefit.

OFFICERS ELECTED

The following officers were elected for the coming year: President, William Warner Bishop, librarian University of Michigan, Ann Arbor.

First vice-president: Charles F. D. Belden, librarian Boston Public Library.

Second vice-president: Burton E. Stevenson, librarian Public Library, Chillicothe, Ohio.

Executive Board (for three years): Linda A. Eastman, vice-librarian Cleveland Public Library; Adam Strohm, librarian Detroit Public Library.

Council (for five years): W. Dawson Johnston, librarian St. Paul Public Library; Joseph L. Wheeler, librarian Reuben McMillan Free Library, Youngstown, Ohio; Mary S. Saxe, librarian Westmount (Quebec) Public Library; Jessie Fremont Hume, librarian Queens Borough Public Library, Jamaica, N. Y.; Henry N. Sanborn, librarian Public Library, Bridgeport, Conn.

Trustee of the Endowment Fund (for three years): M. Taylor Pyne, Princeton, N. J.

The committee on nominations was comprised as follows: Walter L. Brown, chairman, Mary L. Titcomb, Gratia A. Countryman, George H. Tripp, Charles E. Rush.

CAMP AND HOSPITAL LIBRARIANS WERE MUCH IN EVIDENCE AT SARATOGA, WHERE THEIR UNIFORMS GAVE A MILITARY TOUCH TO EVERY MEETING

FIRST SESSION

The first session was held in the convention auditorium Monday evening. As always happens on the first evening, dinners were delayed and there was only a scattering audience when the president, with unparalleled promptness, called the meeting to order to listen to the address of welcome by Dr. Charles B. Alexander, regent of the University of the State of New York and member of the committee on the State Library. This was the more regretted because Dr. Alexander is held in particularly affectionate regard. Following his cordial greeting, the president of the association, Thomas Lynch Montgomery, state librarian of Pennsylvania, read his address on "Civilization," which is printed in full elsewhere in this issue. The meeting adjourned after this address and an informal reception, or rather reunion of old friends, was held in the ball room of the Grand Union. Here Miss Ahern was in charge of the proceedings, and for the benefit of the younger members of the profession, those who had joined the A. L. A. in 1894 or later years were marched one by one across the platform at the end of the room, while their name and station were announced with an occasional bit of pungent comment by Miss Ahern. The picture of Mr. Dougherty and Mr. Teal, in their Mutt and Jeff promenade, will last in the memory for many a day.

SECOND SESSION

Tuesday morning the members gathered bright and early for the second session in the convention hall. As usual the reports of most of the officers and committees had been printed in advance and distributed to members upon registration, and were read only by title. The reports of the War Service Committee had also been similarly printed and distributed. These included the report of the committee proper, covering the history of the camp library movement from its inception at the conference at Louisville last year thru the early days of the summer and its subsequent more permanent organization with Dr. Putnam as general director, down to June 15 of this year; the report of the general director; and the history of the financial campaign which put \$1,766,000 at the disposal of the association for the maintenance of the work. In commenting briefly on these reports, Mr. Wyer, chairman of the Library War Service Committee, said they were not to be interpreted as reports of what the *committee* had done, but rather a record of what had been accomplished by the hundreds and thousands

of librarians who by concerted action had made the work possible. Probable effects on the association would be at least three: a new assurance with the public on the part of the librarians who will henceforth dare to ask for what they want and need; a renewed belief in library work on the part of the public, shown by the books and money so freely given; and a firmer faith by the librarians themselves, in the value of their work.

The question of the part which women can expect to take in this camp library work was raised at this and subsequent meetings and was the subject of some heated remarks. Inasmuch as the regulation which restrains them from taking entire charge of a camp library is of War Department origin and not a device of the A. L. A. committee it seemed both unfair and unwarranted to berate the committee. As a matter of fact, as Dr. Putnam pointed out, a large number of women have been connected with the work, both in the headquarters and dispatch offices and also as assistants in many camps, and in the rapidly developing work in the hospital libraries they are having full appointments and recognition.

In commenting on the printed report submitted, Dr. Putnam spoke of the multiplicity of needs presented as the work developed. There is constant change of work in the camps as the camps themselves change in character. In the past year there has been much new ground to be explored and charted, but with the development of a personnel of experience both in the field and at headquarters, the foundations have been laid upon which may be reared a permanent structure.

Most of the session was given over to a symposium on the work in the camp libraries, conducted by Carl Milam, assistant to the director. There was so much discussion of the papers as they were read that the morning was gone before the program was half completed, and it was unanimously and vociferously voted to continue the program on the morning of the Fourth, which had been left free for any celebration desired, rather than curtail the discussion.

The first subject taken up was "What men read: In camps" by Matthew S. Dudgeon, and "In hospitals" by Miriam E. Carey. The one general principle which Mr. Dudgeon had found true was that "a man reads on any subject in which he is interested." His first interest just now in camp is to win the war, and so "he will read anything that will help him lick the Kaiser." The function of recreational reading in the camps has been much

overestimated, in Mr. Dudgeon's opinion. In the camps with which he had had experience, he found the average of fiction and non-fiction to be pretty evenly balanced, and in one camp non-fiction was seventy per cent of all the reading done. There are never enough textbooks to meet the demands of the men. He made two definite suggestions; first, that technical and non-fiction books be brought closer to the men, and that special collections be placed in regimental headquarters or assembly rooms so that the different branches of the service might be better served with the particular literature of their field. Second, the next book campaign must be more specific in character, asking for definite titles and subjects which the experience of the past year have shown to be most in demand. There was heated argument on the question of textbooks and the extent to which the A. L. A. should be expected to supply them in classroom quantities. It was agreed that satisfactory classroom work could not be done when the books used by the students were by a dozen different authors and of a dozen different periods, but on the other hand many of the needs of individual men could be met from a very heterogeneous collection of texts. In many of the states the camp librarians reported most helpful co-operation from county superintendents of schools, who had many times supplied the necessary texts in any desired quantity and in uniform editions. It was voted to send a telegram to the National Education Association, in session the same week in Pittsburgh, thanking them most cordially for their helpful co-operation in this manner and asking their continued interest when the next campaign for money and books should be undertaken. It was felt that when more books were asked, greater emphasis should be placed on *new* fiction, up-to-date textbooks in mathematics, science, telephony and telegraphy, sanitation, engineering, etc., as well as military manuals, in many cases asking for definite titles.

In reply to a question, Mr. Dudgeon said that in many camps German is being taught in the camp schools and there is a decided demand for German dictionaries and grammars in these schools. Such books when donated should not be rejected if they can be used in this way.

Following Mr. Dudgeon's summary of what the men are reading in the camps, Miss Carey spoke out of her experience as an organizer and field representative on what they are reading in the hospitals. Her paper is printed in full in another section of this issue. She emphasized, as did every hospital

librarian, the value of the scrapbook when properly made and properly used.

The work of the dispatch offices was next taken up, and the agent in charge of each reported on the work of his office. Mr. Brett, the first to speak, told of the organization of the office at Newport News, where not only does he prepare books for overseas, but supplies books for about thirty camps, large and small, in the vicinity. He was followed by Mr. Dickinson, in charge of the office at Hoboken, who filled his hearers with joy by his recital of the events of a "typical hour" in his four saloons, from which he is supposed to send out 6000 books a day. Mr. Brown told of the organization of the new office in Brooklyn in the Brush Terminal building where he had been for the past four weeks. His quota was 30,000 books a week overseas, besides supplying the marine barracks and the men and ships in the neighborhood. Louis J. Bailey, in charge of the New York dispatch office, the largest of them all, described the method of handling the purchased books for all the camps, as well as the administration of the 250 titles (some 20,000 copies) kept in stock. This dispatch office has its headquarters in a loft on 15th street, New York city, where all the new books and some of the overseas work are handled. In the building of the Public Library most of the gift books are received and sorted for forwarding. This office is expected to forward 60,000 books in deck shipments per month, and has sent books to over four hundred points, from Alaska, Hawaii and the Philippines to Haiti and the Canal Zone, as well as to the forces in Europe.

C. O. Mawson, who was recently transferred from the Hoboken office to Boston to open a dispatch office in the basement of the Widener Library at Harvard, told of his very successful efforts to get volunteers to help him. The office is open every night and various units from the telephone company's offices and other groups come regularly on assigned nights to sort, label, catalog, and pack the books. Forty men from the collection department of the telephone company have volunteered for packing work, "for the duration of the war," and other units have been equally enthusiastic. In a little over three weeks 60,000 books had been sent out. The newest office of all is that at Philadelphia, under direction of Franklin H. Price. This office supplies books only for use on deck of transports, and in the naval bases, 9800 having been sent out the week prior to the conference.

Before adjournment, two motions were

made by Mr. Bowker. The first was that the officials of the A. L. A. be authorized to extend to their associates among the Allies the right hand of greeting, on behalf of the association, and the second was that a rising vote of "respect, honor, and appreciation" be given to those who are carrying on this particular part of the library work of the country with such devotion and success.

SECOND SESSION—ADJOURNED

Thursday morning the adjourned meeting reconvened in the hotel ball room, and the program was continued. "How the camp library reaches every man" was described by Joy E. Morgan of Camp MacArthur, and Frederick Goodell of Camp Wheeler. Mr. Morgan emphasized the tremendous opportunity that the camp library offers for publicity for the idea that the library has a place in public education which cannot be filled by any other institution. As to methods, the library building itself, by its mere presence, impresses this idea. Next come the bulletin boards each man is required to read, the motion pictures in every recreation hall, the lecture platforms in these same halls, *Trench and Camp*, and finally, the opportunity frequently granted, if requested, to address the men briefly on the work of the library, at retreat. He then gave an outline of the service organized, describing how the branches and stations in his camp were started and administered. It is recognized in camp that the first need in a camp library is military information; the second, recreation. Consequently the library tries first to help the men understand why we are at war and how they can help wage it; then helps them to find themselves. Mr. Goodell emphasized the value of establishing personal relationships with the men. In his camp at one time were 3000 men who could not read or write, and the library was able to help in supplying material for their training. He had tried when possible to communicate with the drafted men before they came to camp, thru their home papers or local chambers of commerce, and had found this advance invitation to visit the library always brought results. Mr. Hirshberg told of his work in Camp Perry, where he had found the men to be of an unusually high grade of intelligence, keen to study. The work in the quartermaster's camp at Camp Johnston was described by Lloyd W. Joselyn, and that at Camp Devens by John A. Lowe. In this latter camp libraries are made up for each contingent leaving for overseas, the books being turned over to the military authorities, who require each man to take

one book in his pack, and make him responsible for its safe delivery on the other side. This gives each regiment a well balanced library, which will be in the chaplain's charge. Miss Titcomb who had recently been assigned to Fort Leavenworth, Kansas, to study the situation there and see whether a separate library was needed, told of her first day in camp and how she overcame some misunderstanding of A. L. A. motives. As the last speaker on the regular program, Adam Strohm discussed the question "Is it worth while?" considering both the value to the men in the army to have libraries and to the camp librarians to give service, and in an inspiring talk showed how the library may be a mighty instrument for the strengthening of the ideals of democracy for which this country fights today.

The new poster drawn by Charles B. Falls of New York, who donated the book campaign poster last spring and has now given another for use in the camps to advertise the A. L. A. Library, was displayed, and it was enthusiastically voted that the committee on resolutions send a telegram of appreciation and congratulation to Mr. Falls.

A communication had been presented to the War Service Committee asking for a statement of the attitude of the committee toward the employment of women in war service, and the matter was brought up at this meeting. Mr. Wyer, as chairman of the committee, explained that a future policy was impossible to announce, inasmuch as the committee's action must be modified almost daily to meet constantly changing conditions. He called attention to the record of women's service in both Dr. Hill's and Dr. Putnam's printed reports, and to the fact that in the list of librarians engaged in library war service the past year 236 men and 69 women had been named. The regulation prohibiting women from camp libraries being of military origin, can only be changed by military authority, but he gave assurance that as fast and as far as women are felt to be the best persons available for the work to be done their service would be gladly accepted.

THIRD SESSION

At the third session, Wednesday morning, the report of the finance committee was read and approved. An amendment to the constitution, recommended by the Executive Board, was also read and adopted, empowering the finance committee to audit all accounts.

Following this action, Edith Guerrier, library publicity director for the Food Admin-

istration, talked for five minutes on the work done during the past year. The rest of the session was devoted to a symposium on "What our library is doing to help win the war." Mary L. Titcomb, of the Washington County Free Library, Hagerstown, Md., was the first speaker representing the county and rural library. "Circulation," she said, "had dropped with a dull thud," as war work, gardens, and military preparations took up an increasing amount of time, but the library by trying to enter into these new interests, felt that it still justified its existence.

For "the city library," Hiller C. Wellman of the City Library of Springfield, Mass., gave a recital of activities, which he modestly maintained were only typical of all similar city libraries. Special lists for military and civilians, active co-operation with the A. L. A. in book and money campaigns, with the government in recruiting, food conservation, Liberty Loan and thrift stamp campaigns, and with the Y. M. C. A. and Red Cross in their drives for membership and money, have all been cheerfully undertaken. Out of some "soldiers' parties" in the museum affiliated with the library came the discovery that many of the men could not read or write, and the library started classes for the men at which attendance was at first voluntary but is now compulsory.

Julia A. Robinson, of the Iowa Library Commission, speaking "for the commissions," had much the same tale to tell. She emphasized the fact that just as vital as this work was the action of the staff who had carried on all the regular work of the commission, thereby releasing different members for active service in extra-library activities. In the New York State Library, Mr. Wyer reported that one of the first steps taken was to build up a military information service, circulating material thru the state. The library has prepared a pamphlet on America's part in the war, and has compiled a book on the American flag which the Resource Mobilization Bureau plans to issue. It has been of special service to draft boards, organizing files and records. The collection of local history of the war has been organized for the state, and the photostat in the State Library has been called upon time and time again for rush service in reproducing records and reports. Before the A. L. A. camp libraries were started, books were furnished to camps and smaller posts in the state, and several members of the library staff are now in the A. L. A. service. The double duty which this entails for those remaining behind received special recognition. The recital of work in the Uni-

versity of Chicago, reported by J. C. M. Hanson, again covered the same ground as the preceding speakers, showing that all libraries are finding much the same opportunities. The library staff organized the registration file for women, on some 300,000 cards, and the staff has also undertaken the support of two French orphans for the duration of the war.

The last speaker to contribute to this symposium was Dr. George H. Locke of the Toronto Public Library. To Toronto belongs the honor of having the first camp library on the continent, for in 1915 that city installed a library in its military camp. Canada has pooled its library war service at the front with the Y. M. C. A. As to library work at home, Dr. Locke said that not only had circulation not fallen off, but it had actually increased in Ontario 40 per cent, and money appropriations had likewise increased 35 per cent. Books on the war are not in demand; the war is too real and too close. The problem of greatest interest in Canada now is how to absorb the returned soldier into civilian life again.

The session closed with the reading of the report of the committee on importations by Dr. Raney, the secretary. This is printed in full in another part of this issue.

FOURTH SESSION

The fourth session was held in convention hall Thursday afternoon, July 4, President Montgomery presiding. At his request Mr. Roden of Chicago introduced the first speaker, Carl Sandburg, the Chicago poet. Mr. Sandburg read, with occasional comment, a number of his poems, including "The prairie song," "Chicago poet," "Wilderness," "Interior," "The young sea," "Wars," "Grass," "The next child waits," "The firebringer," and "The four brothers."

Dr. Putnam was then asked to introduce Dr. Raney, who had been abroad for six months as the representative of the A. L. A. War Service. Dr. Raney's report, which was in some ways the most important and striking paper of the whole conference, is printed in full in the front of this issue, and should be read by every librarian and assistant as the best possible inspiration and information needed in preparation for the next campaign.

William Orr, director of the educational work of the Y. M. C. A., spoke with keen appreciation of the way the two organizations had been able to work together during the past year in the common cause. From figures collected in the camps in this country the first three months of this year, he gave most interesting statistics of the men who have used

books and attended lectures in Y buildings—over a million men for the latter purpose alone. He also urged the importance of the home library service, saying that here must be stored up for the years to come the noble impulses and ideals that have grown out of this war in order that, having won the victory, we may garner the fruits hereof.

FIFTH SESSION

The fifth session, held Friday morning, opened with a paper by Dr. Arthur E. Bostwick, on "The future of library work." To the question, Are we a profession?, Dr. Bostwick replies that we are if we are growing sufficiently in group consciousness to let it be evident in our work. Standardization and certification are steps in this direction; increasing professional spirit will demand special training and equipment for service. Popularization of the library will grow in the future, and the surface social democracy of the present will disappear. The library must universalize the desire to read as the schools have universalized the ability. Nationalization of libraries has just begun. In twenty years there will be great improvement in team work as evidenced by the development of interlibrary loan service. Possible rocks on which the library movement may be wrecked are political interference, formalism, self-laudation, and exploitation. Avoiding these, and developing the service side of the work, the profession will increase in attractiveness, tho the pay, according to Dr. Bostwick, will never be sufficient to attract the mercenary.

"The spirit of the war literature" was treated in two parts. Of the poetry May Masee, editor of the *Booklist*, read many selections. She said the two greatest things in the world are love and hate, and the war is the highest and lowest expression of both. The poets quoted, among others, were Rupert Brooke, Siegfried Sassoon, John Masefield, and Vachel Lindsay. In all of them shines the glorious splendor of youth, with its love of life and its realization of death as a part of life, while the love of the homeland and the intense love of the individual merges into love of all mankind.

The prose literature of the war was discussed by Dr. George F. Bowerman. For the discussion of the psychology of the war he chose Gilbert Murray's "Faith, war and policy," and Hilaire Belloc's "Elements of the Great War." Turning to the personal side, he took up in turn Sir Oliver Lodge's "Raymond"; Empey's "Over the top"; Hankey's "Student in arms"; Masefield's "Gallipoli" and "The old front line"; Coningsby Daw-

son's "Carry on," "The glory of the trenches," and "Out to win"; Ian Hay's "First hundred thousand," and "All in it"; Gibson's "Journal from our legation in Belgium" and Gerard's "My four years in Germany" and "Face to face with kaiserism." Of the novels of note he instanced "Christine," "The dark forest," "Private Gaspard," "Under fire," "Mr. Britling," and "The tree of heaven." No great American novel of the war has yet been written. In all these books loathing for Germans is a characteristic, for the men as well as their masters, and the hope is repeatedly expressed that this may be the last war. The sense of danger is ever present, and the nearness of life to death, yet they are marked by cheerfulness, good fellowship, sympathy, helpfulness, and the *will to victory*. At the close of his paper Dr. Bowerman, at the request of Mr. Bowker, read from the Fourth of July speech of President Wilson at Mt. Vernon.

Dr. Putnam summed up at this meeting the library war service of the past year, for many of the members visualized for the first time thru the exhibits at the conference and thru the meetings of the camp and hospital librarians. Formal report on the work had already been made in printed form; in his talk he sought to give the confidence that comes from complete understanding of the methods and motives that were behind the direction from Headquarters, and to assure all members of the association that their suggestion and counsel and helpful criticism were at all times welcome.

On motion of Mr. Craver it was moved and carried that in view of the uncertainty as to the future, the Executive Committee be authorized to omit the 1919 meeting if it seems expedient.

Mr. Perry of Los Angeles read the following resolution to James L. Gillis:

JAMES LOUIS GILLIS—1857-1917.

James L. Gillis came into library work in 1899 as a man who had already clearly demonstrated his ability to handle large problems, to meet men and, in a business sense, to get results. His experiences as a railroad employe and officer, rising as he did from messenger boy to assistant superintendent of a division, gave him a foundation upon which, in a period of eighteen years as librarian of the California State Library, during which time he served the California Library Association as President nine terms, he was able to erect a library structure surpassing in size and beauty the accomplishments of many another leader whose whole life was devoted to one purpose. To those most intimately associated with him, the motive which spurred him on to greater efforts and larger service was clear: he had a never failing desire to give the boys and the girls of his great state, and particularly those in the country and the mountains remote from opportunity's pathway, a chance to make themselves better and more useful men and women; as he said frequently, "to continue their education, by books and reading, throughout their lives." To this task he brought a clear brain, a boundless energy,

a friendliness for people, a love for his friends, a capacity to consider and weigh new things and a faith in his work which will long make his name an honor and an inspiration in the library world. Professionally he came into our work in a commonwealth unorganized and without definite aim: he left it a system beautiful in its simplicity and its effectiveness. His was an outpost position and he held it staunchly, unflinchingly. He erected the California County Free Library plan as his watch tower and from its fair height an ever-growing throng will get its vision of a bigger life, of better things. His loss to librarianship is a heavy one; his inspiration is a treasure not easily or soon exhausted.

EVERETT R. PERRY, *Chairman*
MILTON J. FERGUSON
GEORGE T. CLARK

Mrs. Elmendorf then read a memorial to Henry Eduard Legler:

HENRY EDUARD LEGLER

In this grim, noble time, when millions of men with unflinching feet mount,

"Up the large ways where death and glory meet," we are straightened by an imperative need for uncovering some other, some altered aspect of death.

Sorrow from of old has been individual—isolated—it has been mourning. But we cannot now, even in imagination, look into those wide graves in France, we cannot even picture to ourselves that forest of low, wooden crosses and think,

"Where is sorrow like unto my sorrow?"

We can no longer suffer a broken column as fit symbol of the young dead,

"Dead ere his prime."

Every authentic word from the front of that dire midst of war reiterates this certainty: "It is a far, far better thing that I do than I have ever done." In the face of that certainty, it is no longer tolerable to think of that massed, sacrificial death as frustration—as waste. That were to make "these dead to have died in vain."

They have consentingly paid a price, the last and highest price from them, an unutterably precious price for us, for what must be an unutterably precious possession to us, even a holy thing, as that cup of water brought from "the well which is by the Bethlehem gate" was to David.

They have said each to the other,

"As He died to make men holy

Let us die to make men free!"

"What manner of persons ought we to be" to receive that blood-bought freedom into our hands for ourselves and for the children?

As we look thus at death—as we see it as a deliberately counted and paid price for a most dear thing, almost at once we see in the light of that greater glory that the passing of certain single lives may be interpreted in a like way and change our mourning to proud sorrow.

Certainly the life and the death of this man whom we now honor and remember, Henry Eduard Legler, our fellow-worker, our friend, were a deliberate, a willing paying of what he himself reckoned a not-extortionate price for the thing he meant to do. He absolutely faced the fact from the beginning that the price would almost certainly have to be paid if he undertook the last great work of his life.

Life itself shaped and tempered this instrument for its best use. Born of an Italian mother, the son of a Swiss father, he was given gentleness, courtesy, persuasiveness, simplicity, a deep love of beauty, perhaps his heritage from his mother and his motherland. These graces veiled and adorned an unflinching, noiseless resolution and persistence and a keen intelligence that came, perhaps, from his father and from Switzerland.

Perhaps to make sure that neither inheritance should overwhelm the other, life transported the little lad across the seas to a new and not-too-friendly environment, a small western Wisconsin town.

The early death of his father threw the boy into the earning world, which gave him an experience that wakened in him that intense, persistent, dynamic sympathy with those who are deprived of opportunity. He was the most genuine, the most fundamental of democrats.

It is not necessary to tell here how after work at the printer's case he picked up a reporter's notebook

and thence proceeded to a taxing training experience as purchasing agent for a great school system. After that experience he came into the work which brought him among us as the secretary of the Wisconsin Free Library Commission, afterwards to become, at length and at last, librarian of the Chicago Public Library. The story of all these things is written elsewhere.

He did not create the Wisconsin Free Library Commission. Other equally devoted hands raised that structure. He did set its house in order and extended its domain and made its persistence sure.

He did not found the Chicago Public Library. Another of our great names is linked with that. He did knock the logs from under the keel of that great ship so that she slipped down the ways, where she has hung so long, and now she rides the full stream of Chicago life.

His message comes back to us in the words of him who wrote and who lies "In Flanders field."

"To you from failing hands we throw

The torch; be yours to hold it high.

If ye break faith with us who die

We shall not sleep."

The words of this memorial have not been cast into formal resolutions. They have purposely been made few and short that they might be like that brief, momentary pause in the nation's busy, noisy life which has once or twice honored the passing of a great servant of the people.

THERESA ELMENDORF, *Chairman*
WILLIAM H. BRETT
CARL B. RODEN

The committee on resolutions, thru Dr. Bostwick, then presented its resolutions of thanks for the many courtesies of the convention and of appreciation to the speakers. The tellers announced the result of the election, and William Warner Bishop, the president-elect, was escorted to the platform. After a few words of thanks for the honor conferred upon him, he pledged the undivided support of the association to Dr. Putnam in the conduct of the library war service. With applause for these sentiments, the meeting adjourned.

STATE LIBRARY DAY

On Saturday about four hundred librarians went over to Albany to celebrate the centenary of the establishment of the State Library. From 11 to 12:30 exercises were held in the Education Building, Dr. Charles B. Alexander, of the Library Committee of the Board of Regents, presiding. Greeting was brought by Dr. Thomas E. Finegan, deputy commissioner of education, who told of the organization of the educational system of New York State, the function of the Board of Regents, and the founding of the State Library. Regent Alexander followed, with a most interesting and illuminating story of the growth of the State Library to the present time. Thomas L. Montgomery, state librarian of Pennsylvania, and retiring president, spoke of the early days of the A. L. A., and of the great influence of Melvil Dewey, for many years New York's state librarian. W. W. Bishop, the new president, paid tribute to the influence of the New York State Library and the Library School, not only in the state but

in all parts of the United States and Canada, and he brought the felicitations of the A. L. A. to the library on its far-reaching opportunities for service. James I. Wyer, Jr., the present director of the library, told somewhat of earlier directors, of whom little is known in some cases. Dr. Putnam spoke of the library co-operation now existing as being but the beginning of an ultimate integration in which every state library shall have definite place. Recognizing the right of the individual to determine the institutions under which he is to live, the library should have the material with which to make the choice and should see that the choice is sustained by the organized opinion of mankind.

Scheduled on the program to speak on "A sixth of a century," Melvil Dewey, director of the library from 1888 to 1905, chose to take a forward look rather than indulge in reminiscence. The coming sixth of a century is to be the greatest era in the library world, in his opinion, and not even librarians yet realize the enormous power of print. The world is to be made safe for democracy. That is agreed, but will it be safe for the minority as well as the majority? The printed book must be the power to save. Reading must be followed by reflection, motive by action, habit by character. Efficiency must be carried into the mental and spiritual life, for the universities of the world outlast the dynasties.

At the close of the exercises, the company was invited to adjourn to the rotunda of the building, where a delicious "conservation lunch" was served. This lunch, the gift of Regent Alexander, was prepared and served by members of the staff, to whom most hearty congratulations should be extended. The afternoon was spent in exploring the building. Altho it was Saturday and a half holiday, every division from the museum with its interesting Indian exhibits on the top floor to the departments in the basement, was open for inspection, and guides were furnished to conduct parties thru the building. An illustrated brochure containing a program of the proceedings of the day and a history of the library, with brief descriptions of its different departments, was given to all in attendance.

F. A. H.

SECRETARY'S REPORT

The past year has been the most eventful for the association in the forty years of its history, but for the headquarters office it has been the most uneventful of any year since the establishment of the office. The war service which the association is rendering to

the military and naval forces of the country is by all measures the most far-reaching and significant of any work which librarians of the country and the American Library Association as an organization have ever undertaken, a work which is sure to carry deep-rooted results far beyond the days of the present crisis. The center of this activity, however, has naturally been Washington rather than Chicago. The secretary of the association has been in Washington engaged in this enterprise nearly continuously since the financial campaign of last September, occupying the position of executive secretary of the Library War Service and of the War Service Committee, and has been in Chicago only about six weeks of the time between September 1, 1917, and June 1, 1918.

The routine work of the headquarters office has, however, in no way suffered by this absence, as matters there have gone forward smoothly and expeditiously under the capable direction of Eva M. Ford, the assistant secretary, and Gwendolyn Brigham. For their ever faithful and intelligent service the secretary wishes to express his sincere appreciation.

Chicago Headquarters—The association is indebted to the Chicago Public Library for another year—the ninth—of hospitality and generous provision of ample and commodious quarters in its main library building.

Librarians with the Colors—A considerable number of members of the A. L. A. are serving with the Colors, either in the army or the navy, and a card record of these and of other library workers who are in the service, whether members of the association or not, has with the assistance of librarians and library commissions and library schools, been compiled for permanent preservation. A service flag in honor of these men serving with the Colors is being made and will be displayed at the Saratoga Springs Conference. The flag contains two hundred and ninety-seven stars—one a gold star, a memorial to Dudley Coddington, assistant in the Seattle Public Library, who before the entrance of the United States into the war enlisted with our Canadian allies, and was killed in that glorious charge of the Canadians at Vimy Ridge in April, 1917. [Several additional names have been received since the Saratoga meeting.]

According to the custom adopted for service flags only *men* enlisted in the service are included. Many of our fine capable women are, however, rendering service equally valuable to the country—in the Red Cross, in the Y. M. C. A., in the Y. W. C. A., in the Councils of National Defense, and elsewhere,

and their patriotic work should in some adequate way be recognized and recorded. At least one of these women has rendered the supreme sacrifice—Winona C. Martin, librarian of Rockville Center, New York, who went overseas as a Y. M. C. A. canteen worker, and who fell victim to German frightfulness during an air raid on Paris, on March 11, 1918.

Membership—The growth of the association has been retarded by the war. When the 1917 Handbook was printed there were 3346 members of the Association. Since then there have been additions as follows: new personal members, 150 (the same number as last year); former personal members rejoining, 15 (as against 24); new institutional members, 11 (as against 37); former institutional members rejoining, 1 (as against 3); total, 177 (as against 214 for the corresponding period last year). Four personal members have become life members (as against 6 last year).

Publicity—Practically no publicity work has been conducted from headquarters, but the wide publicity accorded the Library War Service has given the general work of the Association more publicity than it has ever received in all the previous years of its existence. Hundreds, even thousands of newspaper articles relative to the financial campaign, the collection of books, the establishment of camp libraries and the extension of the work overseas have been collected by our clipping service, and in addition numerous magazine articles on various aspects of the work have appeared from time to time during the past six months.

The need of a co-operative publicity expert, working under the auspices of the A. L. A. and in the interest of the general library field is more and more apparent. Good money could be saved the local libraries, but what is even more to the point, effective advertising of library service would be gained.

Reference was made in our last year's report to the library publicity and advertising conference held under the auspices of the Advertising Association of Chicago on May 25, 1917. One of the speakers at that gathering was Mr. John B. Ratto, who is connected with the Redpath Lyceum Bureau. In the course of his duties last summer and fall Mr. Ratto visited a large number of the smaller towns in Minnesota, Iowa, Missouri and Ohio. At Mr. Ratto's proposal, and with the approval and collaboration of the respective state library commissions, arrangements were made by the A. L. A. office with the local librarians in the towns visited, to have Mr.

Ratto meet and confer on publicity methods with the librarian and the members of the library board. A number of enthusiastic letters were received expressive of the practical good accomplished by Mr. Ratto's visits.

Publishing Board—As in previous years a considerable part of the time of the staff has been devoted to the work of the Publishing Board. The sales of publications have kept well up to the mark of other years, but few new publishing ventures have been undertaken. Particulars regarding this part of the office activities are recorded in the report of the Publishing Board.

Library Annual—A year ago plans were being rapidly perfected for the publication of a statistical library yearbook, the material to be prepared by the A. L. A. and the publishing to be done by and at the expense of the U. S. Bureau of Education. Entrance into the war and the consequent devotion of practically all association activities to war work have necessitated an indefinite postponement of this work. In the meantime the R. R. Bowker Company is arranging, with the official approval of the A. L. A., to include more comprehensive statistics than heretofore in its "American Library Annual," and will probably continue to do this until the association and the Bureau of Education can bring out the long planned for year-book.

Japanese Art Panels—During the year 1916-17 the collection of water color panels donated to the American Library Association by the Imperial Japanese Government, at the close of the Panama-Pacific International Exposition visited some eighteen libraries of the north-central states. During the past year it has been touring New England and the north Atlantic states, the itinerary covering eleven libraries in the east, and ending in Youngstown, Ohio, the first of October.

Field Work—The "field work" for the past year has included talks by the Secretary on the general work of the Association or of the Library War Service, before the Kentucky Library Association, the University of Illinois Library School, the Chicago Library Club, the summer schools at Iowa City, Indianapolis and Columbus, the training class of the Chicago Public Library, the staffs of the Department of Agriculture Library and the University of Chicago Libraries, and at the dedication of the Camp Library at Camp Lee, Virginia.

P. L. Windsor, librarian of the University of Illinois, and Mrs. Jessie Palmer Weber, librarian of the Illinois State Historical Society, were appointed official representatives of the A. L. A. at the centennial celebration

of the Illinois State Historical Society, held in Springfield, April 16-17.

President Montgomery officially represented the Association at a conference of the League to Enforce Peace, in Philadelphia, May 16-18.

Necrology—Seventeen members of the Association have died since the last Conference. In this number is a charter member of the Association, who was also a life member, and three other life members. Three were library trustees, two were librarians of public libraries of importance, one of whom was an ex-president of the Association and a man most beloved by his fellow members. The librarian of a state library, three who had retired from active work, and several capable library workers cut off in the active days, also are among the lamented number. The list follows, and fuller biographical sketches will appear in the Handbook of the association for the current year:

W. J. E. Barnwell, assistant librarian, Public Library, Cincinnati, Ohio; Edmund Mills Barton, librarian emeritus, American Antiquarian Society, Worcester, Mass.; Daniel Beckwith, librarian of the Providence Athenæum, Providence, R. I.; Henry Belin, Jr., treasurer, Public Library, Scranton, Pa.; Eleanor Buynitzky, assistant, Weather Bureau Library, Washington, D. C.; Elizabeth H. Cass, librarian of the Portland Cement Association Library, Chicago; J. L. Gillis, librarian, California State Library, Sacramento, Calif.; George William Harris, librarian emeritus, Cornell University, Ithaca, N. Y.; Rowland G. Hazard, chairman Board of Directors, Narragansett Library Association, Peace Dale, R. I.; Sara G. Hyde, catalog reviser, Yale University Library, New Haven, Conn.; Dorothy Kent, formerly chief of the circulation department, Free Public Library, Trenton, N. J.; Henry E. Legler, librarian, Public Library, Chicago, Ill.; Minnie Lunn, assistant, order department, Public Library, Louisville, Ky.; L. R. Moyer, president Library Board, Public Library, Montevideo, Minn. (died March 13, 1917); Emma G. Outhouse, assistant, Public Library, Evansville, Ind.; Ernst Steiger, publisher, New York City; Mabel A. Thain, librarian, Public Library, Oak Park, Ill.

The following persons had formerly belonged to the association, altho not members at the time of their death: William R. Cutter, librarian emeritus, Public Library, Woburn, Mass.; Mrs. Frank Nelson Doubleday, (Neltje Blanchan), author, New York city; Henry M. Leipziger, formerly chairman of the library committee of the Aguilar Free Library,

New York City; Mrs. Emily A. Merrill, Cambridge, Mass.; Alexander J. Rudolph, formerly with the Newberry Library, Chicago, and inventor of the "Rudolph Indexer"; Francis Asbury Sampson, formerly librarian of the Missouri State Historical Society, Columbia, Mo.; Mrs. H. W. Smith, librarian of the Public Library, Truro, N. S.

GEORGE B. UTLEY, *Secretary*.

REPORTS OF COMMITTEES

BOOKBINDING COMMITTEE

The war work of the American Library Association has postponed some of the work of the bookbinding committee. Plans are being made to co-operate with the Library War Service in giving suggestions and instructions at the camp libraries in the repair and re-binding of their books, especially non-fiction.

The bookbinding exhibit, prepared for the Louisville Conference in June, 1917, has been in constant use during the year, the schedule being as follows:

1. Ohio State summer school, July 6-20.
2. Indiana summer school, July 23-Aug. 15.
3. Iowa State meeting, October 9-11.
4. Indiana State meeting, October 17-18.
5. Oklahoma State meeting, Oct. 23-25.
6. Providence Public library, Nov. 15-30.

At this time, the exhibit was in need of repairs and replacements. These were made by Miss Gertrude Stiles, of the Cleveland Public Library, and the exhibit was shown at the Western Reserve Library School during the month of March, and at the University of Wisconsin Library School during the month of April. It was shown at the Maine State meeting in May, and will be used at the Ohio summer school. Requests for the exhibit have also come from Carleton College, from the library schools at Atlanta, Albany, and Syracuse, and from the public libraries at Fremont, Ohio, and Ft. William, Canada. The usefulness of the exhibit shows the advisability of revising and continuing it.

Other methods of publicity, including an illustrated pamphlet on bookbinding, and a model instruction card for book lettering, are proposed by the committee, but time has not permitted their accomplishment.

Miss Mary E. Wheelock, of the St. Louis Public Library, is now preparing a report on the increased cost of binding, due to labor and materials, with recommendations based on the figures obtained. It is hoped to publish this in the library magazines during the summer.

Several inquiries have been received from libraries and publishers in regard to binding and re-binding. It would appear from the lack of interest in the subject of library binding that, for the present at least, the

greatest need in this field is more publicity for some of the elementary facts, so that school officials and especially public librarians may reduce the waste of money and books that at present is resulting from poor methods.

JOSEPH L. WHEELER, *Chairman*.

COMMITTEE ON FEDERAL AND STATE RELATIONS

During the year the committee has endeavored to be vigilant in regard to measures which concern library matters.

We have, consequently, conferred with the Department of State, and the Committees on Commerce of Congress, in reference to the status of libraries in regard to the Trading-with-the-Enemy Act.

We have also endeavored, tho as yet unsuccessfully, to secure amendments to the postal laws of the United States:

(1) To the end that libraries may receive foreign magazines containing advertisements of liquor, believing that the receipt of such magazines was not intended to be prohibited by the law which was passed to prevent the importation of intoxicating liquors into states having prohibitory laws.

(2) That the rate upon post cards be reduced to one cent. It is certainly absurd that a circular in an envelope can be sent for one cent and that a printed, large size card can be sent for the same amount, while a post card costs two cents.

(3) That the zone system of postage upon magazines be repealed, and the national rate be established in lieu thereof, in order that there be no encouragement of sectionalism in this time when the unity of the country is so important.

BERNARD C. STEINER, *Chairman*.

A. L. A. PUBLISHING BOARD

The war has so overshadowed all other affairs for libraries and the American Library Association during the past year that the normal activities of the A. L. A. Publishing Board have been considerably reduced.

The Board has suffered an irreparable loss in the passing of its chairman, Mr. Henry E. Legler, who had been a member of the Board since 1905 and its chairman from June, 1907, to his death in September, 1917. Keenly interested in everything pertaining to library work, Mr. Legler during the entire twelve years of membership in the Board was particularly active and concerned in all that related to its work. He had brought from his library commission experience that rare training and judgment which made his opinion and advice exceedingly valuable in matters pertaining to the publication and dis-

tribution of bibliographical aids, and his experience in the administration of a large public library system enabled him to view problems from yet another angle and give them the benefit of the changed point of view. Mr. Legler will be grievously missed by his colleagues in library work and by none more than by his fellow-members of the Publishing Board.

New Publications—The largest and in many respects the most important publication of the year was the new edition of Miss Kroeger's "Guide to reference books" which has been greatly enlarged and thoroly revised by Isadore G. Mudge, reference librarian of Columbia University. Seriously delayed in its publication and anxiously awaited by a large library circle, the "Guide" has been enthusiastically received and widely distributed.

The "Apprentice course for small libraries," prepared by the faculty of the University of Wisconsin Library School, is having a distinct field of usefulness in a number of ways.

The new publications of the year are as follows:

Guide to reference books, by Alice Bertha Kroeger, third edition, revised thruout and much enlarged, by Isadore Gilbert Mudge. 4000 copies.

Special indexes in American libraries, a list of subjects separately cataloged or so arranged as to be readily accessible, compiled by the A. L. A. Publishing Board. 1000 copies.

Apprentice course for small libraries. Outlines of lessons, with suggestions for practice work, study and required reading, by the faculty of the Library School of the University of Wisconsin (Mary E. Hazeltine, Mary F. Carpenter, Marion Humble, Helen Turvill.) 3000 copies.

Periodicals for the small library, by Frank K. Walter. Second edition, rewritten and enlarged. 2000 copies.

A. L. A. Manual of library economy: Chap. 25, Pamphlets and minor library material—clippings, broadsides, prints, pictures, music, bookplates, maps, 3000 copies.

Some popular books on the great war, by Grace Miller. (Printed for the Western Massachusetts Library Club and reprinted by permission.)

Reprints—The following publications have been reprinted:

Analytical cards for Warner's Library of the world's best literature. 250 sets.

A. L. A. Manual of library economy: Chap. 5, Proprietary and subscription libraries. 3000 copies.

LIBRARY JOURNAL—Savannah (Ga.) Public Library. Plans. 100 copies.

North Central Association of Colleges and Secondary Schools—Standard library organization for accredited high schools of different sizes, by C. C. Certain. 1500 copies.

The Booklist—The total subscriptions to *The Booklist* now are as follows: Bulk to commissions and libraries, 2622; retail subscriptions, 2188; sent to library members and affiliated state associations as part of their membership perquisites, 538; free list, 167; total, 5515, as against a total of 5401 reported last year. (Free list includes 37 sent to camp libraries.)

Hereto are appended brief reports from Miss Massee, editor of *The Booklist*, and Mr. Merrill, editor of periodical cards.

ARTHUR E. BOSTWICK, *Acting Chairman.*

THE BOOKLIST

The Booklist in its new form with its name simplified has had a busy year with "nothing to report," altho when one considers that there has been an almost complete change of staff, that the printers had a strike, that the mails and express were indefinitely behind so that books were sometimes over a month on the way and then arrived all at once, that the *Booklist* delivery was correspondingly slow, and that several of our best readers have been called away by the war, one wonders there is any *Booklist* left to report.

That there is this *Booklist*, that its usefulness has increased is due to the wisdom of the plan which made it a co-operative product, maintained by the concerted action of many libraries with lines of book-review communication centralized and redistributed.

The editor went to Boston and New York as usual to interview publishers. The publishers' use of the *Booklist* is growing. Several now send copies of the notes to their traveling men for advertising. The practice of the book salesmen of showing their advance lines to the editor in Chicago makes it possible to plan in a measure for what is coming.

The editor attended the Iowa and the Illinois library meetings in October, the Atlantic City meeting in February, and was the speaker at the tenth anniversary of the dedication of the Kewanee, Illinois, library building. Otherwise the editor has been devoted to the office, where she is glad to report the growing custom of calls from visiting librarians. Many a good book-note and many a good suggestion have come to the *Booklist* by way of these chance visits.

The office has done some work for the Council of National Defense, reporting on books which are considered pro-German. This work consisted in summarizing special reports received from libraries, which responded promptly to the requests for information.

The *Booklist* staff wishes to thank the Publishing Board for its continued and generous support and the libraries of the country for the spirit and the work which make the list.

MAY MASSEE.

A. L. A. PERIODICAL CARDS

The present report upon the preparation and issue of analytical cards for current serials covers the year ended April 30, 1918.

Shipments 332 and 333, including 121 and 117 titles respectively, have been sent to subscribers; shipment 334, containing 153 titles, has been shipped since the above date.

The number of titles cataloged in 1917-18 is thus 238, and the number of cards printed is 20,255, of which 16,393 were distributed to subscribers. The corresponding figures last year were three shipments, containing 525 titles and 29,851 cards distributed.

Attention is called again to the war as responsible for this continued decrease in the amount of indexing done. Few foreign serials on our list are received from abroad; some serials may be suspended and others held in enemy countries.

Our printers have served notice that the price of cards and printing must be raised 25 per cent on account of increased cost of labor and materials, and cards must be billed to subscribers at a corresponding increase in price, unless our efforts are successful to secure lower terms elsewhere. It is hoped that none will feel obliged to withdraw his support on this account.

WILLIAM STETSON MERRILL.

REPORT OF THE TREASURER, JANUARY 1 TO MAY 31, 1918

Receipts

Balance, Union Trust Co., Chicago, Jan. 1, 1918	\$ 4,780.17

¹ In addition, the sum of \$66.19 was retained at points of contribution for local adjustment of expense.

² Of this amount, the sum of \$41,060.09 has been taken into the accounts of F. P. Hill, chairman, and enumerated in his report of contributions by states as shown in his "Story of the A. L. A. campaign for \$1,000,000."

³ Exclusive of Carnegie Corporation contribution of \$112,300 deposited directly with American Security & Trust Co.

C. B. RODEN, *Treasurer.*

For the fiscal year ending January 15, 1918, the only change in investments occurred thru the calling on May 1, 1917, of a \$1000 United States Steel Corporation Sinking Fund 5% Gold Bond due April 1, 1963, at 110, and the reinvestment of the proceeds in another \$1000 bond of the same issue at 105½ plus commission. All interest on investments has been paid. As set forth in our report of last year, the \$15,000 par value of Missouri Pacific Railway Company Collateral Trust 5% Bonds due January 1, 1917, which had defaulted in the payment of the semiannual interest due September 1, 1915, were deposited with the Columbia Trust Company, of New York, as depository of a committee formed to protect the interests of the holders of that issue of bonds, and this committee thereafter advanced the amount of the September 1, 1915, March 1, 1916, and September 1, 1916 coupons attached to the deposited bonds. The reorganization of the Missouri Pacific Railway Company was completed during last summer, and on July 27, 1917, we received in exchange for the \$15,000 of Collateral Trust 5s, \$15,000 par value of Missouri Pacific Railroad Company First Refunding Mortgage 5% Series B Bonds, due January 1, 1923, interest payable February and August, and the following as an adjustment of the interest:

\$16.67 per \$1000 Sept 1, 1916, to Jan. 1, 1917,	
at 5%	\$250.05
\$20.83 per \$1000 Jan. 1, 1917, to June 1, 1917,	
at 5%	312.45
.50 per \$1000 interest on interest.....	7.50
	<hr/>
	\$570.00

The usual audit of the investments and accounts of the trust was, at the request of the chairman of the Finance Committee of the American Library Association, made by Mr. Harrison W. Craver, director of the Engineering Societies Library, of this city.

M. TAYLOR PYNE,
EDWARD W. SHELDON,
WM. W. APPLETON,

Trustees, Carnegie and Endowment Funds.

TRUSTEES SECTION

The trustees section meeting, scheduled for Tuesday afternoon, was not held because of the absence of Chairman Porter and the presence of so few trustees at the designated hour and place.

EXECUTIVE BOARD

A meeting of the Executive Board of the American Library Association was held at Saratoga Springs, July 1. Those present were President Montgomery, Vice-president Eastman, Electra C. Doren, Josephine A. Rathbone, Frank P. Hill, M. S. Dudgeon, S. H. Ranck and A. L. Bailey. After arranging details for the annual election of officers it was voted, that the Executive Board recommend to the association the amendment of Section 12 of the Constitution, so that the last sentence be changed to read as follows:

The finance committee shall audit the accounts of the secretary, treasurer, trustees of the Endowment Fund, treasurer of the Publishing Board, and all other accounts and report to the Association at the annual meeting.

It was also voted to exempt from payment of membership dues for the duration of the war all those who are in the military or naval service of the country.

At the request of the War Service Committee, it was voted that the War Service Committee of the American Library Association thru its sub-committee on Library War Finance be authorized to conduct a second financial campaign, and to solicit funds in the name of the American Library Association for the purpose of providing books and personal library service to soldiers and sailors in this country and abroad and for carrying on such other activities as are manifestly related to library war service. The funds so collected shall be styled "The American Library Association Second War Service Fund."

(Note: The War Service Committee at its meeting held on June 8, 1918, in framing the proposed vote which it would submit for action by the Executive Board, made the proposed vote to read "That the War Service Committee of the American Library Association thru its sub-committee on Library War Finance be authorized to prepare a plan for

a second financial campaign, etc., etc." The word "conduct" in place of "prepare a plan for" was substituted in the vote as passed by the Executive Board by that member of the War Service Committee who framed the original draft, namely Dr. Hill, chairman of the Committee on Library War Finance.)

Assuming favorable action by the Executive Board on the foregoing resolution, the War Service Committee at its meeting on June 8, 1918, passed supplementary votes which it likewise submitted for the approval of the Executive Board; that \$75,000 be transferred from the general fund to a fund to be called "The Campaign Fund," as an initial appropriation for the purpose of meeting expenses in the second financial campaign, and that this "Campaign Fund" should be kept separate from the two War Service Funds and expended under the authorization of the Library War Finance Committee.

The Executive Board by unanimous vote ratified the above votes of the War Service Committee. A depository to act as treasurer for the "American Library Association Second War Service Fund" will be named later.

The board also ratified the action of the War Service Committee in transferring to George B. Utley, executive secretary, a further sum of \$2000, to be used to meet general expenses of the committee not justly chargeable to the fund voted to the credit of the War Service Fund, Herbert Putnam, General Director; bills covering such expenses to be approved by the chairman of the committee, and checks to be drawn and signed by George B. Utley, executive secretary.

It was voted that the report of audit of the Finance Committee of the American Library Association of February 13, 1918, previously placed in the hands of the Executive Board by correspondence be officially adopted.

It was voted that the Executive Board employ counsel whenever necessary to assist it in all legal matters, such counsel to be employed on the nomination of the president of the Association.

Mr. Dudgeon, having offered to present a plan for the systematic promotion of the reading of the best of the non-fiction books, it was voted that he be requested to present such a report within the next three months.

It was voted that the question of meeting the expenses incurred by the board in connection with meetings other than the annual meetings be referred to the finance committee.

A second meeting was held July 5, with President Bishop, A. L. Bailey, Frank P. Hill, Electra C. Doren, Linda A. Eastman and Josephine A. Rathbone present. It was unanimously voted that the president obtain from counsel an opinion as to the relations between the American Library Association, its Executive Board, its War Service Committee and the General Director of its Library War Service under certain resolutions passed by the American Library Association, the Executive Board and the War Service Committee, and to ascertain where the custody of the fund raised for library war service should be vested.

Josephine A. Rathbone was appointed a member of the A. L. A. Publishing Board to fill the unexpired term of the late Henry E. Legler (term expires 1920), and the president was authorized to fill the two existing vacancies on the A. L. A. Publishing Board caused by the expiration of terms of Arthur E. Bostwick and M. S. Dudgeon.

The committee on finance for the coming year is to be constituted as follows: A. L. Bailey, chairman, C. W. Andrews, H. W. Craver.

The secretary was authorized to distribute to such other accounts as are most in need the \$130 remaining in the "Contingencies" account of the budget for the current fiscal year.

At the suggestion and request of A. L. Spencer, of South Canisteo, New York, the board renewed its endorsement of the plan for a special flat rate of local character over the rural delivery lines, the level of such rate to be fixed by the postal authorities as low as is consistent with the self-paying character of the postal service.

The question of means of obtaining the requisite funds for preparing for publication certain war time reading lists in co-operation with the U. S. Bureau of Education was referred to the War Service Committee with the approval of the Executive Board of the lists proposed.

Invitations for the next conference were received from Asbury Park, Buffalo, Chicago, New York, Philadelphia, St. Louis and San Francisco. Action on place of meeting was deferred.

The secretary was requested to prepare a statement of work in prospect for the coming year at the Headquarters office or elsewhere which should have his personal attention, and to present this statement to the Executive Board at its next meeting.

GEORGE B. UTLEY, *Secretary.*

PROFESSIONAL TRAINING SECTION

The ninth annual meeting was held on the afternoon of July 5, with Ernest J. Reece, vice-chairman, presiding, and Mrs. Harriet P. Sawyer, secretary *pro tem*.

The program opened with a paper by Frank K. Walter, on "The war and library training," which was based on replies to a questionnaire sent to library schools and the libraries known to have training classes. From the replies received the conclusions reached were these: (1) The libraries of the country need trained help as never before and the need is likely to increase; (2) existing agencies whether school or training class seem essentially sound in theory and to need adjustment rather than reconstruction; (3) these adjustments can be fully effective only when the extension course, the training class, the library schools, the librarians, and the appointing officers of libraries work together in essential harmony. (4) It will be useless to plan training without having some one to train and there will not be enough persons to train unless enough salary can be offered to attract competent men and women from other lines which, to an outside observer, seem to give equal chances of service with more than an equal chance to live comfortably.

The discussion of the paper was opened by Mary Emogene Hazeltine, who said that the Wisconsin State Library Commission wants the libraries of the state to have trained workers, but finds it difficult to get trustees to pay adequate salaries. Raises should be by the twenty-five dollar method rather than the five. The university students can obtain larger salaries in other fields and the course of library training covers more hours than the usual university courses. Miss Eastman reported modification in training class plans for last year in Cleveland, viz: a clerical course for a clerical grade and delaying the apprentice course until January first in order to get enough students to form a class. Miss Rathbone spoke of the unprecedented demand for trained workers. More than half the students graduating this year had been salaried assistants in libraries before coming to Pratt. An investigation of the actual expenses of the students showed that they ranged between \$250 and \$550 for the school year, an investment quite worth while. In regard to salaries, Miss Doren said that the trustees must be reached and back of them the taxpayers. It is very difficult to meet the present war competition when wages can double their salaries at Washington. Standards of work cannot be reduced. It is an economy to conduct a

training class; fewer persons do more work, when trained, than a larger number of untrained assistants. Miss Curtis suggested an efficiency survey of salaries and living expenses, giving educational qualifications, and comparing salaries with those received by graduates of business colleges, teachers' colleges, etc. Miss Hooper told of the elaborate report which she presented to her board, giving the educational qualifications of the staff assistants and a comparison of salaries with school salaries. The trustees were impressed and cut the general expenses and book fund in order to meet the increased salary budget as recommended. A similar plan was described by Miss Donnelly, who had used it with success. Miss Zachert referred to the general feeling that "it was not ladylike to mention salaries," and added, "the librarian must be convinced before convincing others, and a knowledge of salaries the country over is necessary to convince trustees." At the end of the discussion, Mr. Walter made the following motion: "That a committee be appointed to make a survey of the salary conditions in the libraries of the United States, and their relation to the problem of effective library training." The motion was passed unanimously.

The next paper reported "Some experiments in secondary training," being a record of psychological tests conducted in training classes of the Public Libraries of Brooklyn, Chicago, Detroit, Portland, (Oregon), and Washington, by Dr. Elsie Murray, professor of psychology, Wilson College, Chambersburg, Pa. This was a pioneer attempt in the application of psychological methods to the rating and differentiation of abilities in a class of prospective library assistants. A series of twelve tests, planned by Dr. Murray, was applied in the fall of 1917 and spring of 1918. The fifty student apprentices tested were also rated by their class instructors on a scale of 5 to 1 points in the following: general mental ability; accuracy; practical ability; social ability; executive ability. The following rough method of evaluating results was then provisionally adopted: the corrected tests sent in by the class directors were scored, not on the customary percentage basis, but by the quartile method, i. e.,—an individual whose performance in any test ranked with that of the best quarter of the group of fifty was assigned four points; with that of the next best quarter, three points, etc. The various scores thus obtained from the twelve tests (20 in all) were then tentatively grouped in four sets according as they seemed best

adapted to gauge either: (a) general ability; (b) accuracy, or clerical ability; (c) practical ability; (d) social ability. From the scores thus grouped a single composite rating in each of the four abilities mentioned was then obtained for each individual. The comparison of the composite test ratings in each ability thus obtained with the instructors' final estimates of the corresponding qualities discloses sufficient agreement to warrant both a further evaluation of the results in connection with the type of position to which each member of the classes has been recommended, and a repetition of the experiment (with modifications) with other training classes. The final corroboration of the value of the results must come, of course, empirically, i. e., from the actual records of success or failure made by each individual tested along the special lines of work entered. Miss Murray's paper was read by Adah F. Whitcomb, director of the Chicago Public Library training class.

Opinions differed as to the accuracy of the grading, but there was at least much interest manifested in the conduct of the tests.

The last paper was a description of a "Neighborhood apprentice class," written by Emilie Mueser, librarian of the Lucas County (O.) Library, and was read by Lilly M. E. Borresen. This was an experimental course of three months training given in three small towns situated within easy access of each other, assisted by a fourth and larger library. Approximately five lectures were given each week, and ten hours of practice work required in return. Of the libraries, one was a university library, one a county library in the first stages of organization, and the third a small town library. The experiment at least proved the possibility of co-operation among libraries satisfactorily situated, and it was felt that it was worth while for the libraries doing the work. As for the students, its value is less certain. Each of the students received an opportunity to enter library service soon after finishing the course, but the salary question arose at once, with the result that one went into government service, one went back to teaching, one entered the filing department of a business house, leaving only one, who had some previous library experience, in library work.

The following officers were elected: Chairman, Mrs. Harriet P. Sawyer; vice-chairman, Mary Emogene Hazeltine; secretary, Clara Herbert.

HARRIET P. SAWYER,
Secretary pro tem.

ROUND TABLE CONFERENCE OF TRAINING CLASS TEACHERS

The conference of training class teachers, arranged for by the committee on library training, was held in the ball room of the Grand Union Hotel on the evening of July 3. Wonderful to relate, the conference began at the time scheduled—8.30 p. m. About seventy-five persons were present. The following papers were read:

1. What should be the standard of admission to a training class? Marie Newberry, New York Public Library.
2. How long should the course be? How much time per week should be given to practice and how much to study? Should the practice be paid? Lucy Morgan, Detroit Public Library.
3. What subjects should be taught in the course? Adah F. Whitcomb, Chicago Public Library.
4. In what way and how soon after the beginning of the course should undesirables be eliminated? Clara W. Herbert, District of Columbia Public Library, Washington, D. C.
5. When the course is completed and students are ready for work, what salary should be offered? Ernestine Rose, Carnegie Library, Pittsburgh.

Each paper was followed by a general discussion in which an unusually large number of persons participated. So successful was the discussion that it was unanimously voted to arrange for a similar conference at the next A. L. A. meeting. Ernestine Rose was elected chairman, and Adah F. Whitcomb, secretary.

AZARIAH S. ROOT, *Chairman.*

CATALOG SECTION

The catalog section met Tuesday evening in the club room of the Grand Union Hotel with the chairman, Adelaide F. Evans of the Detroit Public Library presiding. The secretary, Mary E. Baker of the University of Missouri Library was unable to be present, and Leta E. Adams of Gaylord Brothers acted in her stead.

A paper on "War department indexes" by Lieut. Willis F. Sewell of the Adjutant General's Office, took the form of a most interesting personal letter to Miss Evans and was read by Mary E. Hyde of the Library School of the New York Public Library. The work of the Adjutant General's office in compiling a card for every man in the American Expeditionary Forces and of notifying relatives when casualties occur, was given in detail. Other indexes described were: the file of enlistment papers and of the declarations of privates; the

applications and subsequent correspondence in the Bureau of War Risk Insurance (life insurance section); an occupational card file in the office of the Provost Marshal; a personnel file in division headquarters of the army in this country and in France, and finally a file of Income Tax returns in the office of the Collector of Internal Revenue.

Dr. C. W. Andrews of the John Crerar Library presented a report from the Decimal Classification advisory committee. He said such slight progress had been made during the year that it might almost be called a "report of standing still." The committee felt that unless there was a decided change for the better during the coming year, they should either go on independently or else ask to be discharged.

In the symposium on "Cataloging economies" which followed, the speakers were decidedly conspicuous by their absence. Jennie M. Flexner of the Louisville Free Library read a very entertaining paper written by May Wood Wigginton of the same library on the subject "Economical cataloging as it has been developed to meet the needs of war service." This rather awesome title camouflaged a humorous narrative of the experiences of members of the Public Library staff in organizing a library at Camp Zachary Taylor, five miles from Louisville, and getting 11,500 volumes ready for circulation in eighteen days. Books were classified to three figures, Cutter numbers were omitted, a charging system was installed and the simplest kind of an author and title catalog was made. Since these simple records met all the needs of the men at Camp Zachary Taylor, Miss Wigginton asks a very pertinent question: Why not learn the lesson of the camp library and lower the expense of public library cataloging by eliminating red tape and many of the really unnecessary bibliographical details?

The next paper "Some Rochester economies" written by Grace B. McCartney of the Rochester Public Library was read by Adeline B. Zachert of the same library. In describing the short-cuts which have worked well in Rochester, Miss McCartney emphasized the fact that their system as yet had no central library, that it consisted of five general branches, a business reference branch and sixty-seven stations.

All the work of the catalog and order departments including the supervision of book repairing is done by a staff of five. Time and labor savers are therefore eagerly sought and joyfully welcomed when found. Economies discussed in detail were enumerated as follows: the number of L. C. cards needed are

indicated on carbon copies of book order lists; Cutter numbers are not used; a typewriter platen made especially for the Rochester Public Library enables three cards to be typed at a time; a temporary author card permits the removal from the official catalog of the main entry card, which is used as a guide when duplicate cards are to be typed for branches.

"The care of gift pamphlets in the University of Illinois Library" written by Adah Patton of that library and read by Margaret Mann of the Pittsburgh Carnegie Library, told the story of how 5000 pamphlets of more or less temporary use are economically cataloged yearly so that the order department avoids purchase of duplicates and all pamphlets on any subject are available to readers. Brief author entries are typed by student clerks on manila cards as the pamphlets come in. Carbon copies are filed in the gift and exchange department to prevent duplications and the pamphlet is stamped with the mark of library ownership. Three figure Dewey class numbers preceded by the capital letter P are written in pencil on the pamphlet itself and typed on the author cards. No book numbers are used except in the case of individual biography, when the letter of the name of the biographee is added. When the cards are filed in the public catalog, care is taken to see that the pamphlet is not a duplicate and already in the library. If the pamphlet is a second copy that fact is noted on the card already filed and the pamphlet is returned to the classifier who marks it copy 2. After the cards are filed the pamphlets are shelved in boxes, labelled with the class number preceded by the capital letter P. They are placed before the completely cataloged books on the same subject. Each collection of pamphlets is represented in the shelf-list by a card bearing the class number and note "Box of pamphlets." The cost per piece of cataloging pamphlets in this way is about one-tenth that of fully cataloged books. When the time comes to arrange pamphlets having the same class number, Miss Patton thought that chronological order would best meet the needs of the users of the library. Exceptions to the above treatment are: foreign dissertations, which are minutely classified and cataloged, and college publications of an administrative character, which are shelved together and not cataloged at all.

"Cost reduction in cataloging," the last paper on the program was written by T. Franklin Currier of Harvard College Library and was read by Katharine Dame of New York State Library. Economy in cata-

logging, Mr. Currier wrote, will be brought about not by teaching parrot-like specific devices but by applying the principles of efficient management which are correct ideals of work, care in selecting and training assistants, correct supervision, and flexibility of organization.

Considerable discussion of short-cuts in general and especially the elimination of Cutter numbers followed. Some of those taking part were G. W. Lee of the Stone and Webster Library, J. C. M. Hanson of the University of Chicago Library, Charles Martel of the Library of Congress, Dr. E. C. Richardson of Princeton University Library, Rena Reece of the Denver Public Library, Jennie M. Flexner of the Louisville Free Library and Leta E. Adams of Gaylord Bros.

Mr. Sloop of 713 Madison Avenue, New York City announced the formation of a French information bureau and clearing house and invited the patronage of the librarians present.

Herbert C. Collar of the Grosvenor Library, Buffalo, spoke very fully on the making of "Index cards for maps found in certain periodicals."

The committee on nominations, Sophie Hiss of the Cleveland Public Library, chairman, presented the following names, and they were unanimously elected as officers of the section for the ensuing year: Chairman, Jean Hawkins of the New York State Library School; secretary, Adah Patton of the University of Illinois Library.

LETA E. ADAMS, *Acting Secretary.*

COLLEGE AND REFERENCE SECTION

The college and reference section met Friday, July 5 at 8:30 p. m., W. W. Bishop presiding.

A paper "Thoughts on the present discontent with newspaper stock" by H. M. Lydenberg had been previously printed and distributed but was read and discussed. Samples of papers treated by various methods were submitted. Mr. Lydenberg stated that the Japanese tissue and the paste used in some of these experiments had been tested by the Bureau of Standards and approved. Various letters discussing the chemistry of the stock, the preservation of duplicate files, dependence on digests, etc., were presented. An interesting discussion which followed arrived at no more definite conclusion than that the chemistry of the problem has not yet been satisfactorily solved.

Dr. C. W. Andrews presented facts regarding the union list of periodicals which he is editing for libraries of the middle western

states. This list will show joint holdings of university and state libraries and in addition sets held by public libraries which are not in the university and state libraries. It is expected that the list will include about 30,000 entries and that the volume as printed by The Wilson Co. from linotype slugs will consist of about 600 pages.

A discussion of "Instruction in bibliography and the book arts in colleges and universities" was introduced by A. S. Root. He advocated that elementary instruction in high schools in the reference use of libraries should be followed in colleges by courses in the history of printing and in bibliographical methods given by the librarian, and in the bibliography of special subjects given by specialists on the faculty.

The chairman appointed Mr. Quaife and Mr. Keogh as a nominating committee and their report naming Augustus H. Shearer as a member of the committee controlling the affairs of the section, was adopted.

The lateness of the hour prevented the formal discussion of the last topic on the program: "University and college catalogs in university libraries" but after adjournment several members of the section under the leadership of Mr. Hanson told how their institutions are handling and filing these publications.

CHARLES J. BARR.

CHILDREN'S LIBRARIANS SECTION

The children's librarians section met in the ball room of the Grand Union Hotel Tuesday evening, July 2, with Sarah C. N. Bogle of the Carnegie Library School, Pittsburgh, in the chair. But one session of the section was held, therefore a business meeting preceded the program.

A report of the permanent committee of five on the production of children's books, written by Miss Burnite, chairman, was read by Miss Hazeltine and approved as read.

The committee had studied the situation and obtained some definite information after getting reports from about thirty publishers who "replied in a spirit of interest and a desire for co-operation." "It is not surprising that none of them felt there was anything that could be done to improve the physical qualities of the books just now."

Nearly all of the publishers in answer to the question, "In what ways may this committee be of service to your firm?" asked that they be apprised of the plan of work and decisions of the committee. One firm would welcome an opportunity to put suggested ideas and manuscript of books before the

committee or a specially suggested committee of children's librarians, and would contribute something to the expense of such co-operation.

The committee recommended that the next step be the securing from publishers of some definite statement of books which they expect to reprint and especially those which they plan to reset, to determine whether any changes seems wise in illustration, make-up or text.

The committee also recommended the advisability of finding out from the publishers those books which are out of stock and which they are not planning to republish, and whether publishers would be interested in a statement from the large libraries as to the importance of continuing particular titles.

The committee considered that much of the success of any attempt to influence the production of better books for children depended on a cordial relationship between the committee and the publisher, especially on the confidence of the publisher in the practical judgment of the committee.

A list of examples of books of unsatisfactory typography and books which do not wear well was prepared by this committee.

None of the speakers scheduled on the regular program were able to be present. Miss Burnite's paper on "Library work for children in war time" was read by Miss Zachert. The constructive suggestions, keen analysis and breadth of view of the paper cannot be given in a few quotations.

Following this paper informal reports from Miss Moore of New York, Miss Engle of Philadelphia and Miss Hazeltine of St. Louis gave summaries of the war service rendered by children in the various cities. The secretary read a report from Miss Jordan of Boston.

An outline prepared by the Library Committee of the Junior Red Cross on possible means of co-operation was sent by C. C. Certain, chairman of the committee, and read by the secretary. The suggestions given were meant to be practical ones for small and large communities and were made up from those which have been actually tried in a number of libraries.

The present significance and importance of work for children in libraries was emphasized in various meetings and altho there were fewer children's librarians present than usual the stimulation to renewed efforts was not lacking.

The nominating committee consisting of Miss Hazeltine of St. Louis, Miss Herbert of Washington, and Miss Sutherland of Kansas City, reported as follows: Chairman, Caro-

line Burnite, Cleveland Public Library; vice-chairman, Adeline Zachert, Rochester Public Library; secretary, Ethel Wright, Toledo Public Library.

The chair appointed Louise Hooper of Brookline and Adam Strohm of Detroit on the advisory board.

ELISABETH KNAPP, *Secretary.*

SCHOOL LIBRARIES SECTION

The school section of the A. L. A. this year held two sessions, one a round table and the other the regular meeting, at both of which the chairman, F. K. Walter, presided. No special program was followed at the round table; topics for discussion were suggested by questions asked at the meeting. Dr. Sherman Williams explained the recently adopted regulation of the Board of Regents of New York state concerning certification of school librarians.

The library problems of the Junior High School were discussed by Adeline B. Zachert, Willis H. Kerr, and John D. Wolcott. Miss Zachert advocated the creation of a division of the school section to be known as the Junior High School Division, the function of which is to be: 1. The preparation of a standard list of general literature to serve as a guide to teachers in Junior High Schools. 2. The encouraging of a friendly interest of librarians toward their local boards of education in urging the appointment of qualified librarians in Junior High Schools. 3. The preparation of a simple outline of instruction in the use of books for Junior High School pupils.

The problem of magazines in the high school library received attention and some concrete ways of tempting pupils to read suitable books were thoroly discussed.

At the regular section meetings the general topic was, "The school library in the teaching of patriotism." Various aspects of this subject were given by Rachel Baldwin of Allegheny High School branch, Pittsburgh, Helen S. Babcock of the Austin High School branch, Chicago, and Anne T. Eaton, Lincoln School of Teachers College, New York.

Miss Baldwin in discussing the topic brought out the fact that "the high school is a fertile field for the cultivation of patriotism because of the various agencies which readily link themselves with school activities such as Red Cross, Boy Scout, Liberty Bond campaigns, Food Conservation, etc., all of which serve to stimulate loyalty and enthusiasm and offer opportunities where pupils may work for definite ends. The school library comes in everywhere; there is no activity which it cannot touch. Nothing is easier at this time

than to arouse war patriotism by means of bulletins, pictures, current topics, debates, war books, soldiers' book campaigns, etc. The librarians' and teachers' greatest opportunity, however, is to fuse this enthusiasm for one great cause into an active, constructive patriotism that will give generous and loyal service to our country in peace as well as in war."

Miss Babcock in her paper supplemented the statements of Miss Baldwin by telling of the work in the Austin High School. Here, teachers are informed thru mimeographed bulletins of the material of general interest for the teaching of patriotism contained in the library. If more specialized, this information is conveyed by personal note or interview. A marked copy tucked in the teacher's box often brings good results. In order to locate quickly articles appearing in the magazines, simple penciled cards referring to the articles are filed in an index and kept on one of the tables and thus anticipate the coming of the new Readers Guide. During the various campaigns, the library has displayed all posters and notices in its room and kept on hand literature bearing on the subject. It has been the policy of the school to use the public speaking classes to make the appeals. This was first tried with the A. L. A. book drive. The library was headquarters but the school organizations were utilized, thereby gaining wider publicity and interest. These "two minute men" used the library as the source of their material for speeches, circulars, advertisements, pamphlets, editorial, addresses and the like.

The various government bulletins were used as a basis for class work, also clippings, pictures and the Readers Guide. A recipe file was started in the card catalog. Exhibits of food uses, such as a model meal for a child of five and the daily rations of the fighting nations, were shown, together with all available material in printed form.

Miss Eaton in her paper, deplored the fact that tho the word patriotism has been written and spoken more often than ever before, we have not altogether succeeded in teaching true patriotism so long as the stirring up of hatred and violence is defended as a legitimate and necessary means of awakening the people. Miss Eaton said in part: "If we have ever felt for a moment that the work of a school library lacks contact with realities, surely we need feel so no longer, for the school library if it well fills its appointed task will be helping to eliminate passion and hate as well as to do away with that self-satisfied indifference which refuses to recognize the

meaning of all that the nations of the world are undergoing. One way in which the school libraries can do this is by familiarizing children with the highest ideals of the past as a safeguard for the present."

Annie C. Moore, Mary Ahern, Sherman Williams, Adeline Zachert and Willis S. Kerr participated in the discussion which followed the reading of the three papers.

Elisabeth Knapp, chief of the children's department of the Public Library of Detroit, read a report of the library committee of the Junior Red Cross. This report defined the purpose of the committee, suggested methods of co-ordinating library service with Red Cross activities, and outlined the plan of co-operating with other organizations such as the National Education Association. This report was endorsed by the section.

The following officers were elected to serve the school library section next year: President, Helen S. Babcock; secretary, Anne T. Eaton.

ADELINE B. ZACHERT, *Secretary.*

AGRICULTURAL LIBRARIES SECTION

The agricultural libraries section, League of Library Commissions and National Association of State Libraries, held a joint session, July 3. By invitation of Mr. Deveneau, Mr. Henry N. Sanborn presided. The subject was "Libraries and the food problem—a symposium." Clara F. Baldwin, secretary of the Minnesota Library Commission, spoke for the Library Commissions, which have undertaken to help libraries to show (1) why conservation is needed, and (2) how to conserve.

In 13 states the executive officer of the Library Extension Commission, or some member of the staff, has been appointed library publicity director. In Illinois and Massachusetts the commission secretary is a member of the library publicity committee. The methods employed have included the sending of circular letters, stress on the subject of food conservation in commission bulletins, and special emphasis on the work at state and district meetings and library institutes. In Illinois 6 library conferences were held in different parts of the state and 59 libraries were visited for special conferences. The work of local libraries has been supplemented thru special loans of charts and exhibits of posters, photographs and motion picture slides.

Mr. Godard, librarian of the Connecticut State Library, gave an account of what that library had accomplished, which was believed to be typical of the work done in the

other states. When this country entered the war it was fully realized that only by utilizing every agency for reaching the people could maximum results be accomplished. To this end, as a preliminary measure, a survey of all the existing agencies in the state of Connecticut was made and the mailing lists maintained at the State Library were carefully revised, especially the list of libraries, for it was realized that the best printed material in the world would fail in accomplishing its mission if it were not properly addressed. The State Library distributed the material sent it for this purpose, held exhibits designed to educate the people in the necessity for increased production and conservation of food, prepared a poster for use with children, and, most important of all, took an agricultural census of the farms of the state, showing in the minutest detail what each farm had produced, area planted to various crops, etc. The results of this census were coded on cards which have been of great use to county agents and others interested in speeding up production. The library has also made a list of boys from 16 to 20 years of age which has been very useful, and a list of leaders of thought in the state to prevent duplication in sending out material. Such men appear on all important mailing lists and often received a number of copies of the same thing. This list has been effective in preventing this waste.

Claribel R. Barnett, librarian of the U. S. Department of Agriculture spoke for agricultural libraries. She said in part:

The agricultural organization existing at the outbreak of the war and stretching from the individual farm, thru the county agent, and the agricultural college to the Secretary of Agriculture on the President's cabinet, was able to set in motion at once forces which have done magnificent work in increasing the production of food and its conservation. Agricultural libraries are a part of this organization and are in a position of great usefulness. They serve the scientist and research worker by rendering bibliographical aid, they are in a position to help other libraries in the evaluation of agricultural literature; in some states they are doing extensive work thru the boys' and girls' clubs and other extension agencies. It is highly desirable that more library school students recognize the opportunities for service in agricultural library work, and this would be greatly aided by a special course for agricultural librarians in some one of the library schools, taking up such subjects as the bibliography and history of agriculture, sources

of agricultural literature, the bibliography of the sciences relating to agriculture, the editing of agricultural publications, and some of the administrative problems connected with the relation of the libraries of the agricultural colleges to the experiment station libraries and to the agricultural extension work of the state.

Carl B. Roden, librarian of the Chicago Public Library, followed, and spoke for public libraries. Following Mr. Godard's example, he outlined the work done by the Chicago Public Library as being typical of many. The most notable single thing done by the Chicago Public Library was the holding of the Food Show which was so great a success that the woman's committee of the Illinois Council of Defense asked permission to take it over and give it permanent quarters. This has been done and it is viewed by hundreds every day. Smaller food shows have been aided in churches and other places. The library has been generous in its policy of lending its assistants to help in the food conservation work wherever they were needed. The document section of the library has been practically given over to food conservation work, as much of the routine work as possible being cut out in order to leave the library machinery and the time of the assistants available for the more immediate necessity of food conservation work.

Edith Guerrier, director of the library publicity work of the Food Administration, followed. After paying a graceful tribute to the chairman and each of the speakers individually who had preceded her, for the help and co-operation she had received from them in carrying out the program of the Food Administration in its work with libraries, she said that the voluntary conservation of food accomplished by the people of the United States had succeeded beyond the most sanguine expectations of the Food Administration. The work of libraries to this end had been a real contribution to the winning of the war. The function of her office is to act as a collector of the ideas put into use in the various libraries over the country and give them the publicity they need to secure a greater usefulness. Too great praise could not be given to the splendid work done by the various states, such as California with its 58 county chairmen, and Illinois with its food show and fine active organization. The main thing for libraries to do is to connect the reading of the people with the appeal of the food conservation work, and make exhibits effective by the dramatic and imaginative emotions aroused and set to work.

Henry S. Wells, associate director of the U. S. Boys' Working Reserve, followed. After giving an outline of the reasons which led to the establishment of the Boys' Working Reserve and sketching the plan of organization he said: There are 2,000,000 boys available for work on farms. Only 500,000 of these may be reached thru the schools; the remaining 75% must be reached in other ways and one of the most important is thru libraries. The specific ways in which libraries can help are (1) To enroll boys; (2) To call attention to the literature of the Boys' Working Reserve; (3) To co-operate with all agencies doing similar work. The response of the boys of the country to the appeal to work on the farm, which is harder than many other kinds of work for which they would earn much more, has been a lesson in patriotism which has thrilled all who know of it—but much yet remains to be done and libraries can render much needed help in accomplishing it.

At the close of Dr. Wells' address Mr. Deveneau, of the Illinois College of Agriculture, made a motion that the sections of the American Library Association represented by this joint session express their appreciation of the wonderful work already done by the U. S. Boys' Working Reserve and their desire to aid it in every way possible. The resolution was unanimously adopted.

Helen W. Atwater, representing the woman's committee of the Council of National Defense, was next introduced by Mr. Sanborn. The woman's committee was created to serve as an authorized channel of communication between the various federal departments and other agencies of the government, and the women of the country, especially for the transmission of information and requests which the government might wish to give to the women of the nation to enlist their help in its war activities. Each state is asked to organize corresponding women's divisions, which in turn were organized in county and local units. In planning its work the Woman's Committee has found it desirable to subdivide its activities into eight or ten departments. The food conservation work is carried on thru two of these departments, the food administration department and the department of food production and home economics. In addition to the work with food, it is becoming more and more apparent that other lines of conservation will have to be generally adopted by the country and here the libraries can be of assistance in the same way that they have in the food conservation work. It is useless to urge people to buy Liberty Loans or War

Savings Stamps unless we can point out definite ways in which they can save money for such purchases. It will be a very useful service on the part of libraries if they call to the attention of the public such reliable material as already exists and aid in distributing such emergency material as will undoubtedly be published by Governmental agencies, and probably also by private persons or societies, within the next few months.

At the second session, George A. Deveneau, chairman, presided and opened the session by reading a paper on "The agricultural literature of Canada" by Jacquetta Gardiner, librarian of the Ontario Agricultural College, who was unable to be present. The Dominion Department of Agriculture issues many bulletins, circulars and reports, but owing to the war, has reduced the publication and distribution of the larger reports and comprehensive bulletins, aiming to make the publications more specific and brief.

This department also issues bulletins of the International Institute at Rome; the Bulletin of Foreign Agricultural Intelligence; The Agricultural Gazette of Canada; and the Agricultural War Book. The more important of these were described with some detail. Bulletins and pamphlets are issued by the Inland Revenue Department, Central Experimental Farm, Dairy and Cold Storage Commissioner, Entomological Branch, Division of Botany, Tobacco Division, Seed Branch, Health of Animals Branch, Division of Chemistry, Fruit Division, Publications Branch, Live Stock Branch, the Dominion Experimental Farms.

When a campaign of publicity is on in connection with the Patriotism and Production movement, there are inserted in newspapers from coast to coast, a series of advertisements, each one making a specialty of some particular branch of agriculture. A coupon attached invites application for bulletins on specified subjects. Posters of the same character are also displayed in public places, such as railway stations, etc. Lists of these Dominion publications are available for distribution, and may be had by applying to the Publications Branch of the Department of Agriculture at Ottawa.

Mr. Deveneau then introduced Vera M. Dixon, assistant librarian of the Iowa State College, who read a paper entitled "A plan for library extension work in agriculture and home economics." The estimated cost for conducting such work at Iowa State College is \$2580 for initial cost of service, with from \$2300 to \$3000 for maintenance each year. A questionnaire was recently sent to all state universities, agricultural libraries, and state

library commissions to determine how much library extension work in agriculture and home economics they were doing. Sixty-one state universities and agricultural colleges answered. Of this number 63 per cent report that they are doing library extension work, and the number of questions answered per year runs from 25 at the University of Nebraska to 6897 at the University of Kansas. Eight have a special assistant in charge agricultural extension work at the University of this work, and many express the wish that they had.

Miss Fay gave a report of the plan for agricultural extension work at the University of Tennessee and Mr. Hepburn a similar report from Purdue University, Indiana.

There followed a spirited discussion of the interesting facts brought out by Miss Dixon's report of the questionnaire sent out, which resulted in a motion by Miss Lacy that a resolution be drawn up and presented to Dr. True that in view of the fact that 63 per cent of the institutions in this country doing agricultural work were carrying on some form of library extension work in response to the great need existing for such service, he be respectfully urged to consider this need and the great handicap experienced in meeting it because of lack of funds and if possible devise some means of using a portion of the Smith-Lever funds for this purpose. The resolution was unanimously adopted.

There followed a paper on "The sources of agricultural statistics" by Miss Mary G. Lacy of the Library of the U. S. Department of Agriculture.*

Miss Barnett for the handbook committee reported progress and it was decided that the material in hand be circulated among agricultural libraries for criticism and suggestions. Mr. Hepburn reported the action of the committee appointed at Louisville in 1917 which recommended to the Association of Agricultural Colleges and Experiment Stations that each agricultural experiment station be requested to keep a reserve supply of not less than 150 copies of each publication issued, to be drawn on in completing sets in libraries.

The nominating committee, consisting of Miss Barnett and Mr. Hepburn, nominated the following officers for the coming year, and on motion they were elected: Chairman, Vera M. Dixon, assistant librarian, Iowa State College, Ames, Iowa; secretary, Lucy E. Fay, librarian, University of Tennessee, Knoxville, Tennessee.

MARY G. LACY, *Secretary*.

HOSPITAL LIBRARIANS ROUND TABLE

The hospital librarians round table dealt with two distinct phases of the work; that is, the growing activities in the local hospital libraries, and reconstruction work.

Electra C. Doren, Anna G. Hall, Kathleen Calhoun, of the Vocational Branch, Invalided Soldiers' Commission, Ottawa, Canada, W. O. Carson, also of Canada, and several others spoke of what is being done by the Red Cross Institute for Crippled and Disabled Soldiers, and other activities in the matter of reconstruction. The other speakers were: Caroline Webster, on "The organization of the hospital library service"; Miriam E. Carey, on "The work of the field representative"; Kathleen Jones on "What a hospital librarian ought to know"; and Blanche Galloway on "A woman among ten thousand blue jackets."

LENDING DEPARTMENT ROUND TABLE

At the lending department round table, meeting Wednesday afternoon, July 3, the paper by Jeannette M. Drake on the "Elimination of the use of the readers' cards" in the public library, was the principal topic of discussion. She summed up the advantages and disadvantages as follows. She finds that their elimination also eliminates constant talk and argument as to where readers' cards are and constant explanation about bringing them each time a book is taken out, etc.; by asking addresses each time, these are kept up to date; the borrower's card is always in the library in its proper place; the time of assistant in filling out readers' cards in the beginning is saved, as well as the duplicates and the temporary cards; the cost of readers' cards is saved. Disadvantages are that readers have to wait while their number is being looked up; the reader's name must be asked each time; the reader will not have a receipt for his book (tho he never had one under the old system, either); the library must take patron's word as to number of books he has out.

Redlands, Burlington, Cedar Rapids, Oskaloosa and Sioux City are now using this system and report favorably. Rochester tried dispensing with borrower's cards at one of the sub-branches but had to go back to using the card. Wilmington has tried to shorten and simplify the process of charging and finds the Newark system the best. The Sioux City way does not shorten the process nor lessen congestion at the charging desk. Newark thinks it could be used in small libraries but it means increased waiting and work for the borrower. Mr. Dana furthermore said that for twenty-five years he had

*This paper will be printed in a later issue of the JOURNAL.

been trying to find a simpler method than the Newark and found that any means used for saving the library meant extra work for the patron. The consensus of opinion was that the Sioux City system would not be feasible in a large library system.

The question box brought the following:

How have the libraries near the training camps for soldiers and sailors handled these men when they presented themselves as would-be patrons?

Omaha lost so many books a deposit was required; this was not successful as the men frequently were called away with so little notice they could not get the money refunded. Now books are sent to the camps and placed in charge of the Y. M. C. A. Wilmington also makes deposits in the camp, the A. L. A. supplying the needed technical books. The question of fines has not arisen as the soldiers return their books promptly. Omaha and Newark remit fines; Elizabeth treats the soldier as a regular patron, except that the officer's signature takes the place of any other reference.

What can be done when books are kept until long overdue by members of the board of trustees of a library, after the usual post card notices have been sent?

The methods used were: notify wife of the board member; use special card saying book is needed; send personal letter; telephone that book is urgently needed.

What is the general opinion in regard to charging books by date of issue instead of date due?

This was voted on and a large majority found in favor of the date due. Cleveland has used both and hopes never to return to the date of issue. The chief opposition to using date due seems to be the chance of charging with the wrong stamp and the inability to fix responsibility. Pittsburgh reports no trouble of this sort. Each date has a different colored pencil—current date (discharging pencil) is brown; 7 day, black; 14 day, yellow; 28 day, green. Each assistant has a symbol—a check, a dash, etc.—which she makes when writing borrower's number, thus fixing responsibility absolutely. Another library further differentiates by using different sized type for different dates.

Have any libraries instituted economies in the routine of the circulation department in the effort to release assistants for war work which might be of interest to this meeting?

Newark bought a nicer set of trays to save time; also recommends use of registration book in place of numerical file at Central library. "Mr." and "Miss" are now omitted

from registration entries and borrower's card while a dash (—) is used for "Mrs."

Rochester multigraphs the bookslips of books of which there are many copies in use, which require frequent renewing.

Miss Waller I. Bullock of the Carnegie Library of Pittsburgh was chosen chairman for the next meeting and Frances Dorrance of Trenton, secretary.

AGNES F. P. GREER, *Secretary.*

GOVERNMENT DOCUMENTS ROUND TABLE

The government documents round table was held in the ball room of the Grand Union Hotel, Friday afternoon, July 5. The meeting was called to order by George S. Godard, state librarian of Connecticut, chairman of the committee on public documents. Demarchus C. Brown, state librarian of Indiana, acted as secretary.

The chairman briefly outlined the present status of the printing bill before Congress. He stated that it was somewhat discouraging and no action could be expected during the present War Congress when more important world problems were at stake. He called attention to House Resolution 11521, which is a new printing bill introduced by Mr. Barnhart on April 18, 1918, and was referred to the Committee on Printing, having been ordered printed. Up to the present time the chairman has heard of no report having been made on the same by the committee.

The bill is entitled, "A bill to amend and revise the laws relating to printing and binding and the distribution of publications for Congress." In brief it abolishes all the official gazette and geological survey libraries and rewrites the sections relative to valuation distribution. It places in the hands of the Joint Committee on Printing the responsibility of determining much of the detail relative to publication, binding and distribution included in the former printing bills. Thus, Section 18, paragraphs 1 and 2, read as follows:

Sec. 18. Par. 1. The Joint Committee on Printing shall have power to adopt and employ such measures as, in its discretion, may be deemed necessary to remedy any neglect, delay, duplication, or waste in the public printing and binding and the distribution of Government publications, and shall exercise general supervision over printing and binding for Congress.

Sec. 18. Par. 2. The Joint Committee on Printing is hereby authorized to inquire at any time into all matters pertaining to the public printing and binding and the distribution of publications for Congress, the judiciary, and the various executive departments, independent offices and establishments of the Government, to report to Congress from time to time any abuses in the public printing and binding and the distribution of Government publications, and to recommend such remedial legislation as in its judgment may seem proper.

Twenty publications heretofore included in Congressional distribution to depository libra-

ries it is proposed to remove from such distribution, as may be seen from Section II, which reads as follows:

Sec. 11. The printing of the following publications for congressional distribution as heretofore provided by law shall be discontinued: Monthly Summary of Foreign Commerce of the United States, Annual Report of Foreign Commerce and Navigation of the United States, Annual Report of the Health Officer of the District of Columbia, Annual Report of the Bureau of Ethnology, Bulletins of the Bureau of Ethnology, Geological Bulletins, Geological Professional Papers, Geological Water-Supply Papers, Topographic and Geologic Maps and Atlases, Charts of the Coast and Geodetic Survey, Memoirs of the National Academy of Sciences, The American Ephemeris and Nautical Almanac, Publications of the Naval Observatory, Annual Report of Field Operations of the Bureau of Soils, Annual Report of the Commercial Relations of the United States with Foreign Countries, Navy Yearbook, and the Annual Report of the Commissioner of Patents with list of patents.

The chairman stated that on the whole he felt the bill was a step in the right direction for up to the present time the Joint Committee on Printing had expressed its desire and willingness to incorporate any suggestions which the librarians of the country had united in asking for when the same did not conflict in detail considered essential for the convenience of Congress. This willingness was shown in the other printing bills before Congress as explained before the government documents round table at former meetings by Mr. Carter, clerk of the Joint Committee on Printing. It seems safe to assume therefore that the same willingness may be expected from the Joint Committee hereafter.

The chairman also called attention to Senate Bill 4366, introduced by Senator Chamberlain, April 16, which was referred to the Committee on Library, and by that committee reported favorably without amendment, July 6, as explained by Report 481 of the 65th Congress, 2nd Session. This bill relates to the return of government publications by depositories. Section 5 reads as follows:

Sec. 5. That libraries heretofore designated by law as depositories to receive books and other Government publications shall hereafter, during their existence, continue such receipt, and new designations may be made when libraries heretofore chosen shall cease to exist or other designation shall hereafter be authorized by law. The librarian of any library above mentioned may return to the superintendent of documents and the superintendent of documents shall receive back such of the documents and publications furnished to said libraries as in the opinion of said librarian are not suitable for collection or use by said library.

Following the brief explanation covering the two bills affecting the publication and distribution of documents, the chairman introduced Dr. H. H. B. Meyer, chief bibliographer, Library of Congress, who read a most interesting paper upon "Government documents relating to the war." In this paper Dr. Meyer called attention to a goodly number of publications issued by various government departments and bureaus which were especial-

ly timely and helpful. Copies of many of these publications were passed for inspection while they were being described by Dr. Meyer.

On motion of Mr. Dullard, state librarian of New Jersey, a vote of thanks was returned to Dr. Meyer for his interesting and instructive paper and a copy requested for publication at an early date, which request Dr. Meyer stated he would be pleased to grant.

The committee on public documents was instructed to take up the question of securing for certain depository libraries the twenty publications proposed to be eliminated from congressional distribution, as stated in Section 11 of the proposed printing bill.

There being no further business the meeting adjourned.

GEORGE S. GODARD.

ROUND TABLE OF THE LIBRARIES OF THEOLOGY AND RELIGION

The third annual meeting of the theological round table was held Wednesday evening, July 3 at nine o'clock.

The meeting was called to order by the president, Dr. Charles R. Robinson of the Philadelphia Divinity School. A nominating committee consisting of Glen B. Ewell of Rochester, Clara M. Clark of the Bible Teachers Training School, New York City, and Mrs. C. E. Moody of the Day Missions Library at Yale University, was appointed by the president.

The first paper of the meeting was read by Miss Hollis Hering, on "The war and the mission field."

The President then spoke of the great collection of imprints before 1700 of British history and theology, known as the McAlpin collection, in the library of Union Theological Seminary. A paper prepared by Dr. Charles R. Gillett, who is in charge of this collection, was read by Julia Pettee. Dr. Gillett told how this collection, generously financed and later endowed by David Hunter McAlpin, was begun by his father, the Rev. Ezra Hall Gillett, who was interested in gathering the writings of the Deistic controversy. The collecting was continued by Dr. Charles A. Briggs. Dr. Briggs' search at first centered particularly in the writings of the Westminster Assembly of Divines; then having practically completed this collection, he turned to other controversies. As theological and state affairs are inextricably interwoven in these centuries this collection, numbering now over 15,000 titles, is a depository of source material of all kinds from the Commonwealth period to 1700, the terminal date of the collection. A very full catalog with elaborate biblio-

graphical detail, has been prepared by Dr. Gillett, and this catalog will be published as a memorial to their father by the children of Mr. McAlpin.

After Dr. Gillett's paper the subject of an evaluated list of denominational periodicals was taken up. Dr. Robinson thought there was considerable demand for such a list to aid the libraries of limited funds in the selection of these periodicals. Dr. H. P. Smith of Union Theological Seminary had furnished a list of those currently received at Union, in which Dr. Robinson noted some missing.

The last paper, on the "Exchange of duplicates," by Samuel G. Ayres of Garrett, was read by Mr. Ewell. Mr. Ayres arranges his duplicates alphabetically, lists them, and sends carbon copies of his lists to other libraries who have books to exchange. He makes it a fundamental principle that any library desiring a book on the list shall have it whether he receives its value in exchange or not. He also advises exchanging with dealers. Of the residue of unexchangeable books, selections are sent to needy institutions in the South or perhaps to some minister who has been burned out. He has distributed 5000 volumes besides hundreds of magazines and pamphlets in this way during the last six years. A lively discussion followed this paper. Mr. Collar of Grosvenor library, Buffalo, emphasized the wastefulness of disposing of duplicates for a small sum to second-hand dealers, saying "Why not give other libraries a chance at them first."

Miss Krum of the Buffalo Historical Library told of sending selected subject lists to libraries where she knew of their interest along special lines; Mr. Elwell reported that his unexchangeable duplicates were gladly received by poor denominational institutions; Prof. Root advised against either classing or arranging duplicates alphabetically, saying that he gave the duplicates a consecutive number on the shelves and employed untrained student help to list them, mimeographing copies and circulating these lists at frequent intervals. Mr. Keogh, called upon by Dr. Robinson, outlined the system in use at Yale. There seemed to be a consensus of opinion that the thing to do was to get the book where it was wanted, regardless of its exchange value—to pass it along whether anything in return was received or not.

The nominating committee reported Prof. A. S. Root of Oberlin for president and Miss Hollis Hering for secretary. These nominations were seconded and the officers duly elected.

JULIA PETTEE, *Secretary.*

Library Organizations

LEAGUE OF LIBRARY COMMISSIONS

The first session of the League of Library Commissions, held in the Convention Hall at Saratoga, July 3, was made notable by the reappearance after twelve years of Dr. Melvil Dewey at an A. L. A. convention. The audience showed their esteem by rising to greet Dr. Dewey with hearty applause. Dr. Dewey spoke of the present war conditions with a spirit of optimism, showing the great opportunity of the public library in a state of society in which democracy will come to its own. To him it seems that among the many things libraries can do, the greatest service is to aid the movement for simplified spelling. As a firm conviction, he repeated the assertion of the philologist Grimm, that the greatest obstacle in the way of English linguistic domination of the world, is the absurd and unscientific spelling of the English language. To prove the rapid increase in the progress of English towards becoming the universal language of the world, he quoted statistics showing the relative increase in the last 400 years in the number of persons speaking the important modern languages. The whole tone of the address was optimistic and inspiring.

Following this address, the members of the league, in a discussion led by William R. Watson of New York, considered the progress made by the various states towards certification of librarians and standardization of libraries. Only a part of the states represented at the meeting reported any real action attempted, namely: California, Illinois, Indiana, Massachusetts, New York, Ohio, and Texas. Minnesota and Wisconsin reported their state associations at work on proposed legislation, and Iowa reported an educational campaign under way. In California, the system of state examination for librarians of county libraries has worked almost perfectly. This system does not, however, include librarians of city libraries nor county libraries, nor library assistants. In Illinois an attempt at legislation was made in a section of a county library bill, but the whole bill of a defeated, largely on account of the clause providing for certification. In Indiana, the experience of Illinois was anticipated in one legislature and in a second attempt a county bill, without the certification clause, was passed. The plan here was to certify all librarians of public libraries but not library assistants. In Massachusetts, the commission has been improved by legislation to hold examination for the registration of librarians,

but libraries are not compelled to employ registered librarians or assistants. Twenty-seven took the first examination. The New York plan is a merit rather than a certification system, and has met with rather wide approval as previously set forth in *New York Libraries* and the LIBRARY JOURNAL. In Ohio there have been several attempts at legislation for certification but without legal results. In Texas the county law passed in 1917 provides for certification of county librarians.

The general sentiment of the meeting was that certification of librarians is one of the most important objects for which the library profession can work. Altho representatives of many states felt that much educational work will be necessary before legislation can be obtained in their states, no one expressed disapproval of some plan of certification.

On the evening of July 3, the league participated in a joint meeting with the agricultural libraries section and the Association of State Libraries on the subject of food conservation. This session will be reported under the agricultural libraries section.

On the evening of July 4, the league met to discuss the "Methods of control of state supported library activities," under the leadership of Julia A. Robinson, of Iowa. Each state represented reported on the present relationship between the various state library activities and on any attempted or recently achieved consolidation.

In several of the midwestern states recent attempts or plans for consolidation were reported. The reason behind these attempts seems generally to be economy, altho it was the expressed opinion of those present that no money saving would result in such consolidation. In several states, it appeared, the State Library, more properly the Law Library or Supreme Court Library, is provided for in the constitution, so that unless the constitution should be changed, the only form of consolidation would be to bring all library activities under the State Library. This was not considered desirable as long as the State Library should be managed by the Supreme Court Judges.

There seemed to be a general opinion that proper consolidation would be desirable to save duplication of effort. Co-ordination under one board of control rather than subordination of departments under one of the others was favored. North Dakota reported a gain in dignity and no loss in independence from being co-ordinated with other educational institutions under the State Board of Regents. Other states, notably Pennsylvania, have practical consolidation because the state

librarian is ex officio secretary of the state library commission and connected with other library activities.

The value of such discussion, the president showed, was to evolve some ideal plan which could be used as a model by states establishing library systems, as a norm for states reforming their present conditions, and as a goal towards which all states might be tending even tho change does not appear imminent or desirable.

At the close of the discussion the members present, in business session, took action on the amendment to the constitution proposed by Illinois. The constitution as amended at Berkeley fixed the annual meeting at the time and place of the mid-winter meeting of the A. L. A. Council. As a consequence, no legal annual meeting could be held this last year. By common consent the Saratoga meeting was voted the annual meeting. The Illinois amendment was then adopted as follows:

Annual Meeting. The annual meeting shall be held at such time and place as the Executive Board shall decide.

After the treasurer reported a balance of \$531.20, it was voted that the executive board be authorized to invest in War Savings Stamps any amount of this balance that they thought fit.

The meeting then adjourned. At a meeting of the executive board held July 5, the secretary and treasurer, Henry N. Sanborn, resigned, and William J. Hamilton was appointed his successor.

HENRY N. SANBORN, *Secretary.*

AMERICAN ASSOCIATION OF LAW LIBRARIES

The American Association of Law Libraries met in annual conference at Saratoga Springs, July 2 and 3. As was to be expected, the attendance was small, limited in the main to those members living in New York and near-by states. Two separate sessions were held, and one joint session with the National Association of State Libraries. Addresses were delivered as follows:

The president's address: Edward H. Redstone, librarian, Social Law Library, Boston, Mass.

Workings of the Massachusetts Constitutional Convention: Lawrence B. Evans, state librarian, Mass.

The effect of the world war on Anglo-American legal literature: Frederick C. Hicks, law librarian, Columbia University. A brief survey of special legislation: Frank E. Chipman, president, The Boston Book Company.

Editing the New York session laws: John T. Fitzpatrick, law librarian, New York State Library.

These papers will all be published in full in the *Law Library Journal*, hence no attempt will be made to review them here.

Two committee reports of vital interest to members of the association were delivered by the chairmen. Mr. Small as chairman of the committee on legal bibliography brought us the welcome news that a check list of state bar association reports is being prepared by an Iowa librarian, and that President Redstone has a bibliography of legal periodicals in the process of compilation. Changes in price and form of the Index were the chief topics touched upon in the report of the committee on *Index to Legal Periodicals and Law Library Journal*, given by Chairman Poole. These points were discussed thoroly by the members but the final decision was that the committee should be continued with power to act in extending the index in any feasible way. Mr. Wilson of The H. W. Wilson Company, the business managers of our publications, was called upon informally to make a report upon those publications from his standpoint.

The nominating committee made the following report of officers for the year 1918-1919: President, Edward H. Redstone, Social Law Library, Boston, Mass.; first vice-president, John T. Fitzpatrick, New York State Library, Albany, N. Y.; second vice-president, Agnes Wright, Wyoming State Library, Cheyenne, Wyo.; secretary, Elizabeth B. Steere, Law Library, University of Michigan, Ann Arbor, Mich.; treasurer, Anna M. Ryan, Buffalo Law Library, Buffalo, N. Y.; executive committee, George S. Godard, E. A. Feazel, John P. Dullard.

ELIZABETH BEAL STEERE, *Secretary*.

THE BIBLIOGRAPHICAL SOCIETY OF AMERICA

The meeting of the Bibliographical Society of America was held at Saratoga, N. Y., July 5, the president, George Watson Cole, presiding.

In his preliminary remarks the president outlined the work of the society since the last meeting. Two numbers of the "Papers" have been issued and the printing of the "Census of incunabula" is well under way. The first installment of the Census appeared in the April number of the *Bulletin of the New York Public Library*, and the second, in the May number, completed the letter B. For the progress in this work the society is under obligation to Dr. George Parker Winship for his voluntary services as editor, and

to the generosity of the New York Public Library which has undertaken to print the Census without cost to the society.

In order to carry on the expense of the editorial work, several friends of the society have contributed, collectively, \$2050. Of this amount there remains enough unexpended to complete the work, and leave a small surplus to carry on any supplementary work that may be deemed advisable. As planned, the Census will be completed in the December *Bulletin* of the present year. A separate edition of 300 copies will be printed for the use of the Library and 250 for the Society. Of the latter, one hundred copies are to be printed on Old Stratford paper, copies of which will be offered to subscribers at \$10 each. The money so raised, together with whatever balance there may be left of the special fund, will be used for further work in this field. As now planned, this will consist of full descriptions of the works given in the Census which have not heretofore been made. It is a source of great gratification that this project which the late Dr. John Thomson, librarian of the Free Library of Philadelphia, had so much at heart, is on the eve of being accomplished, tho in a somewhat modified form.

The treasury of the society was reported in a healthy state, enough being on hand to meet the probable expenses of the fiscal year.

Several new members have been added, and the society now has 196 members of whom eight are life-members; an increase of two over those reported last year.

Proceeding to the formal program for the meeting, Mr. Cole said, preliminary to introducing the several speakers:

"It has been thought wise that the program of this session should take the form of a Memorial to Professor Willard Fiske; a man in whom are seen the best fruits of American culture; one who as librarian, bibliographer, scholar, linguist, bibliophile, collector, philanthropist, and library benefactor made his influence felt from the icy north to the tropics—from Iceland to Egypt. A native of the Empire State, he chose the realm of literature as his field of activity and mastered it as few of his compatriots have done. His death was a loss to both hemispheres and called forth expressions of grief and appreciation on both sides of the Atlantic."

Professor Horatio S. White of Harvard University, then being introduced, began by explaining a number of photographs of Professor Fiske and of his homes both in Ithaca and Florence, which he had brought with him

and placed on exhibition. Attention was then called to the printed works of which he was the author, and the catalogs of the Dante, Petrarch, Icelandic, and Runic collections which he bequeathed to Cornell University. Mention was also made of the different places in which accounts of these collections are to be found. The professor then read the first paper on the program, "An introductory sketch of the life and labors of Professor Fiske." This was followed by one on "Willard Fiske as a bibliographer," by Mary Fowler, the compiler of the catalog of the Petrarch collection. Her paper, owing to her absence, was read by Willard Austen, librarian of Cornell University.

At this point the program was interrupted in order to give Mr. Wyer, the director of the New York State Library (who had to leave before the close of the meeting) an opportunity to say a word regarding the library of the Bibliographical Society, which, in accordance with a vote passed at the meeting in Louisville, is now in the State Library School at Albany. There being some uncertainty as to whether all of the material belonging to the society had been received, he put himself in communication with Dr. Carlton, of the Newberry Library, and Mr. Josephson, of the John Crerar Library, in order to find out whether any more still remained in Chicago. Owing to this fact, the printing of the list of the books in the library had been deferred, but it will be taken up as soon as Mr. Wyer is satisfied that the entire library has been received at Albany.

The regular program was then resumed, the next number being a paper by Mr. Haldór Hermannsson on "The Icelandic collection formed by Professor Fiske, now at Cornell University." In the absence of Mr. Hermannsson, this paper was read by Theodore Wesley Koch, of the Library of Congress, who made the catalog of the Dante collection. The concluding number of this memorial program, "Recollections of Professor Fiske and a trip to Iceland," was read by Prof. William H. Carpenter, provost of Columbia University, New York. He gave a graphic account of a winter spent in Iceland and of a journey to the interior of the island, during which several places of historic interest were visited.

The report of the secretary, Henry O. Severance, in his absence, was then read by W. W. Bishop, secretary *pro tem*. This was followed by the report of the treasurer, Frederick W. Faxon, read, in abstract, by Mr. Bishop, Mr. Faxon having been called home on business.

A report of the progress made on the "Census of incunabula," by Dr. George Parker Winship, was then read by the president, followed by a report of the treasurer of the special fund for that work. These reports will appear in detail in the publications of the society.

The report of the nominating committee was then read as follows: President, George Watson Cole; first vice-president, H. H. B. Meyer; second vice-president, J. C. M. Hanson; secretary, Henry O. Severance; treasurer, Frederick W. Faxon; member of the Council, Aksel G. S. Josephson. These officers were duly elected. At the suggestion of the nominating committee the selection of an editor, owing to the resignation of A. G. S. Josephson, who has felt obliged to relinquish the duties of that position, was left to the council with power.

GEORGE WATSON COLE.

NATIONAL ASSOCIATION OF STATE LIBRARIES

The National Association of State Libraries held its twenty-first annual meeting at Saratoga Springs, July 2 to 5. There were two separate and two joint sessions, one of the latter a symposium on libraries and the food problem held jointly with the League of Library Commissions and the Agricultural Libraries Section of the American Library Association.

The first joint session was held with the American Association of Law Libraries on Tuesday afternoon, July 2. Dr. Lawrence B. Evans, librarian of the Massachusetts State Library, presented a paper on the workings of the Massachusetts Constitutional Convention, dealing particularly with the work of the Commission to Compile Data of which he is a member. William P. Capes, director of the Bureau of Municipal Information of the New York State Conference of Mayors and Other City Officials, contributed a very full and detailed account of the methods of work of the bureau, illustrating by examples the value of this unique system of team-work among municipalities.

The State Library's contribution to war work was the subject matter of the Tuesday evening session. James I. Wyer, Jr., director of the New York State Library, described the library's plan for collecting material on the state's part in the war with the co-operation of local libraries. The Connecticut Military Census was described and its functions explained by George S. Godard, librarian of the Connecticut State Library.

A round table on legislative reference work

and state document exchanges was held on Thursday evening. William E. Hannan, legislative reference librarian of the New York State Library, told of the advertising methods used in the New York State Library, to overcome the handicap of being in a separate building from the legislature. Demarchus C. Brown, leading the discussion on document exchanges, reiterated the recommendations made at the 1908 session that a systematic effort be made to induce all states to make exchanges thru the state libraries. A suggestion made by letter by Miss Marvin of Oregon that all but the very essential sendings be discontinued during the war was not approved. The need was emphasized of a law requiring delivery of a certain specified number of documents for use in exchange, because of the frequency with which documents get out of print before exchange distribution can be made. Resolutions were adopted urging a federal law to make obligatory the distribution to state libraries by the Superintendent of Documents of any desired bill of a public nature, and of the printed reports of all public Congressional hearings. It was voted to appoint a committee on the care and exchange of state documents, and to refer to it the question of a revised edition of the pamphlet by Ernest J. Reece on "State documents for libraries," published by the University of Illinois in 1915.

George S. Godard, chairman, reported for the committee on a national legislative information service that war conditions had made it impossible to get support for the resumption of publication of the Official Index to State Legislation. The committee, however, was continued.

The joint committee on a skeleton index to statute law, Gertrude E. Woodard, chairman, recommended that a tentative index be prepared thru co-operation of the legislative reference departments of the several states with a central revising committee to be appointed by the two associations, and that legislative reference departments use their influence to have it adopted as a guide by the persons who in the several states prepare the indexes to the legislation of 1919. It was voted to continue the committee with power to carry out the suggestions made.

An amendment to the constitution, to make the constitution more easily amended by dropping out the provision requiring action by two successive conventions, was introduced and passed to the next convention for final action. A motion was carried that the executive committee be guided by the action

of the American Library Association in deciding whether to postpone further meetings until after the war.

The convention passed memorial resolutions on the death of James L. Gillis, librarian of the California State Library and formerly president of the association. Resolutions were also passed deploring the action of the state of Ohio in removing from office for political reasons Charles B. Galbreath, state librarian.

The officers elected to serve for 1918-19 were: President, Milton J. Ferguson, state librarian of California; first vice-president, Lawrence B. Evans, state librarian of Massachusetts; second vice-president, Mrs. Maud Barker Cobb, state librarian of Georgia; secretary-treasurer, Mrs. Eva May Fowler, acting librarian, Illinois State Library.

ELIZABETH M. SMITH.

SPECIAL LIBRARIES ASSOCIATION

The first session of the Special Libraries Association was held Thursday evening, July 4, in one of the parlors of the Grand Union Hotel at Saratoga. Owing to the resignation of Dr. C. C. Williamson, John A. Lapp, vice-president, presided on motion. He urged that special attention be given to increasing the membership and suggested the formation of groups within the association, as for commercial, legislative and medical libraries. He also outlined the desirability, in his view, of holding the annual meeting of the S. L. A. at a time and place other than that of the A. L. A. conference, and there was general discussion, both pro and con, of this latter suggestion.

A report was received from the war service committee, R. H. Johnston, of the Bureau of Railway Economics, chairman, reviewing its efforts to co-operate with the American Library Association in war work. It had been felt that members of the Special Libraries Association were especially well qualified to supply camp libraries with material or information in special or technical fields, and for this reason the War Service Committee, appointed by the president shortly after this country entered the war, had been endorsed at the Louisville meeting. The committee's report, however, showed that despite untiring efforts on the part of its chairman, the co-operation proposed had not been welcomed by the A. L. A., whose war committee felt that the needs of the camp libraries for technical material could be met by ordinary public library methods. Realizing that to a large extent this was true, the committee confined itself to quiet co-opera-

tion with individual camp libraries which expressed a desire for special assistance; in a number of cases the resources of special libraries were drawn upon, and thru their influence also several publishers of technical books and periodicals contributed their publications to camp libraries.

Notwithstanding the chairman's belief that "the opportunities for special service might have been placed with more effect by the A. L. A. before the camp libraries," he expressed his admiration for the war work accomplished by the A. L. A. and recommended the discontinuance of the committee. It might fairly be said in passing, that this report was the most clean-cut, businesslike document presented at any of the sessions of the association.

Thirty-five were present at the second session, held Friday afternoon, July 5. Mr. Lapp, presiding, recalled the organizing of the association at Bretton Woods, nine years before, and spoke at length concerning the fundamental characteristics of the special library and the service it should render. His contention that the public libraries of the country are not even to-day alive to their responsibilities and that only about ten per cent. of them are rendering complete and effective reference service was vigorously combated by Charles A. George, of the Elizabeth, N. J., Free Public library and others, who argued that the public library is not called upon to duplicate the work of the special library. However beneficial this discussion may have been in "clearing the air," to use an expression employed by some of the speakers, it had the unfortunate effect, because of its length, of crowding from the program all papers save one, that by Miss A. G. Cross, librarian of the Department of Commerce, Washington, D. C., who described briefly the work of the great number of libraries maintained by Federal departments, boards and bureaus, at the national capital, many of which have sprung into being since our entrance into the war.

At the evening session on the same day, also held in the club room, forty were present. J. H. Friedel, librarian of the National Industrial Conference Board, acted as secretary. The question was brought up as to what part special libraries could take in war service. Upon motion of Mr. Friedel, it was voted that the incoming president appoint a committee to memorialize the federal government's Committee on Public Information, offering to place at its service the resources of the special libraries of the country, and to draw up a plan of co-operation with that committee in war service.

John D. Wolcott, librarian of the U. S. Bureau of Education, spoke of the work of fifteen newly-organized libraries in government departments at Washington.

Kenneth Walker, librarian of the New Jersey Zinc Company, spoke upon "Purchasing in a special library." It was evident from the discussion which followed that there is a decided variation in the purchasing methods of different special libraries; that while in some cases, as with the larger corporations, special librarians are hampered by their dependence upon a central purchasing office which orders books in the same manner as pins, window-screens or floor-mops, in other cases, as with libraries of membership associations, the librarian has considerable freedom in purchasing.

Papers by A. B. Lindsey on "The follow-up system of the Bureau of Railway Economics" and by C. R. Green, librarian of the Massachusetts Agricultural College, on "The special library as an aid to agricultural development" were not read, but the chairman announced that the former paper at least would appear in *Special Libraries*.

On motion of Mr. Friedel, the executive committee was instructed to formulate a plan for central registration of applicants for special library work.

Caroline E. Williams, librarian of the Dupont-de Nemours Powder Company's experiment station at Wilmington, Del., was chosen secretary of the association, and J. H. Friedel was made a member of the executive committee. The selection of a president and vice-president was entrusted to a committee composed of the executive committee and three other members; this committee as finally made up consists of Misses Williams and Ethel M. Johnson, and Messrs. Lapp, Handy, Lee, Friedel and R. H. Johnston.

W. N. SEAVER.

Library Schools

LIBRARY SCHOOL OF THE NEW YORK PUBLIC LIBRARY

The bibliographical and thesis work incidental to the advanced courses for 1917-18 has been elective. The aim has been to include it only where the proper person and a suitable problem could be brought together, and to allow in the cases of other students the substitution of the equivalent in class hours. The bibliographical assignments which have been made this year have been designedly of too comprehensive a nature for completion within the limits of the course, the plan having been to accept, as meeting the

requirements, one hundred hours of satisfactory work applied as part of a larger task. In accordance with this, credit toward the diploma has been given in 1917-18 to Eleanor Duncan in connection with a compilation relating to the "Irish renaissance"; to Lurene McDonald for her "International finance and foreign investments"; and to Emma Pafort for work on "Cartels in Germany." The following bibliographies and theses, begun in former years, have been submitted recently:

The biography of English librarians: a bibliography. By Corabel Bien.

The community center library. By Mrs. R. R. Anderson.

School stories: a bibliography. By Frances G. Burdick.

Submarines: a list of references in the New York Public Library. By Mary Ethel Jameson.

Notable private book collections in the United States since 1890. By Jessie Scott Millener.

Edith Tiemann has been appointed registrar at the school, to fill the place of Juliette A. Handerson, resigned. Miss Tiemann is a graduate of Smith College, holds the certificate and diploma of the Library School of the New York Public Library, and for five years has been first assistant at the Jackson Square branch of the New York Public Library. Her new duties begin September 1.

Recent appointments are as follows:

Isabel Davidson (Library School of the Carnegie Library of Atlanta, 1912-13) who took advanced work at the Library School of the New York Public Library in 1917-18, to the library of the Federal Reserve Bank of New York.

Alice M. Dunlap, 1917-18, to be reviser and general assistant at the Library School of the New York Public Library.

Mary E. Ferguson, 1917-18, to the staff of the library of the United Engineering Societies, New York City.

Ramona Reed, 1917-18, to the lending department of the Carnegie Library of Pittsburgh.

Leonore Tafel (Drexel Institute Library School, 1913-14) who took advanced work at the Library School of the New York Public Library in 1917-18, to be second assistant at the library of the New Jersey Zinc Company, New York City.

Special entrance examinations are to be held on Saturday, August 31, between the hours of 9 a. m. and 1 p. m., and the hours of 2 to 6 p. m.

ERNEST J. REECE, *Principal*.

LIBRARY SCHOOL OF THE UNIVERSITY OF WISCONSIN

Final examinations June 5 to 11 closed the work of the second semester. Commencement occurred on the evening of June 12, and was made notable by its speaker, Prof. Richard Green Moulton, of the University of Chicago, who took for his subject "Fiction as an independent interpretation of life." The exercises were held in the auditorium of the city library to accommodate the large attendance of guests who completely filled the hall. Thirty-one students were graduated. Preceding the exercises a class supper was

given at the capitol café, with fifty-one covers for the faculty, the students and their guests. There was a class picnic for the faculty and students on June 1 at Turvillwood.

Entrance examinations for the class of 1919 were held on June 14. The Summer Session opened on June 24, with thirty-three in attendance, twenty-three taking the general course for public library work, and ten the course for teacher-librarians. Of those in attendance, twenty-nine are from Wisconsin, and one each from Illinois, Montana, North Dakota, and Kansas.

Further positions for the class of 1918 are announced as follows:

Josephine F. Clarke, senior assistant, branch department, New York Public Library.

Maude V. Dickinson, organizer, Marathon County Training School Library, Wausau, Wisconsin.

Marie Houston, reviser, Summer Session, Wisconsin Library School.

Mary R. Kobetich, assistant reference librarian, Seattle Public Library.

Elizabeth Royce, head of circulation department, Waterloo (Iowa) Public Library.

MARY EMOGENE HAZELTINE, *Preceptor*.

PRATT INSTITUTE SCHOOL OF LIBRARY SCIENCE

At the alumni supper the celebrating classes united with the class of 1918 to present the school with \$100 to be used to convert the roof of the library stack just outside the west windows of the class rooms into a roof garden. This has long been a pet project of Miss Gooch, and the twentieth celebration of her class was made the occasion for its realization.

Fourteen members of the class of 1918 left salaried positions to come to the school. With the desire of seeing how much the course added to the earning capacity of these students, we averaged their salaries before and after, and found that there was an advance of \$280 in the salaries of the group.

A second examination for admission to the class of 1919 will be held Sept. 6. This may be taken either at the library or at the applicant's home. School opens Sept. 16.

JOSEPHINE ADAMS RATHBONE,
Vice-Director.

[Notes of other library schools have been held over for the next issue, for lack of space.—Ed. L. J.]

Review

CLARKE, EDITH E. Guide to the use of United States government publications. Boston: The F. W. Faxon Co. 308 p. O. \$2.50 n. (Useful reference series.)

Many qualifications unite in the author of this volume to promise an exceptionally in-

formed and useful book in this broad but intensively cultivated field. And the promise is richly fulfilled. Miss Clarke was the first chief of cataloging in the newly organized office of the Superintendent of Documents, 1896-98; as compiler of the early numbers of the Monthly Catalogue, volumes 1-2 of the Document Catalogue and volume 1 of the Document Index she did much to establish the sound principles and the admirable practice which have always marked the bibliographic work of that important office. As a librarian of long service in both principal and auxiliary posts and in differing types of libraries she acquired that first-hand experience which alone entitles one to speak of Government publications. To this she has added some years of instruction of the subject in the Syracuse University Library School and a later thoro study of the research and findings of the Printing Investigation Commission and the development and content of that law which, for the past nine years, the Joint Committee on Printing vainly has sought to enact.

The book is a rich mine of accurate information, revealing on every page nuggets of fact, footnote, reference and quotation. One is easily persuaded that very little which a librarian ever will need to know about the subject has escaped the tireless and painstaking author. It is written not only out of full knowledge but (as the scientific historians would say) is thoroly "documented" with near 200 foot-notes, 35 pages of bibliography (over 500 separate references) and a 20-page index.

Its aim, its proposed (and varied) appeal are thus stated by the author—"the work is not intended only as a manual for instruction in library schools; nor for depository libraries only. It has the needs of depositories, chiefly of those which are public libraries, largely in view, of those which are college libraries somewhat. But the needs of the state libraries and the largest libraries which maintain documents departments it regards not a whit. . . . Also the writer would be glad if she could enroll among those whom the book can help, the growing number of students and teachers who use the national publications."

That "state libraries and the largest libraries which maintain documents departments" are thus left in outer darkness is due to the keynote—the very sensible basic premise of the book that Government publications in libraries are no different from other books, are not a sacro-sanct class of books calling for separate and peculiar esoteric treatment

but should be given the same footing as any other books and their publishing should be conducted on the same principles and methods as publishing business in private hands. This conceded, the book is in fact thru its comprehensiveness and its extensive bibliographic apparatus of the highest value to all libraries.

In one part or another the book also consciously addresses itself now to the immature student of library science, now to the untrained librarian of the small library (tho just here with rather formidable mien it is feared), again to the depository library and frequently—and with the most unsparing criticism, the utmost frankness and a relentless citation of damning chapter and verse—to any one who is or may become interested and influential in directing Government printing policies. Federal printing scandals are cataloged, waste and duplication laid bare; inefficiencies of management and method are indicted, ignorance and indifference in administration are censured and unerringly ascribed to its control by a shifting political committee and to the choice and dismissal of Public Printer and Superintendent of Documents for partisan, not professional reasons.

Miss Clarke's account, naturally and properly is fullest since 1895—a date which, no matter what reforms still press for achievement, surely marks the end of the Dark Ages of document distribution and cataloging—when the present printing law was passed and the Documents office and work created. Due credit is given Dr. Ames for his excellent pioneer work in the Interior department, Poore's Descriptive Catalogue is noted as including early documents, yet there is too little in this very useful volume to show that the Congressional Set had a copious and significant (if not a bibliographically attractive) existence before the 15th Congress. Gen. Greely's checklists appear only as items in the bibliographies, the valuable American State Papers are nowhere noted nor is any attempt made to indicate the extent, high historical and social value and peculiar bibliographic difficulties of these earliest documents.

Miss Clarke is first and most ardently a cataloger and bibliographer and it is these aspects (especially their conservative aspects) of this difficult subject that are accorded most space, the most circumstantial discussion, the keenest and most cogent argument and an intensity of conviction now and then (as on p. 66-67) fairly picturesque and compelling.

Looking more closely at the substance and structure of the book it may fairly be said that while the author knows an amazing

amount about her subject, she is not equally gifted in logical arrangement and clear and unencumbered exposition. The matter too often is not firmly knit together (especially true of Part I); there are too many sentences which might and should be clearer, e. g., "As has been seen, the subject of the activity of Congress is in the form of bills and resolutions" p. 140; and there is enough general vagueness or diffuseness to contrast oddly and unfavorably with the author's evident and well-known mastery of the subject. The book would be the better for a careful tho not extensive clarifying, re-arrangement and compression.

J. I. WYER, JR.

[It should be added that Miss Clarke in her book persistently continues to urge the principle of government publication consistently upheld by the A. L. A. committee and by the LIBRARY JOURNAL, of independent publication of the documents of the executive departments submitted to Congress rather than as parts of the numbered Congressional series in which they are so easily lost to sight except by the expert user. This "counsel" of perfection must remain the standard aim, despite any compromise forced by the unwillingness of Congress to omit from the Congressional series any documents whatever addressed to the Congress and thus making part of its record.—Ed. L. J.]

Librarians

ALLEN, Amy, B.L.S. New York State Library School, 1912, resigned her position in the catalog department of the Cincinnati Public Library to take charge of the cataloging at the University of Kentucky Library, Lexington.

BAKER, Charles M., B.L.S. New York State Library School 1918, has gone to Camp Jackson, Columbia, S. C., as assistant camp librarian.

BALZ, Leonard, Jr., chief of the registration department, Public Library, St. Louis, Mo., is assistant at the Camp Library, Camp Hancock, Georgia.

BAXTER, Ethel L., New York State Library School 1917-18, has been appointed temporary assistant in the New York State Library School.

BEACH, Harriet A., formerly of the Buffalo Public Library, is hospital librarian at Camp Hancock, Georgia.

BEAL, Helen Marjorie, Carnegie 1914, has resigned her position of children's librarian of the Hazelwood branch, Carnegie Library of Pittsburgh.

BECKFORD, Esther, Simmons 1917, was married July 3 to Charles Wesley Williams.

BEECH, Ruth S., Wisconsin 1918, has been appointed children's librarian at the Public Library at Fond du Lac, Wis.

BLANCHARD, M. Gertrude, Carnegie 1910, has been appointed librarian of the West End branch, Carnegie Library of Pittsburgh.

BRONK, Clara L., New York State Library School 1914-15, has resigned as assistant in the Lake Erie College Library to take a similar position at Wells College, Aurora, N. Y.

CALKINS, Ruth H., New York State Library School 1913-14, has resigned her position as assistant in the Wellesley College Library to become assistant branch librarian at the Bushwick branch of the Brooklyn Public Library.

CAMPER, Elta, California 1917, has resigned her position in the California State Library to spend some time at her home in Berkeley.

CARLTON, Marjorie F., Wisconsin 1917, is index clerk in the Bureau of Ordnance, Quartermaster General's Office.

CLARK, Charlotte, Wisconsin 1917, who completed the training course for children's librarians in the Cleveland Public Library during the year, has been elected children's librarian of the Chisholm (Minn.) Public Library.

CONGDON, Fern L., Wisconsin 1914, has been appointed cataloger in the Superior (Wis.) Public Library. Since graduation she has been on the staff of the Wisconsin Historical Library.

COOK, F. H., of the Public Library, Dayton, Ohio, is assisting at the Camp Library, Camp Sherman, Ohio.

COX, Mary Frances, Carnegie 1916, is doing substitute work in the children's department of the Carnegie Library of Pittsburgh.

DALE, Mary, county librarian, Los Angeles, Cal., is hospital librarian at Camp Kearny, Cal.

DANIELS, Esther, Riverside 1914, librarian, Boys' High School, Riverside, has returned from her one year leave of absence which she spent at the University of California, Berkeley. She is a member of the teaching force of the summer school 1918, Riverside.

DAVIS, Elizabeth L., New York State Library School 1913-14, was married on June 29, to Wright McCallip at Sag Harbor, N. Y.

DEARBORN, Virginia, Riverside 1914, Pomona College 1918, is employed in the Public Library at El Paso, Texas.

DICK, Jane, director of branch libraries under the Los Angeles Library Board and the Los Angeles Playgrounds Commission, is hospital librarian at Camp Logan, Texas.

DRURY, F. K. W., assistant librarian, Univ. of Illinois Library, Urbana, Ill., is to take charge of the Camp Library at Camp Wadsworth, S. C., August 15.

ELSE, Ethel E., Wisconsin 1915, has been appointed assistant field librarian for the South Dakota Free Library Commission, at Pierre. Miss Else has been cataloger at the Madison (Wis.) Free Library since her graduation.

FANNING, Elizabeth L., Simmons 1916, was married July 2 to Charles Holloway Crennan.

FARR, F. K., librarian, Lane Theological Seminary, Cincinnati, Ohio, is assisting at the Camp Library, Camp Sherman, Ohio.

FAXON, F. W., long known in library circles as the chairman of the A. L. A. Travel Committee and former secretary of the American Library Association, has purchased the Library Department of The Boston Book Co., of which he has been manager for over twenty years. He will continue the business under the name of the F. W. Faxon Co., at the same address as of old, 83 Francis St., Back Bay, Boston.

FLETCHER, Robert S., librarian, Amherst College Library, Amherst, Mass., is assisting at the Camp Library, Camp Mills, N. Y.

FREDERICK, Frances, New York State Library School 1917-18, has taken a position with the Detroit Public Library.

FRIEDEL, Esther, Wisconsin 1914, has accepted the position of librarian of the Public Schools of Bisbee, Ariz. She has been in the children's department in the Brooklyn (N. Y.) Public Library for the last three years.

GIBSON, Mrs. Adelno (Mabel E. Leonard), B.L.S. New York State Library School 1906, has received an appointment on the staff of the University of Chicago Library.

GILCHRIST, Captain Donald B., B.L.S. New York State Library School 1915, was married on June 26 to Ella M. Trowbridge at Des Moines, Ia.

GLOVER, Freda M., Wisconsin 1913, who has been children's librarian in the East Portland branch of the Portland Public Library, has accepted a part time position in the children's department of the Seattle Public Library, taking several courses in the University of Washington in addition to her library work.

GODDARD, William Dean, librarian, Deborah Cook Sayles Library, Pawtucket, R. I., is assisting in the work of the Library War Service in the Charleston Naval District.

GORSE, Edwin Sue, from the King's County Library, Hanford, Cal., is hospital librarian at Camp Bowie.

HALLSTED, Sarah, B.L.S. New York State Library School 1915, will succeed Paul R. Byrne, B.L.S. 1915, as librarian of the National Bank of Commerce in New York City. Miss Hallsted became first assistant in the National Bank of Commerce last December.

HARPER, E. C., of the State Library, Albany, N. Y., returns to Camp Upton, N. Y., August 1, as assistant in the Camp Library.

HAWKINS, Eleanor E., head cataloger of the Chicago Historical Society, has accepted the position of organizer at the Public Library of Bridgeport, Conn.

HOLZBERG, Ethel, Library School of the New York Public Library 1916-17, has resigned from the staff of the Cincinnati Public Library to become chief of files in the Production Division of the United States Ordnance Department. Miss Holzberg is located at Cincinnati.

HOWARD, Anna, New York State Library School 1918, has been appointed index and catalog clerk in the Office of the Quartermaster General at Washington, D. C.

HUMPHREY, Mary Brown, Pratt 1918, formerly librarian of the Girls' High School in Louisville, has been made reference librarian at the State College, Pullman, Wash.

INGRAM, Lottie N., Wisconsin 1914, has been elected librarian of the Wellington

(Kan.) Public Library, resigning her position as reference librarian in the Superior (Wis.) Public Library.

IRISH, Marguerite, St. Louis Training Class 1916, has resigned from the catalog department of the St. Louis Public Library to accept the position of assistant librarian at the Missouri State University School of Mines and Metallurgy at Rolla, Mo.

JEFFERS, LeRoy, manager of the circulation department book order office in the New York Public Library, was married to Rose Miller Saturday afternoon, June 29, at the home of the bride, in Connecticut.

JOHNSTON, Mary Jane, Carnegie 1914, has been acting as substitute assistant in the Carnegie Library School during June and July.

KAUTZ, Dorothy, Wisconsin 1911, died in Des Moines, Iowa, April 11. She had been acting as secretary in the office of the state director of the Red Cross and was under appointment for work in France, when she was taken ill with scarlet fever.

KEATOR, Alfred D., recently of the Carleton College Library, has been elected librarian of the University of North Dakota. Mr. Keator is serving as assistant librarian at Camp Humphreys, Va., during July and August.

KELLOW, Ethel, Carnegie 1911, has been appointed librarian of the Coolidge Corner branch, Brookline Public Library, Brookline, Mass.

KENDIG, Katharine, Library School of the New York Public Library 1916-17, has been appointed second assistant in the library of the American Telephone and Telegraph Company, New York. Miss Kendig was formerly on the staff of the East Orange (N. J.) Free Public Library.

KIEMLE, Katherine, Wisconsin 1910, has been made librarian of the Benson Polytechnic School, Portland, a high school for boys. She has been on the staff of the Portland (Ore.) Library Association for several years.

KIMBALL, Theodora, Simmons 1908, has been made an editor of *Landscape Architecture*, the official organ of the American Society of Landscape Architects.

KNIGHT, Marion A., New York State Library School 1903, resigned her position with the H. W. Wilson Company to accept the

librarianship of the United States Rubber Company Library, New York City.

LANCEFIELD, Hilda M., B.L.S., New York State Library School 1916, joined the staff of the Brooklyn Public Library in August as assistant branch librarian.

LEETE, John H., director of the Carnegie Library of Pittsburgh, is on temporary leave of absence in Washington where he is in charge of the classification and codification of all war department material.

LITTLE, Elizabeth W., New York State Library School 1915-16, has resigned her position with the Wells College Library to take a place on the staff of the Detroit Public Library.

LUTHER, Mrs. Jessie L., Wisconsin 1913, acting reference librarian of the Calgary (Alberta) Public Library, has been elected to a similar position in the Superior (Wis.) Public Library.

McDOWELL, Ella R., librarian, Danbury Library, Danbury, Conn., goes to Camp Devens, Mass., as assistant in the Camp Library beginning August 1.

McKILLOP, Samuel A., director of extension, Public Library, Milwaukee, Wis., is assisting in the Camp Library at Great Lakes Naval Training Station, Ill.

McLAUGHLIN, Ruth, California 1917, temporarily acting as assistant in the Colusa County Free Library, has returned to her position as assistant in the Sutro Branch, San Francisco, of the California State Library.

MILLER, Mrs. Minnie Dearing, librarian of the Jefferson branch, Free Public Library, Louisville, Ky., is hospital librarian at Camp Taylor, Ky.

MOEHLMAN, Lillian E., Wisconsin 1917, has accepted the appointment of cataloger in the Madison (Wis.) Free Library.

MUNN, Dorothy, Simmons 1911, has been appointed assistant in the Winchester Repeating Arms Company Library at New Haven, Conn.

NORTON, Ruth, New York State Library School 1915-16, has been appointed librarian of the Washington Junior High School of Rochester, N. Y.

PERKINS, Hildegard, Western Reserve 1917, has been appointed to a position in the U. S. Signal Corps office, War Department.

PICKETT, Amelia T., Carnegie 1916, will begin her duties August 1 as librarian of the Sarah Sargent Paine Memorial Library, Painesdale, Mich.

PIERCE, Marian Marshall, Carnegie 1914-15, has resigned as children's librarian of the Public Library, Flint, Mich.

POTTS, Marion E., Wisconsin 1912, acting-assistant in the Municipal Library in the extension division of the University of Wisconsin, has accepted a government position in the statistical department of the shipping board, Washington, D. C.

PRATT, Ada M., Wisconsin 1915, who has served as assistant field librarian for the South Dakota Free Library Commission has resigned, to accept the librarianship of the Watertown (S. Dak.) Carnegie library.

ROBB, Ena, Library School of the New York Public Library 1912-16, has left for France on war service.

RUPP, Alica, Library School of the New York Public Library 1913-15, is connected with the Embarkation Division of the United States War Department, Washington.

SHARP, Kathryn, from the Carnegie Library, Pittsburgh, Pa., is assistant in the New York Dispatch Office of the Library War Service.

SHELP, Blanche B., Wisconsin 1917, has received appointment as librarian of the Panama Canal Zone. For the past year she was librarian and taught office methods in the Scudder School, New York.

SKARSTEDT, Marcus, librarian, Public Library, Evanston, Ill., is camp librarian at Camp Pike, Ark.

SLAUGHTER, Dell Pemberton, Riverside 1917, is index and catalog clerk at Washington, D. C.

SMITH, Gladys, Wisconsin 1912, has accepted the position as secretary to the librarian of the Spokane (Wash.) Public Library.

SMITH, Ora I., from the Grinnell College Library, Grinnell, Iowa, is hospital librarian at Camp Sevier, S. C.

SPICER, Inez, New York State Library School 1913-14, has received an appointment as index and catalog clerk in the Office of the Quartermaster General at Washington, D. C.

STAUFFER, Robert E., New York State Library School 1917-18, is filling a temporary

appointment as assistant in the reference section of the New York State Library.

STEARNS, Helen J., who is the head of the traveling library work of the Library of Hawaii in Honolulu, has been granted a six months' leave of absence and has come to the United States. She will spend part of the time at her home in Cleveland and part in traveling thru the East.

STEWART, Lavina, Wisconsin 1913, assistant cataloger at the University of Wyoming has been chosen for similar work at Grinnell College for next year.

STRETTON, Ruth H., of Woburn, Mass., has been appointed to the staff of the Somerville Public Library.

SWERIC, Vivian, Wisconsin 1917, received promotion in March to the librarianship of the Wheeler branch, Public Library, Evansville, Ind.

THOMAS, Anna B., of the Public Library, Youngstown, Ohio, has joined the Headquarters staff of the Library War Service, Washington, D. C.

VOSPER, Zaidee B., New York State Library School 1918, will return to the staff of the Detroit Public Library in October.

WALKLEY, Raymond L., B.L.S. New York State Library School 1913, and assistant librarian of the Minneapolis Public Library, was married on June 28 to Frances E. Day at Minneapolis, Minn.

WEST, Eva, Riverside 1914, has completed a year at Leland Stanford Jr. University and will take Lillian Dickson's place at Riverside Public Library during the summer as reference librarian. It has been announced that Miss West will take a position in the Lane Medical School Library next fall.

WIGGINS, Harry H., from the Lebanon University Library, Lebanon, Ohio, is assistant in the Camp Library at Camp Taylor, Ky.

WILKIN, Ralph H., librarian, Supreme Court Library, Springfield, Ill., is assisting in the Camp Library at Camp Grant, Ill.

WOODWARD, Emma, assistant librarian, Public Library, Wilmington, N. C., is assisting in the Camp Library at Camp Lee, Va.

WRIGHT, Ethel Connett, Carnegie 1909, has been made chief of the children's department of the Public Library, Toledo, Ohio.

THE LIBRARY WORLD

New England

MAINE

Augusta. In anticipation of the opening of the legislative reference department of the State Library authorized by the last legislature, there has been considerable shifting of other departments so that the new department may be most accessible for the legislators. The department will be under the charge of Marion Brainard.

Brunswick. Gerald G. Wilder, librarian of Bowdoin college, in his annual report for the year ending June 19, 1918, gives the number of volumes in the library as 118,344, the accession during the year being 2555. The library received 600 volumes of poetry and classical literature, the bequest of Isaac Bassett Choate and more than 600 volumes, the gift of Mrs. Thomas Laughlin and her daughter, Mrs. James A. Clarke of Portland. This collection contains nearly all of the first edition of the early political economists as well as many volumes of recent date. From Hon. Augustus F. Moulton of Portland, class of 1873, the library received a copy of the "Memorials of Maine," compiled by him. It is of interest to record, says Mr. Wilder, that a set of the Outward Bound edition of the works of Rudyard Kipling, purchased during the year, was recently the property of Captain Franz von Papen.

North Jay. The Niles Memorial Library was dedicated Friday evening, June 28, with suitable exercises in its memorial hall. The library is the gift of the four sons and two daughters of Varennes and Mehitable Niles, who spent their entire life in Jay. The building is two stories high, of brick and granite. The sum of \$5000 has been given for its maintenance by the donors.

VERMONT

Burlington. During May the work of moving the State Library to its new quarters from the State House was largely completed. About 77,000 books and pamphlets were moved. The stock of state publications including session laws, court reports, statutes and department reports and other public document which the State Library distributes either by sale or gift were not moved during May but will probably be transferred to the new building during the summer.

MASSACHUSETTS

Holyoke. The success of the branch of the Public Library opened in the Rosary building in ward one has been so marked that library officials are considering opening a second delivery room in South Holyoke this fall.

Lenox. Andrew Carnegie has given a fund for a new electric lighting system for the Lenox Library, a fund for recataloging the library has been given by F. Augustus Schermerhorn and Grenville L. Winthrop has given money for the restoration of the library building to its original Colonial design.

Lynn. A petition has been presented to the board of trustees of the Public Library for the opening of a reading room in East Lynn. Residents in this section now have to pay double carfare to visit the library building.

Northampton. Miss Josephine Clark, librarian of Smith College, has a farm in Chesterfield, a town about fifteen miles away, which is being worked by Smith College girls. The girls work in relays, each unit covering a period of two weeks between rests. The farm is planted to two acres of beans, five acres of potatoes and several acres of sweet corn and vegetables. Some of the girls are assisting on neighborhood farms during the season.

CONNECTICUT

Bridgeport. The new North End and East Bridgeport branches of the Public Library were opened in July, with an initial stock of about 4000 volumes in each building. The branches will be open afternoons and evenings, and messenger service will be maintained between the branches and the main building.

New Haven. Some interesting gifts were announced at the alumni luncheon at commencement in June. Besides the gift of \$100,000 from Mrs. James Harvey Williams for the benefit of the Yale University Press, in memory of Earl Trumbull Williams, '10, a gift of \$400,000 from William L. Harkness, '81, was noteworthy. Interesting news of future plans was revealed by Dr. Hadley. The new Harkness gift is to provide an educational building on the campus where Dwight hall now stands, to contain lecture and class

rooms and offices. Dwight hall will be transferred to the library next door, and ultimately the library is to have a new library building in a more central location, with sufficient room for growth. The present library buildings and the site they occupy have been relinquished to the college for its development. Another interesting announcement was that Nathan Hale's commission as captain in the Continental Army had been presented to Yale by Mrs. W. A. Read, of New York, as a memorial to her son, Ensign Curtis Seaman Read, who died for his country while still an undergraduate at Yale. An autograph letter by Nathan Hale went with it.

Middle Atlantic

NEW YORK

Albany. In his annual report of the State Library for 1917 James I. Wyer, Jr., the librarian, prefaces the detailed reports of the various divisions with an introductory statistical statement. The total resources of the library are estimated at 449,542 volumes (6936 in the library for the blind, 88,508 in the traveling libraries, and the rest in the general collection), and 150,000 pamphlets. There were 1542 institutions on the exchange mailing lists, to whom 36,296 state publications were sent on exchange account. Circulation for the year was 42,082 in the general library, 12,488 in the library for the blind, and 58,260 thru 1502 traveling libraries sent out. The total number of students in the Library School was 82, including attendants at the summer sessions. The staff numbered 120, including State Library, Library School, Educational Extension Division, School Libraries Division, and bindery. Appropriations for the year were \$265,076.36. The principal expenditures were \$107,122.03 for salaries for all divisions, \$42,845.10 for books, serials and binding, \$39,925.58 for grants to free public libraries and for their benefit, and \$63,328.08 for grants to school libraries. The possibilities for war service are reviewed in the report, both those actually undertaken and those projected for which special authorization and appropriation will be needed. Besides building up its collection of military books into a more adequate military library, a bibliography of the more important magazine articles on all related medical and surgical topics has been kept. The most important publication of the legislative reference section was Legislation bulletin 42, "Property exempt from taxation in the forty-eight states." Active work was resumed on the indexes of legislation and some progress made. In the law library the most important work undertaken was the systematic effort to restore the

collection of cases and briefs lost in the fire of 1911. As the result of circularization and personal solicitation a large amount of material bound and unbound, was secured. Its arrangement, binding, and indexing, must await a special appropriation. Part 2: Non-fiction, of the "List of books for prison libraries," was finished in the book selection division, but demand for the fiction list, previously printed, was so limited that publication of the second part was not undertaken. Special reports of the Library School, Educational Extension Division, Library for the Blind and School Libraries Division, are included in the report.

Johnstown. Twelve of the fifteen trustees of the Public Library tendered their resignations to Mayor C. W. Smith and the common council in June, the reason offered being, in brief, "the utter ignoring of the Board of Trustees by the present mayor in his designation of persons to become members of said board for terms commencing in July of this year. No objection is taken to or criticism made of any of the persons so designated by the mayor; nor is exception taken to the idea of women becoming trustees of the library." The excuse of the preponderance of members from a particular ward is regarded as a subterfuge. Two of the members resigning were new appointees. A long statement from the trustees is published in the *Gloversville Herald*, together with Mayor Smith's reply in which he states that "no person named by me for trustee this year asked for the appointment and no one for them, and each hesitated in accepting the call to service." All members of the board serve without compensation.

New York City. The annual report of the New York Public Library for the year 1917 shows a continuing increase in the use of the library system. In the reference department in the Central building 865,591 readers filed call slips for 2,252,659 books—a gain of about 3 per cent in readers and a loss of about 3 per cent in volumes used. In the circulation department 10,709,095 volumes were issued thru the 44 branches, the Travelling Libraries, and the Library for the Blind. This was an increase of about 6 per cent over 1916. The number of visitors to the Central building was 2,796,530, a gain of 15 per cent; in the branches the total recorded number of readers was 3,971,681. At the close of the year the reference department had 1,065,196 volumes and 318,225 pamphlets, the circulation department 1,154,384, making a grand total of 2,537,805 pieces. For the circulation

department 193,756 volumes were added, but 148,919 were withdrawn or discarded. The number of employes at the end of the year was 1244—552 in the reference department, 681 in the circulation department, and 11 in the Municipal Reference branch. During the year 19 per cent of the regular staff of the reference department resigned for better-paying positions and 8 per cent to enter the uniformed service of the government or some form of patriotic service. In the same period 27 per cent of the circulation department staff resigned. These figures do not include pages nor the mechanical staff of the library. The most notable development remarked in recent years has been the extraordinary increase in the use of the Central building on Sundays and holidays, where statistics have frequently exceeded those of Saturdays. Many times during the year the 768 chairs in the main reading room have been insufficient to accommodate the readers. In the technology and science divisions the war has had a great influence on the use of the library's resources. The most important exhibition was one illustrating the history of the water supply of New York City from 1639 to 1917, when the Catskill aqueduct was completed. The exhibition was open for six months, with an attendance of 101,878. No new branches were opened during the year, but four sub-branches were established, three in The Bronx and one on Staten Island. All kinds of patriotic war agencies were allowed to display their posters in the library buildings, and the library took an active part in the sale of Liberty bonds and war savings stamps, and in the collection of money and books for camp libraries. Certain branches have been used as headquarters by the local exemption boards, and in others the Red Cross has had work rooms established.

Utica. On June 21 the Utica Public Library completed twenty-five years of service to the community under its present charter. The first authentic mention of the existence of a public library in Utica is in 1825. From time to time the names, locations, administration and character changed until the Utica City Library, under the management of the school board, was formed in 1842, and served its purpose until 1893. At that time a new corporation was formed and a charter from the Regents of the University of the State of New York was granted to the Utica Public Library. Louisa S. Cutler was librarian from 1893 to 1895, and since that time Caroline M. Underhill has been in charge. At the time of reorganization in 1893 about 10,000 volumes

were on the shelves; in 25 years the total number has reached 93,532. The circulation of books has increased during the same period from 55,122 to 308,789 for 1917, the year just closed. The total number of active card holders is conservatively estimated at 15,000 while between 60 and 70 thousand individuals have at one time or another borrowed books. Work with children was introduced in 1896, and in December, 1904, the library moved into its present building. A number of gifts and bequests have aided in the development of the library's resources, a notable instance being the help given by the Industrial Library League, organized in 1905 for the express purpose of increasing the supply of practical and technical books. An industrial department has been the outgrowth of this effort. In March, 1911, the B Sharp Club presented to the library a collection of 227 volumes of music, and in 1917 a room was set apart for the music department. The library has over 8000 mounted pictures for circulation and school use, and an art gallery on the second floor makes possible exhibitions of pictures. For some time the library has been collecting and preserving maps, pictures, surveys, manuscripts, books and pamphlets published in Utica, or about Utica, or written by Uticans, in fact all printed material of local interest. The collection has grown so that a room on the second floor has been set apart for it. Many valuable gifts have been made by Thomas R. Proctor, one of the trustees. Two branch libraries have been opened and 14 deposit libraries are maintained in convenient locations. The yearly appropriations have grown gradually from \$7500 in 1893 to \$39,960 for the current year.

NEW JERSEY

West New York. The West New York Free Public Library has just celebrated its first birthday. The total circulation has been 77,403, with an addition of 2569 books, and a registration of 3564.

PENNSYLVANIA

Phoenixville. A tablet in memory of Elmira W. Pennypacker, for many years librarian of the Public Library, has been presented to the library by Esther G. Leggett and was dedicated with appropriate exercises June 23.

South Atlantic

MARYLAND

Baltimore. The patriotic and useful work of the Enoch Pratt Free Library is described by Bernard C. Steiner in the *Manufacturers*

Record for June 20, as a sample of what libraries all thru the country have been doing. The strengthening of war book collections, the collection of books and money for soldiers' libraries, the co-operation with the federal government in connection with the Liberty loans and the Food Administration, for which Dr. Steiner is library publicity director for the state, the display of pictures and posters from the battle fronts, the lectures given on the war fronts and the work of the Food Administration, and the use of branch rooms for Red Cross purposes, are some of the ways in which this library is helping to win the war.

NORTH CAROLINA

Durham. Word has been received from the Carnegie Corporation that Durham has been awarded the \$32,000 asked for by the local library for the purpose of establishing a Carnegie Library in Durham. This money, together with that which came from the sale of the old library building and site, will be used to construct a \$40,000 library here.

GEORGIA

A bill is pending in the legislature providing for the appropriation of \$5000 of state funds to be used by the Georgia Library Commission in extending library facilities to the rural districts. Under the caption "Books for the ruralists" the *Atlanta Constitution* of July 3 prints an editorial endorsing the bill. "Only 20 per cent of Georgia's population is urban; which means that 80 per cent of our people live in the country . . . absolutely without library facilities," says the editorial. "Georgia is one of twenty-two states having state library commissions; and it is the only one of the twenty-two which does not make an annual appropriation from the state treasury to enable its commission to carry on its work, and the only one whose library commission does not conduct a system of traveling libraries for the exclusive benefit of its rural population—and of the whole list of twenty-two states, Georgia is at the bottom in point of literacy! . . . The act has the unqualified endorsement of the Georgia State Federation of Women's clubs, the Georgia Library association, the United Daughters of the Confederacy, the Daughters of the American Revolution, the Georgia Educational association, the Georgia Historical association, and the state and county councils of defense."

East North Central

MICHIGAN

Detroit. A permit was issued in June to the Detroit Library Commission for the erec-

tion of the three-story steel-frame and stone public library on the west side of Woodward avenue, between Putnam and West Kirby avenues, at an estimated cost of \$1,235,000.

Highland Park. Land, valued at more than \$100,000 has been donated to the city of Highland Park by Mrs. Tracy McGregor, of Detroit. The land is to be used as the site of a municipal library. In accepting the gift, the Highland Park council agreed to fulfill conditions outlined in the offer, regarding the erection and maintenance of the library. Work on the building is to commence within five years after the end of the war. The city must appropriate at least \$5000 each year for five years for the purchase of books, and it must provide for the upkeep of the grounds and building.

INDIANA

The report of the State Library Commission for the year ending Sept. 1, 1917, gives the following summary of work for the year: Every public library in State visited; 11 public libraries established; 4 county libraries established; 17 gifts offered by the Carnegie Corporation; 9 library buildings completed; 296 visits made by the commission staff; 10 public library book collections organized; 29 school library book collections organized; 5 reorganization visits; 60 new townships given public library service; 12 district meetings attended by staff; 41 students instructed in Summer School; 44,684 circulation of traveling library department; 318 associations served by traveling libraries; 118 new stations served by traveling libraries; 600 volumes loaned to camp libraries; 514 dates arranged for 39 art exhibits; 17 towns supplied with Christmas book exhibits; camp library established and organized at Ft. Benjamin Harrison. The most important event of the year was the passage of the county library law, which went into effect July 1.

ILLINOIS

Danville. Work done by members of the Boys' and Girls' Canning Club which has been in existence for only a short while, has been placed on exhibit in the library, together with an exhibit of the vegetables grown in boys' and girls' war gardens.

Elkhart. A branch library has been opened in one of the offices of the C. C. Conn, Ltd., Co. Three hundred and fifty books, including fiction, music books, literature, histories, biographies, and books on industrial efficiency, electricity and the European war, have been placed in the branch.

East South Central

KENTUCKY

Louisville. Arrangements have been made with the Louisville Trust Company for a loan of \$310,000 to pay off a mortgage of that amount held by the Mutual Life Insurance Company of New York, on the old library building on Fourth street, now occupied by the Kaufman-Straus Company. The finance committee has been authorized by the board to issue bonds pending permission from the Capital Issues Committee. The bonds to be issued will be of \$500 and \$1000 denomination, bearing interest at 6 per cent. It is planned to make partial payment on the principal annually for the next five years. The resolution was adopted during the absence of four members of the board, including Mayor George Weissinger Smith and Librarian George T. Settle.

Louisville. Residents of the East End and friends of the library in other sections of the city have presented a piano to the Colored branch library at Hancock and Lampton streets.

Mountain

COLORADO

Denver. The William N. Byers branch of the Public Library was dedicated June 22. A special feature was the gift of a 35-foot flag-pole by C. W. Bond, in honor of the West Denver boys who have gone to war. This is the sixth library building to be opened in Denver, and is the only branch on the west side. The building has a book capacity of about 7000 volumes. It is built in the Italian style of architecture and was erected at a cost of \$22,000, the money being donated by the Carnegie Corporation. It is one of the most beautiful and artistic libraries in the city. The branch is named in honor of William N. Byers, a pioneer newspaper man of Denver. Helen Campbell will be the librarian. She is a graduate of Westminster College and of the New York Public Library School.

Pacific

CALIFORNIA

Los Angeles. About four years ago an effort was made to recognize the need of those engaged in genealogical investigations, and to increase and improve the collection of works on genealogy in the Public Library. The amount of money available was so small during the first two years, that only the requests of patrons were ordered, and such other works as were deemed indispensable

for use and growth. But between 1917 and 1918 the collection received many additions and increased one-third. There is now a very serviceable group of books for those who wish to trace their lineage from immigrants to the thirteen original colonies, and almost any demand for assistance can be satisfied to some extent. There is difficulty, however, in obtaining genealogical material relating to the South, and the library would welcome any aid which students of this science are able to afford. It needs information about the best books published on Southern families and town history, and the places where these may be bought.

Pomona. A branch of the Public Library has been opened at the corner of Tenth and Park avenue and is open every afternoon. The circulation of stereoscopic views is already larger than at the main building. The library is trying especially hard to interest the Spanish and Mexican families in reading, and Spanish story books and papers are gradually finding an important place.

Sacramento. Members of the city commission have been inspecting the old city library building on I street between Seventh and Eighth with a view to converting it into a hospital for the treatment of women with venereal diseases. It was the belief of the authorities that the structure could be made into a suitable place at little cost. The property is owned by the city.

San Diego. The annual report of the public library shows the year to have been the most active in the records of the library, the circulation of books amounting to 74,123 volumes. Expansion of floor space in the main library, with the addition of three new branches as well as other means for extended usefulness have been made possible thru a more generous appropriation than heretofore by the city Common Council. The work of collecting and forwarding books for the camp libraries has been faithfully carried on; and the other war phase of book demand—the call of the public for books on war topics and subjects growing out of war conditions—has been well sustained. The reference department has had a 75 per cent. increase in the number of questions asked. Two new features are the clipping file, consisting of about 1800 clippings, together with federal reports; and the circulating package libraries, which are enlarged from the clipping file to supply up-to-the-minute material, not yet in any other available form.

LIBRARY WORK

Notes of development in all branches of library activity, particularly as shown in current library literature. Material printed in this department is cumulated each year in the "American Library Annual."

BLIND, WORK WITH

After ten years of discussion the American Association for the Blind has adopted the revised Braille type, as best adapted for the use of those who read with their fingers. This type has been in use in Europe since its invention by Louis Braille in Paris in 1829. It was officially adopted by the Institution Nationale de Jeunes Aveugles in Paris in 1854 and introduced in England in 1868. It is taught in all schools for the blind except those in the United States. The other types for the blind used in the United States are New York Point and the American Braille, both of which will be gradually discarded. The first book printed in Revised Braille since it has been adopted by the American Association is Richard Harding Davis' story, "The deserter."

The New York Public Library recently added these war books to its collection in the department for the blind: Arthur Guy Empey's "Over the top," Coningsby Dawson's "Carry on," James Norman Hall's "Kitchener's mob," Fritz Kreisler's "Four weeks in the trenches," Sir Arthur Conan Doyle's "British campaigns in France and Flanders," E. A. Powell's "Fighting in Flanders" and Frederick Palmer's "My year of the Great War."

CHILDREN'S READING

Reading for children. Sidonie Matzner Greenberg. *Dial*, Dec. 6, 1917. p. 575-577.

DELIVERY OF BOOKS—BY PARCEL POST

Registered patrons of the Los Angeles Public Library may now receive and return books by parcel post, by paying a small deposit from which postage will be deducted, the deposit varying according to the convenience of the borrower and the frequency of his requests. The effect of this plan is expected to be a great saving of time to those who live at a distance from the main library, while the cost, in most cases, will be no greater than that of carfare. The privilege extends to patrons absent from the city on a vacation. St. Louis has had a plan of this sort which has worked out successfully, partly owing, no doubt, to the fact that the post office there circularized the city calling attention to the possibility of

obtaining books by mail, and to the co-operation existing between the library and the post office for this public benefit.

EXTENSION WORK

Through its extension department, established a year ago, the Public Library of Missoula, Mont., is carrying the privileges of good reading to every part of its county, which is larger than the whole state of Delaware. The one disappointing feature is that country school districts are not taking full advantage of the opportunities afforded by the county library law.

The Missoula Public Library contains about twenty thousand volumes, and a year ago it took a contract to serve the whole of Missoula county. This it does thru the main library and fifteen stations in various post-offices, schools and stores of the county.

One of the first acts of the library board was to offer free delivery of books by parcel post to all county residents. During the winter months the parcel post service is appreciated and well used, but in summer when the roads are good patrons prefer to go to either the main library or the branches.

Persons to the number of 1591, living outside the city, are now card-holders, and during the last year 10,240 volumes were circulated from the stations outside of Missoula, or by parcel post. Books loaned to people near enough to Missoula to visit the library in person are counted in the circulation of the central library.

Wherever there are enough people to warrant the establishment of library service, a local board of three persons is appointed at a public meeting of the citizens of the locality to assist the librarian of the county library in making arrangements.

HIGH SCHOOL LIBRARIES

Chats with students about books. Raymond W. Pence. *Eng. Jour.*, Dec., 1917. p. 677-685.

An account of the writer's attempt to stimulate the interest of freshmen in general reading. Contains a bibliography.

The high-school library: the department and its equipment. *Amer. School Board Jour.*, Nov., 1917, p. 22-23, 51, 52; Dec., 1917, p. 25-26, 77.

POSTERS

Poster bulletins. Francis Hoyt Ford. *Wis. Lib. Bull.*, Apr., 1918. p. 89-91.

One of the best ways of directing the reading public is by means of poster bulletins displayed in libraries, banks, city halls, club houses and other public places. In order to do their work satisfactorily the bulletins must be timely, neatly made and striking. If the poster takes too much time to make some other way should be found to bring the books before the public, who should be attracted by a desire for the books and not by the beauty of the poster.

Select your pictures for posters from magazines, either taken from the covers or from the advertising section, and file them away for future use. Of course those done in color are more effective, but an occasional black and white poster is a relief. Do not have more than three pictures on the poster. A small picture may be made to appear larger by mounting it on a harmonizing sheet that gives a border, or by drawing a line in black or color, around the picture about a half inch from the edge. Do not crowd too many pictures on one poster. Ernest Batchelder, in his book on "The principles of design" has a very helpful chapter on "Measure balance." A cut out figure is very effective on a bulletin: Only one figure should be used for this unless the figures are directly related. After cutting out the figure or group of figures neatly, mount them on the board, taking care that the edges are pasted, then go around the edge of the picture with black drawing ink in a decided line, putting in the shadows with water color paint on the board itself, and you will be surprised how much a part of the board the picture will look. For the title or headlines of the poster it is better to have several words or a catchy phrase rather than just the name of the class book or subject which the poster represents, and the plainest of letters should be used. It is not difficult with a little practice to do this lettering by hand but letters in black and white may be bought of the Dennison Manufacturing Company. A rubber stamp outfit can also be used. In lettering by hand, block in the letters in pencil, then follow the lines in black drawing ink and fill in the letters in color or black if preferred. If the board is very dark and you wish the letters lighter in color, go over the letters with white water color paint, and after this is dry, any color can be put on very satisfactorily. Old English and other fancy lettering, tho beautiful, is too difficult to do well, so except for a Christmas

poster it is not practical. In putting on a verse or quotation, the letters should be much smaller than the title, and in black letters, or if the board is too dark in plain color. If you do not find an appropriate verse or quotation leave it out entirely and use a longer title.

Heavy double-faced cardboard makes the best background for poster bulletins as it does not warp or break easily and both sides can be used if necessary. A very good substitute is oatmeal wallpaper, as the colors are soft and good and it is cheap and effective. Select the most pleasing of neutral tints such as grey, fawn color, dull green and brown. To do away with lists the bulletin should be displayed on an easel backed board placed on a table with the books which it represents.

POSTERS, PATRIOTIC

The phrase originating with George W. Coleman, that "four 'g's' will win the war: British grit, French genius, Italian gallantry and Yankee gumption," inspired Cora L. Stewart, librarian in charge of one of Boston's reading rooms, to write to several of her associates suggesting that the phrase be made the basis for a number of posters prepared by the children.

"The result," says the *Boston Transcript*, "is a display of posters showing originality in arrangement and admirable selection from the vast amount of material printed in America and the allied countries.

"Miss Stewart's particular poster has its 'four g' legends in Arabic, since her duties bring her into close association with some 8000 Syrians of the neighborhood. All the Chinese residents of the city, it may be said in passing, live in the zone of this library, as well as large numbers of Greeks, Russian Jews, representing, for the most part, people of distinct literary tastes, many Albanians and those of Irish descent. To all these the war is a matter of vital concern and absorbing interest.

"Among the librarians who responded to Miss Stewart's suggestion were those in the children's department of the main library, City Point, South Boston, South End, Codman square, Upham's Corner and West Roxbury. Simmons College also contributes a stirring poster. The national characteristics of the 'four g's' are shown in a variety of ways and one poster-maker chose a picture of women workers in cement to illustrate Yankee gumption. Another shows a motor car with Columbia at the wheel and Uncle Sam blowing a bugle call for "three speeds forward and no reverse."

PUBLICITY

Publicity. Cornelia D. Plaister. *Iowa Lib. Quar.*, Jan.-March, 1918. p. 72-76.

Enthusiasm, knowledge of our resources, and successful publicity go hand in hand. A thoro knowledge of our goods promotes the greatest enthusiasm, for we must first convince ourselves of the reliability of our tools before we can convince others. This enthusiasm should be carried to our board, for they as prominent business men and women have many opportunities of boosting the library that do not come to us. A "chatty" report at each board meeting is vastly more interesting than a statistical one, and these reports if preserved will furnish fine material for our annual report.

If we wish more patronage of the public library, the building should be clean and attractive and minor details such as even shades, the arrangement of the books on the shelves, growing plants in sunny windows, should be attended to, for the sake of promoting a friendly and inviting atmosphere that will make one glad to be there and resolve to come again.

Helpfulness and sincere service to our patrons is evidenced by the questions we ask. "What can I do for you today?" "Have you received attention?" or "What else can I do for you?" the latter stated affirmatively bringing questions that might not otherwise have been made.

When we give our sincere and sympathetic attention to each and every patron who comes into our library, we manifest the same spirit of service that is shown us when we purchase a suit and alterations are made.

Table displays of books, arranged in groups of two or three and opened at striking illustrations, when accompanied by an attractive poster are always successful in stimulating interest. The display should be in the rotunda or near the entrance, so that people coming in are met with the open book and not the cold forbidding steel stacks.

If street windows are too high for a poster and book display, the poster alone can be used to call attention to the books or to some activity of the library, such as an exhibit or a Sunday concert.

Advertisers tell us of certain appeals which should be emphasized in our poster and book list work. *Self preservation* is one, and may be used to introduce books on health and proper feeding of families. *Property holding*, *Reputation* and *Power* can be appealed to thru posters pushing better business books. *Tastes*, *Affections*, and *Sentiments* are for

more cultural lists and displays. Exhibits of local interest, whether antiques, book plates, bird and butterfly collections, or canned and dried fruits and vegetables, will attract many people to the library.

Talks and dramatic readings are often instrumental in bringing people for the first time to the library. A reception given once a year to the public school teachers is a splendid method of co-operation between school and library. During the evening the teachers should be shown our picture collection, our different exhibits, and all our material particularly helpful to them.

It is easy to devise methods of interesting the children. Contests with fairy tales, birds and animals, can be planned with appropriate answers, or a continued contest may be made from worn out picture books by placing three or more pictures from them on our bulletin board each week; the stories that they represent to be guessed by the children. No reward should be given them, save the child's name on the honor roll. To give a diploma to the child reading fifteen or twenty books of a printed list during the summer is a good stimulant for summer reading, but one should be sure that the child reads the books.

The better we build to-day, the greater the results will be to-morrow. Moreover, children are very often a channel thru which to reach the adults of a family. When parents come for the first time to see their child's name and several stars on an honor roll, it is the librarian's fault if they are not made to want to come again.

The public press is the greatest ally in combating the ignorance of library resources, but it is not enough to have carefully annotated lists. The casual reader is attracted far quicker with a short library story or by a short account of our various departments. Moving picture slides and down-town window exhibits are both excellent methods of publicity.

To reach the business man we should first have an intimate knowledge of the industries of our community; then get the books on these industries onto our library shelves; and third, get them into the hands of our patrons.

To let the business man realize the use he can make of the telephone in hurry-up reference questions, to issue desk blotters or a desk calendar with a business-like announcement of the library, to send out printed postals calling attention to certain books—all are good methods of publicity.

A book carefully selected may be placed at each plate when a luncheon is given by a busi-

ness club of any kind. Small dodgers sent with the water bills or wrapped in the grocery, meat or drug packages are good publicity.

The personal talk is the most convincing of all methods, and no invitation to talk on the library and its work should be refused.

We should at all times show that we are librarians not because it furnishes us with a job, but because "we believe that the public library is the university of the people and that each and every citizen of our community should be enrolled in that university."

Bibliographical Notes

The St. Paul Public Library has two bibliographies in preparation: one is a list of books in the library on railroads, and the other a list of books and magazine articles on the Mississippi river.

"A study of opportunities for women in the municipal civil service of the city of New York" has been published by the Intercollegiate Bureau of Occupations at 19 West 44th street, New York City.

The government has begun to print war pamphlets in foreign languages. The Committee on Public Information has issued "How the war came to America" in Bohemian, German and Polish and "American loyalty" in German.

The little article on "Patriotism and heroism," first written by Adam Strohm for the Detroit Public Library's *Library Service*, has been reprinted in full in *The Detroit* of June 24, as well as in several of the city newspapers.

In "Farm and home drying of fruits and vegetables," by Joseph S. Caldwell (Farmers' bulletin 984), the Federal Department of Agriculture has issued a practical statement of the different methods of drying which the department has tested and found acceptable.

The Public Library of South Australia, in Adelaide, announces in its last annual report that the difficulty of caring for the rapidly increasing collections of duplicate official publications from the other states has caused the library committee to cease preserving them, and they will be disposed of on an exchange basis if possible.

The Library of the U. S. Department of Agriculture has listed in mimeographed form (*Library Notes* no. 6, May, 1918) the biblio-

graphical work, special indexes, directories and lists of publications in progress in the department, with the bureau or section where each is filed or from which information is to be obtained.

Two more pamphlets of interest in the War Information Series published by the Committee on Public Information in Washington are "The war for peace; the present war as viewed by friends of peace," compiled by Arthur D. Call, secretary of the American Peace Society; and "Why America fights Germany," by Prof. S. P. Tatlock of Stanford University.

The Pacific Northwest Library Association has published its Proceedings for 1917, especially valuable for the splendid paper on the "Poetry of the war" by John Ridington, acting librarian of the University of British Columbia and Vancouver. Back issues of the Proceedings are available at ten cents each, to cover postage, and may be secured from Jacqueline Noel, Public Library, Portland, Ore.

The paper on the "Various incunabula and other rare works in the Library of the Surgeon General's Office," by Major R. W. Shufeldt of the Medical Corps, U. S. A., has been reprinted from the *Medical Review of Reviews* for June. Major Shufeldt has had unusual opportunity to study the rare volumes in this collection, and many of the pictures used in illustration of his article have never before been reproduced.

"Teaching citizenship via the movies" is the title of a special survey of civic motion pictures and their availability for use by municipalities prepared by Ina Clement of the New York Municipal Reference Library and published as a supplement to *Municipal Reference Library Notes* for June 26. This is special report no. 2 in the series recently begun by the library. Beside a survey of the field and a statement of the need for a film library, the agencies interested in the educational film are enumerated and a subject list of civic motion pictures is included.

A new periodical is the *National Efficiency Quarterly*, whose first number appeared in May. It is published by the National Efficiency Society at 119 West 40th street, New York City. This first issue, devoted to "Efficiency" is edited largely by Paul H. Nystrom. The second issue will be devoted to "Labor—as affected by war" and edited by William R. Hayward. Succeeding numbers will deal with "Management—under war

conditions," "Transportation—as changed by war needs," Foreign trade—during and after the war," each being edited by specialists in the subjects chosen.

Do you like Japanese prints? You may think you don't, but you will if you read the story of the Lady Steko Kaibara as written by J. C. Dana. In the first of the "Stories of the prints" which the Newark (N. J.) Museum Association is going to issue, he explains all the curious and interesting (when you know what they mean) details in the picture so that it tells a very pretty story of this lady, who "always from her youth was very fond of poems and often made some of her own." The artist has obligingly copied on the top of this picture one of her poems that every school child in Japan can say, and the picture itself is attractively copied in color on the cover.

The Rotary Club of Liverpool, England has prepared for the use of Allied soldiers and sailors visiting that city, an excellent map of Liverpool and its suburbs. On the back of the map is printed much interesting data on the points of interest in the city and on the lines of transportation. Excursions of interest are suggested, the location of hospitals, theaters, and clubs is set down, and information on postal matters, foreign money exchanges, etc., is given in condensed form. The compilation of this material was done by G. H. Parry of the Liverpool Public Reference Library, to whom we are indebted for the map.

At the Saratoga conference of the A. L. A. the Cleveland Public Library had for distribution two multigraphed statements. One was a statement of the reasons "Why America had to take part in the war," taken from the war message of President Wilson on April 2. The other was a tentative list of books and poems in answer to the question "What is patriotism?" The material was grouped under the headings Loyalty, Knowledge of and obedience to law, Knowledge of history (of other countries and our own), Sharing liberty (protecting weaker peoples and making citizens of the foreign born), Safeguarding liberty, Sacrificing for liberty, and Service thru liberty.

The Library, and the Museum Therein, is a new publication of the Newark Public Library whose first issue is dated July 1, 1918. Its purpose is "to interest more Newark people in their library, and museum, and to make it plain that to come to the main building is

worth while." Full of interesting items and pertinent comment, it should surely serve its stated purpose and pique the curiosity of many a Newarker until he goes to explore the inner chambers of his public library. Newark has also started a *Junior Museum News*, a four-page leaflet made up of material written or solicited by Junior Museum Club members, which ought to do much to stimulate interest among the children in their own and other people's hobbies.

Illiteracy, immigration, Americanization are all bound together so closely that it is difficult to disentangle them. When the military draft registration in Fresno, Calif., showed the percentage of alien registration to be 21.7 per cent, the State Commission of Immigration sent the director of its Bureau of Education to Fresno to study the problem. His "Report on Fresno's immigration problem," dated March, 1918, gives particular reference to educational facilities and requirements, with some constructive suggestions. Another valuable report is that on the "Americanization of foreign-born women," the account of an experiment made in Los Angeles in the summer of 1917 and also issued by the state commission. Another interesting pamphlet, this time from Wisconsin, is a discussion of "Illiteracy and Americanization" prepared by Amy Bronsky, supervisor of city grades, and issued by C. P. Cary, state superintendent in Madison.

DES MOINES PUBLIC LIBRARY HAS COUNCIL
Editor *Library Journal*:

For the past year the Des Moines (Iowa) Public Library has been organized and working under a Council similar to the one recently adopted by the St. Paul Library.

The Council is composed of the librarian, assistant librarian, heads of departments, branch librarians and secretary to the librarian. The meetings are held weekly for the discussion of the problems, aims, and methods of each department and of the library as a whole. Our Council is not large, but in order to have a group of ten department heads work together intelligently and successfully there should be some tangible system of co-ordination. In business the fact has long been accepted, that no force can work successfully and harmoniously as a whole, unless it works as a unit, and the

same principle is applicable to the successful administration of the affairs of a public library.

Council meetings in no way interfere with private conferences between members of the staff and the librarian nor with the regular bi-monthly staff meetings. The meetings are informal, the librarian presiding, and in his absence, the assistant librarian. To the Council meetings all sorts of vexing questions are brought for examination, discussion and solution. We also talk over new ideas for extending the work and service of the library. To me, as a member of the staff and Council, one of the most appreciable benefits to be obtained from such an organization as ours is the greater co-ordination of the work of the various departments, and almost as important, is the spirit of enthusiasm felt by each member of the Council in pushing the work of her special department toward the goal as outlined and approved by the Council.

In the Council, it is possible to arouse and establish a greater interest and sympathy in the policy of the library, and thru the department heads, who have had a part in shaping that policy, earnestness, enthusiasm and efficiency may be transmitted thruout the entire library staff.

GENTILISKA WINTERROWD,
Reference Librarian.

The Public Library of Des Moines, Iowa.

LIBRARIES' LIMITATIONS RECOGNIZED AND DEFENDED

Editor Library Journal:

In running over L. J. for June 5 I find following the editorial page the article by Mr. Carl L. Cannon on "After-war needs of reference librarians," and passing over several statements of his desires I come to that for a Municipal Year Book for United States founded on model of the English publication. Here crops up and out the old comparison of the United States and England, *without taking into consideration the area*. England could be completely lost in Texas and more or less misplaced in California, and in a dozen of our Mississippi Valley states could be nicely planted in the center still allowing room for exhibition purposes on the outside.

A rough calculation of centers of population of 5000 and over in the United States taken from our local directory comes to at least 1000. "Some job" to get the particulars about all these places—providing such particulars exist as listed by Mr. Cannon. Our state year books, of which he cites Wisconsin Blue Book, are the natural sources

for such information, but few states issue them in as good form as does Wisconsin. So far as I am aware no New England state does except Connecticut.

There are a lot of inquiries made at libraries which cannot in the nature of things be answered, and I do not think librarians should either blame themselves or be blamed for this failure. And as to what will be wanted when this cruel war is over, no one knows, no one mortal or any collection of mortals. One guess is as good as another and my advice is to carry on to the best of our limitations—for we all have them—we would not be librarians if we did not have limitations.

No, I am not saying anything about law libraries. They are very much alive and are doing their best and their bit in their own way all the time. We even have our own prophets and sungazers wondering what we will do "after the war is over." But mostly we are still carrying on.

DR. G. E. WIRE.

*Worcester County Law Library,
Worcester, Mass.*

AMERICAN BIBLIOGRAPHIES WANTED IN ENGLAND

Editor Library Journal:

May I ask American librarians to be kind enough to send me copies of any special bibliographies or reference lists they may publish? I am collecting material for a universal bibliography and already have some three million titles arranged in order of subjects. This will I hope ultimately be made available for public use as there is no subject catalogue on a really large scale in this country. I already have to think the Library of Congress and the New York Public Library for large donations.

R. H. PEDDIE.

THE RILEY ROOM FOR CHILDREN IN THE INDIANAPOLIS PUBLIC LIBRARY—NAMED FOR THE HOOSIER POET AND CHILDREN'S FRIEND, WHOSE GIFT OF LAND FOR A LIBRARY SITE WAS THE FIRST STEP TOWARD THE QUICKENING OF PUBLIC INTEREST WHICH RESULTED IN THE PRESENT SPLENDID LIBRARY BUILDING

WITH the holding of the district conferences throught the country this month, the outward and visible evidences of the second campaign for funds to maintain the Library War Service will begin to be manifest. Tho the original plan of holding a separate campaign has been modified to meet the wishes of the Secretary of War and the Commission on Training Camp Activities and the A. L. A. will instead join forces with the Y. M. C. A., the Y. W. C. A., and the War Camp Community Service in one United War Fund Campaign, this should not be regarded by librarians as a reason for any slackening of effort on their part. Rather will it be necessary to redouble every effort, not only for the sake of raising to the largest possible figure the share which the A. L. A. will receive of the final total, but even more that our association, numerically by far the smallest of the four banded together in this undertaking, may bear worthily its share of the responsibility and of the good hard work which will make the drive a success. It is to be clearly understood that all plans for the campaign are to be made by the four organizations working together. Joint state conferences will be held between Sept. 9 and Sept. 26, each organization having an equal representation on all committees. Librarians, who have always stood for co-operation, have here an excellent opportunity to practice what they have preached. The district meetings scheduled are designed primarily to inform the so-called "state directors" more explicitly of the co-operative plan of action agreed upon, so that they in turn may be able to answer questions and give aid and suggestion to the libraries in their states. Elsewhere in this number Mr. Frank Stockbridge, director of public information for the libraries' share in the campaign, outlines very clearly the *modus operandi* to be

followed, and it only remains for all the libraries, from the largest to the smallest, to settle down to the long pull and the strong pull and the pull all together, to make the A. L. A. come thru with flying colors and a record to be proud of.

AT its Saratoga conference, the American Library Association specifically sent its thanks to the National Education Association for the co-operation of the teachers and scholars in procuring books for soldiers. This co-operation has taken two important shapes. In many places school children have acted as scouts and collectors for books which the public is willing to give, and the schoolhouses have been made collecting centers for books on their way to library distribution. For the book drive, which is intended to be continuous, such organization of school children may well be made general thruout the country, under the proper administration by teachers and librarians acting conjointly. An even more important service is in the supply of text-books for educational requirements of the soldiers, for demand has shown the need of books for education quite as much as for recreation. School superintendents and many teachers have desk or examination copies of text-books which they may well spare for this high purpose, and some school buildings have considerable collections, little used, which can now be turned to good use. As Mr. J. C. Dana has pointed out, the job of educating our soldiers to their full usefulness for war and later for peace is so big that government administration may be found necessary, but meantime let us all do all we can to meet the need. The school master is abroad in a very literal sense across the sea as well as within our borders, and the war gives an unlooked-for opportunity to enlarge the after-school field of education and make sure that the parents

of the future will demand for their children a higher standard, a better, broader and more practical education than ever before.

It has been frequently emphasized, not least by Mr. James Bertram from the experience of the Carnegie Corporation, that unschooled librarians are and must always be in demand for the thousands of little libraries which cannot afford to pay salaries for full trained service. Dr. Williamson, in his paper in this issue, further explains this thought and makes some suggestions of interest for the education of the unprofessional librarians. Much has been accomplished for this class by library institutes, of which those held by the New York State Library authorities are an excellent example, but even these require travel and there will still be "stay-at-homes." Some of these are reached in Massachusetts under the excellent missionary system of the Massachusetts Library Commission. The method of the correspondence school, as is now suggested, may be usefully applied to librarianship and might prove a great boon for those who aspire to be real librarians and to do better service thru their small libraries. Certainly the suggestion is worth thinking about and working out.

A good deal of service has been asked and obtained by the government from librarians in developing filing and card reference systems, thru which only can records dealing with the millions of men and the thousands of subjects be kept in any kind of shape. The lack of such systems has not only wasted official time counting up to the millions in dollars but has produced confusion worse confounded which cannot be measured in loss by money terms. A good example of the methods worked out from library experience is described in the letter printed elsewhere from Mr. Sewall, now a lieutenant in charge of filing in the Statistical Division of the Adjutant General's Department. It is not permitted to officers

to contribute formal papers at meetings or to periodicals, but we have taken the liberty of utilizing this letter from Mr. Sewall in the interest alike of the Government and librarianship.

A PLEASANT feature of the year in some libraries is the reception in which the public generally are invited to come together for an inspection of the library and its workings, for acquaintance with its staff and for the social touch which helps to make community feeling. Even in so large a library as that of St. Louis Dr. Bostwick has made a point of setting aside specified dates on which the library will be open for inspection, altho the social reception is scarcely possible. In the smaller libraries, however, the library reception can take this shape. A chief purpose should be to induce those who use the library to bring with them others who do not use it, and thus increase the clientele and usefulness of the local library. It is often suggested that the stateliness and beauty of our library buildings seem to debar instead of inviting the very people whom the libraries in reality chiefly seek to reach and influence. If it can be made clear that at these library receptions it is not a question of good clothes or class distinction, but that the invitation is thoroly democratic, a good point can be scored for the real vitalizing effectiveness of the library as a center of community interest and service.

As we go to press comes the shock of the telegram which tells us that William H. Brett, for thirty-four years librarian of the Cleveland Public Library, was killed by an automobile on Saturday, Aug. 24. There is no one in the library profession to-day more universally loved and respected than Mr. Brett, and our hearts are heavy at the thought of "carrying on" without him in days to come the varied activities in which his patriotism and public spirit made him an active worker and an inspiration to all who were associated with him.

THE LIBRARY WAR SERVICE FUND CAMPAIGN

BY FRANK PARKER STOCKBRIDGE, *Director of Information, Library War Finance
Committee of the American Library Association*

WE are going to ask the American people, in the week beginning Nov. 11, 1918, for \$3,500,000 with which to carry on the Library War Service for another year.

We are going to need the active, enthusiastic, untiring help of every librarian and member of a library board in the United States, to get this money.

We have got to get it!

That admits of no discussion. We have got to get every cent of \$3,500,000—and we ought to get twice as much. Perhaps we ought to have asked for twice as much in the first place; with the expansion of the United States Army to 4,000,000 effectives we surely are going to need it.

If the Library War Service of the American Library Association is even to approach the ideal aim of supplying every man of the fighting forces with exactly the reading matter he wants and needs, wherever he is and whenever he wants it, whether he be in a training camp on this side, on board a fighting ship or a transport or on duty overseas, then every member of the association, every friend, everyone who can by any means be pressed into service must help to the utmost in the effort to raise the necessary fund for the continuance of the work.

It is not going to be easy. The Library Association has joined forces with three other great war service agencies, the Young Men's Christian Association, the Young Women's Christian Association and the War Camp Community Service, to ask the people of the United States to give, for their combined work, the largest sum of money ever asked of a nation as a gift. On Nov. 11 the four organizations, operating for this purpose as a unit, will undertake to collect the stupendous sum of \$133,500,000 from the public! No such staggering amount has ever been asked as a gift; except for Governmental purposes, no sum so large has ever been named as the goal of a single public subscription, in all history! Unless this amount is oversubscribed,

the Library War Service will be seriously handicapped.

This, then, is a call to service—to a service no less vital, no less lofty than the service of those who bind up the wounds or minister to the spiritual needs of the soldier or the sailor. And just as our fighting forces have been grouped and merged and organized into one great unit, for more efficient service, so the forces of the four great organizations that serve the fighters are to be grouped and merged for the purpose of raising the "sinews of war" to enable them to continue to serve.

There is to be no merger of the war services of the Young Men's and Young Women's Christian Associations, the War Camp Community Service and the American Library Association. Each will continue to perform its specific, particular functions in its relations to the soldier and sailor. The Library War Service will continue exactly as it has begun, on a constantly expanding program, to establish and maintain its own direct service, thru camp libraries, dispatch offices and overseas organization; it will continue, too, to supply the books for the libraries of the Y. M. C. A., the Y. W. C. A., the War Camp Community Service, the Knights of Columbus war service, the huts of the Jewish Welfare Board, the Salvation Army, the Red Cross canteens and convalescent houses and to any and all other relief agencies that may be added to these. But for the purpose of raising the money necessary to carry on this work, and for this purpose alone, the combination already referred to has been effected.

The call now, therefore, is for team work.

If everyone who would have been eager and glad to help raise the modest sum which the American Library Association asks, in a campaign for that and nothing else, will join just as eagerly, just as gladly in the combined campaign and work twice as hard for the huge subscription that is asked by the combined organizations, enough and

more than enough for the needs of all will be obtained. Unless everyone helps we shall fail of our goal.

There is but one way to succeed. That is, for every man and every woman who is interested in any degree in the work and the service of any one of the four united organizations to work twice as hard for the combined fund as he or she would have worked for the interest of the one organization nearest and dearest.

That means that library workers—and we hope that this means everyone in any remote degree connected with or interested in any phase of library work—must realize that in working for the United War Work Fund they are working for Library War Service no less than if it were solely a Library Fund campaign.

The combination of interests was not of our seeking: it was brought about, however, from considerations of the common welfare and the general good, not merely of the organizations involved but of the fighting men in whose service they are enlisted for the duration of the war. The American Library Association, in point of money interest, is the smallest factor in the combination. We want to show the others—those whose money needs are many times the modest \$3,500,000 we require—that in point of effective work for the common good we are not the weakest but the strongest. It should be our pride to do many times more than our share—if the share of any individual or group in work for our soldiers and sailors can, indeed, be measured in dollars. The national executives and managers of war work of the four united organizations have met and planned the joint campaign in the most admirable and wholehearted spirit of co-operation. If the same spirit is continued down the line to the smallest local units and groups. If the strength of each can be enlisted for the good of all, the huge sum desired can be obtained—not otherwise.

It was at the suggestion—perhaps it should be said at the direct request—of the Secretary of War, thru Raymond B. Fosdick, chairman of the Army and Navy Commissions on Training Camp Activities, that the responsible national heads of the war

services of the various agencies engaged in relief and welfare work for our soldiers and sailors met and agreed to combine their money-raising efforts for the coming autumn and winter. The following statement, issued by the committee representing the Young Men's Christian Association, the Young Women's Christian Association, the War Camp Communities Service and the American Library Association, tells the story succinctly and comprehensively:

Seven distinct organizations have been recognized by the Government for service with the troops—the Young Men's Christian Association, the Young Women's Christian Association, the National Catholic War Council (Knights of Columbus), the Jewish Welfare Board, the War Camp Community Service, the American Library Association, and the Salvation Army. Each of these organizations is supported by private subscriptions, and each has planned a campaign for funds on a national basis for some period between September, 1918, and February, 1919. It has become increasingly apparent that seven such campaigns cannot be conducted in the period named without serious overlapping and conflict, to say nothing of the confusion into which communities would be thrown by a series of drives following one another in quick succession, each with its own machinery and administrative personnel and each for objects involving the serving of the American Army and Navy. This is particularly true in view of the fact that a Liberty Loan drive has been scheduled for October, and the whole question has been presented whether a combination campaign on the part of some or all of the societies above named might not simplify the task which they are jointly bearing and give the country an opportunity to contribute at one time to what is in reality a common cause.

Differences in fiscal periods between the societies named, as well as divergencies in financial needs, make it difficult to effect such a result for all seven societies. It has been agreed, however, between representatives of the Young Men's Christian Association, the Young Women's Christian Association, the War Camp Community Service, and the American Library Associ-

ation to conduct a campaign together during the week beginning Nov. 11, and we are informed by Raymond B. Fosdick, who represents the War Department in the matter, that the three other organizations, the National Catholic War Council, the Jewish Welfare Board, and the Salvation Army, have agreed to join in a common campaign to be carried on in January, 1919. This plan will therefore result in two national drives instead of seven.

The Young Men's Christian Association, the Young Women's Christian Association, the War Camp Community Service, and the American Library Association do not attempt to dictate to the communities how the money collected during the week of Nov. 11 shall be raised. It is strongly urged, however, that the local representatives of the four societies unite their machinery in single committees so that the campaign will take on the appearance not of four drives conducted the same week, but of a common drive in which all take part.

The exact text of the agreement arrived at on Thursday, Aug. 15, under which the United War Work Campaign will be carried on, is here given, for the information of all who are expected to assist in the work, in order that they may know the precise terms of co-operation under which their efforts will be directed:

It is agreed by the Young Men's Christian Association, the Young Women's Christian Association, the War Camp Community Service and the American Library Association

(1) That there shall be a joint campaign for funds during the week beginning November 11, 1918.

(2) That by *joint* campaign we mean, as far as it can be brought about, a campaign undertaken thru the agency of consolidated committees rather than four separate campaigns in the same week.

(3) That each society will adopt a joint pledge card.

(4) That the committee organization now installed thruout the country for the collection of funds be disturbed as little as possible, and that the policy of addition rather than elimination be advised.

(5) That in so far as the campaign has a name it shall be called the United War Work Campaign followed by the names of the four organizations participating.

(6) That Mr. Cleveland H. Dodge be the national treasurer and that the moneys col-

lected in the States be paid to him for proper distribution between the societies.

(7) That all funds collected be distributed on a pro rata basis between the four societies participating in the campaign; that is, the funds received shall be divided among the participating organizations in such proportion as the total budget of each organization bears to the sum total of the combined budgets. The budget estimates and percentages are as follows:

Y. M. C. A.	\$100,000,000	75%
Y. W. C. A.	15,000,000	11.22
W. C. C. S.	15,000,000	11.22
A. L. A.	3,500,000	2.56

(8) That specified or restricted subscriptions shall not be asked for, but if given, shall be credited to the particular association, such amount to be a part of the total and not an addition to it.

(9) That the advertising which each organization has planned for itself proceed as planned but that some advertising be advised in the name of the United War Work Campaign.

(10) That the expenses incurred in joint work in connection with the drive be paid on a pro rata basis.

(11) That Mr. George W. Perkins and Dr. John R. Mott for the Young Men's Christian Association; Mrs. Henry P. Davison for the Young Women's Christian Association; Honorable Myron T. Herrick for the War Camp Community Service; Mr. Frank Vanderlip for the American Library Association; and Mr. John D. Rockefeller, Jr., Chairman of the United War Work Campaign for New York City, and Mr. Cleveland H. Dodge as Treasurer ex officio, act together under the Chairmanship of Mr. Raymond B. Fosdick of the Commission on Training Camp Activities of the War Department, or their alternates, in settling any questions between the four organizations participating in this agreement or in handling any arrangements which have to be jointly dealt with.

Before the program of co-operation and union had been decided upon, the War Service Committee of the American Library Association had begun the erection of its campaign organization, with the intention of conducting an independent campaign for the \$3,500,000 fund which the General Director of the Library War Service had estimated as sufficient for the needs of the coming year. This organization is continued under the new co-operative plan, its function being to organize the library workers and supporters into a co-ordinate part of the combined campaign organization and arrange for co-operative effort at all possible points of contact. It will also provide

and direct the execution of plans for the special publicity for Library War Service which is doubly important in view of the merger of activities.

This campaign organization is under the direct supervision of the War Finance Committee of the American Library Association, of which Dr. Frank P. Hill, chief librarian of the Brooklyn Public Library, is chairman. Associated with him and forming the executive force of the campaign organization are Wickes Wamboldt, national campaign director; Frank Parker Stockbridge, national director of information, and Emma V. Baldwin, secretary of the War Finance Committee. These and Theodore L. Frothingham, counsel to the War Finance Committee, are the representatives of the American Library Association on the National Advisory Committee of the United War Work Campaign.

This National Advisory Committee is the first part of the campaign machinery to be consolidated. It consists of five members from each of the four organizations which have united for the joint campaign. In this respect—that of equal representation of all interests—it sets the example which will be followed thruout the campaign organization, down to local committees. The chairman of the National Advisory Committee is John R. Mott of the Y. M. C. A., and its membership includes the national campaign directors and national publicity directors of all the organizations represented. All matters relating to the conduct of the United War Work Campaign will come before this committee for final review and the adjustment of any differences that may arise. It is only fair to all organizations and individuals concerned, however, to say, with all the emphasis possible, that the spirit of co-operation and mutual confidence and goodwill manifested from the very first gathering leaves nothing to be desired.

That this same spirit of mutual confidence and goodwill shall extend down thru the united campaign organization is the essential, indispensable element in making the United War Work Campaign a huge success. To achieve this, by bringing those who will be the active workers in each of the four organizations into contact and

harmony, is one of the principal objects of the series of joint meetings which will be held in every state during the middle of September.

Since the Y. M. C. A. and the Y. W. C. A. had already set up their national organizations, it has been found desirable to model the entire united organization on the lines these organizations had laid down. This plan provides for six territorial committees, one for each of the military districts of the United States; subordinate to these are the state committees, and these in turn control the formation and activities of county committees. Each local committee will be responsible to its county committee. Communications from national headquarters will be to the Military District Committees and thence down the line, as indicated. Like the National Advisory Committee, the district, state, county and local committees will consist of an equal number of representatives of each of the organizations concerned. The size of state, county and local committees will not be prescribed, and so far as possible each state organization will be left to work out the details of its own organization and its own state campaign, to fit the conditions of its own territory.

State chairmen of the War Council of the American Library Association and state directors will be expected to attend a series of regional meetings, to be held early in September, at which officers of the national campaign organization will be present to explain in detail the campaign plans and prepare the way for the merger with the other three organizations. State directors will be expected to recommend a prominent citizen from each locality who will agree to accompany the local librarian to his respective state convention or meeting.

So much for the general plan of the United War Work Campaign, in which the American Library Association should play a most important and inspiring part. Details will be transmitted thru the channels already indicated and direct to members and friends, as rapidly as these are worked out. It seems appropriate at this time, however, now that we are embarking on a campaign for fresh funds, to present an accounting

of the work already accomplished and the moneys expended, and to indicate the purpose for which additional funds are specifically required. Here, briefly stated, are a few salient facts and figures, dating as of Aug. 1, 1918:

- 41 large camp library buildings have been erected in the United States.
- 43 large camp libraries have been established.
- 139 hospitals and Red Cross houses have been supplied with books.
- 243 librarians have been placed in service.
- 284 small military camps and posts have been equipped with book collections.
- 130 Naval stations and 18 Marine stations have been supplied with libraries, as well as 232 vessels.
- 1460 library branches and stations have been opened in Y. M. C. A. and K. of C. huts, barracks and mess halls.
- 828,000 books have been shipped overseas.
- 540,833 books have been purchased, largely technical.
- 2,662,550 gift books have been placed in service.

These gratifying results have been accomplished in less than a year, with the expenditure of little more than one million dollars. Here is the financial statement of the Disbursing Officer of the Library War Service, accounting for all funds to Aug. 1:

Buildings—Carnegie grant	\$263,302.13
Building equipment—Carnegie grant	40,183.13
Buildings—General funds	14,989.24
Building equipment—General funds	3,967.52
Books	366,207.51
Binding	677.81
Book campaign	25,000.00
Freight	14,798.95
General equipment	66,755.84
Great Lakes Station building and equipment	10,000.00
Service	141,131.85
Sundry	25,725.69
Supplies	48,269.90
Travel	23,067.04
	<hr/>
	\$1,014,076.61
In hands of librarians and overseas agents.	31,075.00
Balance on hand Aug. 1—	
General funds	\$315,270.70
Insurance funds	5,000.00
Carnegie funds	16,514.74
	<hr/>
	336,785.44
Total credits and receipts	<hr/>
	\$1,381,937.05

Big as have been the results achieved so far, the plans for the future are naturally of even greater size and scope. It is planned, with the fund about to be raised,

to construct twelve large and ten smaller library buildings at overseas camps; to add ten large and ten smaller new buildings to those in use in this country as well as to make extensive additions to many of those now in use; to spend more than a million and a half in the purchase of additional books and magazines and to expend for the maintenance and equipment of the service, including these new additions, another million and a half. The details of the budget under which the call for \$3,500,000 is made, as furnished by the General Director of the Library War Service, are interesting. They follow:

BUDGET

LIBRARY WAR SERVICE, AMERICAN LIBRARY ASSOCIATION, ESTIMATE OF PROBABLE EXPENSES OF THE SERVICE IN AMERICA AND OVERSEAS, DEC. 1, 1918, TO NOV. 30, 1919.

For Books, Magazines and Newspapers:

BOOKS:	
France	\$600,000
England	60,000
Elsewhere abroad	50,000
65 large American camps and stations at \$4000	260,000
400 small American camps and stations at \$500	200,000
150 hospitals at \$1000	150,000
Naval vessels	50,000
	<hr/>
	\$1,370,000

MAGAZINES AND NEWSPAPERS:	
Overseas	\$100,000
65 large camps and stations at \$500	32,500
400 small camps and stations at \$40	16,000
150 hospitals at \$40	6,000
	<hr/>
	154,500

Total for Books, Magazines and Newspapers\$1,524,500

Buildings and Building Equipment:

OVERSEAS:	
12 new buildings at \$10,000	\$120,000
10 new buildings at \$4000	40,000
5 rented at \$2000	10,000
Paris Headquarters—Rent and equipment	5,000
London Headquarters—Rent and equipment	3,000
Rental Overseas Dispatch Offices	4,000
	<hr/>
	182,000

IN AMERICA:	
Repairs to 40 camp and station buildings at \$300	\$12,000
Extension to 10 camp and station buildings at \$2000	20,000
New (large) buildings, 10 at \$10,000	100,000
New (small) buildings, 10 at \$3000	30,000
Equipment 10 extensions at \$200	2,000
10 large buildings at \$2000	20,000

10 small buildings at \$400	4,000	
Rental distributing centers, 12 at \$600	7,200	195,200
Total Buildings and Equipment in Amer- ica and overseas		\$377,200
<i>Service:</i>		
Headquarters and field representa- tives, 50 persons at an average of \$1500	\$75,000	
Overseas Dispatch Offices, 30 persons at average of \$1200	36,000	
France and British Isles	150,000	
Elsewhere abroad..	5,000	
American camp serv- ice, 65 main camps and stations—Av- erage 5 men at \$1200	390,000	
50 small camps and stations at \$1200.	60,000	
150 hospitals at \$1200	180,000	
Subsistence—400 in the field, Amer- ica and overseas at average \$500..	200,000	
Total Service	\$1,096,000	
<i>Overseas shipping cases:</i>		
For 2,500,000 vol- umes 50,000 cases at \$1.50	\$75,000	75,000
<i>Transportation in America and Overseas:</i>		
Travel	\$75,000	
Freight, express and drayage	75,000	150,000
<i>Supplies, Equipment, Sundries in America and Over- seas:</i>		
Automobiles, 20 at \$700	\$14,000	
Headquarters, print- ing and publicity, \$3000 per month.	36,000	
Headquarters station- ery, postage telegrams and miscellaneous, \$4000 per month.	48,000	
Overseas	50,000	
65 main camps at \$1500	97,500	
50 small camps at \$50	2,500	
150 hospitals at \$200	30,000	
Total supplies, etc.	278,000	
GRAND TOTAL	\$3,500,700	

NOTE.—A much larger amount could be used advantageously for books. Experience of the past year shows, however, that out of \$3,500,000 not more than the amount specified would be available for this purpose, because the proposed outlay for buildings, equipment, service, supplies, transportation, etc., is necessary to make the books of the greatest possible use.

It may be expected that any over-subscription will be largely devoted to the purchase of books.

That, then, is what we are to work for—but we are to work for far more than that.

Co-operation, teamwork, complete and harmonious—that is the spirit in which we

must go into this campaign. It will not be a library campaign; it will not be a Y. M. C. A. campaign; it will not be for the Y. W. C. A. or the War Camp Community Service; it is to be a United War Work Campaign, thru and thru. Important as our own objects seem to us, important as Library War Service appears to us, vital as the interests of the American Library Association are, these are not the main objects for which we are to work.

Let us show those who will be associated with us, with whom we are to work shoulder to shoulder, that we know what co-operation means, that we can do more than they think we can, that we can submerge our individual and personal interests and work wholeheartedly in the greater group for the greater good of the greater number.

Our responsibility in the last Library War Fund campaign was to ourselves alone; now we have a quadruple responsibility. If we fail the whole campaign fails by the extent of our failure; we are jeopardizing not only our own little end of war service, but the whole greater program of all of our associates, if we shirk.

All together for the United War Work Campaign!

NEGRO BOOKS FOR NEGRO SOLDIERS

A FUND is being raised by the "Negro Books for Negro Soldiers Movement" to provide the 100,000 negroes known to be in the army and navy, with a number of small libraries containing the best books by negro authors. The movement has headquarters at 61 Bible House, New York City, and is working in co-operation with the A. L. A. The aim of the movement is the establishment of 4000 libraries, of twenty-one books each, so that each group of fifty negro soldiers may have access to a complete set. The sum needed for this purpose is \$90,592.

A TEXAS preacher says: "It isn't the amount of money a man has, but the amount of man the money has that counts."

THE NEED OF A PLAN FOR LIBRARY DEVELOPMENT

By C. C. WILLIAMSON

ONE of the most difficult and important problems in the whole range of library service is presented by the small public library. By small library I mean, roughly speaking, one having less than \$2500 annual income. Just how many libraries of this sort there are in the country I do not know. Sufficient for present purposes is the unquestioned fact that many hundreds have incomes too small to employ librarians with full professional training. Some idea of the number of small libraries may be gathered from the statistics of library buildings Mr. Carnegie or the Carnegie Corporation has built to date. Out of 1317 buildings erected in the United States, not including library systems in twenty-seven cities, 650 cost \$10,000 or less; and 399 cost \$20,000 or less (most of these were apparently under \$15,000). Only 132 out of the 1317 buildings cost over \$30,000. I estimate therefore that at least 1000 of these so-called Carnegie libraries have a total income of less than \$2500 while the average income of all Carnegie libraries, if a half dozen of the largest appropriations be deducted, is less than \$1000. It is easy to see that after paying for heat, light, insurance, repairs and janitorial service little is left for the salary of a full time trained librarian, to say nothing of money for books and periodicals.

I assume that no argument is needed to establish the facts upon which is based by contention that we have here a library problem of great importance for a large part of the population and for the library profession as well. Yet outside of a few of the more active state commissions, I cannot observe that anyone feels much concern about it. In talking with librarians I find some who seem to regard the situation as quite hopeless until such time as the communities spontaneously decide to provide adequate support, meaning by adequate support, of course, the salary of a fully trained professional librarian. If this attitude were coupled with a definite and practicable proposal as to methods of making

the community demand a skilled library service, one could at least have some respect for it. Usually, however, this attitude is at bottom one of impotence, helplessness, indifference. I refuse to believe that there is no remedy for the inadequate, often grotesquely inadequate, service rendered at present by many of these libraries. That the problem is difficult may readily be conceded, but may the real trouble not be that the best talent in the library profession has been seeking professional distinction in more lucrative fields?

Would it not be possible for the American Library Association to assume the duty of working out some plan of professional education that would be adequate for the needs of every branch of library service? I do not assume that merely formulating a plan will remove all obstacles and bring about ideal conditions. I do think, however, that it is reasonable to look to the association for a scheme of library development towards which we can work, a scheme into which all available energy and resources can be placed with confidence that effort expended will not be wasted.

In the last few years we have been surfeited with discussions of city planning. Every city that has had a proper planning survey and campaign has undoubtedly benefited thereby, tho the results may not begin to be evident to the eye for years. The city which has just been "planned" for the first time looks exactly as it always did. Ugliness, inconvenience, congestion and planlessness are still as much in evidence as ever. The gain is found in that the community is uncomfortably conscious of these defects and is firmly resolved to lose no opportunity to carry out the program of betterment—a program sometimes utopian as to its ultimate goal, tho very practical in its specifications of first steps, second steps and ways and means. New cities, it should be observed, have a tremendous advantage over old in guiding their development by some rational plan.

What I would propose is that this rela-

tively new profession and branch of the public service survey itself and officially adopt a plan for its development—a plan comprehensive, practical and inspiring.

As I have already suggested, one of the principal defects which such a professional self-criticism and self-survey would reveal is the not infrequent stagnation and relative ineffectiveness of the small library. A mere survey and plan will not eliminate unsatisfactory conditions forthwith, but a single decade of planful co-operation of all available resources might work wonders here as it has in some branches of education and many departments of the public service.

If we really believe that library service has any future worth while, why do we not plan for it? Why are we so loath to try experiments, to initiate new methods, to subject our processes and results to acid tests?

The ready-made answer is, of course, that it is difficult to obtain money to carry on our routine work. The profession being on the whole poorly paid cannot contribute largely to organization funds; state, city and other public institutions must devote their income to the purpose for which it is appropriated and for the benefit of their own territorial units; endowments and donations have taken the form of buildings and books. Financial resources are therefore lacking for experimental work, for large plans of promotion and development. This, however, is only a partial answer and largely an evasion. I am informed that no library association, in spite of years of bewailing the backwardness of most states in library development, has ever taken the trouble to frame and adopt a model library law—the statutory basis of an efficient state library system. Experience in many fields has proved over and over that such standard codes are a most effective method of making progress. The cost would be nothing—a little imagination, a little spirit of co-operation, a little hard work—and the thing is done.

Doubtless many other fruitful endeavors not conditioned upon large financial support wait merely upon the energy and initiative of librarians themselves. Indeed I

suspect that much of the developmental work that needs to be done calls rather for vision and forward-looking planning than for money. It is idle to complain of lack of funds until we have done our part. Public authorities and private philanthropists will not hesitate to invest in the execution of plans which insure large returns in public service for a given expenditure of money. But neither public officials nor philanthropists will venture to furnish both the plans and the money and then thrust their work upon a hostile or even upon an indifferent profession.

But to go back to our starting point—the problem of improving the service of the small library. We have to deal for the most part with communities having no conception of what an active library service is and therefore no incentive to insist on even a minimum standard of training and fitness in the librarian, with perhaps no means of paying the salary of a trained librarian, even if fully conscious of the need. The librarian herself, unconscious of any shortcomings in the service, or in her own equipment and capacity, too often holds her position for social, political or other equally improper reasons. Library boards, representative of the community at large, are in some cases less and in others even more visionless and ineffective than the librarian herself. A dark picture indeed, but certainly not hopeless. Where can you find a finer opportunity for constructive work? A challenge to every one who believes in the social utility of an effective library service!

The opportunity of the small library is peculiarly rich. In co-operation with the public schools and other social agencies it can do much to break down the unfortunate assumption that study and education are for children only. Unhindered as it is by religious, social and political differences and prejudices, the library in a small community may become a real center of light and leading. But its power and influence depend almost entirely upon the character of the librarian. A certain amount of technical training she must have, but it should be adapted to this very special field. Much emphasis should be placed

on the social problems of the small community.

Tho I have not the hardihood to offer a ready-made solution for this problem, I do venture to suggest that the point of attack is not the community at large, not even the library board, but the librarian herself, and perhaps individual citizens in each community whether members of the board or not. The general public should not be blamed for not being interested in an inactive and stagnant library. An efficient librarian will stimulate interest; therefore I maintain that the librarian is the proper point of attack.

In spite of her inefficiency, ineffectiveness and incapacity the librarian can in most cases be given a certain degree of professional consciousness and pride which is doubtless the first step upward. She can be made conscious of deficiencies in her personal equipment. Seldom does she lack the capacity to master the rudiments of library technic or to learn the use of the many technical aids and tools available. In most cases she could also grasp something of the social significance of her work and something of its unrealized opportunities. Any response on her part would quickly be reflected in the community in the form of increased financial support. A person with moderate training and some ingenuity can produce valuable results with meager support, but an untrained and sluggish librarian will do nothing worth while no matter how generous the support. Should she fail entirely to respond, perhaps some member of the board or some volunteer worker could be utilized as the point of contact for infecting the library, and eventually the community, with a spirit of efficient service.

So much for the point of contact. What is to be the agency for training and inspiring the librarian, for persistently and intelligently utilizing every means at hand for setting up standards and diffusing thru-out the smaller urban and rural communities dynamic standards of service which now exist mainly in the larger cities and upper ranks of the profession? Most of the machinery is already at hand, at least potentially. First of all are the state library commissions, some of which are at-

tacking the problem with a degree of success that points the way to a frontal attack along the whole line.

In the matter of method also the work of the active and progressive state commissions has broken much ground. Summer courses have been effective, tho limited in results because many librarians who most need their help are unconscious of their need or unable to leave their post or bear the expense. Something, tho not much at present, can be done to educate library boards to grant leave of absence with pay; state laws might be amended in some cases to require such action. Scholarships for meritorious cases have been suggested, but I do not know whether that is feasible or wise. Library institutes properly organized and skilfully conducted can certainly do much to promote professional consciousness, to arouse enthusiasm, to maintain helpful contacts between workers who suffer severely from enforced isolation, and even to correct to some extent the deficiencies of cultural background. A system of traveling librarians to teach and inspire, not the librarians alone but the community as well, is a most promising method, tho necessarily expensive—too expensive to be widely used.

In other fields this idea of extension teaching is being fruitfully employed. State agricultural colleges and departments with their county agents, lecturers, demonstrators and traveling exhibits are a splendid illustration of the modern method of taking vocational help to people while at work. In many states our educational institutions have abandoned the policy of saying in effect to workers in both private occupations and public service, "We can help you to become more efficient if you will drop your work for a considerable period and take up your studies as a resident student in the institution." To fit for the higher ranks of a service this is undoubtedly necessary, but to make it a requirement for every worker, however humble, is a sure way to deny him the help which he is eager to get and abundantly able to profit by. The so-called "co-operative courses" in engineering and in the practical sciences and vocational sub-

jects have shown the utility of combining work and study, of hooking up every day tasks with theoretical training.

There is no absolute standard of adequate training; it must be considered in relation to environment and the public to be served. A person with a Ph.D. in pedagogy may be very well trained for certain kinds of educational work, yet quite improperly trained for success in others. A college graduate with a two-year library course may not be fitted for the work of a small library. At all events, library schools are not attempting to fit students for part time positions paying \$30 to \$50 a month.

Tho all existing methods of helping the small libraries should be utilized to the fullest possible extent, I do not believe they furnish a complete solution. Even if there were summer schools within easy reach of every librarian who could benefit by such a course, the brevity of the period of study, and the uneven character of the students in fitness and capacity militate against thoroughness and render difficult the necessary assistance in adequately relating what they learn to their own work. Short courses in which much ground is covered rapidly will often be quite satisfactory for those who have a broad general education and know how to learn rapidly. For most, however, a little study needs to be combined with much supervised practice. Summer schools, institutes, and other methods can be made extremely useful, but I do not believe they are adequate in themselves.

Would it not be possible to reach a still larger number by some carefully planned adaptation of the correspondence method of instruction? Instruction in which communication between teacher and pupil is written and not oral has, as is well known, passed the experimental stage, has become indeed a recognized part of our educational system and is used to an increasing extent in the most progressive states. "Oh," somebody is sure to exclaim, "you couldn't possibly teach cataloging, library administration, book selection, children's work, etc., by correspondence." Has it ever been given a thoro trial? Until a method which has had a successful experience in other

fields has been put to the test in library work and proven inapplicable, I shall refuse to believe that it cannot be done. Indeed, I think many of the subjects to be taught are peculiarly well adapted to that method of instruction. If the financial inducement had been present, I have no doubt that private correspondence institutions would have occupied the field long ago.

Please note that I do not mean by correspondence courses anything in the nature of mere reading lists. The reading list is too often the highest point in a librarian's scheme of service. A mere list of things for the untrained librarian to read will amount to nothing at all. She must be made to feel that she is enrolled in an organized system of instruction, that she is responsible to teachers who are interested in her progress; and that she will get recognition and approval for work well done.

The idea of correspondence training occurred to me first some time ago in an endeavor to find a method for meeting the need of training for certain kinds of special library service. Since I became interested in its application to the problem of the small public library I have learned that Melvil Dewey, many years ago, believed a correspondence course feasible and wished the Albany school to become the pioneer in establishing one. I do not propose this as a substitute for anything else, but merely as the necessary and logical supplement to other methods—the lowest round of the ladder, if you please, the step that it would be relatively easy to persuade every one to take and which would lead naturally and easily to other higher steps.

The important thing to my mind is to get every librarian definitely and actively to affiliate herself with some organized effort to advance professional standards; to construct a channel thru which ideas and ideals can flow. The definite courses taken, over a period of years it may be, supplemented by summer courses, institutes, certificates of work successfully done, etc., assisted by all the traveling agencies that may be secured, should fit the librarian of the small library as adequately for her own

task as her sister in the large city library is fitted by the more thoro training of the library school.

If such an experiment were to be made, thru what agency should the instruction be given? Should each library school offer courses to librarians in any part of the country and each commission to those in its own state? No; the task plainly calls for co-operative effort on the part of all the schools, all the commissions, and the American Library Association itself. Existing organizations should be used to the fullest extent; as little new machinery as possible should be created. Some central organization, a library service bureau perhaps, under the management of a board chosen by the commissions and existing professional organizations, should work out the plans and supervise their execution, assigning to each agency the tasks it is fitted to undertake. No work now being done by the state or other agencies, including summer courses and institutes, would need to be abandoned, but rather expanded in accordance with the general program. Where no commission or similar organization exists the central bureau would probably have to assume full responsibility until such time as those states could be brought into line.

I should expect that the offering of such assistance to the small library would result in stimulating the community to demand a librarian with a training equal at least to that required of a high school teacher in the same community and a willingness to pay at least an equal salary. In most cases it is inevitable, and perhaps desirable, that the librarian should have lived in the community. In any case the clerical assistants in larger libraries will be local high school graduates without training. By experience they may become very proficient in routine work, but they would benefit enormously from the professional training and spirit to be gained from a system of correspondence study, summer schools and institutes. This should make a very satisfactory substitute for the training classes in libraries large enough to maintain them.

Members of boards and chairmen of committees should also be induced to take such courses as they could follow with any profit. The chairman of the book committee, for instance, might take a course in book selection. I have known of an able woman, a college graduate, practically wasting the slender funds of her library because she had not the slightest acquaintance with the aids to selection or the principles to be followed. The librarian unfortunately knew even less.

While the scheme of organized instruction I have in mind is aimed primarily to solve the personnel problem of the small public library, and its facilities should be offered in this field with a minimum of expense, every part of the instruction should also be available at very moderate fees to persons in charge of private libraries, office libraries, business and other special libraries. Efficiency in the use of books and printed matter in general could be vastly promoted by making it easy for anyone to acquire a rudimentary knowledge of library methods. Public library service is suffering acutely from the fact that business and the professions desiring to make use of simple library methods and having no practicable means of giving their own employes the simplest training (for that is all that is usually required) rob the public libraries of workers who have been elaborately trained at no inconsiderable cost in time and money both to the individual and the institution. I do not see that this shifting is accompanied by sufficient benefit to anyone to compensate for the waste involved in taking a trained and experienced librarian into a business office because she happens to know how to classify, or catalog, or index.

I can merely refer in passing to these incidental tho very important services which might be rendered to the literary, scientific, professional and business world by providing in convenient form a certain amount of elementary instruction in library methods. Under present conditions very few of those who could benefit by such instruction have any opportunity whatsoever to get it. The library profession cannot

be permanently benefited by monopolizing knowledge of its simple and fundamental technical processes. We berate our readers for stupidity in their use of the library, while we deny them the opportunity to acquire the little insight into our work which would make the library more useful to them and make them more appreciative of the services of a skilled librarian.

This point should be emphasized, for some will doubtless look upon the proposal as furnishing a dangerous opportunity to get into library work by short cuts. The obvious reply to such an objection is that if head librarians can see no difference between assistants with school training and those trained by correspondence methods, there must be something the matter with the school. Moreover, any real danger at this point would quickly result in certification of librarians—a matter long discussed—and thus raise instead of lower standards. Indeed from every point of view I have no doubt that by making it easier for anyone to learn something about technical processes of library work, standards would be raised, not lowered. Capable persons who have learned a little will want more and thus the library schools will find they have more and better students.

In making my appeal to the library profession to act upon its belief that the future holds great possibilities of development and to make plans to stimulate and guide that development, I have emphasized the needs of the small library, particularly the need for an improved personnel, but that of course is not the only weak point in the line. Library school facilities in general are inadequate to meet the need for a trained personnel in the higher ranks. The existing schools are doing good work, tho perhaps their courses are not as flexible as they should be in view of the great diversity of requirements in the positions which graduates are called upon to occupy.

I have wondered whether it would be possible or desirable to establish a purely graduate school of very high order, to which only graduates of other schools or those with equivalent training and some successful experience would be admitted. That would enable existing schools and

the others we shall need to confine their energies to the fundamental things that every grade of service requires. A graduate school, especially if conducted as a part of a university, could offer more specialized work than can be expected of any existing school. An educational system requires various kinds of training agencies. We do not depend on one standardized institution or curriculum to turn out school administrators, college teachers, high school teachers, grade teachers, teachers of special branches and rural teachers.

I have no right or disposition to criticize the work of the library schools. It is evident, however, that the capacity of existing schools is not equal to the demand. Schools must be enlarged, others established and training by other methods provided. Just now, apparently on account of the comparatively low initial salaries paid to library assistants, the schools are meeting some difficulty in recruiting students up to their full capacity. It may therefore seem to be an error to propose an increase of training facilities. So far as the present shortage of matriculants is due to war conditions, it is temporary. The possibility of a permanent shortage in the supply of library school students would merely constitute another reason for demanding that the profession itself should take the initiative in making a thoro investigation and planning for the future.

I have intimated that in the small library the surest way to raise salaries is to improve the service, to make it a vital thing to all classes in the community. In the large library too there may be danger of putting the cart before the horse. My general belief is that any class of workers is paid in the long run about what it is worth to the community. Public services which all classes of the community recognize as indispensable will not remain grossly underpaid. The public has not been more dilatory in providing support for libraries than it was in the beginning for public schools.

One of the most encouraging things about the whole situation is that standards of education and public service once recognized by the public are not likely to be relaxed. The community as a whole, hav-

ing experience with but one library, naturally knows no standard except that set by its own institution. If that standard be low, its patrons are none the wiser, since they cannot know what the service is in other communities. And this, by the way, seems to me a very sound reason for grading or standardizing libraries as suggested by the A. L. A. committee on standardization, provided that the examination and grading is done by some competent outside agency. It is futile, however, to talk about raising standards, especially in the small libraries, until we provide a practicable means for the minimum training.

While the normal public is quick to detect and to resent any deterioration of service, it is indifferent to general talk of higher standards which are not concretely defined and of which it has had no experience. This is the reason that while we may rely on the community to aid in preventing any material curtailment of service or lowering of standards once set, we cannot depend upon it for the impetus toward higher standards. The first step forward waits upon the stimulus of a skilled and inspired librarian.

Improve the service first and lead the public to an appreciation of what a fine library service means to it. Improved service and publicity should therefore go hand in hand. To say that proper publicity is a part of good service or that good service effects its own publicity amounts to the same thing.

The responsibility for every advance rests squarely upon the profession and cannot be shifted. This is a situation which we could accept with complacency if there were not reason to suspect that the library profession has a pretty low average of initiative. Reading—the absorption of other men's ideas from the printed page—is a passive act which too often stifles rather than stimulates originality. The major part of the reading public is by temperament the passive element of the community. Librarians tend too much to adapt themselves to this part of the public and to regard the other part, so far as they know anything about it, as made up of "chronic kickers."

RECENT MOTION PICTURES BASED ON STANDARD OR CURRENT BOOKS

THESE pictures have been selected for listing by the National Board of Review of Motion Pictures:

All Woman, 5 reels, Goldwyn. Star—Mae Marsh.

Adapted from Edith Barnard Delano's story, "When Carey came to town."

Annexing Bill, 5 reels, Pathe. Stars—Gladys Hulette and Creighton Hall.

Based on Edgar Franklin's entertaining story in *Munsey's Magazine*.

Behind the Scenes, 5 reels, Famous Players-Lasky. Star—Mary Pickford.

Based on story and play of the same name by Margaret Mayo.

Bella Donna, 5 reels, Famous Players-Lasky. Star—Pauline Frederick.

A picturization of the novel by Robert Hichens.

Bondman, The, 5 reels, Fox. Star—William Farnum.

Hall Caine's novel "The bondman" adapted to the screen.

Carmen, 5 reels, Famous Players-Lasky. Star—Geraldine Farrar.

A screen adaptation of Bizet's famous opera with Geraldine Farrar, the operatic impersonator of the chief character, in the rôle.

Chimmie Fadden, 5 reels, Famous Players-Lasky. Star—Victor Moore.

The famous character of E. W. Townsend's book of the same name represented in pictures.

Claw, The, 5 reels, Select. Star—Clara Kimball Young.

The South African story of this name by Cynthia Stickney.

Crucible, The, 5 reels, Famous Players-Lasky. Star—Marguerite Clark.

Mark Lee Luther's story of the same name done into motion pictures.

Danger Mark, The, 5 reels, Artcraft: Famous Players-Lasky. Star—Elsie Ferguson.

An elaborate picturization of Robert W. Chambers' story of the same name.

David Harum, 5 reels, Famous Players-Lasky. Star—William H. Crane.

The well known story by Edward Noyes Westcott picturized, with the actor who made the play based on the book a success, in the chief rôle.

Dawn of a To-morrow, The, 5 reels, Famous Players-Lasky. Star—Mary Pickford.

A picturization of the book of the same name by Frances Hodgson Burnett.

Dictator, The, 5 reels, Famous Players-Lasky. Star—John Barrymore.

Richard Harding Davis' story presented in motion pictures.

Esmeralda, 4 reels, Famous Players-Lasky. Star—Mary Pickford.

Frances Hodgson Burnett's story of the same name reproduced in motion pictures.

Eternal City, The, 8 reels, Famous Players-Lasky. Star—Pauline Frederick.

A powerful screen depiction of the novel by Hall Caine.

Firefly of France, The, 5 reels, Paramount: Famous Players-Lasky. Star—Wallace Reid.

A picturization of the romantic detective war story of the same name written by Marion Polk Angellotti for the *Saturday Evening Post*.

Freckles, 5 reels, Famous Players-Lasky.

Star—Jack Pickford.

A picturization of "Freckles," by Gene Stratton Porter.

Garden of Allah, 7 reels, Selig-Kander.

A very fine presentation of Robert Hichens' tale of this name.

Gentleman from Indiana, The, 5 reels, famous Players-Lasky. Star—Dustin Farnum.

Booth Tarkington's romance of the same name presented in pictures.

Ghost of Rosy Taylor, The, 5 reels, Mutual.

Star—Mary Miles Minter.

An adaptation of Josephine Daskam Bacon's story of a French orphan girl stranded in America, written for the *Saturday Evening Post*.

Girl in His House, The, 5 reels, Vitagraph.

Star—Earle Williams.

The society romance by Harold MacGrath for the *Ladies' Home Journal*, presented in a photoplay.

Golden Wall, The, 5 reels, World. Star—

Carlyle Blackwell and June Elvidge.

Adaptation of an old-fashioned French society novel of the same name.

Goose Girl, The, 5 reels, Famous Players-Lasky. Star—Marguerite Clark.

A photoplay based on the novel of the same name by Harold MacGrath.

Great Expectations, 5 reels, Famous Players-Lasky. Star—Jack Pickford.

Adapted from Charles Dickens' novel of the same name and directed by Robert Vignola.

Heart of a Girl, The, 5 reels, World. Star—Barbara Castleton.

Maravene Thompson's society story reproduced for the screen.

Her Final Reckoning, 5 reels, Famous Players-Lasky. Star—Pauline Frederick.

An adaptation of "Prince Zilah," Jules Claretie's Parisian society story.

House of the Lost Court, The, 5 reels, Famous Players-Lasky. Star—Viola Dana.

Mrs. C. N. Williamson's mystery story of this name picturized.

How Could You, Jean?, 5 reels, Arctcraft: Famous Players-Lasky. Star—Mary Pickford.

Eleanor Hoyt Brainerd's story of the same name in pictures.

Little Sister of Everybody, 5 reels, Pathe. Star—Bessie Love.

William Addison Lathrop's story of a young East Side girl reared in the atmosphere of poverty and socialism, done into a motion picture.

Maria Rosa, 5 reels, Famous Players-Lasky. Star—Geraldine Farrar.

The screen version of Angel Guimera's tragedy of a Spanish peasant girl.

No Man's Land, 5 reels, Metro. Stars—Bert Lytell and Anna Q. Nilsson.

Louis Joseph Vance's war story of the same name adapted to the screen without the usual battle scenes.

O. Henry Stories: One Thousand Dollars, 5 reels, Vitagraph; star—Edward Earle.

Sisters of the Golden Circle, The Winning of the Mocking Bird, The Girl and the Graft, each 2 reels, General Film Co.

Old Homestead, The, 5 reels, Famous Players-Lasky. Stars—Frank Losee and Louise Huff.

Denman Thompson's perennial vehicle reproduced in motion pictures.

One Dollar Bid, 5 reels, Paralta: Hodkinson Service. Star—J. Warren Kerrigan.

A Kentucky hills mystery story based on Credo Harris' tale entitled "Toby."

Pudd'n Head Wilson, 5 reels, Famous Players-Lasky. Star—Theodore Roberts.

The Mark Twain classic of the same name successfully adapted to the screen.

Redemption of David Corson, The, 5 reels, Famous Players-Lasky. Star—William Farnum.

Charles Frederick Goss' novel of this name turned into a photoplay.

Sandy, 5 reels, Famous Players-Lasky. Stars—Jack Pickford and Louise Huff.

Alice Hegan Rice's Kentucky romance of the same name presented as a photoplay.

Sappho, 5 reels, Famous Players-Lasky. Star—Pauline Frederick.

Alphonse Daudet's story turned into a motion picture by Hugh Story.

Seventeen, 5 reels, Famous Players-Lasky. Star—Jack Pickford.

Booth Tarkington's humorous story of puppy love presented on the screen.

Snobs, 4 reels, Famous Players-Lasky. Star—Victor Moore.

George Bronson Howard's story in a photoplay.

Soap Girl, The, 5 reels, Vitagraph. Star—Gladys Leslie.

A light comedy picture based on Lewis Allen Brown's story of the same name.

To the Highest Bidder, 5 reels, Vitagraph. Star—Alice Joyce.

Adapted from the novel of rural life of the same name, written by Florence Morse Kingsley.

Uncle Tom's Cabin, 5 reels, Famous Players-Lasky. Star—Marguerite Clark.

Harriet Beecher Stowe's famous book admirably adapted to the screen.

Virginian, The, 5 reels, Famous Players-Lasky. Star—Dustin Farnum.

Owen Wister's story of the old West represented finely in motion pictures.

Wolfville Tales by Alfred Henry Lewis: Dismissal of Silver Phil; Faro Nell, Look-out. 2 reels each, General Film Company.

Zaza, 5 reels, Famous Players-Lasky. Star—Pauline Frederick.

The story by Berton and Simon, whose presentation on the stage by Rejane, Bernhardt and Mrs. Leslie Carter added to its fame, done in motion pictures.

The director of the schemes authorized and conducted from the British Board of Education, to supply British prisoners of war with educational books, has recently issued "A classified list of the books urgently needed to meet prisoners' requests." Each book listed has actually been asked for by one of the prisoners, and it is remarkable that the books listed cover accountancy, agriculture, anthropology, the arts, science, commerce, the applied arts, all languages including Kaffir, literature, philosophy, navigation, and many other subjects. As described by Dr. Koch in his articles in the LIBRARY JOURNAL last summer, credit is given by the Board of Education for systematic study in many of these subjects.

THE FIRST 5000 BOOKS, SINCE FOLLOWED BY OTHER SIMILAR LOADS, SHIPPED BY MOTOR TRUCK FROM THE WORCESTER PUBLIC LIBRARY TO CAMBRIDGE, WHERE THEY WERE PREPARED FOR OVERSEAS SERVICE

THE BOOK ON THE RIGHT, THO NOT THE PROVERBIAL BIBLE THAT STOPPED THE BULLET, WAS BROUGHT BY A SOLDIER INTO THE HEADQUARTERS OF THE Y. M. C. A. IN PARIS AND SHOWS THE EFFECTS OF A GERMAN SHELL

IT OFFERS ACTUAL EVIDENCE THAT BOOKS ARE GOING UP TO THE VERY FRONT LINES, AND ALSO FURNISHES AN EXCELLENT ARGUMENT FOR THE CONTINUING COLLECTION OF BOOKS IN THE LIBRARIES AT HOME

LIBRARY WAR SERVICE

SEPTEMBER sees the beginning of the active work thruout the country preparatory to the nation-wide campaign for funds the week of Nov. 11. As a first step, regional conferences are being held, the military districts of the country being used as a basis for the grouping of states. At these conferences the individuals chosen to act as state "directors"—the library representatives in the state conventions to be held jointly with the other three co-operating organizations later in the month—will meet to discuss the plans being worked out for the campaign by the national joint committee in charge. The schedule of these conferences is as follows:

No. 1—*Conference City*—Seattle.
Date—Sept. 3

<i>State</i>	<i>State Director</i>
Wyoming	Miss Agnes Wright
Montana	T. H. Richardson
Idaho	Reilly Atkinson
Oregon	W. L. Brewster
Washington	Judson T. Jennings

No. 2—*Conference City*—San Francisco
Date—Sept. 6

<i>State</i>	<i>State Director</i>
Nevada	Frank J. Pyne
No. California...	Milton J. Ferguson
So. California...	Everett R. Perry
Utah	Council Natl. Defense

No. 3—*Conference City*—Birmingham, Ala.
Date—August 30

<i>State</i>	<i>State Director</i>
North Carolina...	Mrs. A. F. Griggs
South Carolina...	Robt. M. Kennedy
Georgia	Robt. L. Foreman
Florida	Lloyd W. Josselyn
Tennessee	Chas. D. Johnston
Alabama	Thos. M. Owen
Mississippi	
Louisiana	Thos. P. Thompson
Arkansas	

No. 4—*Conference City*—Oklahoma City
Date—Sept. 2

<i>State</i>	<i>State Director</i>
Arizona	Con J. Cronin
New Mexico	Miss Evelyn Shuler
Oklahoma	Mrs. Mary Hays Marable
Texas	Miss Elizabeth H. West

No. 5—*Conference City*—Chicago
Date—Sept. 7

<i>State</i>	<i>State Director</i>
Ohio	Prof. Azariah S. Root
Indiana	W. M. Hepburn
Michigan	Adam Strohm
Illinois	P. L. Windsor

Wisconsin	M. S. Dudgeon
Kentucky	George T. Settle
West Virginia ...	

No. 6—*Conference City*—Minneapolis
Date—Sept. 6

<i>State</i>	<i>State Director</i>
North Dakota....	Mrs. M. C. Budlong
South Dakota....	Miss Julia Stockett
Iowa	Johnson Brigham
Minnesota	Miss Clara F. Baldwin

No. 7—*Conference City*—Denver
Date—Sept. 4

<i>State</i>	<i>State Director</i>
Colorado	Chalmers Hadley
Missouri	Miss Elizabeth B. Wales
Kansas	Chas. S. Colladay
Nebraska	Miss Anna Jennings

No. 8—*Conference City*—Boston
Date—Sept. 9

<i>State</i>	<i>State Director</i>
Maine	Henry C. Dunnack
New Hampshire..	Arthur H. Chase
Vermont	Prof. S. F. Emerson
Massachusetts ...	John A. Lowe
Rhode Island....	H. O. Brigham
Connecticut	W. D. Hine

No. 9—*Conference City*—New York City
Date—Sept. 10

<i>State</i>	<i>State Director</i>
New York	James I. Wyer, Jr.
Pennsylvania ...	O. R. Howard Thomson
Delaware	Arthur L. Bailey
Virginia	H. R. McIlwaine
Maryland	
New Jersey.....	M. Taylor Pyne
Dist. of Columbus.	Dr. Geo. F. Bowerman

Joint state meetings will be held between Sept. 9 and Sept 26, at which the A. L. A. will have equal representation with the other organizations. The A. L. A. is expected to send representatives consisting of the state director, the chairman of the State War Council, a librarian from each locality in the state and at least one other prominent and efficient person from same locality. At these meetings the full state and local campaign plans will be presented and the necessary joint organization effected.

The magnitude and vital importance of the coming campaign continues to grow upon us. It is evident in the light of the report recently sent from overseas, and which is based upon recent conferences between our leaders and General Pershing, that it is urgently necessary that there be a large oversubscription. All are agreed

that the war is approaching its climax and that the period right before us is by far the most critical and, therefore, that the American people are not likely to be called upon to render a more significant service and one calling for greater sacrificial effort and devotion than during the coming momentous autumn and winter months. Our only hope of meeting the situation is by all of these agencies presenting an absolutely united front in carrying thru to success the coming campaign.

SPECIALIZED CAMPS

The new policy of the War Department, developing several specialized camps instead of maintaining so many general camps giving all branches of training, is requiring a more careful study of the individual camps by the A. L. A. Headquarters. Heretofore with one or two exceptions the large camps had practically the same needs and were supplied with the same collection of books. But now Doniphan, Taylor and Jackson have become artillery camps, Greene an aviation ground school, Chickamauga is largely used for medical training, Sevier is an infantry camp, etc. Each such specialized camp requires individual attention in the selection and ordering of books and develops peculiar problems in connection with the library service.

FIELD REPRESENTATIVES

A short experience in the use of field representatives has already shown that this is to be a most valuable feature of Library War Service administration. The visit of a field representative to a camp library enables the librarian and assistants to discuss with him their many camp problems, seek advice on their plans for future development of the library service, learn what is being done in other camp libraries. Such visits will give the camp librarian confidence in his own policies and the benefit of the experience of other libraries, and will certainly result in a broader and more vigorous and more uniform development of the camp library service. The service at small stations and forts where there is no A. L. A. representative will receive even more benefit than the large camp from the visits of the field representative.

NEW BUILDINGS

At Pelham Bay, N. Y., the naval authorities have arranged to erect at once without cost to the A. L. A. a standard camp library building. This is the first camp where a building has been erected in this way—a tribute to the work of Miss Galloway, who is the first woman to be appointed librarian of a large camp.

The building at Camp Mills, L. I., is completed except for equipment.

NEW PUBLICATIONS

War Library Bulletin, No. 7, issued by Library War Service Headquarters, contains a summary of war service operations from Oct. 4, 1917, to June 20, 1918, together with an outline of the "Organization of the Library War Service as existing June 20, 1918." This outline includes the names of the men and women directing the work in the many camps and other service centers thruout the country on June 20.

A Supplement to *War Library Bulletin* No. 7 is entirely composed of a ten-page list of the personnel of the Library War Service from October, 1917, to June, 1918.

The "Report of the War Service Committee of the American Library Association for the year ending June 30, 1918," has recently been issued. To this report is appended a thirteen-page "Statement by the General Director of the A. L. A. War Service as to operations, Oct. 4, 1917, to June 30, 1918."

Another recent publication concerned with the work of the Library War Service is a twenty-two page pamphlet by Dr. Frank P. Hill and Emma V. Baldwin entitled "Library service for soldiers and sailors: the story of the million dollar campaign of the American Library Association."

A new poster, designed by Charles B. Falls for camp library use, has been printed and sent to camps. The poster, printed in bright colors, shows a soldier really enjoying books—even his toes are curled in comfort and satisfaction. "The Camp Library Is Yours" is conspicuous in large letters. Two forms of this poster are to be used—one in branches and stations in large camps where there are A. L. A. camp libraries;

another form with slight changes in the wording is for use in the smaller camps, posts, forts, stations, etc.

For distribution at the Allied War Exposition, the Library War Service has prepared a six-page folder telling of the book needs of the men in service, and of the work done by the American Library Association in filling these needs. Copies of this folder will be supplied to libraries on request.

hoped that booksellers thruout the country will also co-operate by placing these book-marks in new books sold. Librarians and booksellers may obtain copies on request. Each bookmark provides a bookplate (a cut of the first Falls poster) on which may be written the donor's name and address, making the book a personal gift. These book-marks should be useful in vacation books that are given for camp use.

Publishers who have already agreed to distribute copies of these bookmarks in their new books are: Century Co., 25,000; Doubleday, Page & Co., 1000; Grosset & Dunlap, 50,000 (will take up to 100,000); Harper & Bros., 5000; Houghton Mifflin, 25,000; Mitchell Kennerley, 15,000; Longmans, Green, 1000; Macmillan Co., 10,000; Putnam's, 5000; Scribner's, 25,000.

A placard printed in buff and red, giving the definite address of the A. L. A. Camp Library, has been sent in large numbers to the camp libraries for posting thruout the camp—in barracks, mess-halls, recreation buildings, etc. "A Necessary Part of Your Equipment" are the words at the head of the poster, with the following words in red, in the center:

"Knowledge
gained from
books telling
why
how
where
you are to fight."

For the purpose of establishing and maintaining communication between the libraries and the Library War Service campaign organization, a new bulletin to be called *War Libraries* has been started. This will be issued from the campaign headquarters in New York City.

AN ASSURING LETTER FROM DR. MOTT

In numerous articles published descriptive of the work of the Y. M. C. A. for the soldiers and sailors, no mention has been made of the American Library Association and its library service as an auxiliary. Dr. Putnam recently wrote to Dr. John R. Mott, general secretary of the International Y. M. C. A., calling his attention to these omissions.

Name

Address

Books for recreation, for study and advancement are needed by our men in the service.

When you have read this book, why not pass it along?

Make it a personal gift by writing your name and address beneath the book plate, if you like.

Take the book to any Public Library or Book Store and your gift will be forwarded to the men in uniform, who are asking for more and more books.

American War Service
American Library Association

Arrangements have been made with several publishers for distribution, thru their new books, of bookmarks recently published by the Library War Service. It is

In his prompt and gracious reply, Dr. Mott regretted the fact that such omissions had been made, and mentioned the "absolutely invaluable contribution made by the American Library Association with reference to the service which we are seeking to render the American Army and Navy." He writes: "I know that the members of our council and its executive officers do appreciate sincerely the large and ever increasing part which your association has in this common task. It is our desire to reciprocate. We trust that in your coming campaign, as in our own, we may be of real help in this direction. I want you to call upon me in that or any other connection. Anything in my power that I can do to further your comprehensive and efficient plans, I will gladly do."

SERVICE IN THE SHIPYARDS

The Portland (Ore.) Public Library has at last been able to penetrate the sanctity of the shipyards, and in two of the largest yards has placed a deposit of books.

In the Peninsula Shipyards, where wooden ships are built, the books are in the care of the welfare worker and are kept in his huts. Library assistants have made two visits to this shipyard, one at noon to meet the day workers and one at 8:30 in the evening to meet the night shift. After a brief talk on the opportunities of the library and the location of the various branches, Miss Fossler, technical librarian, had her books stretched out before her on the platform, as a drummer displays his wares, and talked definitely about each book, with the result that she was almost swamped with applications. From 60 to 100 men crowded about the platform after the little speech was over, hoping to sign an application and take a book.

At the Albina Engine Works, where steel ships are made, a small box of recreational books has been placed in the hut of the welfare worker but these books have not received much attention. The technical books at that shipyard are in the mold loft under the care of one of the employes.

For real war service a library can do nothing better than meet the demands of the shipyard workers. The majority of these men are new to the business. They have come from all walks in life—this man is a picture framer, that one a restaurant keeper, here is a school principal, here is a young lawyer. The workmen are almost all intelligent and the sort that will find it possible to learn from books as well as from experience.

PUBLICITY HINTS FROM THE CAMPS

In two camps, at least, the library is being advertised by a pocket-sized card given to the men. In Camp Johnston, the quartermaster's camp in Florida, Charles R. Green, acting librarian, prepared a card which on one side has a brief general description of the A. L. A. war service, particularly as it applies to that camp, and on the other side bore a "Camp Library" acrostic.

In Camp Funston Purd B. Wright took advantage of the fact that the first duty of a new soldier is to memorize the general orders for sentinels, to have these orders printed on a pocket-sized card. "Usually," he writes, "one copy is placed in a barrack and all the men crowd around and copy it on such paper as they find handy—usually scraps from the Y. M. or K. of C. . . . The idea was that of Frederick Henke, formerly of the St. Louis Public Library, who was assigned to duty in the camp library. General headquarters printed the cards with the reverse side blank. The country print shop and my old time experience as a printer utilized the space. It is the best advertising medium for a camp library that I have ever found. Headquarters has just authorized the printing of 15,000 for distribution and I shall ask for more and more. The idea of the book list [printed on the back, with an informal but cordial invitation to enjoy the library—including its ice water and electric fans] was simply to show the titles of one or two books in each branch of the army in our camp. It is not even a select list."

RECENT ASSIGNMENTS TO LIBRARY WAR SERVICE

Camp Beauregard, Alexandria, La.	Mrs. O. D. Dobbs, assistant.
Camp Bowie, Ft. Worth, Texas.....	Irving R. Bundy, librarian. Edwin Sue Goree, hospital librarian. Leslie L. Parker, assistant hospital librarian.
Chickamauga Park, Georgia.....	Ruth Bradley Drake, hospital librarian.
Camp Cody, Deming, N. Mex.	Clarence W. Sumner, librarian.
Camp Custer, Battle Creek, Mich.	Henry O. Severance, acting librarian. Edna Foley, hospital librarian. Clemens R. Frank, assistant.
Camp Devens, Ayer, Mass.	Ella R. McDowell, assistant.
Camp Funston, Fort Riley, Kansas.....	Geo. W. Fuller, librarian. Alfred C. Runyan, Jr., assistant. Mary C. Sherrard, hospital librarian.
Camp Grant, Rockford, Ill.	Ralph H. Wilkin, assistant. Arthur C. Kemble, assistant.
Camp Greene, Charlotte, N. C.	Winthrop H. Chenery, librarian. Welden T. Myers, assistant.
Camp Hancock, Augusta, Ga.	Leonard Balz, Jr., assistant. R. D. Williams, assistant. Olive Mayes, hospital librarian.
Camp Humphreys, Va.	Geo. I. Dale, assistant. Alfred D. Keator, assistant. William Teal, assistant.
Camp Jackson, Columbia, S. C.	Mrs. W. L. Brownlee, assistant. H. H. Harwood, assistant. Charles C. Thach, Jr., assistant. Ola M. Wyeth, hospital librarian (transferred from Camp Wadsworth).
Kelly Field, San Antonio, Texas.....	Samuel A. Jeffers, acting librarian. Dewey C. Wayne, assistant.
Ft. Leavenworth, Kansas	Hattie Osborn, librarian.
Camp Lee, Petersburg, Va.	Alice Peddle, assistant. Emma Woodward, assistant. William A. Walsh, assistant.
Camp Lewis, American Lake, Wash.	Mrs. Harriet Carstensen, assistant. Arthur S. Beardsley, assistant. Raymond D. Holmes, assistant.
Camp Logan, Houston, Texas.....	Jane Dick, hospital librarian.
Camp MacArthur, Waco, Texas.....	Earl Butler, assistant. Mary E. Goff, hospital librarian.
Camp Merritt, Tenafly, N. J.	F. Langdon Davis, assistant. Harold W. Hobbs, assistant. Agnes Cowing, hospital librarian.
Camp Mills, Mineola, L. I.	Arthur L. Bailey, librarian. Marion Dutcher, assistant.
Pelham Bay, Naval Training Sta., Pelham Bay Park, N. Y.	Wilhelmina Harper, assistant.
Pensacola Naval Station, Pensacola, Fla....	Chas. A. Read, librarian (transferred from Newport News Dispatch Office).
Camp Perry, Great Lakes, Ill.	S. R. McKillop, assistant.
Camp Pike, Little Rock, Ark.	Marcus Skarstedt, librarian. Betty H. Pritchett, hospital librarian.
Camp Sevier, Greenville, S. C.	John S. Baker, assistant. Mrs. I. M. Adams, assistant. Ora I. Smith, hospital librarian.
Camp Shelby, Hattiesburg, Miss.	Valeria Easton, hospital librarian.
Camp Sheridan, Montgomery, Ala.	Fanny Taylor Taber, assistant. Dixie E. Macey, hospital librarian.
Camp Sherman, Chillicothe, O.	A. F. Pauli, assistant. F. K. Farr, assistant. F. H. Cook, assistant. E. F. Loucks, assistant. Elizabeth Pomeroy, hospital librarian.

Camp Wadsworth, Spartanburg, S. C.	F. K. W. Drury, librarian. Alan F. English, assistant. Marion Leatherman, hospital librarian.

OTHER POINTS OF SERVICE

Asheville, North Carolina, Hospital District..	Fanny Duren, hospital library organizer.
Brooklyn Naval Stations, Brooklyn, N. Y....	Robert S. Fletcher, library organizer.
Charleston and Paris Island Naval District, South Carolina	William D. Goddard, librarian.
Letterman General Hospital, San Francisco, Cal.	Mrs. Inez G. McConnell, hospital librarian.
Mexican Border Service, El Paso district....	Doris Greene, assistant.
Mexican Border Service, San Antonio dis- trict	Mrs. Cora Case Portes, assistant.
Quantico Marine Barracks, Quantico, Va. ...	Chaplain E. B. Niver, ex-officio librarian. R. W. Hawkesworth, assistant.
Troop Train Service	Mary E. Ahern, organizer.
U. S. Debarkation Hospital No. 2, Fox Hills, Staten Island, N. Y.	Anna May, hospital librarian.
U. S. General Hospital, No. 3, Colonia, N. J..	Margaret H. Martin, hospital librarian.
U. S. Naval Training Station, Newport, R. I. (House that Jack built)	Edwin Wiley, supervisor. Chaplain W. G. Cassard, ex-officio librarian.

DISPATCH OFFICES

Boston, Widener Library, Harvard Univer- sity, Cambridge, Mass.	A. L. S. Wood, assistant. Harriet E. Howe, assistant.
Newport News, 32-34 Twenty-third St., New- port News, Va.	Helen Barnett, assistant.

HEADQUARTERS

Miss Caroline Webster of the New York State Library is again at headquarters in charge of hospital library service.

ADDITION TO HONOR ROLL

The name of Howard R. Hill, now a first lieutenant in the 332d Infantry with the American Expeditionary Forces in France, was inadvertently omitted from the Honor Roll of A. L. A. members printed in last month's issue. Mr. Hill is a son of Dr. Frank P. Hill of Brooklyn and went into the army from the Adelbert College Library in Cleveland.

LETTERS FROM THE FRONT

From our friends overseas we have received some interesting comment on the books in service. Albert Crone, formerly of the staff of this office, wrote from France early in the summer:

You will be interested to know how much showing the A. L. A. makes here and something of the reading of books. When we first arrived, in one Y. M. C. A. building there could be found a scant 100 volumes—practically all of them marked with the book

plate of the A. L. A. For the most part I think probably they had been brought over by the men themselves and gradually collected. At the time we arrived this camp was comparatively unoccupied. The readers in the large body of men who came in with us quickly snapped up these few volumes.

Some two weeks after our arrival another Y. M. C. A. library room suddenly opened up with about 500 or 600 books, all A. L. A. They went like the proverbial "hot-cakes." There is a constant and continual call at the desk for more books beyond a doubt—and the supply is far below the demand.

As you know the men of our outfit also brought books with them over-seas as they wished. A notice was posted generally thru-out the regiment, urging the early return of these to the regimental chaplain for further distribution.

Two things have especially struck me regarding the work of the A. L. A. as the prime agency in getting books to soldiers. The one is an advertising proposition for the association—rather, for libraries in general thru the A. L. A. It seems to me that far too little notice or emphasis has been made of

the fact that these books came from the A. L. A. (the small book plate notwithstanding) and that not enough are these readers, many new ones, being taught that these soldier libraries are simply transplanted miniatures of libraries great and small found everywhere thruout the states: I should like to believe that these donors—libraries and individuals—are going to reap the satisfaction of having added not only temporary value to the American Expeditionary Forces, but have awakened many an individual to the permanent values of books and of the places of books—libraries. The Red Cross, the Y. M. C. A., etc., spare no pains to make public their work—in many instances seek and take other rewards. The book comes to the soldier freely every time. The A. L. A. has asked nothing of the soldier—and little from the public, and its services have been many. I think the books stand alone as the single thing which comes to the soldier without a string tied to it. I would keep up that fine reputation, but I would use every possible means to bring the soldier-reader's attention to the fact that his home town library sent that book he reads or one like it to him—and that when he comes home he will find welcome and solace and assistance in the same library—in any library in any town almost from Maine to California.

My other thought regarding books is their distribution. Too often do those drawn from the shelves here remain long unreturned. True they have an inside circulation within a given organization. For instance—a book I draw usually reaches a number of readers in my own organization. But there are many volumes which seem to be of no interest to one group which might find a better pastorate if only they were returned. I would suggest a circular letter urging this upon the Y. M. or the regimental chaplains, so that some decided efforts—more vigorous than the notice which I mentioned above—would be made.

Ralph L. Power, editor of *Special Libraries* and librarian of the College of Business Administration in Boston, now with the statistical branch of the Headquarters staff of the A. E. F., writes of his book observations on the journey overseas:

The first thing that I saw at the port of embarkation was one or two books on each man's pack. Apparently they had been given them at some camp library, for they were all labelled American Library Association. They were mighty useful on board boat to pass away some tedious hours.

The ship had an officers' library for the ship's officers; a library for the crew and the army officers on board; and a library of many hundred volumes was in the troop quarters for the use of the men. The first two were partly books owned by the ship's

officers and crew and partly from the war library service, but the troop library was entirely of war library service books and there were few on the shelves. Just because a book was out from the time the boat left port till the time it entered did not mean by any means that it had been read only once. Almost every volume was passed around several times.

At the rest camp where we landed the Y. M. C. A. had been established only a short time and had practically no provision for books. It did have, tho, a box of two hundred which it lent to officers only. This was because they had not recorded them. When fully arranged they intended to circulate. Later at our next station the Y. M. was well stocked with books and at our present place there is a separate room for the library in the Y. M. C. A. hut. There are not many books there but maybe they are out. Frankly, we haven't such a lot of time to read. We do need papers and magazines, as we can read them much easier, but we cannot get them where we are. We get a European edition of a N. Y. paper daily (of 1 to 2 pages) at 5c.

Library developments in certain phases of Army work are developing wonderfully. There are three departmental libraries where I am now—each with a good sized staff and doing excellent work. Other than that there is nothing I can write about them. My own work is a sort of combination of business and library work. I hope to pin it down to one particular phase as soon as we are permanently settled.

CAN YOU TELEGRAPH IT?

THE man who doesn't know what he's talking about keeps rambling from the path like a traveler in strange territory. Many words mean little information. The test of competence is directness. Experts are concise. The Ten Commandments can be written on a postal card. Lincoln immortalized Gettysburg in a three-minute speech. The kodak king became a multi-millionaire on a single explanatory sentence.

The measure of a mind is ability to simplify principles and issues. Short cuts are only reached by long study. The telegram is more effective than the letter, not alone because of urgency, but clarity, too. There's a certain amount of reflection behind every wire.

Knowledge can be reduced to an essential phase and expressed in a comprehensive phrase.—HERBERT KAUFMAN.

WHERE THE PERSONNEL RECORDS OF THE ARMY ARE KEPT

ONE of the most interesting contributions to the meeting of the catalog section of the A. L. A. at Saratoga was a long letter from Willis F. Sewall, for many years the librarian at Toledo, Ohio, and now holding a lieutenant's commission in the Adjutant General's Office in Washington. In the statistical division, to which Lieutenant Sewall is assigned, there is kept a card index of all the men in the A. E. F.

Each contingent sailing to join the American Expeditionary Forces forwards a copy of its roster to the Adjutant General as it goes on shipboard. A card is made for each soldier, with his organization, the name of a parent or other relative or friend designated by him to be notified in emergency and the address of the individual designated for notification. The cards are filed alphabetically. In addition, the ship sailing lists are maintained on file. Each casualty list cabled by General Pershing is checked on the cards in this personnel file before notices are sent to relatives or the casualty lists given to the papers. The work of this division is fully described in the *Official Bulletin* for June 6, to which Mr. Sewall makes reference.

"As will be seen from this statement," he wrote, "we build up a card index of the men in the A. E. F. from the Passenger List. The P. L.'s are prepared at the ports of embarkation, and signed by the company commanders. Before going to the typists they are carefully scrutinized by experienced women clerks in our office and every possible error in spelling of name, in rank, organization and emergency address corrected. Every local address is verified against the Postal Guide, the Western Union list of telegraph offices, and if necessary against a domestic or foreign atlas. For cases still in doubt two cards are typed and stamped 'DATA UNCERTAIN.' One of these goes to file at once, and the other is used as a basis for further investigation. The original enlistment paper is the next and principal source of verification, for here we have an official document signed by the soldier himself. The errors which

creep into the records are mainly of three kinds: errors due to poor hand-writing; errors due to careless typing; and errors due to misunderstanding and misspelling information given by word of mouth. Then there are those cases where the soldier for reasons best known to himself deliberately gives a false name or emergency address. If you have a name like 'Jake Drzazdyuski' it would seem at first glance that a few Z's more or less would not matter so much so long as you did not lose sight of the 'ski.' But I do not need to tell catalogers that Jake's card might easily get lost among a million others if not pretty nearly correct at least half way through. Jake, by the way, is a good American from Ohio. I once saw on a card this local address: 'Shayshear, Conn.' I looked up at the soldier's name and noticed that he was Italian. I came to the conclusion that that was his pronunciation of 'Cheshire,' and a better pronunciation than ours at that. But some company clerk had laboriously spelled it out the way it sounded, and thereby caused a lot of inconvenience. One colored soldier gave his emergency address as: 'Mammy Short, Mother, Post Office, Va.' I showed that to a clerk from Virginia. She said she had seen the sign, but could not remember just where it was. I enclose a sample card, which incidentally gives as voluminous an emergency address as has come to my startled gaze. In its original form the country was not visible to the naked eye, and one of our checkers had the hardihood to hold it up as 'Insufficient Address.'

As corrected by a Russian Jew.

"Seriously, however, every effort is made to verify and correct the data on these cards, so that if a casualty is reported, immediate notification can be made. We cable daily to the Headquarters of the A. E. F. in such matters, and the replies come back as sub-paragraphs on the daily Casualty Cablegram. Sometimes however the whole machinery of the War Department fails. Not long ago a soldier died in a hospital in France. The emergency address on the records here was 'Chicago, Ill.,' no street or number. We cabled, and the reply came back that the soldier flatly refused to give any information concerning himself or his family before he died. One can only wonder what domestic tragedy lay behind such a refusal.

"The Chief of Staff has officially stated that more than 900,000 men are already in France, and that the million mark will soon be reached. We have a card for each man; and are now typing and filing upwards of 10,000 cards a day. The problems of a great file of names are very different from those of a library catalog. Our file already occupies 1080 trays, and the names which fill two or more trays are as follows: Adams (2); Allen (2); Anderson (3); Brown (3); Davis (2); Jackson (2); Johnson (5); Jones (3); Martin (2); Miller (4); Moore (2); Murphy (2); Nelson (2); Smith (8); Thomas (2); Thompson (2); Williams (3); Wilson (2). Furthermore the great preponderance of Christian names are the old simple ones like Charles, Daniel, Frank, George, Harold, Henry, James, John, Joseph, Samuel, William, and the like. Therefore, there is a great duplication of these most common family and baptismal names; and the problems of arrangement and identification grow increasingly difficult.

"A whole chapter might be written on the comedies, and I doubt not the tragedies, of these family names. There is 'Heavens' and 'Hell' and everything between. All the sages and patriarchs from 'Milchisedek' down, not omitting 'Ananias'; all trades and occupations; all colors; all moral attributes and qualities; all growing things, trees, berries, and garden truck; all beasts, birds, fish, and creeping and crawling

things. There is the poor fellow who was named 'Faylure' at the start, and has been struggling manfully all his life to outgrow the handicap; and still it clings like a millstone. I hope it will get changed in the Army, if only to a nick-name. But above all the name 'Gaston Popskul' excites my eager curiosity. I would like to tap him gently on the cranium and see what would happen. I would have no fear of bodily harm, for he must above all else be a polite man.

"I have already referred to the Enlistment Paper. This is a four-page printed form which when folded looks very much like a deed. Some 18 or 20 different files of Enlistment Papers had grown up. These have recently been thrown into one alphabet. It involved the handling of approximately two million papers. The Draftees are taken care of by a Declaration, which is an unfolded form the same size as the folded Enlistment Paper, of heavy stock, and printed on both sides. From the latest Muster Rolls jackets are being typed for each man in the Army. Each soldier's jacket will contain his Enlistment Paper or Declaration, any other personal papers, and finally his Service Record when he is mustered out of the service. This file includes prior enlistments, all men now in the Army, and will include all enlisted men who may hereafter be called to the colors. It will therefore contain more names than the index first described. It does not include officers.

"In the Bureau of War Risk Insurance (Life Insurance Section) the applications and subsequent correspondence are filed numerically, just as books are accessioned in a library. There is an alphabetical index on 3 x 5 index cards. My understanding is that every man who does not take out insurance will be required to sign a declaration that he has had an opportunity to take out insurance and declines to do so, thus relieving the Government of any possible future claim. If that is so this index will contain the name of every enlisted man and every officer in the Army, the Navy and the Marine Corps. That will make it the largest alphabetical index of names in this country, and I suppose in the

world. The Allotment Section of the Bureau of War Risk Insurance also has a file or index, the nature and extent of which I know nothing of.

"In the office of the Provost Marshal is being assembled a complete central occupational card file. This file when completed will contain the special occupational qualifications of each *Registrant*. It is on 5 x 8 inch cards and is compiled from the Questionnaires. You will recall that President Wilson last winter appealed to school teachers to assist the local boards in filling out these cards. The cards are arranged according to a symbolic number, the basis of which is the Census Bureau's series of numbers for occupations, extended by numbers for the states and local registration districts. Class 1 has been completed, and the work is going forward.

"Under the authority of the Committee on Classification of Personnel a personnel office for enlisted men has been established in each division headquarters of the Army in this country, and in several in France. A card catalog system furnishes immediately available information as to the educational, occupational and military qualifications of every man. There is also an elaborate rating card for officers.

"And finally, as it takes money as well as some other things 'to win the war,' I will mention the file of Income Tax Returns in the office of the Collector of Internal Revenue. I have been told that these Returns are filed geographically and by size of income; and that they reach the enormous total of 13 millions.

"Will those who have not been card-indexed in some way or other please stand until counted?"

AN AMERICAN CREED

I AM an American. I believe in the dignity of labor, the sanctity of the home, and the high destiny of democracy. Courage is my birthright, justice my ideal and faith in humanity my guiding star. By the sacrifice of those who suffered that I might live, who died that America might endure, I pledge my life to my country and the liberation of mankind.—*The Outlook*.

AN IMPORTATIONS CANARD AND SOME NOTES ON GERMAN PERIODICALS

A REPORT has gone abroad that the War Trade Board has ordered the seizure and sale of American merchandise impounded in Dutch ports. Without preliminary inquiry as to its accuracy this report has been sent to librarians altho the author had been officially advised that the State Department had given direction to the American Legation at The Hague to reconsign the material destined to American libraries so as to reach the State Department and therefrom be distributed to the subscribers.

The simple fact is that the War Trade Board maintains an agent in Holland who offers to perform a friendly service for American importers. He endeavors to secure a license for the export of their impounded material if they wish it; or if they prefer not to risk shipment and yet escape storage charges he will, upon request, endeavor to find a purchaser. American libraries are not involved in any wise. Let this incident, therefore, be one more proof to the librarians that they pay not the slightest attention to any importations advice of anybody save the importations committee, which is in continual contact with the Departments of Government in Washington and is kept advised as to the shipping situation.

NOTES ON GERMAN PERIODICALS

The following notes on the appearance of German periodicals during 1918, as reported by Mr. Nijhoff, will be of interest to numerous American subscribers.

The following have ceased appearance during the war:

Archiv für pädagogik.
Archiv für papyrusforschung.
Bibliotheca mathematica.
Ferrum.
Internationales archiv für schulhygiene.
Die Musik.
Mycologisches zentralblatt.
Pädagogisches archiv.
Zentralblatt für die ges. innere medicin.

The exportation of the following during the war has been prohibited by Germany:

Chemische novitäten.
Gummi-zeitung.

Kolloid zeitschrift.
Kunststoffe.

Liebigs Annalen d. chemie.
Zeitschrift f. d. ges. kältindustrie.
Zeitschrift für instrumentenkunde.
Zeitschrift für orth. chirurgie.

The following show irregularities of issue:

Archiv f. d. gesamte psychologie. Vol. 37, pt. 1, issued June 1917; pts. 2 and 3, March 1918.
Archiv f. entwicklungsmechanik der organismen. Vol. 43, pts. 1-3, issued in 1917; pt. 4 in 1918.
Archiv für rassen- u. gesellschaftsbiologie. Vol. 13 not yet issued.
Archiv für zellforschung. Vol. 15 not yet issued.
Archiv f. zoologie, allgemeine u. experimentelle biologie. Vol. 7 not yet issued.
Deutsche mathematiker-vereinigung. Jahresbericht. Vol. 27 not yet issued.
Internationale zeitschrift für metallographie. Current vol. 9 started in 1917.
Internationale zeitschrift f. physikalisch-chemische biologie. Vol. 3, pt. 1 was issued in 1916; pt. 2 in 1917.
Mathematische annalen. Vol. 79 not yet issued.
Monatshefte für mathematik. Pt. 1 will be issued about August.
Romanische forschungen. Vol. 37 latest issued.
Zeitschrift f. aegyptische sprache u. altertumskunde. Vol. 54 not yet issued.
Zeitschrift für ethnologie. Vol. 49 will start at the end of 1918.
Zeitschrift für gährungsphysiologie. Current vol. 6 started June 1917.
Zeitschrift f. mathematik u. physik. Vol. 65 not yet issued.
Zentralblatt für biochemie. Current volume 19 started May, 1917.
Zentralblatt f. zoologie, allgemeine u. experimentelle biologie. Vol. 7 not yet issued.

The following are out of print as indicated:

Giesserei-zeitung. Pts. 1-7.
Verein deutscher ingenieure. Zeitschrift. Pts. 1-6.
Wiener medicinische wochenschrift. Parts of 1918.
Zeitschrift f. bildende kunst. Part for March.

M. L. RANEY, *Secretary,*

A. L. A. Committee on Importations.

A PERSONAL STATEMENT REGARDING IMPORTATIONS

LIBRARIES are apt to get befuddled by too much advice on importations. Job is being vastly comforted by the authors of his boils and carbuncles. The facts can be simply stated.

Our entry into the war made it automatically unlawful to get a book from Germany, directly or indirectly. No individual therefore or agent could keep within the law and maintain a trade relation with the enemy countries. This is recognized in a communication of Oct. 18, 1917, from a prominent importer to his clients as follows: "We have just learned that exportations from Germany are out of the question during the war, and since it is impossible to send mail or cash to that country, we

cannot place a regular order for German and Austrian periodicals." That is as true today as when it was written. Librarians had better remember that.

But with the passage of the Trading-with-the-Enemy Act, approved Oct. 6, 1917, ways by exception were provided for a certain amount of trading with the enemy; that is to say, you could, if you got a license from the War Trade Board. That the American Library Association, thru its committee on importations, did. That the agents of institutions did not.

But in order to convenience the institutions, the committee sought to use its license, so that the institutions might maintain their connection with their agents. The plan was at first accepted by the State Department, which, by agreement with the War Trade Board, was to control operations under this specific license. But after its promulgation, it withdrew its sanction and required the Association to act directly, so that institutions and agents once more reverted to the status outlined in the circular just quoted.

This new pronouncement came just as I was on the eve of departure for Europe. It came too late for me to get a response from institutions. I had either to act in their behalf, as the State Department required, or abandon them completely, and so act for the Johns Hopkins University alone. I chose the former, and believe that in the end the institutions cannot regret the choice.

I succeeded in effecting the arrangements with the British and French Governments which the State Department asked. The order was placed, as the Department of State desired, with such agent as I found our Allies to be successfully patronizing; that is to say, in the first instance, Martinus Nijhoff, whose service British institutions were found to be highly enthusiastic over. The further orders will be placed, unless otherwise required by institutions, with Librairie Kundig, found similarly to give satisfaction to French institutions. This firm says, under date of April 30: "They [German books and periodicals] can be supplied at exactly the same rates as at headquarters where

they are issued. *We* pay the cost of carriage to Geneva. The mark will be reckoned at the 'cours du jour,' that is, at its quoted value. All orders will be delivered free of charge at Berne."

This was explained to the chief importers in New York before my departure, and my long activities in their behalf were cordially recognized, and I was told that they were glad the institutions were not after all to suffer because of their inability to serve.

Several weeks after this order was placed, this same American importer, above quoted, was surprised by an advice from Germany that he had, without authorization, been advanced a credit sufficient to cover half his usual subscriptions. But he cannot legally take advantage of that authorization, for he would thus be trading with the enemy. Therefore institutions are not under the slightest legal obligation to recognize this unauthorized act of a German agent.

Nijhoff has succeeded in getting the goods. Large shipments have gotten at least as far as London, and the ambassador there has secured from the Foreign Office an order for their dispatch. The State Department feels quite sure that it will soon be able to effect an arrangement for direct shipment from Rotterdam to America, so as to cut out trans-shipment charge in London.

The bills from Nijhoff have arrived and show an exorbitant rate of exchange. That is to be greatly regretted, and has been made the subject of both telegraphic and written protest. Nijhoff converts the mark into guilders at the rate of .55, whereas, in his published offer of October, 1917, the promised rate was .45. Furthermore his so-called 5% war tax is entirely unheralded. I hope for modification, and expect, if this cannot be secured by mail or cable, to handle the case in person at The Hague in the near future, so that institutions can feel assured their interests will be energetically looked out for. The main difficulty however lies in the advance in value of the Dutch guilder as compared with its ante-bellum rate. This we cannot overcome.

As for the claim that the German Government will not permit the exportation

of important scientific journals, let me say that, without claiming the ability to prophesy the future, I can emphatically assert that as a result of the examination of the British Government's records as well as the cards and shelves of several representative British institutions, I am in a position to say that British institutions are receiving nearly their usual German periodical service. The Royal Society of Medicine, for example, has 350 German medical journals right up to date on its shelves, with scarcely a gap discernible. The practice may change, but those are the facts at present, and what is more Nijhoff has despatched from Rotterdam large consignments for us.

In conclusion I cannot too strongly urge upon libraries the importance of their taking out insurance against gaps in their files. They had better get these periodicals while the getting is good, not being too squeamish about cost. The German War Paper Commission has laid limitations upon editions. Many are already out of print. For example, even the 1918 issues of the *Zeitschrift Vereins deutscher Ingenieure* can no longer be had. Many publishers are printing only a sufficient number of copies for subscriptions actually received, and demand, of course, payment of subscriptions in advance. Under the best of circumstances we should be years in getting our lacunae closed, and we may be assured we shall pay a pretty price for it. Duplication is not serious. Any person or agent that is lucky enough to have a surplus journal after the war will have an embarrassing number of chances of disposing of it at a nice figure.

Institutions will do well to remember that the Association in this matter of importations is being implicitly trusted by the State Department. Its cables are regarded as Department business, and its correspondence accorded the courtesy of the diplomatic pouch. The advice of the committee is accepted in practically every case by the officials, and Washington acts with energy upon our requests. We had better not throw away such a position at the idle suggestion of those who have axes to grind.

M. L. RANEY, *Secretary,*

A. L. A. Committee on Importations.

THE WORK OF THE LIBRARIES IN THE FOOD CAMPAIGN

IN the great movement for food conservation the past year the libraries have played no mean part, ever since the librarians were enlisted to aid the United States Food Administration last October. Writers, artists, specialists in many fields, schools, universities, and government departments have all volunteered help. It has been the library's part to make constantly available to the public the information and ideas offered by these individuals and institutions.

The United States Food Administration has secured in practically every library a bulletin board whereon important announcements are displayed each week. In the monthly *Food News Notes* for public libraries it suggests short, telling items for each week's bulletin, and the recipes which it gives are so arranged that they may be cut out and displayed there also. Before leaving the *Food News Notes*, it is well to note among other useful items for reference its lists of publications relative to food conservation of the federal and state Departments of Agriculture, and of the Bureau of Fisheries, lists of books on gardening, poultry and eggs, notices of special articles on food in the current numbers of the magazines, a digest of press statements relative to food conservation, and names of state merchant representatives, home economics directors and library directors from whom further help may be obtained.

The Food Administration has, further, made suggestions to those librarians who have requested material for food talks to be given in the library auditorium, has helped to plan exhibits for libraries and has "provided exhibits . . . for thirty state fairs. Each exhibit consists of a set of twelve oil paintings freely contributed by men like Daingerfield, Blashfield and Campbell; twelve statistical charts showing the accomplishment of the Food Administration, and ten small exhibits in a glass case picturing the need for food saving and the method of its accomplishment."

By January, 1918, a "library director" was placed on the staff of the United States

Food Administration in nearly every state. The library directors now are:

- Alabama—Dr. Thomas M. Owen, Dept. of Archives and History, Montgomery.
- Arizona—Estelle Lutrell, University of Arizona, Tucson.
- Arkansas—Beatrice Prall, Public Library, Little Rock.
- California—Mrs. F. M. C. Harmon, State Council Defense, Los Angeles.
- Colorado—Chalmers Hadley, Public Library, Denver.
- Connecticut—George Godard, State Librarian, Hartford.
- Delaware—
- District of Columbia—Arthur Blessing, Public Library.
- Florida—Helen Virginia Stelle, Tampa.
- Georgia—Duncan Burnet, Librarian University of Georgia, Athens.
- Idaho—Belle Sweet, Moscow.
- Idaho—Marion Dahl, Boise.
- Illinois—George A. Deveneau, University of Illinois, Urbana.
- Indiana—Wm. J. Hamilton, State Library Commission, Indianapolis.
- Iowa—Julia A. Robinson, Iowa Lib. Commission, Des Moines.
- Kansas—Willis Kerr, Emporia.
- Kentucky—Carolyn E. Adelberg, Free Library, Louisville.
- Louisiana—Henry M. Gill, New Orleans Public Library, New Orleans.
- Maine—Henry E. Dunnack, State Library, Augusta.
- Maryland—Dr. Bernard Steiner, Enoch Pratt Free Library, Baltimore.
- Massachusetts—Food Facts Bureau, Boston Common.
- Michigan—Theresa J. Shier, State House, Lansing.
- Minnesota—Clara F. Baldwin, Minnesota Public Library Commission, St. Paul.
- Mississippi—A. A. Kern, Millsaps College, Jackson.
- Missouri—Elizabeth B. Wales, Missouri Library Commission, Jefferson City.
- Montana—Gertrude Buckhous, Librarian State University, Missoula.
- Nebraska—Edith Tobitt, Public Library, Omaha.
- Nevada—Frank J. Pyne, State Library, Carson City.
- New Hampshire—Grace Blanchard, Public Library, Concord.
- New Jersey—Sarah B. Askew, State Library Commission, Trenton.
- New Mexico—Mrs. Harry Wilson, Santa Fe.
- New York State—Asa Wynkoop, State Education Bldg., Albany.
- New York City—Edwin W. Gaillard, New York Public Library, New York City.
- North Carolina—Mrs. Minnie L. Blanton, Raleigh.
- North Dakota—Winnie Bucklin, Fargo.

Ohio—Charles W. Reeder, State House, Columbus.
 Oklahoma—Charles H. Stone, Librarian Oklahoma Agricultural and Mechanical College, Stillwater.
 Oregon—Cornelia Marvin, State Library, Salem.
 Pennsylvania—
 Rhode Island—Herbert O. Brigham, State Library, Providence.
 South Carolina—K. B. Trescott, Clemson College, Clemson.
 South Dakota—Mrs. Jeannette E. Herreid, Aberdeen.
 Tennessee—Mary Skeffington, State Library, Nashville.
 Texas—Julia Ideson, Houston.
 Vermont—Ruth L. Brown, Free Public Library Commission, Montpelier.
 Utah—Joanna H. Sprague, Salt Lake City.
 Virginia—Earl G. Swem, State Library, Richmond.
 Washington—W. W. Foote, Library State College, Pullman.
 West Virginia—Dr. L. D. Arnett, Librarian West Virginia University, Morgantown.
 Wisconsin—C. B. Lester, Library Commission, Madison.
 Wyoming—Grace Raymond Hebard, University of Wyoming, Laramie.

Varied and ingenious are many of the programs planned by the library directors for carrying on this work. The New York state director has arranged for local conferences all over the state with round table discussions. Georgia's director sends out a semi-monthly news letter to all librarians of the state. Mr. Deveneau, director for Illinois, enlists a fellow-librarian with a *flair* for advertising to write "A personal letter on library publicity," emphasizing the human side of the work and exhorting them to "keep on doing it"; at another time Mr. Deveneau himself sends out an informing letter with bibliography attached, as for example, on small fruits for Illinois; again he writes urging superintendents, principals and teachers of public schools to have their students enter the poster-designing contest and send a poster-collection to the annual exhibition of public school drawing and manual training at the university. W. W. Foote, director for Washington state, at the beginning of the campaign, wrote to the schools asking that the children write essays and make posters on sugar and meat conservation. Later he drew the attention of librarians and school superintendents to the material which could be had

for free distribution, and again, still early in the campaign, sent to every library in his district a letter calling attention to the general plan suggested in *Food News Notes*. Beginning with February 16, he has issued a printed *Weekly News Letter* suitable for posting on the library bulletin-board. It reproduces clever posters, suggests subjects for essays, and gives reports on gardening and food exhibits in other libraries both inside and outside the state.

Many library directors modestly withhold reports alike of what they have planned and what achieved. But from the reports available there seems to have been a very serious and continuous working "with a pull all together" all over the country. Mr. Jennings, of Seattle Public Library, reports that he can use two thousand copies of the United States Food Administration pamphlets and that he finds it impossible to satisfy the demand for literature on food production and conservation. The New York City libraries have distributed over half a million pamphlets. "No more new fiction" say some libraries of Oregon, which put additional money and energies into the purchase of books on food, securing and loaning pamphlets, and, where there is only one available copy of a pamphlet, arranging for readings to be given from it at stated hours!

But the distribution of literature, once the library's sole function, is now but one of its many activities. In these activities the domestic science, art and gardening classes, and women's clubs have been enlisted to help. In many places, notably in Washington, Illinois and Michigan, the schools furnish the libraries with nearly all the posters required. California libraries exhibit fruits and vegetables, canned and cooked products as well as books and pamphlets. The Takoma Park branch of the Washington Public Library as early as last summer gave space for a vegetable drying apparatus and in September had a fine exhibition of fruit and vegetables raised and preserved by children of the district. One Wisconsin librarian writes:

"For our food exhibit, which was confined to the use of substitute flours, I gave up the most popular reading table in the

library, put up a row of colored picture posters back of it, and decorated the table with the prettiest flowers I could get. The domestic science department opened the exhibit with an interesting display, accompanied with piles of manifolded recipes for free distribution. As fast as I could find out from visitors which substitute flour troubled them most, and which they had best success with, I asked for samples of the successes and made typewritten copies of the recipe, with the donor's name, for free distribution. Then I either found some one who had successfully used the troublesome substitute, or some good cook who was willing to experiment with it. a d exhibit a successful result, with recipe."

In Walla Walla, Wash., a food exhibit, prepared by Whitman College students, was held in the Public Library, where it attracted at least five hundred visitors. Different tables exhibited the following: (1) Meatless dinner, illustrating the use of peanut butter, nuts, etc.; (2) different breads without wheat, and combinations with a little wheat; (3) breakfast foods other than wheat; (4) "butter stretchers"; (5) use of scraps from the table; (6) what Uncle Sam feeds his soldiers—a day's rations; (7) exhibit of one day's food for child two years old; (8) fireless cookers and iceless refrigerators; (9) one hundred calories of various foods; (10) model grocery order for family of five. The library exhibited the colored food charts of the U. S. Department of Agriculture, showing compositions and value of certain foods, and all pamphlets and bulletins were exhibited on wires strung around the room. Copies of the bibliography of material available in the Walla Walla Library were distributed.

Again, the Chicago Public Library and many members of the Chicago Library Club took an exhibit section at the Chicago Food Show, Jan. 5 to 12, and had a most successful booth, which was described and illustrated in the March issue of the JOURNAL.

The food exhibits of the Boston Public Library are of particular interest because of the varied organizations co-operating to prepare the exhibit and because of the widespread and sustained interest they command. The following organizations are

responsible for this service: Association of Collegiate Alumnae; Boston Women's City Committee on Food Conservation; Free Public Library Commission; Massachusetts Branch of the Women's Peace Party; Massachusetts Normal Art School; Massachusetts Public Interests League of Anti-Suffragists; Massachusetts Women's Suffrage Association; Miss Farmer's School of Cookery; National Civic Federation; School of the Museum of Fine Arts; Special Aid Society for American Preparedness; Women's City Club of Boston; Women's Municipal League of Boston.

The board of directors, composed of one member from each of the organizations, meets the third Monday of each month to determine policies, to decide upon the character of the exhibits for the following month, and to apportion them. The executive secretary, whose time is contributed by the Women's Municipal League, is responsible for the detail of assembling and installing the exhibits each month. A prominent place on the first floor of the library has been set aside for the exhibit. A leaflet, issued under the auspices of the Massachusetts Library Commission, is distributed to the public. This leaflet furnishes a list of substitute foods with the *price* at which they may be bought at the time in Boston, and in a general way, where they may be procured. The exhibit for January was Corn foods, for February, Fats, and for March Milk as a food, not a beverage.

The library director for New York city, Edwin H. Gaillard, has arranged for an attractive corner in each branch library, with posters and a table of books relating to a special field, *e. g.*, flour substitutes. The branches have distributed half a million pamphlets on production and conservation. There are two permanent canning stations, and a dozen food exhibitions have been arranged, one good one consisting of a day's meals suited to the season, showing in each case the cost and the number of calories obtained from the food. At a demonstration of breadmaking with substitute flours, five batches of bread are in the making at one time so that the audience in one séance can enjoy each process, from the mixing of the dry ingredients to the

eating of the finished product. To do this, gas stoves were used, one in the staff room kitchen and one installed on the platform in the lecture room. This unique demonstration was arranged by the director himself who also tries out and approves canning recipes before they are given to the public.

The problem of New York city is very complicated not only by the many languages spoken but by the very varied methods of food preparations used by the peoples forming a large part of the population. Some food propaganda material has been translated into Italian and adapted to their needs. The next translations will be into Bohemian, and it is hoped ultimately to reach many more foreigners with literature in their own tongues.

"LYSIS"

THE following information as to the identity of an able French writer, whose works are finding their way to this country in book form and who uses the pseudonym "Lysis," is sent in by a librarian for the benefit of others who may have been puzzled to identify this author:

"*Letailleur c'est le même homme que Lysis qui est un pseudonym.*"

"*Lysis est un des cerveaux qui dirigent la France demain—c'est un solitaire—il a écrit des articles de philosophie d'action, d'un façon populaire, un peu à la Brisbane, pour les plus grands journaux socialistes français, bien que non 'socialiste.' Influence énorme. Respecté pour tous partis . . . J'ignore son prénom.*"

The above information was obtained unofficially from an attaché of the French High Commission.

"*Il est vrai que les ministres les plus éminents ont bravement endossé la responsabilité des assertions qu'un journaliste financier, M. Letailleur, a mise en circulation sous le nom de Lysis.*"

The above is the evidence of Yves Guyot in "*l'Industrie et les Industriels.*" Paris, 1914, p. 136.

EVERY day in our life is a day in our history.

Do not wait to have your task marked out.

SALARIES MUST BE RAISED TO MAINTAIN LIBRARY EFFICIENCY

"YEAR after year about one-fourth of the staff of the Library leaves its service, attracted by better pay in other libraries and other state departments," says J. I. Wyer, Jr., in the 1917 report of the New York State Library. "Most of these resignations are from the lower grades, receiving salaries of \$600, \$480 and \$360 (for there are several positions as pitifully paid as that), and the vacancies are with much difficulty filled with other pages and clerks, who are in turn quickly tempted into better paid offices (and every other department is better paid). For years the State Library has been training clerks for the other state departments. There is scarcely another state office which does not have or has not had on its force from one to a dozen former library employees. This may be very advantageous for the other departments but it puts upon the library a permanent handicap, for which it is not a sufficient consolation to reflect that the library's clerical products are keenly appreciated in other directions and that the library is notoriously an easy mark for any other office wanting a good clerk."

In a recent letter published in the *Boston Record* Isaac Sidel of East Boston says, in an arraignment of salary conditions in the Boston Public Library:

"It is doubtful whether any other municipal department of the City of Boston pays such a low living wage to its majority of employees as does the Library Department. Length of service means hardly anything. Of all its employes, about half earn about fifteen dollars weekly regularly. Some who have been in the service 40 years are earning to-day only from ten to fifteen dollars weekly; others in the service twenty years receive only ten dollars weekly.

"The only way that they can make both ends meet is by working overtime. Take away this overtime work, and soon they would practically starve. . . . As it is, the married men have their home life disrupted; having to work day and night to earn an apology for a decent salary. The

younger men hardly indulge in recreation; they have not the funds to pay for it. . . . "The Boston Public Library is the graveyard of all ambition and hope."

The Public Library in Washington, D. C., has been hard hit by resignations during the past year. The following explanation of the resulting deficiencies in library service is given in its latest *Bulletin*.

"The library would like to give 100 per cent service to the public, including especially the newcomers to Washington. The following are some of the reasons for deficiencies in the service:

"1. In twelve months the resignations have numbered 90 per cent of the library staff. Employes have gone to government departments at double the salaries paid by the library. All library salaries are fixed by law.

"2. The recruits, no less than the remaining original staff, desire to give good service, but, to a large extent, are inexperienced.

"3. The staff was too small in peace time. The increase in population has brought larger crowds to the library. The library staff has remained practically stationary in numbers.

"These conditions cause congestion and delay. The consideration and cooperation of the public are requested under these trying circumstances."

At the regular monthly meeting of the Library Council of the St. Paul Public Library, July 1, a resolution was adopted that in the preparation of the library salary budget consideration should be given not only to the increased cost of living, but also the higher grade and increased amount of service rendered by the several departments. It was also resolved, that heads of departments elaborate a schedule of activities in their several departments and determine standards of service in connection with each for use in the measurement of the efficiency of each employe and as a basis for recommendation for promotion, and that the questions of standardization of the service and efficiency rating be referred to a

special committee of the council for investigation.

On the other hand, we have come across occasional evidence that library boards, and the citizens behind them, are waking up to the need of increased salaries for library workers. In view of the increased appropriation received by the Public Library of Phoenixville, Pa., from the school district, the salary of the librarian was increased \$5 per month at the June meeting of the board. At a recent meeting of the trustees of the West New York Public Library, likewise, it was decided to increase the salaries of the chief librarian and the two assistants, \$200, \$120, and \$60 per annum respectively. Kansas City has increased its salary list about 21 per cent, increases ranging from 12½ to 25 per cent, on salaries of all members of the staff earning less than \$2000 a year. This comes on top of a raise of 10 to 20 per cent a year ago.

The following is one of the poems contributed weekly by request to the *Eighty-Third Division News* by G. O. Ward, of the Cleveland Public Library, while serving as camp librarian at Camp Sherman:

Grouch Gets Hep

Old Jethro Grouch dropped in to see just why camp libraries should be. "I've heard," he said, "of these here books, and I'm not sure I like their looks. The thing for soldier boys is drills, and books, methinks, are simply frills."

Just then, came Private Benjamin Bones and asked for books on telephones, and after him, two husky chaps demanded dope on making maps, and others asked for Lewis guns and other things to swat the Huns. And last, a tired guy walked in to rest him from the dust and din, and found a novel and a fag to straighten out his mental sag.

Then Jethro said, "At last I see just why camp libraries should be. They speed the soldier's training up to face the hardware made by Krupp, and when he sort of loses step, they help to give him back his pep. And so, my friends, henceforth, gadzooks! You'll hear me root for soldiers' books."

Library Organizations

LIBRARY WEEK AT LAKE PLACID

Indications point to one of the finest meetings in the history of the New York Library Association.

The program, which has for its general theme, Book Power, is growing in strength and attractiveness. The subject of books, our working capital, will be treated from various angles by members within our own ranks and by noted speakers from without.

Among the speakers who have been secured are:

Dr. C. H. Parkhurst

"The bearing of literature upon civilization and the present condition of the world."

Dr. Melvil Dewey

"The Lake Placid Club, a sociological experiment."

Col. William Cary Sanger

"Arms, books, and the man."

Dr. Earl E. Sperry

"German propaganda in the United States."

Dr. Frederick W. Betts

"Book distribution to rural communities."

William Warner Bishop

A message from the President of the American Library Association on "Changing ideals in librarianship."

Frederic G. Melcher

"Publishers as multipliers of book power."

Orrin G. Cocks

"The motion picture visualized book power."

William F. Jacob

"Technical books as sources of power."

H. W. Wilson

"Mobilizing book power."

We expect to secure also S. K. Ratcliff of England and the Hon. Geo. W. Ray.

Leta E. Adams is arranging a symposium on books for adults and Mary C. Richardson one on books for children. Charles H. Brown has charge of a session of camp librarians which will be open to all members.

Of entertainment and outing there will be an embarrassing richness. The use of boats, tennis courts, golf links, etc., will be free to members of the association. The Lake Placid Club is arranging for special boat trips and mountain rides. One evening will be set aside for the Indian Council fire in charge of Godfrey Dewey.

In music also a treat is in store for us. Concerts of the highest order are given twice a day by artists who have been members of famous concert groups such as the Kneisel and Beethoven. There are seven of them selected from the Boston Symphony Orchestra, the finest in the world.

By no means least of the attractions are the rates. Thru the personal interest of Mr. Dewey in our association the rates are so moderate as to place this meeting within reach of all. Charges for members are \$3.50 a day or with private bath \$4 for the smaller rooms. For larger rooms there is an increase of 50c for each larger size. Headquarters will be at the Lakeside Club House, where all our members can be housed practically under one roof.

Library Week presents a rare opportunity to combine business and recreation for a few days. There is nothing better to equip librarians with new inspiration and vigor for the strenuous duties of the coming year. If you have not yet made your plans to attend, you should do so at once. The date is September 23-28.

WM. F. YUST, *President*,
New York Library Association.

NEW HAMPSHIRE LIBRARY ASSOCIATION

The annual meeting of the New Hampshire Library Association was held at Claremont June 13-14, and proved to be one of the most delightful gatherings in the history of the association.

The president, Mary Lucina Saxton, presided and introduced the Hon. Hosea W. Parker, chairman of the board of trustees of the Fiske Free Library, who extended a most cordial welcome to the visitors. Abbie Field, for many years librarian of the Fiske Free Library, read a delightful paper on the artist colony in the neighboring town of Cornish, giving a history of the founding of the colony and relating many interesting anecdotes concerning the artists and writers connected with it. It was a disappointment that Lillian Whiting was prevented by an accident from attending the meeting, but Harry K. Lloyd of Claremont, very acceptably filled her place on the program with an illuminating talk on stained glass. Avoiding technicalities he gave his hearers something of an insight into the workings of the artist's mind, the means by which he seeks to express his ideas, and his use of symbolism. Mr. Lloyd illustrated his talk with several of his own designs.

Promptly at four o'clock automobiles, pro-

vided by the people of Claremont, were in readiness to take the party to Cornish to visit the Saint-Gaudens studios. It was a beautiful drive about eight miles along the Sugar river and the Connecticut, affording a wonderful view of Mt. Ascutney and the Green Hills beyond. A short distance above the Tea Tray, a most attractive tea house, which, by the way, bears a sign painted by Maxfield Parrish, the machine turned into a road winding through beautiful woods until a sudden turn brought them into the driveway leading to the larger of the two studios where Augustus Saint-Gaudens did so much of his work. A visit was paid to both of the studios, also to the Temple erected to Saint-Gaudens' memory by his friends and neighbors. The pleasure of the trip was greatly enhanced by the gracious welcome accorded the party by Mrs. Saint-Gaudens.

The evening session had a decided war flavor. Edith Guerrier, speaking for the library section of the Public Information Division of the U. S. Food Administration, urged the librarians to press on to greater and still greater service. John Adams Lowe, librarian of the Camp Devens Library, told in his characteristic manner of the work being done for the boys at Ayer and proved to the satisfaction of the audience that a camp library is a military necessity.

The session on Friday morning was given over to reports, election of officers, and messages from the district reporters concerning library activities in different sections of the state. Profitable discussions followed on what war books to avoid purchasing. Mrs. Robert Barrett, librarian of the Cornish Library, spoke briefly on her recent experiences in London and Paris, and exhibited some striking war posters which she collected in Paris and is willing to lend to any library desiring them.

The following officers were elected for 1918-1919: President, Elsie Gaskin, Derry; 1st vice-president, Caroline B. Clement, Manchester; 2nd vice-president, Mrs. Lillian Wadleigh, Meredith; secretary, Sarah Gilmore, Claremont; treasurer, Annabell C. Secombe, Milford.

The Vermont Library Association, which had been invited to attend this meeting at Claremont, was represented by a goodly number of its members. It is a pleasant experience having the two associations come together in this manner and it is hoped that other joint meetings may be held in the future. Following the closing session a number of persons motored to Cornish Flat to visit

the Stowell Library, whose librarian and assistants are doing such excellent work in making the library a community center. This library has the distinction of owning a book-wagon and trips are made to the outlying districts even during the severe weather of winter.

CAROLINE B. CLEMENT.

BAY PATH LIBRARY CLUB

The annual meeting of the Bay Path Library Club, was held in the Petersham Memorial Library, June 21, 1918.

The president, Mrs. Robert K. Shaw, called the meeting to order and presented the Rev. Robert C. Douthit, who welcomed the club to Petersham and gave an outline of the attractions of the town both natural and historic.

Because of the limited time the business meeting was very brief and the reports of the secretary and treasurer were omitted. The president appointed a nominating committee to bring in a list of officers, and the following names were submitted: President: Mrs. Robert K. Shaw; honorable vice-president, M. Anna Tarbell; vice-president, Helen P. Shackley, Harriet G. Brown; secretary, Mabel E. Knowlton; treasurer, Mrs. Grace M. Whittemore. Upon motion of Mr. Shaw the secretary was instructed to cast one vote for the list as submitted, and the above named officers were declared elected.

Miss Chandler reported that the travelling library purchased by the club and placed in the hands of the Woman's Education Association, had been sent to the town of Sutton for use in the public library and its branches in that town.

Mrs. Whittemore then took up the "book reviews" and called on Miss Keyes for a list of some of the best books on the European war for the small library to buy. Miss Keyes in addition to naming the books gave a short analysis of their contents which should prove helpful to the librarians in making their selections.

Miss Johnson of the Town Room, Boston, followed with a list of helpful and inexpensive material on the subject of "Food conservation." Miss Chandler suggested that this list be multigraphed and a number of copies sent to the different libraries. Miss Jones of the commission thought that the commission would perhaps attend to this matter.

The president suggested that the question of appointing a press chairman be considered but no action was taken.

John A. Lowe, agent of the commission,

sounded a note of warning in regard to German propaganda and gave a list of books which the Intelligence Service considers harmful. It was suggested that this list also be photographed and sent to librarians.

The club was the guest of the trustees of the Petersham Memorial Library at lunch which was served in the vestry and on the lawn of the Unitarian Church.

The afternoon session opened with an address by Dr. George H. Blakeslee of Clark University, Worcester, on "Some aspects of the war." Dr. Blakeslee was followed with the closest attention as he presented very clearly some of the aims and issues of the great struggle.

Mrs. Shaw expressed the appreciation of the club for the very generous hospitality extended by the library and the citizens of Petersham both in the matter of lunch and of transportation by automobile to and from the station.

MABEL E. KNOWLTON, *Secretary.*

DES MOINES LIBRARY CLUB

The Des Moines Library Club has closed a very successful year's work, under the leadership of Reba Davis, president.

The meetings were held in October, December, February, April and June. While the social side of the club work has not been forgotten, more thought has been given to the needs of to-day, and the meetings have been devoted to war activities. The October meeting took the form of an informal reception in honor of its new members, Charlene Sperry of Des Moines college very graciously entertaining the club at her home. The social committee provided a program emphasizing food conservation, Liberty bonds and war slogans.

The December meeting was held in the Library Commission rooms in the Historical Building. Prof. Herriott of Drake University gave an address on "Women and patriotism," after which scrap books were made for the hospital at Camp Dodge.

The February meeting of the club was held at the City Library. Mr. Spaulding, the city librarian, gave an interesting talk on John Masefield and spoke of his approaching visit. Then each library represented in the club gave a part in the evening's entertainment.

On Feb. 15, the library club joined with the Press and Authors Club in presenting John Masefield in a lecture, which was listened to with great interest by a large audience.

The club extended an invitation to the Iowa

Library Association in session in the city, and on April 25, Mr. Spaulding, acting librarian at Camp Dodge, was host to the convention and club. War measures and war work were discussed. Tea was served at the Y. W. C. A. Hostess house.

The last meeting of the year was a picnic at Greenwood Park the evening of June 25. Officers of the ensuing year were elected as follows: President, Forrest B. Spaulding of the City Library; vice president, Lavinia Steel of the State Library; secretary, Helen Proudfit, children's librarian of the City Library; treasurer, Mary Mark of the Iowa Library Commission; chairman of the program committee, Ethel B. Virtue, Historical Department of Iowa; chairman of the social committee, Florence Price of the State Library. M. S. Dudgeon, secretary of the Wisconsin Library Commission, now employed by the American Library Association in war work, gave a very interesting and pleasing talk. Grace Shellenburger gave a report of her war work at Fort Des Moines and by her suggestion the club donated money for a clock at Fort Des Moines Library. A committee was appointed to use the money in the treasury for war work. Reba Davis, the president is now temporarily employed as hospital librarian and assistant in border service, El Paso, Texas, Fort Bliss.

LIZZIE BOICE JONES, *Secretary.*

Library Schools

LIBRARY SCHOOL OF THE NEW YORK PUBLIC LIBRARY

Positions in the New York Public Library have been accepted as below by a number of students who received certificates in June, 1918. In the majority of cases those mentioned are planning to return to the school for advanced courses:

Margaret R. Bonnell, reference cataloging division.
Bertha Greenebaum, science division.
Margaret B. James, reference cataloging division.
Adelene J. Pratt, circulation department.
Gertrude Rhodes, reference cataloging division.
Minnie F. Sloat, circulation department.
Earle F. Walbridge, circulation department.
Jessie E. Wing, science division.

In addition to appointments previously announced other members of the same class are holding places for the summer as follows:

Florence J. Lacy, assistant, John Marshall High School Library, Richmond, Va.
Mary Jay Schieffelin, assistant, Camp Upton Library.

The Alumni Association of the Library School of the New York Public Library at its annual meeting on June 6, 1918, elected the

following officers: President, Robert W. G. Vail; vice-president, Mrs. Noel Leslie; secretary-treasurer, Johanna Olschewsky and Hedwig Klingelhoefter (jointly). A directory of all former students is in preparation by the school and will be issued in the fall.

The session for the year 1918-19 opens with the period of preliminary instruction and practical work on Sept. 9, the regular classes beginning on Sept. 23, and the advanced courses starting on Oct. 1.

ERNEST J. REECE, *Principal*.

SIMMONS COLLEGE SCHOOL OF LIBRARY SCIENCE

At the Saratoga conference a Simmons luncheon with fourteen representatives present was held on Wednesday, July 3. Miss Howe and Miss Donnelly of the staff attended the conference.

Appointments of members of the graduating class have been made as follows:

Agnes Judkins, assistant, Union Square branch, Somerville Public Library.
Annable, Dorothy, assistant, Cedar Rapids Public Library, Cedar Rapids, Iowa.
Apple, Miriam K., index and catalog clerk, Signal Corps, Washington, D. C.
Bancroft, Priscilla, assistant, Public Library, Walpole, N. H.
Brown, Beatrice, assistant at reference and loan desk, Bryn Mawr College Library, Bryn Mawr, Pa.
Charlotte Ford, cataloger on the reorganizing staff, Bridgeport, Conn.
Garey, Ethel, assistant, Williams College Library, Williamstown, Mass.
Hadley, Gladys J., assistant in children's work, Utica Public Library, Utica, N. Y.
Isabella Starbuck, librarian, Bethany College.
Patten, Grace E., index and catalog clerk, Signal Corps, Washington, D. C.
Rockwood, Marjorie R., assistant, Williams College Library, Williamstown, Mass.
Sarah Mayo, assistant secretary, Simmons College Alumnae Association.
Sawin, Olive, assistant Librarian, Women's Educational and Industrial Union Library, 264 Boylston Street, Boston, Mass.
Sweetser, Anna M., assistant, Williams College Library, Williamstown, Mass.

SUMMER CLASSES

The attendance this year, forty-five in all, was larger than that of least season, and the proportion of those who carried the full six weeks' program was also greater, the only falling off being in those registering for the "Work with children." Ten completed the course in base hospital library work.

During the session the college had the pleasure of giving house room to the annual conference of librarians, held by the Massachusetts Free Public Library Commission from July 30 to August 1, and the schedules of the summer students were arranged to permit them to hear the speakers on the program. Attendance at the conference discussions of new books was required as part of the book selection course.

During the six weeks, a talk on reference work was given by Miss Marilla Freeman; a vivid description of the Library War Service by Mr. Milam; an illustrated address on Camp Devens by Mr. Lowe; "First things in base hospital library work" by Miss Miriam Carey, and a lecture by Mrs. Grace Myers, on the "Bibliography of the medical and surgical aspects of the war."

In the base hospital course visits were made to many hospitals, including McLean, the Peter Bent Brigham, the Massachusetts General, and the Naval Hospital at Chelsea. One afternoon was spent in working at the Dispatch Office at the Widener Library, and a whole day in a tour, via the "Royal Blue" automobile to Ayer, to see the Camp Devens Library and Base Hospital Library in action.

JUNE RICHARDSON DONNELLY.

CARNEGIE LIBRARY SCHOOL

Students were required to attend the sessions of the library department of the National Education Association at its annual convention held in Pittsburgh, June 29-July 6. Attendance at other sessions of the conference was optional and many of the students availed themselves of the privilege of hearing the distinguished speakers of the day.

Beginning July 1 students were scheduled in the summer playgrounds and recreation parks of Pittsburgh for practice work in the distribution of books and in story telling.

Examinations were held in home libraries, adult book selection and library work with schools, June 29, July 6, 13, respectively.

The closing exercises of the School were held Saturday morning, July 27, in the Library School.

SARAH C. N. BOGLE, *Principal*.

ST. LOUIS LIBRARY SCHOOL

The first graduating exercises of the St. Louis Library School were held in the main auditorium of the school on Friday morning, June 7, at 10 a. m., before a representative gathering of the school faculty, the library staff, relatives and friends of the class of 1918, and citizens of St. Louis.

Dr. Arthur E. Bostwick presided, as director of the school, and after a few introductory words, presented Prof. Roland G. Usher, of Washington University, author of the well-known books on "Pan-Germanism" and "Winning the war," who delivered the graduation address on "The public library and the national crisis." Prof. Usher's speech was noteworthy as an appreciation of public libraries and their work from the

standpoint of a historical scholar. He drew a striking picture of the contrast between German and American ideas of education and organization, and showed how the library, especially in its American conception, is an essential element in the realization of our own ideals and hence in the winning of the war.

At the close of the address, Dr. Bostwick presented each member of the graduating class—thirteen in all—with her certificate, after which the members of the class received their friends in the school room.

The names of the graduates with their assignments are as given below:

Sofia Louise Assmann, circulation department, St. Louis Public Library.
 Asenath Winslow Barnes, Public Library, Mason City, Iowa.
 Lucille F. Buder, catalogue department, St. Louis Public Library.
 Gertrude Bryan Davis, Public Library, Muskogee.
 Margaret Wilcox Donan, children's department, St. Louis Public Library.
 Nina Edith English, catalogue department, St. Louis Public Library.
 Janet Lang Hannaford, reference department, St. Louis Public Library.
 Annalil Huning, catalogue department, St. Louis Public Library.
 Evalyn Marie Jackson, reference department, St. Louis Public Library (temporary).
 Norma Marie Klinge, stations department, St. Louis Public Library.
 Bonnie Lucille Moore, open shelf department, St. Louis Public Library.
 Mary Alice Rodgers, University of Missouri Library, Columbia.
 Elizabeth Lu Wagenbreth, catalogue department, St. Louis Public Library.

Miss Wagenbreth intends to enter the University of Wisconsin in the coming autumn.

ARTHUR E. BOSTWICK.

LIBRARY SCHOOL OF THE LOS ANGELES PUBLIC LIBRARY

The alumni of the Los Angeles Library School entertained the class of 1918 and the faculty at a picnic at Sycamore Grove, June 26. New officers elected at the business meeting are Mrs. Emilie T. Jackson, president; Eloise Carwyle, vice-president; Van Tyne Smith, secretary; Cosby Gilstrap, treasurer.

A summer course to prepare for the position of junior attendant in the Los Angeles Public Library is being given by the Library School. This is a new grade of service, planned to relieve the senior attendants of some of the clerical work. Stress has been laid on efficiency and professional ideals, especially in relation to the circulation and registration departments. Classification, book numbers, bibliographical form and the elements of cataloging have been taught as fully as time allowed. The instruction in cataloging covered fundamental principles, shelf-listing, order and use of L. C. cards and alphabetizing. A

special lecture on "The library and food conservation" was given by Mrs. Frances M. Carlton-Harmon, a member of the State Council of Defense, and a trustee of the library. Other lectures were given by members of the staff on the Los Angeles library system, the opportunity of the library, history of books, books and reading, so that these assistants would have a broad view of the work of the library as a whole, altho working in clerical positions.

The practice work has been planned to give the girls an opportunity for patriotic work as well as to learn library methods. The students have organized and cataloged by author and subject a part of the pamphlet collection of the Council of Defense. They have made and mimeographed lists of patriotic books for children, and readable lists of books for the base hospital library at Camp Cody.

The climax of the course was a practical demonstration of their knowledge of the rules and regulations in a play of three acts showing the work of the charging, receiving and registration desks. This delineated amusingly the foibles of library patrons and the courtesy needed by attendants in enforcing the rules.

Dorothy Dobbings, 1918, has been appointed assistant in the Santa Monica Public Library.

Genevieve Kelly of the class of 1918, has been appointed teacher-librarian in the Corcoran High School.

MARION HORTON.

RIVERSIDE LIBRARY SERVICE SCHOOL

The Riverside Library Service School, summer session, opened with 27 students enrolled.

Three courses are offered this summer—the general course, the advanced course, and the camp libraries course. The advanced course is for the benefit of candidates for credentials from the California State Board of Education for high school library positions. The camp libraries course is offered for the preparation of candidates for positions in camp libraries. About seventy-five inquiries were received altho the advertisements gave less than a week of publicity before the opening of the school, June 24. Three were admitted June 24 and others admitted July 8. The candidates submitted unusual schooling and business preparation.

Both the camp library and the other students will have opportunity to view the library service at March Field, the aviation camp near Riverside. The library service at March Field is now operated in the Y. M. C. A. Hut and about 5000 volumes are available. Technical books were furnished by the American

Library Association. The books are very well selected and the men at the aviation camp are loud in their praise of the A. L. A. Mr. Ludden and Mr. Wesson, now in charge of the Hut, have entered into the spirit of this library service and are doing excellent work for their men and for us.

Alice Butterfield, acting librarian of the Girls' High School, Riverside, is a member of the teaching force of the summer school at Riverside, 1918.

Edris Powlison, Riverside 1916, now a student at Pomona College, is also a member of the Riverside Public Library staff during the summer.

JOSEPH F. DANIELS.

CALIFORNIA STATE LIBRARY SCHOOL

Hazel Askey, assistant in the Siskiyou County Free Library, spoke to the class June 3 on the delights of library work in a primitive community.

June 14 was the closing day of the school year. Eleven students were graduated, each receiving the certificate of graduation, and the special credential in library craft, technique and use, issued by the State Board of Education and required for a high school library position. One of the students, Alice Moore, is also eligible for a high school teachers' certificate, having taken the Library School course as required fifth year work.

At the examination conducted by the Board of Library Examiners in Sacramento, June 14 and 15, the following graduates qualified for positions as county librarians: Mabel Coulter, 1914, and Estella De Ford, 1915, raised their certificates from second to first grade; Lenala Martin, 1914, Eunice Steele, 1916, and Marion Morse, 1917, received second grade certificates.

Positions have been secured by the following students:

Beatrice M. Brasefield, assistant, State Library.
Edith Edinburg, assistant, San Bernardino County Free Library.
Mildred D. Kellogg, assistant, State Library.
Algeline M. Marlow, assistant, Ventura County Free Library.
Alice Moore, librarian, Standard Oil Company Library, San Francisco.
Bess M. Ranton, assistant, Stanislaus County Free Library.

Hazel Meddaugh was married June 11 to Lieut. Ray Jackson Heffner of the U. S. Army, at her home in Stockton.

On the first of August, Belle Robinson began work as assistant at the Tuolumne County Free Library, Sonora, Calif. Tillie de Bernardi will begin on October 1st as assistant in the Siskiyou County Free Library, Yreka, Calif.

On July 13, Rosamond Bradbury was married to Joseph de Lindeth Waithman.

The class for the coming year, consisting of fifteen members, will begin work on Wednesday, September 18.

MILTON J. FERGUSON.

Reviews

LIBRARY IDEALS

LEGLER, HENRY E. *Library ideals*. Chicago: Open Court Publishing Co. 78 p.

Looking out with strong vision upon the world for which the library exists, Mr. Legler in these addresses records with enthusiasm what he sees to be the library's rôle in it.

In a country where even to-day only one person in five receives a high-school education, the public library must be an aid to the material progress of the individual and a cultural influence thru the individual. In the chapter entitled *The world of print and the world's work*, is traced the progress of the printed page from the invention of printing by movable types, thru the establishment of the first free public school and of the first free public library, beyond the phenomenal achievements which are already ours to the day when true democracy shall have come to be an actual fact—"when the local government will be by quasi-public citizen organizations directing aldermen and state representatives to register their will."

But so long has education consisted in learning by rote that the teachers themselves, brought up in the old way, have difficulty in teaching the use of the book. It is therefore for the library to go into the schools, to send traveling libraries and traveling librarians to teach book methods, and to use the story hour, the picture play or any other instrument which suggests itself to bring to the growing boys or girls a love of reading, a genuine desire for absorbing the vital forces of life which literature images.

The cities have been reached, the schools are being reached. But in the work of popular education it is after all not the few great libraries but the thousand small that may do most for the people. To the traveling library, Mr. Dewey's solution of how to give country people access to collections of books, selected by experienced and educated buyers and renewed at will, is devoted a chapter showing what has been accomplished and what remains to be done so that hill folk, miners, lumbermen, fishers and farmers may be reached by fresh literature.

Statistics showing the widening of the library field have been compiled and published; Mr. Legler's analysis of these figures gives life to the facts which they represent.

The book, composed mainly of addresses delivered before meetings of librarians, has been compiled and edited by the author's son, H. M. Legler, "to convey the purposes of the addresses to the friends who like to remember the mind out of which they grew." It is well that, in this tasteful form which would have pleased the author, they should now be made available to a larger circle—to teachers, students of social science and the general reader interested in and contributing to the greater to-morrow that's on its way.

ELEANOR ff. DUNCAN.

Mr. CERTAIN'S REPORT SEEN FROM TWO POINTS OF VIEW

Standard library organization and equipment for accredited secondary schools of different sizes. Report prepared by C. C. Certain, chairman of committee on library organization and equipment, North Central Association of Colleges and Secondary Schools.

Adopted by the North Central Association of Secondary Schools and Colleges, March, 1918.

Adopted by the National Education Association at its Pittsburgh meeting, July, 1918.

I

This is an entire revision of the tentative report submitted by Mr. Certain in 1917. Many of the defects of that report have been remedied in this. A notable instance of revision is the prominence given to the junior high school and the small high school at the beginning of the report. A serious criticism of the older report came from state supervisors of school libraries and state inspectors of high schools who felt that the report should not open with the needs of the large city high schools, as the great majority of high schools in all states are of an enrollment of less than 500 pupils. Another criticism was that the junior high school should not be placed at the very end of the report where it might fail to reach the school superintendents interested in this new form of high school. It seemed particularly important that this new type of high school which is being started all over the country and which has no traditions to hinder the development of its library, should have a standard type of school library from the very beginning.

The most outstanding feature of this report is the emphasis placed upon professional training for the librarian in the high school,

whether large or small. The teacher in charge of the library in even the smallest rural school should, according to this report, have at least a six weeks' course in modern library methods. It is of the utmost importance now that the American Library Association's committee on library training should standardize a six weeks' course in library methods so practically the same ground may be covered in all these courses for teacher librarians thruout the country. It would be well if some standard outline such as Miss Martha Wilson's "Manual of school library management" might be used in all six weeks' or short courses for teachers in charge of school libraries. This Manual for school library management is based upon years of experience which Miss Wilson has had in giving just such courses to teachers in charge of small school libraries in Minnesota. It represents what has actually been accomplished in a six weeks' course and takes up in a practical way the problems which face the teacher as she begins work in the school library.

Everywhere in Mr. Certain's report emphasis is laid upon the importance of securing wherever possible even in the small high schools the full time trained librarian who can devote her thought to the school library and be in the library the whole school day. A librarian who is a graduate from a recognized library school of at least a one-year course is urged upon all schools of 500 pupils and more, and a staff of two or three library school graduates in the larger high schools. The report stands for a faculty position for the librarian and recognition of her work as educational rather than clerical or merely technical. It recommends that the librarian's salary be at least equivalent to that paid the teacher of English and in schools organized into departments the librarian should be recognized as head of department and have the same salary granted to heads of other departments. This has already been done in some colleges and universities and it is placing the librarian where she belongs when one considers the constructive educational work which the right kind of librarian contributes to the school. This recommendation is based not merely on theory but on what has actually been done in the Schenley High School of Pittsburgh.

Emphasis is also laid upon the necessity of a trained librarian as organizer and supervisor of the school libraries of a state. This is the only sure way of putting all the school libraries on an efficiency basis. Miss Martha Wilson of the State Education Department of

Minnesota has demonstrated what such a state supervisor can do for the schools. In her visits to all the schools of the state, her personal advice to teacher librarians in their work, her advice to school superintendents and principals, her courses given both summer and winter in connection with the State Library Commission and University of Minnesota, and in her ability to help school superintendents select for their high school libraries the best possible candidates for personal work with high school pupils from the many graduates of library schools, she has shown what an asset it would be to any state education department to have such a supervisor. She proves that Mr. Certain's recommendation for the trained supervisor in every state is not simply a happy dream of what might be, but a real need based upon what one state has gained. In Minnesota the whole body of normal, high and elementary school libraries has been brought up to modern library standards as in no other state in the union.

This report emphasizes in addition to trained library service in the high school the importance of a large and attractive and well equipped reading room with open shelves, vertical file, bulletin boards and all that makes the modern public library so much alive. It stands for adequate annual appropriations for books, librarian's salary and maintenance and urges the importance of adding new books constantly and having ample funds for subscriptions to periodicals. Definite suggestions are made as to room and equipment and the report refers to the best material in print on this subject which will help architects and school superintendents in planning new buildings. It emphasizes the importance of having the room planned and equipped by a trained and experienced librarian and suggests appointing the trained librarian before planning the building or calling upon the state library commission or nearest public library where expert advice can be obtained.

The duties of the school librarian are fully outlined and emphasis is laid upon her teaching function,—definite statements are made as to what she should teach high school students concerning the care of books and the use of books and libraries,—the report does not recommend technical training in cataloging and library economy for vocational purposes.

Everywhere in the report emphasis is laid upon the necessity of close co-operation with the public library and preparation of students to make the fullest possible use of it after they finish their high school course.

The report has been submitted to leading educators, librarians and architects for criticism and many of their letters are printed as an introduction. It has received a warm welcome from educational leaders, and librarians in all parts of the country can do much to help make the report known to their school superintendents and high school principals. They can help in seeing that new buildings have proper school library rooms and that school superintendents have help in the selection of proper librarians for their high schools. State library associations and commissions can do much to make the report known, working especially for the appointment of trained school library supervisors in all states. If the state department of education has not reached the place where it can appoint such a supervisor there might be such co-operation in school library supervision as in New Jersey where the State Library Commission aids the schools, or in Oregon where the State Library has done so much to standardize the school libraries of the state.

MARY E. HALL, *Librarian,*
Girls' High School, Brooklyn.

II

This report on "Standard library organization and equipment for accredited secondary schools of different sizes" should do much to advance high school library standards throughout the country. It has wide criticism and expert handling and can be depended upon by communities organizing high school library work. It is unnecessary to say that all reports of this nature must be constantly revised, but such a careful survey is an excellent foundation for future development.

The recommendations for senior high schools are based on some years of practical experience. The junior high school problem is more or less theoretical as it is a new venture in education. For this reason there will probably be more radical development and revision in this section than elsewhere.

The tendency in the senior high school has been more and more to make the library an attractive place and to give the pupils all possible freedom to exercise individual reading tastes. Teachers of English are free to say that the English class has failed to produce love of reading, but with the modern high school library as a laboratory, they see new possibilities.

This work, which is becoming so important in the senior high school, should be the keynote of the junior high school library. The demands of the technical and routine work of the school are small. The whole business of

the library in such a school is to present the world of reading attractively to the boy and girl at an age when they are most impressionable. It is not until a child has had an opportunity to learn the pleasures of reading, that the more detailed reference and research uses should be taught.

With this conception of the junior high school library, I question the advisability of insisting on normal school graduation as a requisite of the librarian. A real knowledge of the contents of books and the ability to make them attractive to children must belong to the junior high school librarian. Such qualifications are not dependent on normal school training.

"The work of instruction in the use of books and libraries" should be much simplified in the junior high school and considered as distinctly subordinate to the encouragement of the ability to read with pleasure.

As to transferring reading records of the individual pupils from the junior to the senior high school librarian, I should prefer personally gaining a knowledge of pupils' reading without a previous record to bar the freedom of expression from the pupil and the formation of opinion by the librarian. This point is, of course, debatable, with advantage to both sides.

In selection of books both for junior and senior high schools, I should emphasize the importance of edition and illustration. Whether for good or evil, in these days of moving pictures and illustrated teaching, books must be made attractive to the eye, if children are to read them voluntarily.

I should heartily endorse the need of a contingent fund for book purchasing instead of the customary yearly purchase. In these times especially, it is almost unpatriotic for a school library not to be able to supply the current book material when published.

All thru the report, the importance of connecting the school library with the public library is emphasized. No phase of the work is more important or more destined to increase in importance. Sometimes successful co-operation is hard to accomplish, and no wonder, when the public library and school library each expect to present themselves just as they are and have been for years past, to take part in this new educational work. No up-to-date high school library can direct its pupils to such antiquated, uninformed institutions as some of our public libraries. On the other hand, our best modern public libraries have no basis of co-operation with the old, stiff, study-room type of school library.

The committee presenting the report has made a good beginning. Here is the field of the high school library broadly presented. The board of education in each community should consider its application to their peculiar situation. Every public library should immediately prepare itself to assist in this work which so clearly presents the public library to the people of the community as an important part of the educational and community life.

Already co-operative work has been well started, most notably, perhaps, in Pittsburgh with the new Schenley High School. The high school library is a model in physical equipment; has an excellent staff, with the librarian ranking as head of a department; and the public library and the board of education jointly administer the room. Here co-operation is authorized and enforced, but where such administration is not possible, there is still a large field for using the school and public library as complementary educational institutions. Failure to do this is a reproach to both.

MABEL WILLIAMS.

*Assistant Supervisor of Work with Children,
In Charge of Work with Schools,
New York Public Library.*

Librarians

ANDERTON, Dorothy, Library School of the New York Public Library, 1914-15, has given up her place in the circulation department of the New York Public Library.

ARNEY, Mary, University of Washington Library School 1918, serving temporarily as assistant in the loan department of the Tacoma Public Library, was appointed to the permanent staff of that department beginning Aug. 1.

AUSTIN, Ethel Winifred, since 1906 the secretary and librarian of the National Library for the Blind in London, died in that city on May 17, following an operation. Largely to her energy and enthusiasm are due many of the improvements in service to the blind, including the reduction of postage to 1d on books for the blind; the organization in 1913 of the Federation of Libraries for the Blind, with the National Library as clearing house, and the generous gifts from the Carnegie United Kingdom Trustees and other sources which have provided the present quarters of the library in Tufton Street, Westminster, and have largely increased its resources in books and music.

BALL, Sarah B., who left the library of the United States Rubber Company last April following the sudden death of her mother, is living with her father in Detroit, Mich.

BELL, Dorothy, Simmons 1916, is installing a filing system for the New Jersey Board of Public Utilities Commissioners in Newark.

BRALEY, Esther, who has been given a year's leave of absence from her duties as librarian at Western Normal School, in Kalamazoo, Mich., left in July for New York. Miss Braley will spend the coming year in France doing reconstruction work under direction of the American Committee for Devastated France.

BRANDENBURG, Prof. S. J., librarian of Miami University, was granted leave of absence on June 17, to enter upon the work of organizing county and community councils for the Ohio branch, Council of National Defense.

BRYANT, Janet, of Kirkwood, Ill., formerly a student at Northwestern University, and a graduate last spring from the Pratt Institute Library School, has been appointed children's librarian in the Wichita (Kan.) Public Library.

CAHOON, Katharine, California State Library School 1917, has resigned her position as assistant in the Madera County Free Library to accept a similar position in the Yolo County Free Library, Woodland, Calif.

CLATWORTHY, Linda M., who has been devoting the past two winters to special bibliographic work for the Washington State College Library, has finished her engagement and returned to her summer home in Estes Park, Colorado. After October she will be available for other engagements. During her stay in Washington Miss Clatworthy completed the "Bibliography of food economy for the housewife," also one on the "Conservation of textiles and clothing," now in press.

CLOWE, Virginia B., California State Library School 1917, was married July 16 to Lieut. James S. Bullis.

COLEMAN, Louise, University of Washington Library School 1918, has been appointed assistant in the University branch of the Seattle Public Library.

CONANT, Genevieve, New York State Library School 1913, and head cataloger in the Brookline, Mass., Public Library since August

1913, was married June 11, to William Lewis Curtis. Mr. and Mrs. Curtis will live in Bradford, Pa.

CONDELL, Lucy, Library School of the New York Public Library, 1915-16, (Drexel, 1904) is now a file clerk for the United States Port Supply, New York City.

CORBETT, Helen, University of Washington Library School 1918, has taken the position of assistant in the Ballard branch of the Seattle Public Library.

COTTING, Sarah E., librarian of the Marlboro (Mass.) Public Library, died in that town July 13. She had been librarian for 36 years.

CRISWELL, Clare, resigned from her position as assistant in the Tacoma Public Library Aug. 1.

CROOKS, Muriel A., Library School of the New York Public Library, 1916-18, has left the staff of the circulation department of the New York Public Library to become an assistant in the New York Dispatch Office of the Library War Service.

CUTTER, William Richard, historian, genealogist and librarian-emeritus, died June 6 at his home in Woburn, Mass. He was born in that city on Aug. 17, 1847. He was educated in public schools and at Warren Academy in Woburn and at the Norwich, Vt., University, now located at Northfield, Vt., and known as the Military College of the State of Vermont. He was also a student at Sheffield Scientific School (Yale), and received the degree of A. M. from the university in 1893. Mr. Cutter was librarian in Woburn from 1882 until 1909, when he was made librarian-emeritus.

DERHODES, Hazel, Simmons 1917, is assistant in the University of Maine Library.

DEVENEAU, George A., who has been librarian of the College of Agriculture at the University of Illinois, has resigned to accept a position with the U. S. Boys' Working Reserve in Washington.

ESTES, Grace W., a graduate of the Wisconsin Library School and subsequently assistant in the Janesville (Wis.) Public Library, has taken the position of librarian of the Antigo (Wis.) Public Library, beginning Aug. 1.

GILFILLAN, Emily M., New York State Library School 1914-15, sails for China in

September to become librarian of the Union Medical College at Peking. Since September, 1915, Miss Gilfillan has been connected with the Rockefeller Foundation Library in New York City.

GODWIN, Mrs. Winnifred, formerly librarian at Monrovia, Calif., has been appointed to a temporary position in the circulation department of the Tacoma Public Library.

Goss, Edna L., B.L.S. Illinois 1902, who has held the position of head cataloger in the University of Minnesota Library more than four years, has resigned her position and, after some months of rest, has accepted a position in the catalog department of the Leland Stanford Junior University Library, beginning September 1.

GREENE, May, B.L.S. New York State Library School 1915, was married on June 29 to Benson H. Paul at Albany, N. Y.

HAHN, Marie, assistant librarian at Antigo, Wis., has resigned to enter the Training Class for Children's Librarians in Cleveland.

HENRY, Elizabeth, University of Washington Library School 1918, will begin work Oct. 1 as assistant in the Yesler branch of the Seattle Public Library.

HITCHCOCK, Jeanette, University of Washington Library School 1918, has been appointed to a position in the circulation department of the Tacoma Public Library beginning June 1.

HORT, Doris, University of Washington Library School 1918, has taken a position as assistant in the circulation department of the Seattle Public Library.

HOWELL, Elizabeth B., formerly on the staff of the Buffalo Public Library, has been appointed librarian of the Missoula (Mont.) Public Library.

HUMISTON, Alice, Simmons 1911, has an appointment as catalog and index clerk in the civilian personnel section of the Ordnance Bureau, Washington.

HUMPHREY, Mary Brown, librarian of the library branch in the Girls' High School of Louisville, Ky., has resigned to accept a position with the State College Library at Pullman, Wash.

JOHNSON, Ethel, Simmons 1911, is at present executive secretary of the Congressional suffrage committee, Boston, Mass.

JUDKINS, Agnes F., Tufts 1906, and graduate of the supplementary year for college graduates at Simmons, was appointed on July 16 to the staff of the Union Square branch of the Somerville (Mass.) Public Library.

KOBETICH, Mary, University of Wisconsin Library School 1918, has been appointed assistant in the reference department of the Seattle Public Library and began her work in August.

LEITCH, Harriet, librarian of the Yesler branch library, Seattle, has been granted a year's leave of absence and will be librarian of the A. L. A. Dispatch Office at Newport News, Va., beginning in September. Her position at the Yesler branch has been filled by the appointment of Mrs. Mabel (Smith) Williams, University of Wisconsin Library School, and until recently librarian of the Olympia (Wash.) Public Library.

McGEE, John P., assistant librarian of the Marlboro (Mass.) Public Library for fifteen years, has been elected librarian to succeed the late Sarah E. Cotting.

MEIGS, Avis F., Carnegie 1917, is assistant in the University of Chicago Library.

MILLER, Mrs. G. L., who has been in charge of the library of the Forestry Service in Portland, Ore., has been transferred to the Engineer Office of the War Department in the same city and is not now doing library work.

NOLTE, Claire, of Davenport, Iowa, has been appointed assistant librarian in the Antigo (Wis.) Public Library.

OLSCHEWSKY, Johanna L., Library School of the New York Public Library, 1914-16, formerly an assistant in the circulation department of the New York Public Library, is now connected with the Red Cross Institute for Crippled and Disabled Men, New York City.

PATTERSON, Edith M., children's librarian at the Fond du Lac (Wis.) Public Library, has accepted a position on the staff of the Cleveland Public Library and will assume her new duties in September. Miss Patterson's resignation at Fond du Lac becomes effective August 15.

PECKHAM, Ellen Wheelwright, Carnegie 1917, was married June 23, 1918, in East Orange, N. J., to Francis O'Loughlin Killorin, assistant naval constructor, United States Naval Reserve Force.

PLIMMER, Hilda M., University of Washington Library School 1918, has entered upon her duties as assistant at branch headquarters, Seattle Public Library.

RAYMOND, Mary, Simmons 1916, is assistant in the catalog department of the Carnegie Library of Pittsburgh.

REESE, Rosette, has resigned as librarian of the Antigo (Wis.) Public Library to enter the Training Class for Children's Librarians in Cleveland.

SHAW, Alfred Capel, formerly chief librarian of the Public Libraries in Birmingham, Eng., died there June 27, after a long illness. In 1878, Mr. Shaw was appointed on the staff of the Central Lending Library at Birmingham; in 1887 he was appointed deputy chief librarian, and in 1898 he succeeded J. D. Mullins as chief librarian, which post he held until his retirement in 1912.

SPOFFORD, Mrs. Lucinda F., branch librarian of the West Somerville branch of the Somerville (Mass.) Public Library, has resigned to accept the position of librarian of the Attleboro (Mass.) Public Library. Mrs. Spofford takes charge September 1.

STODDARD, Grace, has resigned the librarianship of the Public Library at Missoula, Mont., and has returned to her home in Winchester, Mass.

THAYER, Ethel, children's librarian at the Public Library in Wichita, Kan., has resigned, the resignation taking effect Sept. 1. Miss Thayer was the first children's librarian in Wichita, going there shortly after the opening of the new building. She was instrumental in forming the Wichita branch of the National Storytellers' League last year.

TURNER, Ethel, Simmons 1903-05, has been appointed assistant in the Massachusetts State Library.

TYLER, Miriam, assistant librarian of the John Marshall High School in Richmond, Va., was married to Dr. Edwin Paul Kennedy, a lieutenant in the Medical Reserve Corps, United States Army, on July fourth, at her home in Richmond.

VAN DER LIPPE, Kathinka I., Wisconsin Library School 1917 and Cleveland Training Class for Children 1917-18, has been appointed children's librarian of the Columbia branch library, Seattle, and will begin her work in September.

VAUGHN, Mrs. Ella R., assistant in the Wichita City Library, who has been away on leave since June 1, has resigned. Her position has been taken temporarily by Helen Neighbors of the Hutchinson (Kans.) Public Library.

WARRICK, Ruth E., has been appointed head cataloger in the Public Library at Wichita, Kan. This position has been recently created. Miss Warrick is a graduate of a Nebraska college, and of the Library School of Simmons College, Boston. The past year she has been an assistant in the New York Public Library.

WEBBER, Vivian B., for several years in charge of the reference desk in the Lynn (Mass.) Public Library, has resigned to take a long rest and may enter the government service in the fall.

WEST, Elizabeth H., has resigned her position as librarian of the San Antonio Public Library to become state librarian and secretary of the Texas Library and Historical Commission. She will take charge on Sept. 1, when the resignation of the present state librarian, C. Klaerner, becomes effective. For the first time in the history of Texas government there will be two women in charge of departments in the State Capitol; these two women will be closely associated in their work, for Annie Webb Blanton, the nominee for state superintendent of public instruction, will on her induction into office become an ex-officio member of the Texas Library and Historical Commission, of which Miss West is to be secretary.

WIDGER, Clara J., an assistant in the Lynn (Mass.) Public Library, has resigned to take a position with the Ordnance Bureau in Washington.

WILSON, Louis Round, librarian of the University of North Carolina, is joint author with Lester Alonzo Williams of an account of the very interesting bureau of extension in that institution, which has been published by the Federal Bureau of Education as Bulletin, 1918, no. 7.

WINSLOW, Mary E., Library School of the New York Public Library, 1913-15, has resigned her position in the circulation department of the New York Public Library.

WORDEN, Ruth, of the Buffalo Public Library, has been appointed county librarian in Missoula, Mont.

THE LIBRARY WORLD

New England

MASSACHUSETTS

Boylston. The will of Alvin S. Dearth of Shrewsbury, recently probated, contains a bequest of \$500 to the Boylston Public Library.

Cambridge. It is announced that the entire library of Daniel Butler Fearing, who died recently at Newport, R. I., is to be presented to Harvard University under the terms of his will. The Widener Library at Harvard already houses two of Mr. Fearing's collections of books, the Persius collection, assembled by Mr. Fearing and the late Prof. Morris H. Morgan, and the Fearing collection of books on angling. The latter consists of more than twelve thousand volumes in twenty languages, including a full representation of editions of Izaak Walton. A collection of whaling implements, whaling prints and whaling pictures is to be given to the Boston Museum.

Hancock. An unsuccessful effort was made recently by some residents of Hancock, to have a special town meeting called to rescind the town's favorable action on accepting the provisions of the will of the late Miss Jennie Taylor of Hancock, whereby a memorial library building was to be erected in the town on a lot given by the testatrix. Funds to defray the cost of the building were also set aside in the will. It is believed that the matter has now been dropped.

Lynn. It is planned to open the new Wyoma branch of the Public Library Sept. 1, provided the furniture and other equipment can be secured in time. Because of the lack of an appropriation to purchase books and prepare them for the new library, it has been necessary to provide books for the start of the branch by other means.

Westboro. By the will of the late Elmer P. Howe, the trustees of the Westboro Public Library have been left \$500 without restrictions. Mr. Howe was a liberal contributor to the library while living and his contributions of reference books have been given a special book plate.

RHODE ISLAND

Providence. Under the auspices of the library division, the annual session of the Rhode Island State Board of Education began its conservation campaign at the State Normal School July 30. Many devices for

diffusing intelligence in regard to food saving were on exhibit in the building. Instruction and practice work were given the 28 librarians and public school teachers from all over Rhode Island, who registered for the two weeks' session.

CONNECTICUT

Bridgeport. With the opening of two new branches in the North End and in East Bridgeport, comes the request for two more branches in the West End and East End, where residents have pointed out that they are quite as far from the Public Library as the people living near the newly opened branches. The establishment of the additional branches is advocated by the librarian, Henry N. Sanborn.

New Haven. Speculation as to the disposition of the \$15,000,000 which John W. Sterling left to Yale continues, but it is believed that a large part of the funds will be devoted to the erection of a great new library. There has been, to be sure, no official announcement of plans, but it is a fact that the library problem is one which has been bothering Yale for some time. Now it seems not at all unlikely that a splendid library will be erected as a memorial.

Middle Atlantic

NEW YORK

Buffalo. The Index Service Company, publishers of *Collectors' Review and Digest*, has quite an extensive philatelic as well as a general hobby library. On special requests the owners will be glad to send certain numbers and volumes out on short time loan, tho they would prefer not to make the practice general until they are able to complete their index.

PENNSYLVANIA

Chester. The will of the late George B. Lindsay, recently probated, designates that his entire estate be left to the jurisdiction of three trustees, William B. Harvey, George M. Booth and John A. Poulson, members of the Delaware county bar and close friends of the deceased lawyer. The major part of the money is to be used for building a law library, free to the people of Chester. The fund will be ample to erect a building that will be a credit to the city and to equip and maintain it for all time. The will specifies that the institution be known as the "Lindsay Law Library," and that it is to be managed by a corporation, also outlined in the will.

Corry. It is planned to open the new Public Library on Wednesday, Sept. 4.

Harrisburg. After being closed for nearly two months, the Public Library was reopened Aug. 1.

South Atlantic

WEST VIRGINIA

Charleston. The Charleston Public Library has extended its quarters by opening up the wall between its present quarters and the room formerly occupied by the Standard Heating & Plumbing Co.

GEORGIA

Atlanta. A collection of books on the British Isles has been given to the Public Library by Dr. Patrick H. Mell.

Macon. Work on Macon's new public library, donated by Mrs. Ellen W. Bellamy and to be known as the Washington Memorial Library, is to be started shortly. The contract was awarded some time ago, but because of the unsettled conditions the work was delayed. However, the need for the library has become so great that it has been decided to proceed with the work and the first step in that direction has been the securing of a building permit. The cost of the building is given as \$46,000.

ALABAMA

Birmingham. The hope of the negroes of Birmingham for a library of their own is about to be realized. The Birmingham Public Library Board, at a special meeting, has authorized the establishment of a colored branch in the near future. The library will be established in the heart of the colored district in a store or other suitable building. The negroes of the city collected a sum of money some time ago for books and with a part of this the initial stock will be purchased. It is hoped that these volumes will be supplemented by gifts on the part of citizens. Mattie Hurd, of Birmingham, will be librarian of the colored branch. She has recently completed a course of training at Louisville, Ky.

East North Central

MICHIGAN

Eaton Rapids. Former Mayor Charles S. Horner has presented to the library board a deed for two lots adjoining Red Ribbon hall on South Main street, to be used as a site for the proposed new Carnegie library.

INDIANA

Milton. The Washington township branch of the Cambridge City library was opened

July 2 at Milton in the room in the bank building. All the people of Milton and Washington township will have access to the branch here and also to the main library in Cambridge City. Branch libraries will be maintained in each district while the schools are in session.

ILLINOIS

Chicago. Newspapers of the city report the decision of Charles E. Frazier and Joseph P. Geary, two members of the city civil service commission, that Alexander J. Johnson, a member of the city civil service commission and a Thompson appointee, is eligible for the post of assistant librarian at the public library, made vacant by the promotion of Carl B. Roden to the librarianship. Mr. Johnson resigned his commissionership several months ago to take the librarian's examination, but went back to the position after the list was posted, showing him to be in the fourth place. Since it has been decided to fill the assistant librarianship from the librarians' list, and since it is not expected that either Mr. Perry or Mr. Hadley, who precede Mr. Johnson on the eligible list, will accept the position, it will then be offered to the latter. Officials of the City Club have asked the commission to abandon this plan of selecting an assistant librarian, stating that there is some question as to the legality of the commission's right to select an assistant from the list for the higher position.

Springfield. The Lincoln Library has branches in twelve of the city schools, and in the five schools housing the Red Cross auxiliaries the libraries are being kept open all summer for the use of children who accompany their mothers.

Urbana. The formal opening of the new Samuel T. Busey Library was held Monday afternoon, July 8, and Tuesday evening, July 9. One room of the new library building has been set aside for the purpose of keeping relics and important papers which had to do with making the history of Champaign county. In this room will be placed the library which was owned by Judge J. O. Cunningham, which contains about three thousand volumes.

West North Central

MINNESOTA

Hibbing. The Hibbing Public Library, rebuilt and greatly enlarged at a cost of \$80,000, is an edifice of which any city might well be proud. It occupies the southwest corner of Third Avenue and Mahoning Street, and is

75 x 125 feet in size. The front and trimmings are brick stone, the walls of pressed brick. Built to surround the walls of the former Carnegie Library, the new building bears on a stone set into the foundation of the main entrance the simple inscription, "Dedicated to the people of Hibbing." The basement floor is six feet above the level of the street. It contains a men's reading room which has been used for the surgical dressings department of the Hibbing Red Cross, a clubroom, a rest room, a kitchenette complete with linen and stores sufficient to serve 100 persons and auditorium having a seating capacity of 250. The auditorium has been converted into a department for the hospital supplies. The first floor contains the children's department, and the one reserved for adults. To the southwest of the main entrance is the staff room, with work room and kitchenette. At the northwest corner is a magazine and newspaper room. The foreign book department occupies a large section, which is in almost constant use. All of the walls have been decorated by E. C. Rosenkrans of Duluth. The chief painting represents the attributes of Minnesota, "Power, Justice, Prosperity and Religion," denoted by heroic female figures. Another central figure shows "Wisdom," who receives and preserves to the use of man the knowledge brought to her by art and industry.

St. Paul. The Public Library has just received gifts of the libraries of the Upper Mississippi River Improvement Association and of the late Thomas Wilkinson, president of the association. The combined libraries contain approximately one hundred and fifty bound volumes of engineering data, reports of technical societies, Federal, State and city documents, and about six hundred pamphlets dealing with all phases of river improvement. A collection of maps, blue prints, newspaper clippings and photographs are included in this gift, together with a considerable correspondence with engineers of national reputation, members of Congress, representatives of civic associations, manufacturers, and wholesale dealers. This addition gives the library one of the most complete collections on inland waterway data in the Middle West.

St. Paul. At a special meeting of the Library Council August 9, resolutions were passed providing for the adjustment of the library's administration so as to provide for the systematic instruction of both junior and senior assistants who are devoting full time

to library service and who expect to continue in the work for at least one year. Admission to the training class is to be based partly upon the candidate's staff record and partly upon examination; and promotion in these lower grades will be based partly upon the assistant's staff record and partly upon her record as a member of the training class.

NORTH DAKOTA

Bismarck. Bismarck today has a real city library. When the Commercial Club was reorganized in 1915 one of the first acts of the president was to name a library committee which immediately entered into correspondence with the Carnegie Corporation in an effort to secure a building. When the grant of \$25,000 was made, on the usual conditions, enthusiasm increased and a campaign for books was made, resulting in the collection of about 2,000 volumes. These were temporarily arranged in the rooms of the Commercial Club and formally opened to the public Feb. 22, 1916. In the spring of 1916, when the taxpayers had an opportunity to vote on the acceptance of the Carnegie gift and the appropriation of \$2,500 annually for the library's support, the Civic League, a woman's organization, conducted a vigorous campaign in behalf of the library, and the issue was carried by a large majority. Plans for the building were prepared by F. W. Keith, a local architect, and the building erected by John L. Larson. Construction work was finished in 1917, and the books were transferred to the new building in January of this year. It was planned to dedicate the building on Feb. 22, but war conditions delayed the interior furnishings until midsummer. Mrs. Florence B. Davis, a graduate of Wisconsin Library School and until recently on the staff of the Public Library of Madison, Wis., has been librarian for nearly a year.

Mountain

MONTANA

Virginia City. Work has begun on the Thompson-Hickman Memorial Library structure, which will cost \$50,000. This new library is given by Mrs. William B. Thompson, wife of the New York millionaire. The building will house a historical museum, which is expected to become a great depository of historical lore of the early gold mining days. It is called the Thompson-Hickman Library because Mrs. Thompson's maiden name was Hickman. Both Mr. and Mrs. Thompson were born in Virginia City.

Pacific

WASHINGTON

Tacoma. At the request of the women's division of the County Council of Defense the trustees of the Tacoma Public Library granted the use of the branch libraries, July 29 to August 11, for the purpose of registering recruits for student nurses.

CALIFORNIA

Orland (Glenn Co.). It is expected that the Orland Library will be completed late this fall. Work on the \$8000 structures was to start in July. The new building, designed by W. H. Weeks, is to occupy the northeast section of the new park, and will face north. It will be 30x50 feet, constructed of interlocking tile and covered with cement stucco. The librarian's desk will divide the main floor into two rooms, one for adults and the other for juveniles. The basement will have one large room for general assembly purposes and the librarian's private work room. The building is to be completely furnished, even to tables and desks, for the \$8000.

Sacramento. Henry Bacon and William Mitchell Kendall, New York architects, and Sylvain Schnaittacher, San Francisco architect, have been named to serve with Governor William D. Stephens, Chief Justice F. M. Angellotti of the State Supreme Court, the State Librarian and chairman of the State Board of Control, as a jury of award to select the architect who will design and superintend the construction of the State office building and the library and courts building to be erected at Sacramento.

Foreign

NORWAY

Bergen. A historical sketch of the Public Library entitled "Bergens offentlige bibliotek," and written by the librarian, Arne Kildal, has been reprinted from the *Nordisk Tidsskrift för Bok- och Biblioteksväsen* [v. 5, 1918]. In 1869 Paul Botten-Hansen left his library of 12,000 volumes to form the nucleus of a collection for the people of Bergen. A committee was formed, the library organized, and in 1874 it opened as a reference library. Its use increased so that the hours of opening, which in 1883 were 12-1 and 5-7 daily, were increased to 10-2 and 4-8 daily. In 1909 Mr. Kildal, who had received his B. L. S. degree from the New York State Library School in 1907, and had subsequently worked in different American li-

braries, was called to reorganize the library. the Dewey classification and the "useful American system" of loaning books for home reading being introduced. The size and scope of the collection having rapidly increased a new building was voted by the city in 1913. Building was begun in 1914, and had so far progressed that the removal of the books was begun in November, 1917. The new building, trefoil in plan, having two floors, has been calculated not only to house the present circulation and general reference departments with the many special collections which have been formed—music, Ibsen collection, Bergen collection and others—but to allow for very considerable expansion.

SWITZERLAND

Berne. In spite of difficulties of transportation and of a shortage of heating and light, the Swiss National Library, in its report for 1917, records a year of great activity—the most notable feature of which was the formation of the nucleus of a collection of photographs relating to Switzerland. For the present photographs of purely technical or artistic interest are to be excluded. The material sought is to consist of portraits, illustrations of historic scenes, of the manners and customs of the people, of details of monuments, towns and villages, antiquities and works of art (especially such as are likely to be lost to the people thru demolition or removal), landscapes, upheavals of nature, etc. It is estimated that about five hundred items will be added to the collection each year. In addition to the monthly bulletin of books and pamphlets published, the library in 1917 issued a catalog of periodicals appearing in Switzerland, most of which are to be found in the reading room. This list forms a valuable contribution to the national bibliography. The recasting of the classified catalog was undertaken, involving very considerable revision of the classification. In addition to the new accessions, two thousand titles were handled, bringing the work almost to the end of the letter E. The preparation of a union catalog with Lucerne was resumed after a year's interruption. The report draws attention to two gratifying points illustrated in the year's statistics: firstly, that the number of works by Swiss authors published outside of Switzerland continues to decrease; and, secondly, that in spite of scarcity of paper the output of books for the year shows an increase by comparison with that of 1915.

LIBRARY WORK

Notes of development in all branches of library activity, particularly as shown in current library literature. Material printed in this department is cumulated each year in the "American Library Annual."

BOOKS AND READING

The relation of reading to life. Sherman Williams. *Jour. N. Y. State Teachers Assn.*, April, 1918. p. 88-93.

A statement of what is being done, and what might be done, in our elementary schools to train children to learn to read the books that are worth while.

CLASSIFICATION

See also Subject headings.

The Public Library of New South Wales, basing its work partly on the suggestions of Wright and Hamer, *Library World*, Feb. 1915, p. 232-3, has developed Dewey's 790-799, thus:—

- 790, Amusements, is subdivided by country in 790.
- 791, Public entertainments, has subdivisions for: Mediæval tournaments; Animal fights, circus, menageries; Garden parties, fêtes; Magic lantern; Moving pictures (this again subdivided).
- 792, Theatre, concerts, theatrical representation, has subclasses for: Influence of the stage; State theatre; Law; Acting; Management; Biography and history; also for: Tragedy and drama; Comedy and farce; Opera; Pantomime; Vaudeville; Concert.
- 793, Indoor amusements, has: Private theatricals; Tableaux; Charades; Dancing; Conjuring; Ventriloquism; Puzzles, etc.
- 794, Indoor games of skill, has: Chess; Draughts; Other board games; Billiards, pool; Bagatelle; Ping-pong.
- 795, Games of chance has: Cards (again subdivided); Dice; Backgammon; Dominoes; Roulette.
- 796, Athletic and outdoor sports, has: Gymnastics; Children's sports; Athletic sports (subdivided); Winter sports (subdivided); Cycling; Quoits; Mountaineering.
- 797, Boating and ball games, has: Rowing; Yachting; Polo; Football; Cricket; Golf; Lawn tennis; Bowls.
- 798, Horsemanship and racing, has: Driving and coaching; Riding; Horse racing; Pony racing; Trotting.
- 799, Fishing, hunting, shooting, has: Fishing, Hunting (subdivided for fox-hunting, coursing, falconry, big game shooting,

small game shooting, pigeon shooting); Miniature rifle shooting; Archery.

ENGINEERS, WORK WITH

The engineer and the book. Winifred Gregory. *Bull. of the Affiliated Engineering Societies of Minnesota*, Dec., 1917. p. 283-290.

This paper, read before the Civil Engineers' Society of St. Paul, deals with the three main channels thru which an engineer receives his books, namely the private, the society, and the public library, and the relationship between these.

For the private library Miss Gregory indicates helps to book selection, suggests time-saving reference books, and describes economical methods of indexing and arranging the material.

While certain professions such as medicine and law require special libraries, the nature of the material in an engineering library and the large classes of users—embracing all from the untrained mechanic to the consulting engineer—makes, in her opinion the gathering and administration of this literature the task of the public rather than of the society library.

She then explains how the public library acquires its material, what classes of material the engineer may legitimately expect to find there, and how it is indexed and arranged so as to realise the aim: The right book to the right person at the right time.

FLOWER DISPLAY BOARD

In the Bixby Memorial Library at Vergennes, Vt., Edith J. Chamberlain, the librarian, has devised a new and better way of displaying specimens of wild flowers. The frame, which is shown below, was made by the janitor, and is described by Miss Chamberlain in the *Bulletin of the Vermont Public Library Commission* for June, 1918.

"We used $\frac{7}{8}$ -inch oak, 3 inches wide, with $\frac{1}{2}$ -inch bead at inside edge, beaver-board 4x4 feet, covered with brown sponged broadcloth.

"The strips of the cloth stitched at each edge, $\frac{3}{4}$ of an inch when finished, were nailed to the board with brown-headed tacks, forming loops in which to place the test tubes. The upper one, for 4-inch tubes, is placed 5 inches

from the top and holds 12 tubes; the next, for 6-inch tubes, is 10 inches below that, and holds 10 tubes; and the lowest, for 8-inch tubes, is 17 inches below that and holds 8.

"The height is 5 feet, 4 inches; the bottom of the board 14 inches from the floor, and sloping so that at the bottom it is 13 inches from the back upright.

"When the season for wildflowers was past, we found that we could very easily transform the board into a bulletin board for the display of the food bulletins, attractive jackets of the newest books, lists of required reading for the high school classes or any other subject of interest; and this simply by removing the test tubes used as flower containers, and the labels which were placed under them by means of thumb tacks."

GUIDE CARD

A guide card for vertical filing systems is described and illustrated in the *Official Gazette* of the United States Patent Office for March 12, 1918, page 435.

INFORMATION BUREAUS

Technical libraries; bureaux of industrial information. *Lib. Assn. Rec.*, March, 1918. p. 77-82.

In a paper on the utilization of accumulated data relating to the automobile industry read before the Institution of Automobile Engineers, Mr. E. A. Savage, chief of the Coventry Public Libraries, indicates the broad principles of an information bureau—information bureau being the author's modern definition of a library—for the automobile industry, and points out that similar bureaux for the *documentation* of material relating to other industries are working simultaneously. To avoid overlapping and waste he says that the Library Association advocates a central bu-

reau of information for scientific and industrial research, on the principle of the International Institute of Bibliography in Brussels and of the bureau of information of the Library of the United Engineering Societies of New York.

Recognising the incompleteness of the information available at the Patent Office Library and the Library of the British Museum and thoroly favoring the author's views, the meeting authorised its secretary to forward to the Secretary of the Department of Scientific and Industrial Research a copy of Mr. Savage's paper together with the resolution: "That this meeting having listened to Mr. Savage's paper on the use of reference libraries in conjunction with bureaux of information likely to be formed in connection with the research of technical industries, desires to acknowledge its recognition of the importance of this relationship and of providing the national central reserve library or libraries needed to render this use of libraries and bureaux fully effective."

INFORMATION SOURCES

1. Conservation of thought—the difficulty of the obvious. 2. The intangible "they" and what to do about it. G. W. Lee. *Stone and Webster Journal*, Dec., 1917; May, 1918.

Mr. Lee's hobby, "Sponsors for knowledge," is the subject of these two papers. It is, he says, the business of this generation so to solve problems that the next shall not have identical ones. Saving of time and energy can be effected by appeal to an authority which shall disentangle what "they say" from what is, and either answer questions or indicate where answers may be found.

An experiment in the establishment of the sponsorship system has been made by the American Library Association thru the Massachusetts Free Public Commission. The commission sent out a circular, "recommending to about one hundred libraries in the state, that they make entry in their card catalogues of certain topics (not over a hundred to be given at the start) and that they record therewith the names of such persons or organisations as have agreed to act as sponsors for the topics listed. These sponsors, presumably specialists, will be expected to be enthusiastic to give satisfaction to inquirers when the latter have not succeeded in getting information enough on their questions from the library resources. Thus . . . may the public find new and unexpected facilities for getting at the men behind the books, for being led to human

sources, to authorities who will consider special questions and special needs in personal ways—as books cannot do.”

INSTRUCTION IN USE OF LIBRARIES—IN GRADE SCHOOLS

Library facilities and course of study in library training in Portland, Oregon. *Pub. Libs.*, Oct., 1917. p. 348-350.

The school department of the Portland Public Library is organized to provide home reading, reference and pedagogical books, magazines and pictures for the schools.

A staff of nine school librarians is employed by the public library. Traveling libraries are sent to the schools. The teachers take charge of the issuing of the books for home reading.

In each grade school library-training lessons are given to the pupils by a librarian and teacher. The subjects covered are: care of books; book marks; title study: how to use the text-book, the reference book, the card catalog, periodical indexes; subject classification. The reading of poems and story telling are included in the course at the school.

An outline of the courses given, by grades, is a part of this article.

INTERLIBRARY LOANS

Memorandum on the organization of library exchange areas. Ernest A. Savage. *Lib. Assn. Rec.*, Aug.-Sept., 1917. p. 328-329.

The Birmingham and Coventry Libraries Committees have resolved: that the librarian be authorized to lend to other libraries, books difficult to obtain elsewhere. This resolution applies to books quite readily replaced by the library owning them, but not procurable at short notice by other libraries, e. g., the proceedings of scientific societies and foreign books. . . . The arrangement could be extended to other towns and could be made to include not only inter-library loans but inter-library cataloging. To extend this arrangement it would probably be desirable to organize exchange areas.

A “trunk” exchange could be organized for the benefit of the larger libraries only: e. g. the organization of an exchange service between the largest libraries in a textile centre and the largest in a steel and iron centre would be to the advantage of all concerned.

A union catalog would be advantageous bibliographically and from the point of view of expense. The cost of publication could be met on the basis of each library paying in

proportion its own entries and to the number of copies of the catalog taken.

It is suggested that the committee, in their report, describe the chief examples of co-operative cataloging of technical books.

LIBRARIANS AND ASSISTANTS—TRAINING

See also Library Association of the United Kingdom—Educational Policy.

Secondary education in library work. Jessie Welles. *Pub. Libs.*, Jan., 1918. p. 5-10.

Under this title Miss Welles discusses the training class, which in its relationship with the library school and the apprentice class, holds a position analogous to that of the high school in the scheme of general education.

She outlines a program for a course of six to eight months' duration, with time equally divided between lecture or class work and practice in the library.

A logical arrangement will give the student a vivid picture of the work of the library. First therefore of the technical courses should come order work and book selection—an introduction to book reviews and trade bibliographies covering ten to twelve lecture periods. Accessioning, shelf-listing and the mechanical preparation of the books for the shelves should follow. Fifteen to twenty lessons on classification and subject headings would be followed by cataloging. Students might have ten to twenty lessons, a picked few being afterwards given detailed practice in the cataloging department. Twelve lessons on loan work, describing local methods and comparing these with the practice of other libraries; and about the same number on the main reference tools complete the technical courses—the work with children being paralleled with each general course.

The study of general literature should receive one lecture a week, the aim being to excite intellectual curiosity and stimulate future reading as well as to train in critical appreciation of good books. Periodicals must receive a good deal of attention: eight to ten periods being devoted to a discussion of the scope and value of assigned periodicals and of present-day standards and tendencies in periodical literature.

Local specialists will lecture on social and educational movements, and in the hour preceding each of these lectures will be a discussion, from previously made assignments, of the subject of the lecture. Heads of departments in the library will speak on the work of their respective departments.

The practice should be arranged to cover

as far as possible all the subjects of the lecture courses; and, while the student necessarily and intentionally becomes most conversant with the local methods, provinciality can be avoided by a study of the principles underlying these and of the practice of libraries elsewhere.

LIBRARIANS AND ASSISTANTS—TRAINING

To the would-be library-school student. Azariah S. Root. *Pub. Libs.*, Jan., 1918. p. 3-5.

A comparison of the courses offered by the various library schools is not much facilitated by a study of their catalogs; for there is no standard of nomenclature, the courses given are variously grouped, and the indication of time required is not clear.

All the schools, however, necessarily give:

(a) Courses about libraries: on the history and social utility of the library.

(b) Courses on the administration of libraries—on business methods, the special technique of ordering, accessioning, shelf-listing and classifying books, the principles of cataloging, subject-heading, the mending and binding of books.

(c) Courses on special types of library work—instruction concerning methods and problems of business libraries, school libraries, extension work.

(d) Courses dealing with the books found in a library—reference books, trade, national and special bibliography, book selection, history of printing and "instruction as to various kinds of books, such as incunabula, government documents and the like." Information set forth in the catalogs in regard to the courses given being unsatisfactory, the would-be student ought to consider the location of the school, whether it is so situated as to give the practice which the student will need for the work in view.

Mr. Root incidentally suggests: (a) that some one not connected with the problem of library training give some specific suggestions in regard to individual schools, albeit such suggestions would have a transitory value.

(b) That the Association of American Library Schools would do a great service to the prospective student and to the profession by agreeing upon a standard of nomenclature, a standard of time and a standard classification of courses.

A plea for advanced instruction in library summer schools. [Mrs.] J. T. Jennings. *School and Society*, Feb. 9, 1918. p. 156-160.

While not wishing to belittle the value of the library schools, Mrs. Jennings points out

certain needs of the librarian which ought to be met by the schools and especially by the library summer schools.

She indicates some of the causes of this state of affairs and suggests remedies. She says, in part: "If the faculties of the library school were more closely in touch with the demands of the calling as service, instead of as occupations for their students, they would feel more vitally the needs of the employers.

"Is it barely possible that the library schools take themselves too seriously? For example, at certain meetings of the A. L. A. the library school section [i. e. the Association of American Library Schools] closes its doors . . . to anyone not connected with library-school faculties. . . . It would certainly be better if most of the discussions were open to other librarians. The curriculum of the library school, the methods and extent of instruction are as vitally interesting to the employers or to their instructors. The librarians . . . should know what the library schools are trying to do.

"Perhaps it would be heresy to suggest that the library schools might possibly receive valuable suggestions from the employers of their pupils, but certainly those employers might get more adequate ideas of the aims and methods of the schools so that they might know what to expect when they engage their graduates for service . . ."

Meanwhile she suggests that two or three institutions of high rank, say one in the east, one in the middle-west and one on the western coast offer courses in:—

(a) Special problems of library administration—a course broadened and enlarged to meet the needs of people of some years' experience.

(b) Library buildings—where the librarian can present his peculiar problems of size, service and available funds and receive reliable suggestions.

(c) Classification and cataloging. The stimulus of a course of lectures from some makers of catalogs which are models of scholarship and of art would be the salvation of many a conscientious cataloger overwhelmed with detail work.

(d) Intensive courses in the bibliographies of special subjects; and in trade bibliography, auction buying and selection of special editions.

(e) A thoro course in public documents, not only in the intricacies of our national authors but also in the best and most economical methods of arrangement and administration.

LIBRARIANSHIP

The educational standard of librarianship in relation to technology. Henry V. Hopwood. *Lib. Assn. Rec.*, Aug.-Sept., 1917. p. 323-327.

... "Bearing in mind that the need is not to test a candidate's scientific and technical knowledge, but rather his capability to deal with the literature of the subject, it would seem desirable to institute, under the auspices of the Library Association, an examination in general knowledge of Science and Technology, in two grades with three sections in each.

Lower grade

(a) "Subject cataloguing, and classification of a certain number of scientific and technical works in English, together with a knowledge of the chief divisions of the Dewey and Library of Congress Classifications.

(b) "A paper designed to test the candidate's knowledge of general scientific facts and technical processes and machines, together with his ability to indicate the class of book to which he would refer for further information.

(c) "Translation out of French or German, the passages set being easy paragraphs from elementary technical text-books.

Higher grade

(a) "Subject cataloguing and classification of English (50 per cent), French (25 per cent) and German (25 per cent) technical and scientific works, a certain proportion of them being pamphlets, theses, and trade catalogues. Capability to annotate should be essential.

"A thorough knowledge of the scientific and technical sections of the Dewey, Brussels, and Library of Congress Classifications, together with the subject headings of the latter library should be required, also a knowledge of special expansions.

"The candidate should be able to explain the scope of selected headings, to differentiate in allotment, criticize selected sections, and suggest expansions.

(b) "A general knowledge paper, of more detailed character than that in the lower grade, which should also test the candidate's knowledge of the history of science and periodical indexes, and his acquaintance with periodical and society literature, including a recognition of the title abbreviations commonly employed. To this might be added a knowledge of the History of Science and technology as distinct from actual technical knowledge. This subject might with advantage form a section by itself, and rank equal to,

or as a substitute for, literary history, in which case it should include an acquaintance with the older literature.

(c) "Translation out of both French and German, passages set being selected from more advanced literature than the lower grade, e.g. dissertations, papers read before societies, etc."

The library school in the college. Sir William Osler. *Lib. Assn. Rec.*, Aug.-Sept., 1917. p. 287-308.

This address, delivered at the opening of the Summer School of Library Science, Aberystwyth, 1917, begins with a sketch of the development of the science of librarianship. Reviewing next the program of studies for the session, Sir William dwells on the scope and on the importance of bibliography, classification, and cataloging, emphasizing the need of co-operative cataloging, which in his opinion in the United Kingdom might be undertaken by the six libraries possessing copyright privileges.

Passing from the technical training possible at the Library School, he outlines his scheme for a *School of the Book* which would prove an active ferment in the departments of history and of literature of the University, would teach scholars how to study and interpret the rich stores of documents in public and private collections, and would thus greatly increase the usefulness of the librarian and of the book as educational factors.

"I should like to see added to the schools of at least one University in each kingdom a *School of the Book*, in all its relations, historical, technical, and commercial—every aspect of bibliography, every detail of typography, every possible side of bibliopoly" . . . Modified to meet local conditions the scheme of the National School would be as follows:

Organization.—Control jointly by a committee representing the Library, the Press, the University, and the Colleges.

Staff.—(a) Head of the Library and of the Press, and assistants who would supervise technical work.

(b) Lectures on library economics, history, bibliography, publishing, binding, etc., chosen partly from the library, partly from the college staffs.

(c) Special lectures from outside. Publishers, manufacturers, printers, and inventors would be asked to give special lectures.

Students.—(a) Ordinary undergraduates, who would be given instruction in (i) the use

of the library; (ii) the elements of bibliography; (iii) palæography.

(b) Special students: (i) in library work; (ii) in newspaper work, printing, publishing, binding and illustrating.

(c) Research students. One of the chief functions of the school would be to train men and women in methods of literary and historical research.

The public.—The classes in bibliography should be open. Anyone desiring special instruction in any matter relating to a book should be able to find it at the school . . . Extension classes would be held for working men dealing with the book as a tool of the mind.

LIBRARIES—SCOPE AND PURPOSE

The library and modern life. Mary Frances Isom. *California Lib. Assn. Proceedings*, 1917. p. 40-44.

Having reviewed the successive steps in widening of the library's field of work during the last 25 years—the work with children, with clubs, with students, with teachers, and with the reading public in general—Miss Isom asks whether the hum of well-running machinery and the murmur of applause of an appreciative public have not deafened the librarian to the voice of to-morrow's need. If the universities, so long the seat of conservatism, are responding to the pressure of modern life, shall not the library, which serves a constituency so much larger, help to train the young for "public service in new democracies, for a new medical profession, for finance, journalism, transportation, manufacturing, the new architecture, the building of vessels and railroads, the great public works which improve agriculture, conserve the national resources, provide pure water supplies and distribute light, heat and mechanical power."

The library is limited in income, not because the librarian is not a politician, but because only 30 to 40 per cent of the public use the library. The question of support will be solved by the time the library has made itself indispensable to every activity of the community—educational, civic, philanthropic, political and religious—and without partiality.

And the gift of comprehensiveness, the faculty of seeing things in their just relations which will enable the librarian to accomplish this, will keep him mindful of the prophet who having but two loaves of bread would sell one and buy hyacinths with which to feed his soul.

LIBRARY ASSOCIATION OF THE UNITED KINGDOM—EDUCATIONAL POLICY

The educational policy of the Library Association as affected by the suggestions in the report of the Carnegie Trustees. Kate E. Pierce. *Lib. Assn. Rec.*, Aug.-Sept., 1917. p. 316-332.

In view of the facts that: (a) The Carnegie Trustees in their report in 1915, say: "It is a question for the Trustees to consider by what means the status and remuneration of librarians can be improved, as experience shows how vital to the influence and success of the library is the ability of the librarian," and again in the report for 1917 speak of the librarian as "the vitalising link between the books and their readers," and "even if the provision of books is adequate it will be of little avail unless an efficient staff exists for administering it," and, further, that "while a strong case for the reconsideration of present financial limitations can be made out, the elevation of a salary scale will not of itself secure the necessary status of the profession of librarianship or place the right men and women in its ranks."

(b) Many trained assistants have joined the army or have left to take up better paid work.

(c) Special libraries, such as technical and commercial collections requiring specially trained assistants are being established. "These cater for the business man, who finding that he is getting value for his money, will not be backward in demanding the removal of the rate limit."

Miss Pierce urges that a sub-committee of the Library Association Council go into the whole question and draw up a definite scheme for training schools.

She suggests, as a basis to work upon: (a) That schools, licensed by the Library Association, be established at various centres, having directors definitely attached to the library staff of the respective towns where the libraries are established. (b) That an entrance examination be held, the course last for six months, followed by practical work in a recognized library, and the subjects taught be those set out by the Library Association syllabus. (c) That the school building be, if possible, a part of the library. (d) That the school be supported by fees of students and grants made by the Library Association.

LIBRARIES—WAR SERVICE

Emotional poise in war time: How the libraries can help the public. Edith Kathleen

Jones. 12 p. Reprinted from *Public Libraries*, Dec., 1917 and Jan., 1918.

This paper, read at the Plymouth meeting of the Massachusetts, Rhode Island and Old Colony library clubs, is based on Miss Jones' thirteen years' experience as librarian of the McLean Hospital, Waverly, Mass.; but the thoughts expressed in it, the manner of that expression and the practical suggestions will make it welcome to every librarian.

Sanity and an unemotional mind are, she says, incompatible: emotional poise implies, not suppressed, but controlled emotion. And what shall we do to preserve our national sanity?

The war is all-engrossing. People want good war books, books on all of the many sides of the war, books on the "real causes" of it, political and social, books on trench life, on the exploits of the navy, personal narratives of ambulance and hospital work, cartoons.

But to reading of this kind and to the fare provided by the daily papers the library must provide an antidote in the shape of books to divert the mind—leaving them withal, as tho accidentally, where the public will think it finds them for itself. It will welcome in this way good detective stories, Wild West tales, mid-Victorian poetry, pretty love stories, anthologies of verse, humorous essays, out of door books on gardening, animal stories, mountaineering, hunting, fishing, or camping.

It has been found that the books in close proximity to the "new books" shelf are much taken out. By simply moving this shelf now near to the biography section, now to the social service and again to history, each section can thus in turn furnish recreational reading.

The public will examine eagerly also a bulletin board on which are pinned poems, jokes, anecdotes. Thus can librarians help the nation by giving the people constructive books which shall lead them to intelligent thinking and direct service, and recreational and inspirational books which shall lift their minds out of apprehension and depression, helping the individual and the nation to keep emotionally sane, holding to national honor and the vision without which the people perish.

Unifying for war. Jessie Welles. *Wis. Lib. Bull.*, Feb., 1918. p. 41-45.

The men at the front or in camps are not the only Americans in service; every true citizen has a definite duty and privilege. A library by its very nature as a storehouse of knowledge and information is a potent ser-

vice unit. Organize your unit to serve by informing and inspiring every citizen.

Keep the flag flying in front of the building as the library's insignia of service, and let its care serve as a lesson in loyalty. Upon entering the building the visitor should feel at once the atmosphere of national service, and everywhere should be evidences of the functioning of this particular unit in providing information upon all subjects connected with winning the war. The morale of the entire staff should be unimpeachable, and to zeal, hope and confidence must be added understanding of national questions and a working knowledge of available material on these questions. Let us keep our library shelves well stacked with books full of information with which every American should be familiar, and with personal narratives showing the noble spirit of our allies at the front, and the conditions under which they struggle.

The library must take an active part in increasing food production. Pamphlets, lists of books on food and gardening, a list of seed firms should all be secured and every effort made to acquire all information possible on this subject. Much valuable free material may be had for the asking.

Bulletin boards or wall space and tables for permanent display use, giving food conservation a special space, should be assigned. These should be kept in reasonably good order, so that fresh material may be readily available. Material for free distribution should be nearby and plainly marked, while notices of new books or pamphlets, of older books on war subjects, magazine articles, special collections lent by the commission, pictures, clippings and verified recipes should be posted, taking care to have the displays in conspicuous places, the choice of matter good and arrangement striking, suggestive and in good taste.

War pamphlets neatly covered and cataloged, tho excellent reference tools, are of only perfunctory service unless widely advertised and distributed, and the people to be reached with these telling messages are men and women who will not ask for them, preferring novels and magazines. It is our patriotic duty to get them read by all the people.

The club rooms of libraries which have been given up to Red Cross work, should have the best posters displayed there, that those women who work so faithfully have a clear idea of why we are at war. Distribute literature there and give short talks on war topics. The library should serve as an agency

for Red Cross registration, Liberty Loan subscriptions, Thrift Stamp campaigns and all similar activities. It should co-operate with schools, and with all national service organizations. Publicity on library material, written and signed by a local expert, will have great weight. All other methods tried and untried should be used.

PHOTOSTAT

Appreciation of the many possible uses of the photostat is increasing rapidly. The report of the New York State Library records that the number of prints made in that institution during 1917 was 2883.

"Only 347 prints, including the reproduction of the small record of the Church of Jerusalem, Albany county, were for the collections of the library itself; the Division of School Buildings and Grounds received 322 prints, mainly reductions of larger schoolhouse plans to convenient size for consultation and filing; 167 prints were made for other divisions of the university. Outside the university, the largest calls have come from bodies closely related to war mobilization and preparation; on numerous occasions the Resource Mobilization Bureau and its divisions have called upon us for the quick multiplication of copies of organization charts or schedules and to the extent of 464 prints we have met their needs, even tho at times it called for evening and Sunday work; a war survey of Albany buildings suited to certain war purposes required the reproduction of views and plans to the number of 592 prints, and for this our facilities were again used. For the State Comptroller, the Attorney General, the Court of Claims, and committees of the legislature, 184 prints were made; 807 prints were furnished to persons entirely outside of the above classes. Fees received and paid into the state treasury amounted to \$81.13, and photographic paper and supplies to the amount of \$139.64 were furnished in place of fees.

PUBLICITY

The Library of the Massachusetts Agricultural College distributed in the spring a circular attractively printed in red and black, bearing the following acrostic:

The College Library

Tries to serve everyone expeditiously.
Hopes to be of very real help to all students.
Expects to have an up-to-date fireproof building soon.

Circulates books to all M. A. C. people.
Offers no apology for its crowded quarters.
Lets students borrow more than three volumes.

Likes to have folks browse among the stacks.
Expects everyone to return books promptly.
Gets, buys or borrows needed material.
Extends a cordial invitation to all.

Looks up facts and figures for busy men.
Invites you into the delights of scientific research.
Begins the day at 7.30 a.m. and closes at 9.30 p.m.
Renews books for those who need them.
Always anxious to learn of new and better things.
Relies upon the telephone and telegraph to get things quickly.
Yes, it ought to have a fine new building right away.

The Rochester Public Library is doing effective work through deposit stations in public schools, parochial schools and other institutions, fire bureau houses, etc. Recently the stations in factories, department stores and public service corporations were selected for development. A brief letter about the books addressed to the managers was printed on one side of a slip and on the other side a list of the agencies circularized.

Copies were struck off and sent to each firm named with the suggestion that as many copies of the slip would be furnished free as they cared to distribute to their employes and firm members.

Of the twenty-five firms listed, seventeen requested 7,880 copies. In this way interest was stimulated among the managers as well as the employes.

Following is a copy of the letter:

A PAYING INVESTMENT

To Business Men Having Libraries for Their Employees:

Gentlemen:

This report is to acquaint you with those who like yourself realize that constant toiling and no reading makes dullards for us all. You have in your establishment one of those little "Accommodation Libraries," where your co-workers may obtain a book for use at home or elsewhere.

During the past year readers have drawn from these libraries at the places named 34,856 volumes. Most of this reading was recreational in character, resulting in greater mental alertness, livelier imagination and greater power of vision. It is safe to say that it has also promoted good will towards your firms and readiness to co-operate in your plans.

You are therefore entitled to view the introduction of these libraries with satisfaction from the standpoint of better business and more willing workers.

Among the large and growing number of laws for the welfare of industrial workers there is none to compel the establishment of libraries. Their presence in your plant exhibits a quality which is not strained but which voluntarily maintains a standard higher than that required by law.

During the present year other firms in the spirit of Abou ben Adhem will add their names to this roll of distinction. Your co-operation and theirs will greatly enlarge this reading and its resulting benefits.

ROCHESTER PUBLIC LIBRARY.

The Cleveland Public Library was represented in the Loyalty Parade, July 4, by a well-thought out and attractive float. The auto, a brand new four-ton truck, loaned by the Mechanical Rubber Co., where the library has a deposit station, told the story of the library's work for the Americanization of the citizens of Cleveland. A book case and a librarian indicated the library's function, while the citizens were represented by users of the Lorain branch in various foreign costumes, some of them very beautiful indeed. A story hour was also in progress. Tots in the dress of various foreign peoples, and one natural negro boy, listened to a story told by the children's librarian at Carnegie West branch.

On the tail-board of the truck stood two pages from the Main Library encased in huge dummy books which left exposed only their heads and legs, and bore the following legends:

BOOKS MAKE MEN BETTER CITIZENS.
 BOOKS MAKE CITIZENS BETTER MEN.
 ??? ASK THE PUBLIC LIBRARY.
 GOOD IDEAS: WE ARE FULL OF THEM.

Mortar board hats added a scholastic touch. American flags, together with the bright costumes, made the float a very colorful picture.

On each side was a huge sign as follows:

THE PUBLIC LIBRARY HELPS TO MAKE US GOOD
 AMERICAN CITIZENS.

The float was commented upon very favorably and did tell very well the story of what the library is doing for Americanization. The library was also represented on the Americanization committee, which had a prominent place in the parade.

REFERENCE LIBRARIES

The Central Library for Students. Alfred W. Pollard. *Lib. Assn. Rec.*, Oct., 1917. p. 371-378.

The Central Library completed the first year of its existence in February 1917, during which time it established itself, with the aid of a grant from the Carnegie Trustees at 20, Tavistock Square, London, W. C., increased its book stock from 1392 to 3249 volumes, and, in five months circulated 2005 volumes.

The library purchases only books costing 5/- or more. Special attention has been given to the building up of the history and social science collections, but the library aims also at forming a good technical collection. It has furthermore become the depository for

the periodicals supplied to the editors of the "Athenæum Index." In the selection of the books expert advisers have willingly helped: among these are Mr. Fisher of the Board of Education, the Master of Balliol, the Poet Laureate, Profs. Ashley, Hobhouse, Jevons, Muirhead, A. F. Pollard, and Tout, Sir Sidney Lee, Dr. Prothero, Dean Rashdall, Dr. Michael Sadler, Mr. Sidney Webb, and Mr. Zimmern.

Originally serving the needs only of the University Tutorial Classes and of the Workers' Educational Association, the aim of the library now is to supply "to every student his book," and hopes to reach individual students of all kinds.

The books are sent either to individual students direct, in which case the borrower pays the cost of carriage, or to libraries, associations or institutions to be distributed among their members. This latter arrangement is usually preferable, since the cost and work of sending per volume is less, and the library has the guarantee of the institution borrowing for the safe return of the book.

The library is confident that as its work becomes better known, co-operation between it and municipal and other libraries may lead to the undertaking of the publication of reading-lists and of other useful activities.

Bibliographical Notes

The St. Paul Public Library has published a 4-page index to *Western Magazine*, vol. 7-10 (Nov. 1915 to Dec. 1917).

A "Dictionary of shipbuilding terms" by F. F. Pease, one of the staff instructors of the Education and Training Section of the Emergency Fleet Corporation, is announced for early publication by the J. B. Lippincott Co.

The story of the A. L. A. War Service written by Theodore Wesley Koch of the Library of Congress, has again been revised and issued in a new edition with a foreword by Dr. Putnam and a number of new illustrations.

The National Committee of Patriotic Societies (Edward Harding, chairman, 43 Exchange place, New York City) is getting out some fine patriotic publicity material, and will be glad to put any library on its mailing list.

The Bureau of Railway Economics has compiled a useful check list of periodicals,

house organs, etc., published by railway companies of the United States, with a list of those discontinued prior to July 9 on account of war conditions.

McClure's for September has an article by Dr. Frank Crane entitled "Button, button, who's got the button?" and illustrated with the insignia of the numerous patriotic organizations doing war work at the front and in the "second lines of defense" at home.

Edward Everett Hale's "The man without a country" has been dramatized by Elizabeth McFadden, formerly of the staff of the Cincinnati Public Library, assisted by Agnes Crimmins, and is published by Samuel French of New York.

The federal government is publishing a monthly "War review of medicine and surgery," which began with the March issue. Copies may be secured from the superintendent of Public Documents in Washington, at 10 cents each.

The *Bulletin of the Medical Library Association* has asked members to suggest what they consider the best necessary material for the establishment of a medical library, both in books and in medical journals. Lists of ten, fifteen, twenty-five and thirty-five titles are asked for, and it is hoped they may be printed in the October *Bulletin*.

The Library of Congress is making a collection of the various bookplates used in connection with the A. L. A. War Service. Will librarians and other A. L. A. workers send to Mr. F. W. Ashley, Superintendent of Reading Room, Library of Congress, copies of any bookplates which come to their notice, other than the blue-gray label which was pasted on the outside of the books, and Mr. C. B. Falls' reduced poster.

A new magazine that will be of peculiar interest to special librarians is *Filing* (*Filing Incorporated*, publishers, 320 Broadway, New York), whose first issue was published in July. The leading articles are "Central filing in big corporations," by W. Herbert Gilley of the Mutual Life Insurance Company, and "Development of a trust company's statistical and information files" by S. Eugenia Wallace of the Guaranty Trust Company of New York.

"A list of United States public documents published as serials of the 61st, 62d, 63d and 64th Congresses—1909-1917," was compiled under the direction of Adelaide R. Hasse by the class

in public documents of the summer session of 1917 at Columbia University and revised by Mary Van Wagenen of the economics division of the New York Public Library. The list was printed for the use of the Joint Committee on Printing and copies for depository libraries have been supplied the Superintendent of Public Documents in Washington.

In 1904 the John Crerar Library bought from a Leipzig bookseller a collection of 1471 documents and pamphlets of the 16th to the 18th century, treating of the economic and social affairs of France and her colonies. From manuscript notes found here and there, the collection seems to have been made by a French government official with unusual facilities for acquiring official printed matter. The collection has proved of great interest to students of French history, and a catalog has now been issued to facilitate its use.

The Cleveland Public Library has received several hundred copies of *The Honorable Peter White: a biographical sketch of the Lake Superior iron country*, by Ralph D. Williams, 286 p. illus., Penton Publishing Co., Cleveland, 1907. These were for use in the camp libraries or in any other way in which they may be of service, and after sending forward those which can be used in the camps, the remainder are available for any libraries which will send the postage. The weight of the volumes is a little over two pounds.

In Cleveland, whose Americanization Committee has a notably broad outlook on the problem of establishing a closer mutual understanding between the foreign born residents and the native born Americans of the city, a series of articles has been planned which will take up in turn the various races prominent in the life of the city. The first of this series is "The Slovaks of Cleveland," written by Eleanor E. Ledbetter, librarian of the Broadway branch of the Public Library, and it gives some insight into their home life, racial characteristics and education, their distribution in Ohio and the United States, and a list of Slovak newspapers and periodicals published in this country, together with some other Slovak publications.

The Federal Bureau of Education is making more extensive use of print than ever before, in its effort to meet the present national emergency in education. Between three and four million copies of the "Lessons on community and national life" issued in co-

operation with the Food Administration were sold for use in the schools last year, and it is expected that they will be used even more extensively next year. Special bibliographies on education and the war have been prepared by the library division of the bureau and will be furnished on application. They include "War pedagogy," "German education and the war," "Teachers' salaries in war time," "Junior Red Cross," "United States Boys' Working Reserve," and "War gardens." The series of Teachers' leaflets, Community leaflets, Home economics circulars, Higher education and Secondary school circulars, as well as the regular numbered Bulletins, have all been widely circulated. A special study of village schools has now been undertaken, and a series of rural school letters dealing with the "Rural school in war time and after" is being planned for the special use of educational and agricultural journals throuth the country. As a further medium for keeping the educational life quickened and vitalized, the bureau has begun the publication of *School Life*, whose first issue is dated August 1, and whose contents include a discussion of the garden armies, War Americanization, government policies involving the schools in war time, home economics on a war basis, military training in college, the need of a national law for physical education, French experience with the teaching of German, and the full text of Secretary Lane's address before the N. E. A. at Pittsburgh.

The Open Round Table

A SERVICE FLAG FOR THE LAKE PLACID MEETING

Editor *Library Journal*:

I am requested to have a service flag prepared, if numbers warrant, to be displayed at the New York Library Association meeting at Lake Placid the week of September 23. Would you not be willing to co-operate in its making by running in the columns of the LIBRARY JOURNAL a very urgent request that librarians send me *at once* names of all N. Y. L. A. members who have entered war service, to the end that the flag be made as complete as possible.

I would greatly appreciate whatever publicity you could give the matter and whatever urging you could bring to bear that the sending to me of names be not delayed.

And I would also appreciate volunteer assistance in sewing on the "last minute" stars at Lake Placid!

N. LOUISE RUCKTESHLER, *Secretary N.Y.L.A.*

Guernsey Memorial Library, Norwich, N. Y.

ABOLISH THE NON-ESSENTIAL ACKNOWLEDGMENT

Editor *Library Journal*:

Some librarians have discontinued the ancient custom of "acknowledging" all gifts which come to them. It has long seemed to me that this is a wasteful and useless practice which should be universally abandoned. An occasional acknowledgment of an annual report or a four-page reading list makes the generous donor feel, as he drops the engraved form into a waste-basket, that it could hardly have been more effusively phrased if the gift had been an Elzevir or a priceless manuscript. And even if the acknowledgment is reasonably moderate in its expression of thanks,—*cui bono?*

Two reasons might (but don't) justify the acknowledgment habit. A receipt might some time be wanted to establish the fact that the gift was received. Or the sender might feel hurt by the lack of courtesy if no acknowledgment were made, and might remove the offender from his mailing list. I suppose that in an infinitesimal fraction of one per cent of all acknowledgments made, the receipt, if kept, may some time be useful. And as for the sensitive feelings of the giver, I wonder how many librarians have known, or have been grieved by the fact, that I made no acknowledgment of their latest annual report

(which I was truly glad to have, though I didn't acknowledge it). I wonder how many business houses or corporations, such as the Pennsylvania Railroad, for example, have blacklisted me for not acknowledging some pamphlet or report.

Acknowledgments are probably necessary when gifts are received from private individuals, especially if they are local residents. But the stereotyped form of acknowledgment certainly seems ill-suited to such gifts. As a general principle it seems to me that if an acknowledgment is needed it is because the gift calls for a more personal note.

Unless as a measure of war-economy, I have no hope that this communication will cause any abatement of the acknowledgment flood. But if the stereotyped note of perfunctory thanks must remain a vital part of library practice, might it not at least be dispensed with, like the third lump of sugar, "for the duration of the war?" I do not know how many books could be cataloged in the time now spent in recording and acknowledging gifts; or how many volumes could be purchased with the money now spent for mailing such acknowledgments; or how many hundred pounds a letter-carrier would have to lift to equal the bulk of a year's acknowledgments which now burden the mails. Such computations are not for me. But anyone statistically inclined could work them out in a small part of the time now spent in the non-essential occupation of acknowledging.

C. SEYMOUR THOMPSON, *Librarian.*

*Savannah Public Library,
Savannah, Georgia.*

Library Calendar

- Sept. 23-28. New York Library Association. Library week, Lake Placid. General theme: Book power. Speakers, Dr. C. H. Parkhurst, Dr. Melvil Dewey, Col. William Cary Sanger, Dr. Earl E. Sperry, Dr. Frederic W. Betts, William Warner Bishop, Frederic G. Melcher, and others. Please send names of association members enlisted in U. S. service to Louise Ruckteshler, Guernsey Memorial Library, Norwich, N. Y., who is preparing a service flag.
- Oct. 9-11. Wisconsin Library Association. Annual meeting, Milwaukee.
- Oct. 17-18. Joint meeting, Indiana Library Association and Indiana Library Trustees Association, Indianapolis.

SCHOOL AND LIBRARY

SUPPLEMENT TO

THE LIBRARY JOURNAL

SEPTEMBER, 1918

LIBRARY WORK WITH CHILDREN IN WARTIME*

BY CAROLINE BURNITE, *Director of Children's Work, Cleveland Public Library*

WE cannot remind ourselves too often that April, 1917, marked the passing of an old order and the beginning of a new. We were less conscious of it then than we are now, we are less conscious of it now than we will be a year from now. It is a new order for every individual and no less new for every agency serving its community. New problems are being solved and old activities are being tested in the light of new national needs. Schools, libraries, settlements, and all other social agencies are being re-socialized. One may see this taking place on all sides, and every worker can tell of activities she is now promoting which two years ago were entirely outside her field. By reason of this resocialization of community life and forces, tremendous accomplishments have been possible. Out of these common undertakings has come a common spirit, which is bringing the community agencies into new relationships with each other and into a fuller understanding of the place that each should take.

Children, as a class, are as affected by this new life as any other one class. One of the great changes for them is that they must now make their own definite contribution of one sort or another to national needs. In other words, they have become an asset for the present as well as for the future. Not next month, nor next year, but *now*, they must be socially and economically productive, and upon these who deal with them, lies the responsibility for bringing this about.

In a great measure society is permitting each institution to decide how children shall help. It is largely allowing each to develop its own ways of helping, keeping a strict accounting only of immediate results. It

says to those agencies dealing with children: There are certain things to be done, take your part, show us at such and such a time what you have taken for your share, and at that time it will be determined whether it has been enough.

Society has given such agencies the new common aim of helping to the utmost. But society is not primarily concerned just at this time with the question of how we accomplish our ends, and whether we make what we do mean the most to the child that it can mean. That important question it will determine later, when the children of to-day are men and women, and then the test will be whether they meet the tremendous responsibilities of that hour with the fulness of their powers. But it is for *us* who work with children to remember now, that the resources and ability and spirit of the young man or woman who is twenty-one some ten years from now depends in no small degree not only upon what he does now at eleven in helping in food conservation or camp library work, but *how* he does it.

In a certain city a Kaiser's coffin was placed in a public square, and children as well as adults who had bought a War Saving Stamp were invited to drive a nail into the coffin. On bill-boards on leading streets are pictures of atrocities. Hundreds of children see these pictures every day. These methods of arousing feeling are known to be in use in other cities, which are leaders in much that is liberal and progressive, as is the one referred to. Do we need other evidences that the responsibility of the right education of children thru wartime activities lies peculiarly with the teacher, the librarian and the social worker at this time?

There are certain definite things wherein

* Read before the children's librarians' section of the A. L. A. at Saratoga July 2.

children are proving that they can be of great assistance. On the economic side there are two: Saving and investment; food conservation and production. On the social side there are three: First, Red Cross work, carried on more recently thru Junior Red Cross activities; second, camp libraries; third, heightening and strengthening an ardent spirit of patriotism, thereby arousing those spiritual forces which are the mainspring of action of this time, and which define themselves in true fidelity and devotion to our own land. Rightly fostered, this spiritual ardor is indeed the greatest contribution to present times that children can make.

It is planned in this discussion to show in the reports of various libraries which follow, just what the libraries' contribution in war times thru activities of children have been. In utilizing the energies of children, the libraries have had, together with all other agencies, the advantage of the children's fine fresh joy in service which came to them in their first realization that they could help. This joy in service will climax and recede unless it is rightly used, and should this happen, the best that lies in service for them will be lost, their help will become only material and in the nature of set tasks. Giving them the fullest understanding of the importance of the things they are doing and a full knowledge of the ends they are serving, is the one way in which this can be avoided.

When the library takes the initiative in collecting books for camp libraries, when planning the part it expects the children to take in getting to the libraries the thousands of books to be collected, it should plan at the same time adequate means for the children to learn what camp libraries really are, to see pictures of camp libraries, to learn something of the similarity between a library in a camp and a city library. It must see that children understand from their own use of the library the need of many books on the shelves in order that a soldier may make a satisfactory selection, and something about the different kinds of books needed in a camp library.

If the library is able to secure the help of the manual training department of the

schools in making boxes for overseas shipments, it should make available some knowledge about the particular use of the boxes; why they are planned as they are, and the many other interesting matters which will help children know what they are working for. If the Boy Scouts are asked to help in certain definite ways, the library must not reward them with the medal of service of the scout organization, the scout paper, or in some similar way. It should see to it that they become intelligent public servants doing their share.

In other words, we must not set just so many tasks for the children as their part of these big movements, but we must remember that we should aim to appeal to their intelligence as we do in dealing with adults. It is the methods of presentation which must vary, rather than the principles themselves. The important thing is that children should understand that books are a great part of the recreation and education of the soldier, and they should understand, as well, why organization is necessary in carrying forward this work of supplying books to soldiers. One way to educate children in this camp library movement is to get them to write to their relatives who are in camp, asking whether they use the camp library, what they think of it, whether they find books there which they want, and what books they would like which are not available. This might be done in some spirit of investigation, which would give a little training in methods of getting first-hand knowledge.

Whatever in general may be the way the library goes about enlisting the aid of the children, various plans should be worked out, of course, and several organizations will doubtless be needed to carry out the plans. Aside from these dealing with children, commercial organizations might be asked to help, such as a photographers' association to furnish local photographs for pictures and slides; printers' association to furnish a special bulletin for teachers and children. In these and other ways, the resources of many groups of people will be levied upon to contribute to this particular phase of the education of the children.

But the child is chiefly an asset at the

present time in his contribution to the community feeling of fidelity and devotion to his country, and the library must play an important part in the quickening of children which this means. We have heard much about the various ways of inculcating patriotism. That such efforts have not always come out of careful thinking, but rather from a fine frenzy for immediate accomplishment is instanced in a child's estimate of her own teacher, "Gee, but she is one patriotism fiend!" One can read from such a remark, the pathos of mispent effort and how the child remained untouched by the most desperate appeals. This is the day of patriotism readers, which draw from much that is best in literature, but which are likely to fail in their purpose by reason of the very directness of their approach of subject. Just as direct moral instruction has little place in making of character, so the inculcation of patriotism will probably not be brought about by direct instruction in its beauties and values. It is true also that by no means all which the children can come to know of patriotism will be taken from books. We go to books for the fine deeds of the past and the present, but a part of such teaching must come out of the immediate experiences of the child, and still another part from intelligent service, well directed. The foregoing references to children's part in camp library work may illustrate the quality last mentioned.

The material which comes from books has been no less available in the past than now. It needs regrouping, however, to bring stronger focus upon motives and situations. Patriotic readers are an effort in this direction. But first let us remember we must understand what patriotism is before attempting to arouse any feeling on the part of the children thru story-telling and thru their reading. Can we not say that patriotism involves loyalty, knowledge of and obedience to law, knowledge of one's own country and other countries, sharing liberty, safeguarding liberty, sacrificing for liberty, service thru liberty. When we really understand this, we are ready to select and arrange material for the children. Heroic deeds in verse and prose give concrete form

to these attributes. We must consider the organization of society as well, so that the child can understand that society affords him certain benefits. The child of foreign parentage can understand that for him then lie opportunities peculiar to his own country in the free public libraries and the free public schools, even tho he may have heard at home tales of discouragement and of failure to secure those social and economic advantages, the hope of which prompted his parents' removal to America. When we give such meaning to his everyday contacts, we are teaching patriotism, as well as when we draw from the past, the deepest and richest experiences of mankind to met this highest need. But in whatever way we attempt to perform this service, the surest way to avoid the danger of falling into abstract preachments, which are certain to fall always on deaf ears, is by carrying over to children, only that which has first quickened ourselves.

In our first reactions in war times, we have been much concerned with the patriotism or the lack of it, in the foreign-born. At times Americanism seems to mean birth in America. In our search for illustrations of heroic deeds we have taken little pains to seek in other than classic sources. The other day, twenty-five thousand Czecho-Slovaks marched in a parade in one city to honor the man whom they proclaim as their future president, Professor Massaryk. Some of their banners were messages to us. One read, "Americans, do not be discouraged! We have fought these tyrants for three hundred years!" To such people and to their history could we not well go for new tales of heroic sacrifices for freedom, which can quicken and impel librarian, teacher and child to a new conception of what safeguarding liberty and sacrificing for liberty really mean.

THE National Security League has asked for the withdrawal from sale and from public libraries of Ellen Key's "War, peace and the future" (Putnam, 1916) on the ground that it contains dangerous pacifistic doctrines.

WAR SERVICE OF HIGH SCHOOL LIBRARIES

[EDITOR'S NOTE: This most suggestive record of war service in high school libraries, compiled by Mary E. Hall, of the Girls' High School in Brooklyn, was prepared for the annual meeting of the N. E. A. from material sent her by fellow members on the committee on high school libraries for the library department. The personnel of this committee, besides Miss Hall, was as follows: Leora M. Cross, West High School, Cleveland, Ohio; Lucile F. Fargo, North Central High School, Spokane, Wash.; June R. Donnelly, Simmons College, Boston; Clara Howard, Schenley High School, Pittsburgh, Pa.; Hannah Logasa, University High School, University of Chicago; and Ella M. Morgan, Lincoln High School, Los Angeles, Calif. Each member of the committee canvassed a district covering several states, and from these district reports Miss Hall has chosen the most significant items. In submitting the report the committee expressed the hope that it would not only be suggestive to high school librarians of the part their libraries may play in war service, but that it would also prove a convincing argument with boards of education and school superintendents for the introduction of the trained librarian and the modern type of library in the high school for service *during* the war instead of after its close.]

FROM all parts of the country have come reports of the great variety of ways in which the high school libraries are helping to win the war. So many of the reports are full of practical suggestions for school library war service it is difficult to select that which is most distinctive and helpful. We wish that each report sent to us might be printed in full. For some of the suggestions of our report we are indebted to the "Report on high school library war service in New York city" prepared by Miss Katharine Christopher, librarian of the Julia Richman High School and presented at the annual meeting of the New York Library Club in May, 1918.

Constructive work has been done by most of the high school libraries along the following lines:

1. Helping pupils to understand why America is at war.
2. Stimulating a high order of patriotism thru American biography, great patriotic speeches of the past and to-day, books setting forth American ideals, etc.
3. Americanization of the foreigner. The daily influence of the library with its bulletins, editorials and news from the best daily papers and the best magazines, the reading of books recommended for study period and home use, all have an influence upon the foreign

pupil and his family. As Miss Christopher states in her report: "By vitally interesting the students they in turn will kindle the enthusiasm of the parents." These books and magazines taken into the home by the pupil give to the family a new viewpoint and offset the influence of the foreign language press and literature in some homes.

4. Arousing the enthusiasm of students for all forms of War service,—Liberty loans, War savings stamps, Red Cross, Food conservation, Camp libraries, etc.

The librarian of the Evansville (Ind.) High School writes: "Our school slogan is '100% Patriots' and the library is trying to do its share." The librarian of West High School, Cleveland, writes: "In all the various 'drives' the high school library has stood back of the school, supplying ammunition with the aid of bulletin boards, posters, clippings, pictures, pamphlets and books, magazine articles and reading lists." Miss Morgan of Lincoln High School, Los Angeles, reports for the school libraries of the Far West: "All are doing everything in their power to stimulate patriotic knowledge and service. The generous distribution of pamphlet material on the great war and the many beautiful posters sent out by numerous national and local boards, committees, and leagues for war service has led to general use of these in all the school libraries." The librarian of the Austin High School, Chicago, sums up the work of all the high schools reporting in the following report on her own school library: "The library has tried in every way possible to co-ordinate its work with all the war activities of the school, always aiming to keep right up to date by having available for use the latest material relative to these activities."

We have selected the following suggestions from the reports, feeling that they are specially worthy of mention as representing excellent methods of use of library resources and devices for stimu-

lating interest in the war and its literature and in the democratic ideals for which our country stands.

HOW SOME TEACHERS USE SCHOOL LIBRARIES

One of the most definite and suggestive reports received from any school library is that of Annie M. Thayer of the Bryant High School, New York city. This report outlines the work done by Margaret K. Acker, a teacher of English in the senior and junior classes. War work in Miss Acker's classes has taken two forms. Each week they have current topics with speeches on the daily happenings on the battle fronts, etc. In addition, each class has four or five patriotic days. Each class is divided into groups of about seven pupils. Each section forms a committee to make special study of an assigned subject and to entertain the class for one period with the result of their study. The patriotic days have been looked forward to with pleasure, feeling runs high and much excitement has been shown. Miss Acker writes: "I feel much true Americanism has been gained." This year they have discussed the following topics:

1. Democratic ideals of the founders of America and of to-day.
2. The ideals of Frederick the Great, Bismarck and the Kaiser contrasted with the ideals of Washington, Franklin, Jefferson, Lincoln, etc.
3. Aristocracy in German education, social life, German universities, the press,—a contrast with the freedom of thought and education in America.

In all this work the librarian has cooperated with lists of suggestive reading in books and magazines, pamphlets and clippings. Among the books found most useful were the following: Curtin—Land of the deepening shadow; Smith—Soul of Germany; Weyl—New democracy; Frederick the Great—Confessions; Notestein and Stoll—Conquest and Kultur; Ohlinger—Out of their own mouths.

In line with this work comes the suggestion of the part the bulletin board may play in developing Americanism. In the Richmond Hill High School, New York,

the librarian prepared an attractive bulletin on Benjamin Franklin entitled

"Benjamin Franklin: the good citizen" Saving Saving

Pictures, quotations from his "Almanac" on "Thrift," references to his service to his country, suggestive reading in his Autobiography, etc., aroused much interest on the part of the students.

In Englewood High School, Chicago, a six weeks course in "Democracy" has been given this year. This offered a great opportunity to the librarian and a special mimeographed list of all books, pamphlets, pictures, and articles which would be of interest in connection with this course was given to each teacher. A collection of pictures of famous men of to-day was in constant circulation throughout the school in connection with this course.

Long Beach High School Library in California reports the use of war pamphlets almost as text books. Hundreds are circulated for class and home use each day. The history department uses them one week, the English the next and so on, until it is certain that every pupil is really intelligently mastering the facts of all these vital problems.

In Oakland Technical High School the librarian keeps the *Official Bulletin* sent daily by the government and posts it in a conspicuous place with this clever label "Your government's daily message to you." This is used by modern history classes and for English and debate work in many schools. Some librarians make a card index to it for text of important bills, of speeches by the President, etc. Some include its specially interesting information in their "Current topics reading list" which they post each week to call attention to the best magazine literature.

In Brookline and Cleveland the English teachers use the best "War books" for book reviews, required reading and topics for oral English. In Brookline a Friday afternoon reading in the library on "War poetry" by the head of the English department aroused much interest.

All the libraries report a great demand for war books, especially personal narratives and war poetry. To meet the demand of teachers and pupils for war poetry librarians are making collections of clippings from newspapers and magazines, files of mimeographed copies of poems most in demand, scrap books for poetry, both clippings and mimeographed or typed, and are making a card index to best war poems in magazines which cannot be clipped.

In Los Angeles the board of education requires that "War lessons" be given once a week in each classroom. The high school librarians have compiled special reading lists to accompany lessons on "Science and the war" "Psychology and the war," etc., each department in the Los Angeles High School preparing a lesson on its subject in relation to the war.

Modern history teachers are sending pupils to search clipping files and magazines for material on such topics as "Labor and the war; what will Germany's expansion in the East mean to us?", "Comparison of Germany's government with ours," etc.

COLLECTION AND ORGANIZATION OF LIBRARY WAR MATERIAL

Clippings and Pamphlets. Clippings from newspapers and magazines form an absolutely necessary part of the modern library's equipment for reference work. Before the week's events have been summarized in the magazines the organized clipping file furnishes the current topics classes and modern history teachers with material on the most up to date topic and has it ready for reference the day after it appears in the newspapers. This clipping file keeps the school supplied with texts of important bills in Congress and legislature, important war measures, messages and speeches of President Wilson, Lloyd George and other leaders and with editorial discussion of topics of the hour. Jamaica High School, New York, reports a clipping file of important battle accounts, such as those of Philip Gibbs appearing in the New York Times. Most libraries organize these clippings and

thin pamphlets in alphabetical file under subject, keeping clippings in envelopes or folders and often mounting them. Pupils use these just as they would an encyclopaedia, looking under the alphabetical heading for Aviation, Submarines, Women and the war, etc.

All libraries reporting mention good working collections of the many valuable pamphlets published by the Committee on Public Information, National Security League, American Defense Society, etc.

San Diego High School Library circulates package libraries of clippings and pamphlets.

Magazines. Austin High School, Chicago, reports a card index to magazine articles on war topics of interest to high school students. This has been constantly in use and has made much material available which would otherwise have been lost for a month or so until the *Reader's Guide* covered those dates.

Horace Mann High School, New York, does not bind its magazines. The librarian cuts out important articles and pictures of war interest and files them in the vertical file.

Pictures and Posters. Many schools report collections of war pictures and cartoons. Many of these are mounted and used for bulletin boards and for circulation to classes. Horace Mann High School has a collection of cartoons which are used in history, English and art classes. Boys' High School, Brooklyn, has a collection of 45 official French War pictures and has started a collection of posters in connection with its war service.

Schenley High School, Pittsburgh, held an exhibition of posters in the High School Library. These were made by the art department for food conservation, gardening, thrift, Red Cross, etc.

Scrapbooks. Boys' High School Library, Brooklyn, reports a scrap book of clippings about the boys of the school who are in the war.

Scrap books for collections of "Battle accounts of special interest," for "War poetry," etc., have been tried in some schools.

INTERESTING PUPILS IN WAR READING AND
WAR SERVICE

Bulletin Boards. Most high school libraries are making excellent use of numerous bulletin boards. Many report a "Daily news bulletin" made up of important news from the morning's paper cut up and posted under appropriate headings by 9 a. m. and kept there thru the school day. The librarian of Englewood High School, Chicago writes: "Special attention must be given to posting clippings which will surely strengthen public opinion as a force back of the war."

Brookline, Mass., High School has a "War map" with the battle line kept up to date by the history department. Lincoln High School, Los Angeles, has a special bulletin board devoted to war maps. One of these, headed "The line to-day" is kept up to date by tracing the position of the combatants by means of ribbons.

An interesting bulletin is reported by Manual Arts High School, Los Angeles. A display of old pictures of warfare cut from early numbers of the *Scientific American* is posted near recent war pictures so that students can see the changes in war apparatus and methods of fighting.

Brookline has a special bulletin board for pictures and clippings about the high school boys in the service and Parkersburg, West Virginia, a bulletin on insignia worn in the service. Parkersburg also reports a map showing the military cantonments. Brookline has a bulletin showing the flags of the Allies with a brief note on each country. Jamaica High School, New York, has a "Gun team" bulletin calling attention to matters of interest in artillery work and gun fring. It also has a bulletin "What a woman can do to help win the war," covering all forms of war service open to women. Girls' High School, Brooklyn, has a French bulletin edited by the French department. On this board are posted pictures and post cards of Paris and cities in France where our soldiers are located. Here are copies of French "trench newspapers," letters from French

orphans adopted by the school, pictures of these children, etc.

Notices of patriotic plays and movies which can be recommended to high school pupils are posted in the Girls' High School and attention is called to all meetings where there is opportunity to hear men and women prominent in the war work of to-day, e.g., the Archbishop of York at Carnegie Hall, Masefield's farewell address just as he left for England, Ambassador Gerard on his life in Germany, etc.

Harrison High School, Chicago, has a "Help win the war" bulletin devoted to all forms of conservation. Englewood, Chicago, finds that a bulletin on "War inventions" interests the boys and science teachers.

War Table and Its Possibilities. A special library war table has proved worth while in one library. On this, new interesting books on various phases of the war are displayed. Annotated reading lists of best war books are mounted and kept here for reference. Recent pamphlets and clippings on war topics are displayed in pamphlet boxes. War pictures which have been classified and mounted are displayed here. Brookline places on its war table collections of letters from the boys at the front and in the camps. These are copies of the originals and are typed by students in the typewriting classes.

Reserve Shelves. Englewood High School, Chicago, has an "About the war" section of shelves. These are in a prominent place in the room and on the shelves all material about the war has been set aside. Pamphlet boxes labelled Red Cross, Military matters, Gardening, The great war, etc., are here. Here is a shelf of military science books for cadets and a collection of the best histories and personal narratives of the war.

Reading Lists. The librarian of Oakland Technical High School arouses interest in war literature by posting all over the school the Gaylord "Have you read?" posters with space for the names of books. The librarian observes direct results in requests from shops and distant

classrooms in which students and teachers have no occasion to visit the library during the day.

Jamaica High School Library gives to pupils at the close of school stencilled lists of the best war books for summer reading.

Cleveland High School libraries use the two selected lists of war books with full annotations compiled by the Public Library and also a list of patriotic stories to read aloud and suitable for high school use. West High School Library, Cleveland, has made a full list of war material suitable for both junior and senior high schools.

Lists of best war books for high school libraries have been compiled by librarians of high schools in Madison, Wis., and Ypsilanti, Mich.

Readings and Talks in Library and Classrooms. One librarian reports that two ten-minute meetings are held each week and at each meeting two four-minute speeches are made by teachers or pupils on topics related to the war. Topics are much wider in range than the usual government "Four minute" speeches because four are made each week to the same audience. Attendance is optional but there is always a large interested audience with many standing.

One library is used every day after school for groups of girls who are sewing for war relief. The librarian suggests interesting books to be read aloud at this time.

One librarian furnishes readings for weekly patriotic readings in the assembly. Articles are also furnished to teachers to read during Red Cross sessions.

The School Paper. Lake View High School, Chicago, printed in the school paper various lists on patriotic subjects. Englewood, Chicago, uses the school paper for articles announcing various library resources on Gardening, Food conservation, Red Cross, etc.

Food Conservation. With posters and bulletin boards, distribution of recipes and display racks of books on economical cooking librarians have helped interest

pupils in food conservation. Farmers' bulletins and special pamphlets have helped students in preparing talks on these topics. Jefferson High School Library in California circulates 300 pamphlets on food production, preservation and conservation.

Recipes for war time cooking are being collected and lent by many high school libraries. Minneapolis South High School collects recipes tested by the domestic science department and lends mimeographed copies. Lake View High School, Chicago, has a circulating library of recipes in pamphlet form. Lincoln High School, Los Angeles, reports that "Wheat conserving recipes" are printed on slips of paper to fit the book pocket of books drawn for home use and in this way sent into the homes of the students. In Austin High School, Chicago, a recipe file has been started in the card catalog. These recipes include War time candies, Wheatless cakes, Meat substitutes, etc. The librarian of Englewood High School, Chicago, posts notices in the lunch room that conservation recipes, menus, etc., may be had in the library.

Exhibits on food conservation are reported by librarians of Ypsilanti, Michigan; Brookline, Mass.; John Marshall High School, Chicago; and Pasadena, California. In Brookline two tables have been in constant use for original exhibits by the domestic science department. In Pasadena the librarian invited the Parent-Teacher's Association to a food conservation meeting in the library. There was a large display of government pamphlets and books on foods. Pencils and paper were provided for note taking and these were very generally used by the visitors. In John Marshall High School, Chicago, the librarian co-operated with the domestic science department in giving a "Food conservation exhibit." On six tables the domestic science department illustrated various ways of conserving food and suggesting substitutes. The librarian brought together pamphlets, books on food conservation, cook books and food posters.

Food Production—Farming and Gardening. At the technical high schools in Cleveland agriculture teachers who have charge of garden plots have made special demands upon the school libraries. In all school libraries, East and West, the libraries have furnished lists of books and pamphlets on school gardens and back yard gardens. Farmers' bulletins and seed catalogs have been placed on the racks in some libraries and in Cass Technical High School, Detroit, there were posted each week directions for the work which should be done at that time. In Englewood High School, Chicago, the librarian co-operated with the teacher of agriculture in bringing together on a reserve shelf a good working collection of books and pamphlets on farm craft problems. The members of the Boys' Working Reserve spent several laboratory periods in careful study of these.

Liberty Loan Drives. Most librarians report busy days in keeping students supplied with material for the "four minute" speeches English teachers in all parts of the country required for the Liberty loan drives. In Cleveland the board of education during the three weeks of the drive sent the following topics for essays by every pupil in the school: Winning liberty; Sharing liberty; Defending liberty. Each large topic was subdivided into smaller ones; *e. g.*, Winning liberty included immigration, religious liberty, pioneers of liberty, captains of liberty, etc. Librarians not only helped in material for these topics but for a final prize essay on "Defenders of liberty of the present time."

Red Cross Work. In all the high schools the libraries furnished material for four-minute speeches, essays and reports in oral English in connection with the Red Cross drive for funds. Most libraries report special Red Cross bulletin boards on which are posted interesting pictures, clippings, notices, etc., concerning the work.

In many libraries the library reading room has been turned into a Red Cross work room. In Girls' High School, Brooklyn, it is used for a surgical dressings work room every afternoon from 3-5 p. m. Here students of all classes

have an opportunity to help and special schedules are made so that each class has an opportunity at certain times during the month. At Schenley High School, Pittsburgh, the library was turned into a workroom for an emergency call for splint belts. Boys and girls worked together and the work was finished on schedule time.

In East High School, Minneapolis, the librarian has a Red Cross knitting club meet in the library. One member reads while the others knit.

At Central High School the librarian was asked to give two talks to the faculty, one on the Red Cross in general and the other on the work of the American Red Cross.

In Cleveland high school libraries the librarians were called on to supply material for essays on every phase of Red Cross work from its history, development, international relations to present day activities. The board of education required every pupil to prepare an essay, written or oral, on one of the Red Cross topics.

LIBRARIES FOR SOLDIERS AND SAILORS

The first drive this last school year which brought the high school library into "war service" was the campaign for money for camp libraries. Librarians entered heartily into the campaign and organized teams of workers among the students in the schools. In Evansville, Ind., the librarian organized a team of twenty-four boys and girls to canvass the school. Each chose two helpers and in little over three days \$291 was raised. In Boys' High School, Brooklyn, the patriotic club known as The Uncle Sam Association undertook the drive and a representative met with the high school librarians of the city to plan the campaign in all the high schools. There was great rivalry among the school libraries as to which could raise the largest sum for camp libraries during Camp Library week. The total amount raised in the New York high schools was \$1586, of which the Boys' High School contributed \$478.

In the book drive in the spring Schenley High School had a weekly collection

of books and magazines thru the spring term and totalled 4550 books and 28,000 magazines. The magazines were mailed directly from the school to the soldiers as a branch post office was installed for the purpose. The books were prepared at the Carnegie Library where many volunteer workers, both teachers and pupils, helped paste, pack and make the typewritten cards for the books.

Specially interesting plans for organizing teams for collecting books come to us from Los Angeles, Pasadena, and Redlands, California, Cleveland, Des Moines, and Chicago and from Parkersburg, West Va. The John Marshall High School in Chicago reports the collection of 5347 books, thru appeals made by students in the public speaking classes who went out to the various section rooms as "two minute speakers." The Civic Industrial Club collected the books and took care of the count. In Pasadena for the first drive the classes were organized with a corporal for each. Corporals from the most successful rooms were made sergeants in the next drive, etc. The girls helped in preparing books for shipment and those who helped were given ten points in favor of their room leader for each hour they worked.

SCRAPBOOKS FOR SOLDIERS

The Chicago high schools have done more in preparing scrap books for hospitals than most other city high schools. The librarian of Englewood High School reports supervising the making of 200 which went from that school. In many schools the librarian co-operated with the art department in supervising in the scrap book work, helping select magazine pictures, short stories and jokes and cartoons. Some librarians report that the scrap books were undertaken by the English department, who looked to the library as a source of supply for pictures and stories.

In the Brooklyn Training School for Teachers 400 short story holders were filled with stories from magazines. Pupils did the pasting and other work necessary under the direction of the librarian.

LIBRARIES AND THE U. S. BOYS' WORKING RESERVE

THOSE librarians who were fortunate enough to hear the address given by Dr. Henry S. Wells at Saratoga, on the work of the U. S. Boys' Working Reserve, need no further argument to convince them of the service they can render thru co-operation with this organization. Their help is definitely asked in an editorial in *Boy Power* for July 15, the official bulletin of the Boys' Working Reserve.

"In initiating its campaign to mobilize the available youth of the land," says this editorial, "the United States Boys' Working Reserve has found that its first concern must of necessity be the 500,000 boys of 16 years of age and over and under 21 years of age now in attendance upon the high schools of the Nation. Its officers have understood perfectly well that the boys of Reserve age in high schools are but a comparatively small part of the total number of boys available for membership in the Reserve. Thus far no concerted effort has been made to reach the larger number of boys that are patrons of the public libraries, but the time has arrived when the 5000 libraries that are represented in the American Library Association shall be asked to co-operate with the Reserve and, so far as their limiting conditions will permit, to enroll and to assist in training the boys who come to their reading rooms and to their shelves for papers, magazines, and books.

"Already very many libraries have rendered conspicuous service. Some of them have been extremely active, and this is specially true of the libraries of the State of Illinois, where George A. Deveneau, librarian of the College of Agriculture, University of Illinois, was appointed director of library co-operation for that state. Mr. Deveneau reports that 75 of the libraries have rendered conspicuous service and have engaged in a great variety of activities to inform, to enroll, to train, and to inspire their boy patrons. The library at Joliet has enrolled 19 boys into the Reserve and 83 boys into the Junior Reserve. It has maintained a Roll of Honor which bears the names of all boys who have enrolled into

the Reserve from that library. The library at Freeport has enrolled 50 boys, and has been instrumental in securing the enrollment of very many boys who were already working on the farms and had been overlooked by other enrolling agencies. The librarian at Jacksonville has been specially active to place in the hands of her boy patrons the Farm-Craft Lessons, and has persuaded them to study these so that they have gone out to the farms with the same general book knowledge of their work as is possessed by the school boys who have studied the Farm-Craft Lessons in the public schools.

"Instances are of record where schools that have been tardy to take up the work of the Reserve have been greatly stimulated by the local librarian to an appreciation of their duty in mobilizing their pupils for food production. The librarian and the president of the library board of the Havana Public Library compiled a list of boys who are eligible for work in the Reserve and furnished this list to the local superintendent of schools. In Danville the librarian enrolled 20 boys and provided for their training in preparation for work on the farm.

"The librarian at Dixon has not only enrolled many boys from among her patrons, but keeps filed in her library for the use of the county director the enrollment cards. Her co-operation has gone so far as the placement of many boys on the farms of the county.

"In some few cases the librarian has secured the assistance of local physicians who have examined candidates for the Reserve free of charge.

"This record goes to show the possibilities of library co-operation when there has been placed in charge of the work a capable director, himself a librarian, thoroly acquainted with the work to be done and thoroly aware of the possibilities of libraries for furthering it."

The same copy of *Boy Power* also quotes from the statement prepared by Asa Wyncoop, chairman of the New York Library Association's committee on institutes for the use of local library institutes in that state:

"The following lines of help are suggested and desired from the libraries by the state director of this enterprise:

"a. That each library put itself into immediate communication with the State Director of the Boys' Working Reserve (Mr. H. D. Sayer, 230 Fifth avenue, New York city), the manager of its county farm bureau, and the head of the high school of its district, offering its services in this undertaking and asking for instructions as to methods of desired co-operation.

"b. That posters and appeals for volunteers be conspicuously displayed at each library, and that literature giving a full description of the plan, conditions of work to be done and nature of contract to be entered, be supplied to all inquirers.

"c. That a list of all boys enrolled at the library between the ages of 16 and 21 years who are not attending school be compiled, and that special efforts be made to bring the plan and appeal to the attention of such boys.

"d. That enrollment blanks be kept at the library and that notice in the local papers and on the library bulletin board be given of this fact; and that a roll be kept and posted on the bulletin board of all boys who enlist in the library.

"e. That the library provide for some preliminary and elementary instruction in the work to which the boys are called by securing and setting apart for this purpose such simple books and other reading matter as may be helpful."

PROOF of the value of the Enoch Pratt Free Library of Baltimore, was given one day when a small boy who previously had borrowed fairy tales and books of a similar nature asked for "The sunbonnet babies." This was such an unusual choice that a few questions were asked, and it was learned that his mother could not read English. Isidor and Ida, aged ten and eight respectively, had taken upon themselves the task of teaching her, and they chose "The sunbonnet babies" as their text-book because the words are easy and the pictures interesting.

HIGH SCHOOL LIBRARY PROGRESS DURING THE PAST YEAR

At the meeting of the National Education Association at Pittsburgh in July the library department received the following report of progress from its committee on high school libraries, of which Mary E. Hall is chairman:

This has been a year of great things in the progress of the high school library movement. The surveys of high school library conditions have proved conclusively during the last few years that definite standards must be set up as to what constitutes an efficient working high school library. This year such standards have been adopted by so important an educational association as the North Central Association of Colleges and Secondary Schools. In this matter of standardization the state education departments of New York and Wisconsin have taken important action requiring trained library service in high schools of those states.

We also find in looking back over this year that wherever the trained librarian has entered the high school the library has become the center for all forms of war service and is every month playing a larger part in the newer forms of educational work demanded of the schools by war conditions. It is hoped that as educational leaders come to realize the splendid contribution which the new type of high school library makes to the solution of our great problem of "Americanization," boards of education which a few months ago said they could do nothing about improving their high school libraries until "after the war" will now begin to question whether they can afford to let their high schools miss the influence of efficient organized libraries during the war. In every city in the country where the high school libraries are not upon a modern basis let us urge upon boards of education the introduction of the trained librarian as an important "war measure."

STANDARDIZATION OF HIGH SCHOOL LIBRARIES

By far the most important event of the year is the adoption of Mr. Certain's report on a standard organization for high

school libraries in the eighteen states of the Middle West represented in the North Central Association of Colleges and Secondary Schools. This report which is a thoro revision of the tentative report submitted by him in 1917 was officially adopted by the association at its annual meeting in Chicago in March, 1918. The full text of the report has been printed by the association for distribution in the states affected and copies of the revision may be secured from C. C. Certain, Cass Technical High School, Detroit, Mich.

According to the words of Mr. Certain in announcing the adoption of this report: "There is now an authorized standard for the Middle West accepted by common consent of those who expect to build to the standard." According to the revised report the period for attaining that standard is five years from March, 1918. This will give time for planning proper training courses for teacher-librarians in the small high schools. These courses should be given by the state university or state library commission and by thoroly trained librarians competent to give training which would meet with the approval of the committee on library training in the American Library Association, in so far as that committee can set up standards for short summer courses of six weeks or more. Minnesota has for some time given such six-week courses for teacher-librarians and this course should be suggestive to other states. Missouri has for the last year or two provided similar instruction in library methods at its State University at Columbia. The University of Michigan this year offers an eight-week course in high school library administration.

STANDARDIZATION IN WISCONSIN HIGH SCHOOLS

An immediate result of Mr. Certain's tentative report in *Educational Administration and Supervision* for June, 1917, was the interest school superintendents began to take in the possibilities of the new type of high school library. In Wisconsin the state supervisor of school libraries reports that the state education department of Wisconsin has this year notified high school

principals of the state that, beginning with the school year 1919-1920, every high school in the state will be expected to have one member of its faculty a teacher-librarian who has had at least the training given in the course for teacher-librarians at the University of Wisconsin or its equivalent. The state education department expects that by that time enough persons will have qualified for this purpose. Larger high schools are expected to have high school librarians who have taken the full course in a standard library school.

STANDARDIZATION OF LIBRARY SERVICE IN NEW YORK HIGH SCHOOLS

The state education department of New York state, thru its division of school libraries, has this year sent out under date of May 1, 1918 the following ruling concerning the state certification of high school librarians:

Inasmuch as a district quota cannot be allowed for the service of a school librarian unless said librarian is a holder of a certificate it has been decided to issue certificates as follows:

a. Permanent certificates will be issued to those who are college graduates and also graduates of library schools approved by the Regents of the University of the State of New York.

b. Five-year certificates will be issued to graduates of approved library schools and after five years' satisfactory service a permanent certificate will be issued to such persons.

c. Three-year certificates will be issued to graduates of an approved short library course of not less than six weeks provided that such graduates have had at least two years of library experience.

d. One-year certificates will be issued to graduates of a short library course of not less than six weeks provided they have had one year's library experience, and to graduates of approved college and normal schools who have had no library experience provided they have had one or more sessions of the state summer library institute conducted by the State Library and are certified as having done satisfactory work.

e. Certificates may be renewed for a like period provided there is satisfactory evidence that acceptable work has been done during the period for which the original certificate was granted.

For service in cities of the first and second class only permanent certificate will be accepted.

STANDARDIZATION OF MISSOURI HIGH SCHOOL LIBRARIES

Thru the influence of Mr. Severance, librarian of the University of Missouri, a questionnaire was printed under the auspices of the committee on accredited schools and sent to all the high schools accredited by the university. This was done for the purpose of creating a standard for the high schools of Missouri based on present conditions. This year the University of Missouri has issued a *Bulletin* containing observations on high school library conditions and suggestions for improvement based on the information contained in replies to these questionnaires. The *Bulletin* suggests a standard of adequate library facilities for the accredited high schools of the university. This standard follows that set up in Mr. Certain's report.

THE NEW ENGLAND ASSOCIATION OF SCHOOL LIBRARIANS

Thru the influence of Louisa M. Hooper, librarian of the Brookline Public Library, June R. Donnelly, librarian of Simmons College, and Alice M. Jordan, of the Boston Public Library, a meeting of teachers, librarians and others interested in the work of high school libraries was called at Simmons College, May 18, 1918. At this meeting the New England Association of School Librarians was organized with Martha Pritchard, librarian of the Bridgewater Normal School, as president. The purpose of this association will be the development of efficient school library service in all New England schools. This association has an unusual opportunity for service and great things may be expected of it in the near future.

EXHIBITS

Your committee has continued its policy of sending exhibits of scrap books, lists, mounted pictures, etc., showing what the new high school library contributes to the school. Exhibits illustrating the work of the modern high school library have been sent to state meetings of teachers in Maryland, Georgia and Texas this year. In Georgia the exhibit was shown at the State Fair and in Texas the exhibit traveled

about the state and at the high schools of Waco, San Antonio, Jefferson and Port Arthur was kept long enough for the schools to make a careful study of such parts of the exhibit as might be suggestive in the library work of these schools. This itinerary thru Texas was planned by Elizabeth West, librarian of the Public Library, San Antonio. The University of Kentucky borrowed the exhibit of the National Council of Teachers of English illustrating what the modern high school library contributes to the work of the English department. In this way leading school superintendents and teachers in the high schools are given a vision of what their school libraries might do even tho very few funds are available.

LIBRARY CONDITIONS IN SAN FRANCISCO SCHOOLS

"The public school system of San Francisco, California," is the subject of a report of an elaborate survey made in that city under the direction of Dr. P. P. Claxton and published as bulletin 46 in the 1917 series of the Federal Bureau of Education.

School library facilities, according to this survey, are rather meagre. In discussing the elementary school situation, the report says of supplementary materials:

"The great insufficiency of supplementary materials of all sorts was to the survey committee a striking characteristic of the San Francisco schools. A full list of all the supplementary books and libraries at hand in 12 representative grammar schools and elementary schools of San Francisco was furnished by the principals of these schools at the suggestion of one of the officials.

"The Jean Parker School is the best supplied of these 12. Its list of supplementary materials for geography gives 113 titles for the use of about 400 children (fifth to eighth grade, inclusive).

"If the plans outlined in the course of study are to be carried out, five times as many supplementary books will be needed. Ten times as many would not be excessive.

"This school, like the others, is supplied with regular sets of readers from the first to the fifth grades. In addition to the

supplementary readers in geography, history, and nature study, the Jean Parker School has a general library of 211 volumes; also reference books (dictionaries and encyclopedias).

"A general library of 211 volumes, even if well selected, is very small for a school of 775 children. A well-selected library of 1200 books would be of genuine value to both teachers and children in carrying on the studies of such a school. The other 11 schools which reported their full list of books are not so well supplied as the Jean Parker School. The Hearst school, for example, with 671 children of all grades, reports only 60 volumes of supplementary books in geography, and a general library of 400 books (names of books not given).

"The Jefferson School, with eight classes of children of all grades, has no geographical readers, and a general library of only 150 books. In spite of this handicap, the Jefferson School, by reason of the energy and spirit of its principal and teachers, was working well. Help and equipment are needed.

"None of these schools are properly supplied with supplementary readers and other library facilities. Teachers and schools can not do effective work under these conditions. A liberal allowance of money for supplying needed reference books and libraries thruout the entire system of schools is strongly urged.

"The following list gives the number of books reported for each of these 12 schools:

<i>Schools and classes.</i>	<i>Number of Books in Schools</i> <i>Volumes in library.</i>
Jean Parker, 17 classes.....	211
Hearst, 16 classes	400
Emerson, 14 classes, 5 grades...	463
Jefferson, 8 classes, all grades...	150
Franklin, 17 classes	218
Henry Durant, 17 classes	200
Bryant, 15 classes	709
Glen Park, 18 classes	310
Mission Grammar, 16 classes
Washington, 18 classes	320
John Swett, 19 classes	125
Columbia Cosmopolitan Grammar, all grades	168

"The movement toward the establishment of an educational museum should be encouraged, necessary supplies of all kinds,

such as lanterns, pictures, phonographic records, gymnasium apparatus, globes, maps, etc., should be supplied much more liberally to all the schools, and a fuller, more effective co-operation between the schools and the public libraries should be established. The capacity of the public libraries for service to the schools will soon be very greatly increased and should be utilized to the fullest possible extent. The library officials manifested eagerness to co-operate with the schools.

"In Boston, St. Louis, Chicago, and other cities well-formulated plans have been carried out to supply the schools with pictures and other illustrative materials, and even with lanterns, lantern slides, and moving pictures. School museums of natural history, geography, and other subjects are not only opened for class excursions, but for the distribution of illustrative specimens to the schools.

"The teachers of San Francisco made a notable beginning toward the establishment of a school museum when they gathered together a collection of materials at the close of the recent Panama Exposition, derived from the various departments of that great exhibit. But these collections need to be put to the direct service of the schools."

Under "Civic education" attention is called to the opportunity offered the Public Library, just moving into new quarters, to make available to school children and others the material pertaining to their own community life. The best example of this sort of thing is probably to be found in Newark, N. J., where under the initiative of the public librarian and the co-operation of the school authorities, "Newark study" has been thoroly established in the public schools.

"All published materials relating to the city and state—histories, departmental reports, publications of public and voluntary social agencies, etc.—should be made available by the library," says the report; "but more important, there should be special attendants familiar not only with these materials but also with the course of study in the schools, who should have ready at hand the materials needed by classes as

the work develops week by week thruout the term, and who should directly assist pupils and teachers in the use of this material. A room should be set apart for the use of pupils in their study of this material relating to the community; a room where exhibits of pictures and other illustrative materials should be on display. It might be known as 'The San Francisco Room.' The library may also be the proper agency for the collection of slides and films illustrative of community conditions and activities, which should be lent to schools, social centers, parents' associations, local improvement associations, as needed. The possibilities in this line are almost unlimited.

"The working relations between the Public Library and the schools have been developed only to a very slight extent. The library does not seem to be in any real sense a part of the working equipment of the schools, and with few exceptions is not recognized as such by teachers. More branch libraries are needed; but more especially there is needed closer co-operation between library and teachers in regard to subjects taught at a given time in the schools and materials relating to those subjects available in the library. More definite and systematic provision should also be made for working collections of books to be lent to schools for short periods of time as needed.

"Individuals and private agencies have opportunity to co-operate with the schools and the library in the assembling of local materials for community study. A few years ago the City Club of Philadelphia published in bulletin form detailed reports of its Saturday discussions on the general subject 'What is Philadelphia doing?' These were available for general use. The Commercial Club of Indianapolis co-operated with the board of education in the publication of pamphlets relating to Indianapolis history and government which have found constant use in the public schools. The Association of Collegiate Alumnae of Wilmington, Del., appointed a committee of college-trained women to compile material relating to that city and state with specific reference to its use in the schools.

Many other instances could be cited. There are many individuals and various organizations in San Francisco who by co-ordinated effort could give impetus to such extension of the usefulness of the public library. Efforts in this direction should be made in full knowledge of the aims and methods of the schools, and the schools should have a supervisor or other representative thru whom such co-operation could be made effective."

In the chapter on "Education of the immigrant" the report says:

"A force possessing many latent possibilities as a factor in Americanization is the Public Library. San Francisco libraries have not yet recovered from the effects of the fire, but a magnificent new building in the civic center is already well on its way toward completion, so that the central section of the city should be well served, at least as far as the building is concerned. Definite plans for co-operation between the library and the school are already in operation. For example, each of the seven branch librarians must visit all schools in her library district. Two story-telling hours per week are conducted in each branch, one for older and one for younger children, the attendance in some cases running as high as 200 children. Branch librarians are in charge of this story-telling.

"The North Beach branch, in the heart of the Italian quarter, is the smallest in the city, yet during the year July, 1915, to June, 1916, it had a book circulation of 64,000, or just a little short of 20 per card holder per year. This particular branch has 7216 volumes on its shelves (6300 English and 900 Italian), so that each book circulated roughly nine times during the year, a most creditable showing. As a rule these Italian parents are anxious for their children to read English books rather than Italian, but the circulation of the foreign books unquestionably reaches families where English is not the current speech. With proper co-ordination of effort this branch library might be a most valuable medium for reaching the Italian people who are ignorant of English and for attracting them into the evening schools."

WILL YOU HELP A CHILD TO SMILE?

AN appeal has been sent out from the Chicago Public Library addressed to the librarians of that city and all others who love little children, proposing the formation of a picture book collection, or series of collections, for the little children of devastated France.

A second division of the Kindergarten Unit, one branch of the Red Cross, is going "over there" early in September under the direction of Fanniebelle Curtis, director of Kindergarten Units in France. This organization has cordially agreed to forward the books to Miss Curtis and the fifteen kindergartners who will take them directly to the children. The first shipment has gone. Others will follow as often as enough books—and let them be bright, new books—are received. There cannot be too many!

Even as the Thomas Hughes collection from England, in Chicago's dark days after the Great Fire of 1871, started the Chicago Public Library, this little suggestion on the part of Chicago librarians may start a great movement for children's libraries all over France.

If you wish an opportunity to join in this "Smileage for the kiddies," send books or money as soon as possible to Adah F. Whitcomb, Thomas Hughes Room, Chicago Public Library.

DEFECTS IN AMERICAN EDUCATION

PRESIDENT ELIOT's paper on "Certain defects in American education and the remedies for them," originally prepared for the Reed College commencement, June 1, 1918, has been published for wide distribution by the Bureau of Education, as Teachers' leaflet no. 5. The circular reviews the physical defects, as revealed both in school children and drafted men, and the mental defects, as shown in the large percentage of illiteracy in the National Army, and the lack of men trained to trade pursuits. For every defect a constructive remedy is suggested.

WILLIAM HOWARD BRETT, FOR THIRTY-FOUR YEARS BELOVED LIBRARIAN OF
THE CLEVELAND PUBLIC LIBRARY

THE LIBRARY JOURNAL

721

Vol. 43

OCTOBER, 1918

No. 10

THE Seven Sisters of Service will join hands in the money drive which will begin Nov. 11 and which will furnish means for the patriotic service of all the auxiliary war service societies except that of the Red Cross, "the greatest mother in the world," which has already had its successful drive. In addition to the American Library Association, which will share modestly but amply in the campaign and its results, there are included the Y. M. C. A., Y. W. C. A., National Catholic War Council, Jewish Welfare Board, War Camp Community Service, and Salvation Army. The local libraries thruout the country are expected to speak not for themselves but for this united effort, and they form in fact one of the best of mediums for communication with the generous public. The drive will be organized in the most thoro manner and there is to be joint organization and co-operation from the national center down thru the local units. First will come a preliminary campaign for the education of the public in the work of the several organizations, accompanied, with the A. L. A. at least, by a weekly bulletin outlining the methods for the library workers so that when the week of the drive opens, everybody and everything will be ready for a gigantic effort which will bring in the \$170,500,000 asked. The generosity of the country has already been put to severe tests, but the results of these have given reason for confidence that there is more to give and that it will be generously given. Every effort, every sacrifice, made now shortens the war and brings peace nearer.

MORE gifts of books are needed for immediate shipment overseas, and state directors have been asked to report the number available in their districts for such purpose. Camp libraries having surplus or

duplicate stocks have also been asked to forward these idle volumes to the dispatch offices. Tho it is felt to be unwise, in view of the coming campaign for funds, to divert the attention of the public by any special campaign for books at this time, especially thru the use of precious newspaper space, librarians should realize that the need for books is constant and insistent, and no opportunity to secure donations should be allowed to pass.

THE death of William H. Brett, comparable with the loss of Henry E. Legler, removes with a sudden stroke one of the most honored, most loved and most useful elders of the library profession. Scholarship, experience, ability and a pioneering nature made his lifelong work in the library field of a value increasing with the years. A generation ago he made the Cleveland Public Library the pioneer in the full experiment of open shelves and in the establishment of high school libraries, and the great building (with its characteristic departmental organization), which he had planned and which we had all expected he would live to open will now be his memorial as well as his achievement. The history of the Cleveland Public Library is his history and no library staff in the country has been bound together by closer ties of mutual affection and appreciation. His fervid patriotism could not rest with sending his sons to the front but put him in the front rank of service at home, and the camp organization which centered at Newport News under his generalship was the most comprehensive and complicated in the country. His keen and ardent spirit always gave touch of inspiration and his affectionate nature won and held friends innumerable. A symposium of appreciation and friendship will be given in a succeeding num-

ber of the LIBRARY JOURNAL. It is a sad comment on human plans and hopes that an accident of the street should in a passing moment have taken from his great and useful place this real leader in the work of the world, this true soldier in the battle of life.

CHILDREN's librarians and school teachers alike may do much to help win the war and to utilize its lessons of thrift for the future, not only by selling thrift stamps to children but by making this the occasion for talk which will stimulate both patriotism and thrift. A little study of economics and history will suggest many thoughts that may be simply put before children and sow good seed while they are interested in the stamps. The older children may be shown from the books how our Revolution was endangered because it was so hard to get money for it, how the continental currency went to pieces and worked such harm to all the people, how Shay's Rebellion grew out of harmful financing and taxing, how the greenback currency of our Civil War depreciated and made prices measured in gold two and a half times what they were, and how the present aim of the Government is to collect money by safe ways so that these ills may not be repeated. Samples of continental currency, Civil War postage stamp currency, metal "tokens" and other devices of that day may usefully be collected by children and shown on the library walls or in the story hour; and children who have been stamp collectors should be especially interested in the thrift stamp method of saving.

CHILDREN should also be interested and utilized in making war collections that may hereafter be of use in the study of the history we are now making. Collections of flags of the Allies and of other nations, such as may be had for a dime apiece, will do not a little to interest children in geography and geographical story telling. The simplest maps of the war may be used to

interest children in maps in general and their history. It would be especially desirable to interest children in the "problem territories" so called, those which will be much discussed at the peace conferences and of which the newspapers will have much to say. Libraries should enrich their shelves now with books on these lands, and those who have to do with children's reading should teach themselves first of all.

WHEN peace comes, the right hand of helpfulness must be extended across sea in many new directions and in the new work the library interest will have part. First in our thought must come bereaved Belgium, and plans for the rehabilitation of the library of the University of Louvain, whose destruction was the first example of German ruthlessness, have already been set on foot. Then will come also the need of our sister republic, brave France, for co-operation from America in establishing the wide system of popular libraries to which that country already looks forward as one of the safeguards of the future. The plan of Chicago librarians for furnishing children's libraries in France is happily in line with this purpose. Meanwhile, steps are being taken in Italy to knit closer together the bonds between our own country and the land which represents to us classical antiquity and medieval and modern arts. Thru the Italo-American Union in Rome it is proposed to establish a library for American studies and information, and to extend thru American libraries our knowledge of the Italian language and literature. There are now many American men in Italy, engaged in war work, who urge that books should be sent now to furnish visible evidence of the nucleus for the library of the future. Books about the United States are what is especially desired and they should be sent by individual mail to H. Nelson Gay, Palazzo Orsini, Rome, who will furnish any further information on the subject beyond that given on another page.

THE LIBRARY'S SHARE IN AMERICANIZATION

By JASMINE BRITTON, *Supervisor of Juvenile Department, Los Angeles Public Library*

THESE are the days when we are all busy Americanizing each other. Usually we are not far out of the way in turning to our immediate brother on the left and on the right. We find on all sides new comers from the Old World. So quickly do foreign children insist that they are Americans that one must approach the question of nationality by asking Angelo or Annunciata what other language beside English their father speaks, and where he was born.

To the question of how many of us are Simon-pure native Americans not many can claim the original Red Indians who welcomed Columbus to our shores, as ancestors, and so this word of the year, Americanization, interests all of us.

The report of the National Americanization Committee puts California with a foreign population of 580,000, among the first seven states. This count does not include our own native born Mexicans. While immigration in California has increased 60% since 1900, the naturalization of these newcomers has dropped from 63% to 46%. The task of enlisting their loyalty to the nation, of fitting them in as citizens, has not kept pace with the increasing numbers. The recent draft brought 64,000 foreign men of the state into the army; 22% of the total draft. Of these a surprising number are illiterate, so that the army has found it necessary to segregate them and hold English classes before any progress in drilling can be made. The following statistics are given to show the size of California's foreign problem:

Oakland is credited with	150,000	foreign born
Los Angeles with	140,000	" "
San Francisco with	131,000	" "
Fresno with	24,000	" "

Until April, 1917, many have treated this foreign problem as interesting, as quaintly curious and different, but not of the critical importance we now know that it is. Branch libraries have been built in foreign districts and have swarmed with dark-skinned children and young people. We have complacently noted the excellent circulation. A very few grown-ups have filtered in, but

the masses of adult foreigners have not been reached by the libraries. Their own clubs and churches within their colony have seen them, but the new world civilization has touched them not at all.

We on our side of the fence, within the library, have exchanged among ourselves interesting anecdotes, such as the small boy sent to wash his dirty hands with soap, who replied, "Ah, I can't. We got to save soap for washing the clothes." We tell of the Russian girl sternly raised a Molokan who is forbidden by her father to wear an American hat. She cannot find work if she is dressed in her peasant costume, and besides, the rest of the girls have hats. She buys a straw hat with pink roses and on her way home from work each night she hides it and meets the family with her embroidered kerchief over her head. It is one more tragedy between the old world and the new.

There is more to it than an exchange of quaint stories. Here is a huge task for the home guard. As in the past, we declared our faith in education, in establishing public schools, so again we turn to education as a means of bringing out of the strange medley of nations in our midst united loyal Americans. Together with the public schools the public library has a share in this enormous work. Are we aware of it? It is time to determine a definite constructive policy. We must do more than passively be at home to our friends. We must go out as kindly neighbors to meet these newcomers. To-day the Americanization of the foreigners among us is a vital problem. It is a library opportunity to share in this work for the present and future welfare of the nation.

The three points of contact for the library are the children of the foreign born, the adult foreigners and the social workers with whom the foreigners come in contact. Along the difficult way the ready response of the children encourages us. We have but to put out the bait and their bright eyes spy it. Often have we observed the vigor and strength with which our foreign

boys and girls attack the best literature and use the library to their advantage.

We are at this time in arms for freedom and democracy, and yet in this country which above all nations stands for democracy how far short of this ideal in our daily life we fall. While the current books and magazines theorize on the brotherhood of man and a world republic, we as individuals are guilty every day of class and racial prejudices which are not democratic. Among children what anguish and suffering come because our pert American boys and girls use such slurring words as Dago, Greaser, Jap, Nigger and Sheeny. Because their foreign mothers and fathers speak with an accent, have different customs and strange clothes, we too are guilty of calling them "ignorant foreigners," and these children are ashamed of their parents. For this reason the discipline and respect of children for older people, and the home itself, is threatened. Jane Addams tells how Hull-House makes a special effort to honor the mothers and fathers in their knowledge of music, of lace-making and of other languages.

In addition to giving our boys and girls stories of American heroes, we want at this time a generous world view point; to discover that other countries have an honorable history and heroes who have striven for freedom and equality, qualities which we as Americans stand for. All nations need an international view point. We realize that language differences and racial differences have had something to do with the present conflict. Out of these comes lack of understanding. America has a unique position and opportunity with its great foreign population. All the world is here. Can we come to an understanding among ourselves? Permanent peace cannot come unless first as individuals, the child, the man, and later as a nation we have a tolerant world view point.

At the request of the State Commission of Immigration we have recently prepared for the use of teachers a selective list of hero-stories of other countries. In the library story hours in the past we have given many of these tales which have a place as great literature, but we plan now to follow this suggestion and to give these

same tales emphasizing that Horatius was an Italian, and Cæsar and Garibaldi. The Mexicans should be proud that a strange and rich civilization flourished here at the time of the great Montezuma. The Japanese have an age of chivalry like that in the King Arthur stories, with a magic sword and brave deeds.

At the Amelia Street School, where you find many Mexicans, Japanese and Italians, there is a story-club which meets after school. Under a teacher's guidance the boys and girls do the story-telling. It has been an excellent way to increase the vocabularies of these children who hear English only at school. The plot of the story carries them over the strange words in spite of themselves. The children's librarian has a friendly interest in this club; in fact, is an honorary member, with a celluloid button like the rest. She tells them where they can find special stories and brings with her several books to illustrate the point. When Togo, one Japanese lad, discovered he could have a library card free, and take these books home, he searched out the library across the railroad tracks and thru the busy part of town. The next week he returned with a friend and importantly explained it all to him and the week after with a few more, until fully four dozen of his kind have become our regular Saturday morning patrons. You are glad to have them neighborly enough to invite you to their special festivities. Have you ever seen an almond-eyed Cinderella or a Japanese Miles Standish in Puritan costume? There is a novelty and piquancy about the sight you will not forget.

At the harbor of San Pedro there is a progressive Japanese fishing association which has built a club house for the men, putting it in charge of a resident secretary, with activities similar to our Y. M. C. A. They have given to the Board of Education playground apparatus not only for the Japanese, but for all the children of Terminal Island. They are asking for a night-school for their men and now for a deposit of books from the Library. "Japanese books?" "No, they want to learn English."

Recently I heard a Japanese Commissioner of Education regret the discrimination here against his countrymen and say,

"Your Kipling has said, 'The east is east and the west is west and never the twain shall meet.' How can you understand us when you know nothing of our history, of our background and how rapidly we have developed in the past fifty years? If you were as interested in our history as we are in your history, I believe we could approach an understanding."

Ella Flagg Young says, "If we as Americans persist in being smug and try to make over our emigrant brother to be like us we are blundering. We must have respect for the language, literature and traditions of the Old World, if we are to work out this readjustment." This is the thread that runs thru our plan of Americanizing the children with hero tales from the world's history.

Thru the night schools the library can reach adult foreigners who are learning to read English. While only a small percentage of the total number go to night school, they are the more intelligent and ambitious ones who are able to respond to what the library has to offer. Our plan has been to talk to the assembled night school teachers every fall, going over the aids we have for them in the way of additional books for a longer time, deposits in the class room, old magazines and pictures. We conclude by suggesting that they bring their class to the library sometime during the year, depending on their ability to read English. This is followed up by the librarian's visiting the school and giving very simple short talks. Often at this time a definite date is arranged for a class visit, and a package of application cards is given to the teacher to be properly filled out beforehand so that books may be taken the first evening. The library prepares for the visit with a table of books in easy English, travel in their country, history, citizenship, mechanical and foreign books and magazines which she has learned from her conversation with the teacher will interest the men. Here we find an argument for foreign books in libraries. They may be the entering wedge among these people. If we must wait until the schools have taught them to speak and read English much time must elapse. The schools and libraries can help each other in this problem. The stimulus

and pleasure of finding books in their own tongue will often stir them to the greater effort of learning English and enjoying other library books. After a talk or story we take them to the shelves of foreign books, the reference room, industrial department, music and art department. We help them to select their first book, explain the rules and ask them to come again. Sometimes we have been able to make it quite an occasion with music or tea and a bubbling samovar. It has been suggested that it would be well to place English readers for foreigners and dictionaries on the foreign shelves where they would be discovered by the people for whom they are intended.

All of these plans have had to do with foreign men. The night schools do not reach the women, for at this time there are dishes to be washed and children to be put to bed. The mother usually speaks less English than any one in the family. The children pick it up in their play and in school. The men learn about their work and their contact with others, while the mother stays at home submerged by babies and house work. Often she cannot even order her groceries in English but sends the children to the market. The schools have been experimenting with afternoon classes for women. Keeping track of these afternoon classes for mothers as they learned the English words for various vegetables, kettles and calico, the library in several cases arranged a party by way of celebrating the conclusion of the term's work. No matter in what strata of society, feminine folk revel in a party. The teachers, attended by a squeaking cavalcade of baby buggies and about fifty Mexican women, arrived at the Violet Street Library, where we had temptingly put forth Spanish books interspersed with easy English, fashion magazines, crocheting books and cook books. Later, with help from an interpreter, a funny garden story was told which included the vegetables and colors they had learned. The playground people entertained them with folk-dances and a flag drill. A number of the children taking part had mothers in the audience. Lemonade was served and as they left we shook hands with each one and said, "Come

again." With their good friend the teacher, they had discovered the library.

As I have gone about thru the schools I have listened with special interest to the various accounts of the activities of the foreigners. When the Spaniards gave a play, the Syrians vied with them and put on an ancient Arabic play. The Greeks gave an excellent Greek comedy at which the audience roared continually.

At Alpine Street they have found one way to bring out the foreign mothers and fathers. A dinner was prepared by the girls' cooking classes. The boys had written in English four-minute speeches on thrift, gardens, bonds, stamps and Red Cross. These were then translated into Yiddish. Fired with their own patriotic eloquence, how dramatically these small boys delivered them and with what interest and pride their parents listened. In the Central Avenue branch there is a talk announced every month for the Yiddish people. Prominent men of their race have talked to them on such subjects as conditions now in Russia and the Zionist movement. At first there were a few queries by the older people as to why they did not meet in the synagogue but they forget the matter when the talks were excellent. The library has been filled each time with all it could possibly accommodate.

In a number of places community singing has had a share of the public attention this year. In foreign neighborhoods, where it is usual to find a great love and knowledge of music, what is more suitable to bring about unity and friendliness? It is a universal language which all speak. It is another opportunity for Americanization. The library's share might be to invite them to meet on the library lawn or in the auditorium.

After reading the article, "Where neighbors meet," which tells of the use of the St. Louis auditoriums, I realized that most libraries were not used to the extent they might be.

It is not an unusual experience, I believe, to have difficulty in carrying out the many plans for any work in which one is much interested, and so we have found it. Some day we want to have the library represented on the night of the city's reception

to the new citizens, to have a speaker at that time and to have a printed folder announcing the free use of the library. In Buffalo and Detroit the Chamber of Commerce has printed a handbook of city information, which the social workers have prepared especially for the immigrant. Such items as the schools, playgrounds, museums, parks and libraries are included. We want to have exhibits of the old world handiwork, laces, pottery, weaving and the posters and art work which the young people are doing.

We have discussed with the foreign consuls ways of informing their people of the educational opportunities which the library offers by systematically arranging for one of their number to give library talks in the foreign clubs and churches, by having frequent library articles in the foreign newspapers, by preparing lists of foreign books for purchase, by arranging with foreign societies to prepare and print for their people a bibliography of the foreign collections which the library has. We have suggested the library as a place where these foreign clubs may meet.

Red Cross work among the foreign women has brought a universal response such as nothing else we have known. It has seemed as if their inheritance from the Old World, of war and its attendant suffering, has made them understand intuitively that all must work for victory. One Bohemian woman told me with glowing eyes that her country had fought over two hundred wars in defence of their homes. Never once had they declared war; never once had they won a war. Their land had been divided, but always, they had maintained their language; that had never been conquered. In the Boyle Heights branch among the Russians and Hebrews there is a Red Cross auxiliary with a membership of nine hundred. As they have worked thru the winter they have grown out of the auditorium into the foreign room, the children's room, (until school is out), and even into the librarian's office. The library has found this an opportunity to make many new friends. In the Neighborhood Settlement House where there is a deposit of books, every day has found a group of Italian women knitting. The wool has been given by

women of wealth, while the foreign women contributed their time. As their skilled needles click a home teacher is ever giving her directions and comments in English, another lesson in Americanization.

The library has been represented on the Y. W. C. A. committee on clubs for foreign girls. There is a deposit of books in the club house and in addition we have helped the club leaders in finding plays and various other book needs for their work. Occasionally the library has given them a story hour which has been our opportunity to meet these foreign girls. The library is also represented on the county committee of Americanization. We find it an opportunity to give the community an understanding of the library's interest in the foreign problem. Another phase in foreign work is advertising the library thru social agencies, such as settlements, clinics, associated charities, probation officers, school and city nurses.

The library often helps with neighborhood activities that could not be said to deal strictly with books. Tommie Pinelli, whose mother works all day in an overall factory, is thin and peaked. He ought to have a summer on a farm. We remember that Dr. Smith who visits the clinic nearby has a farm for underfed children of working mothers. Tommie has all the specifications of those way down at the bottom, so he is sent without further ado. On his return we find he has acquired a toothbrush which he flourishes after each noonday meal in the school yard before a vast admiring throng. That is not the only result. Tommie is cleaner, and his grades in school are better. He recites to his mother the words in his reader; every night they go over his lesson, and he does not realize that she is learning English with him. The library's share is that one more family comes to us each week and is our friend for life.

Several social agencies recently realized that the time had come for intensive work in the foreign districts. It was discovered that there was little available information to help in determining plans. There was not to be found even the approximate number of nationalities in Los Angeles nor the places where they were located. It was agreed that a nationality map of the city

would be of great assistance so a committee from the library and the night schools considered how to obtain it.

They wished to bring together the bits of information from this center and that and make it available for all. Briefly, the city was divided into twelve districts. A meeting of representatives from educational and social agencies was called in each district. A questionnaire was distributed, which by this time in addition to nationality, included items for the housing commission, playgrounds, charities, settlements, night schools and libraries. The library was asked for data on the number of foreign books and the circulation of these; those languages most in demand and foreign clubs meeting in the library. This meeting brought together people with the same interests, the welfare of the foreign born, and who in a surprising number of cases had not met before. In that result alone, the survey was worth while. Thruout the work the State Commission of Immigration advised us when difficulties arose. There were many hitches along the way but finally we finished it. The information is now being tabulated and analyzed. The nationality map will be in the library before long. It is a community survey in which all helped and we now await with interest the report and recommendations of the Immigration Commission. All the agencies felt they had learned their neighborhood and its problems better. From the library view point it was indirect advertising among people who work directly with the foreign born.

These are the several things which the library in the interest of Americanization has so far found to do. Because these aliens live across the track, or across the river, or in the hollow and have not demanded the educational advantages which the city has can no longer excuse library inaction. The public library's usefulness in the next few years will be measured, to a great extent, by its ability to aid in improving the quality of our national life, and that will consist not only in Americanizing the foreigner but also in Americanizing Americans, until we have a democratic neighborly interest in these strangers whose only fault often is that they speak a language which we do not understand.

THE WAR AND LIBRARY TRAINING*

BY FRANK K. WALTER

THERE is so much opinion and so little fact in most of our conclusions regarding any phase of the effect of the war, that it seems imperative to make the proportion of fact as large as possible. The time-honored questionnaire was therefore used in preparing this paper and the various library schools and the libraries which were known to have training classes were asked to help in furnishing information. The responses were numerous and full and it is to be regretted that most of them cannot be quoted *in extenso*.

It is evident that the success of any kind of training must depend on the quality of the persons to be trained and on the possibility of getting a sufficient number of candidates to permit the selection of enough who are well qualified for the work.

From the replies received it is clear that the general impression that there is a scarcity of good material to take the place of those leaving library service under present conditions, is only too well justified by the facts.

Among the libraries which conduct training classes, by far the larger part have had the number of applicants greatly diminished. In most cases the quality of the applicants seems lower than in previous years. The following comments from Baltimore, Buffalo, Milwaukee and St. Joseph, respectively, are typical. (1) "War conditions have absolutely demoralized the training of apprentices in this library. . . . Until last summer, we always had from a dozen to a score of young women in library work. . . . At present we have only two or three persons in training, have waived any high school requirements and have half a dozen vacancies in the library staff with no prospect of filling them." (2) "There was a decided falling off of applicants for positions at the time of our last examination, and a falling off, we thought, in the quality of applicants as well. The usual small group of young men was altogether miss-

ing." (3) "Fewer applicants and less fit." (4) "The number of applicants has been very few and the quality much below the average. I would say that one in four is a possibility."

It is nevertheless reassuring to learn that a fair number of libraries have suffered little in respect to either number or quality of applicants. These are not only the smaller libraries but the libraries of Birmingham, Chicago, Detroit, Grand Rapids, Indianapolis, Kansas City, Savannah and Utica. The reasons for this maintenance of number of applicants is not always indicated. Those given by Birmingham and Grand Rapids are interesting. Birmingham has been affected "not at all apparently, except recently. We used the argument for good jobs ahead in Washington as inducement to get girls to enter apprentice classes." In Grand Rapids, "Our experience is that so far as our library training class is concerned, the fact that a good many of our people have gone into the government service at Washington has widely advertised our library training and we are having more applicants than ever for this work. The people who are applying now are a little more mature and have a little better education than those who have come heretofore." In Queens Borough the number has been reduced from 16 to four but the situation has "improved the quality in one way, namely, that these apprentices really care for this particular work." Other cities, like Denver, have suffered chiefly in the small number of applicants from whom to choose.

The most general method used to counteract the loss of applicants for admission to training classes has been the raising of the salaries of those already on the staff. Increased publicity has been used by the public libraries of Buffalo, Youngstown and the District of Columbia and doubtless by others who did not definitely state that such has been the case. Public talks, letters to and interviews with high school students have been the means most generally em-

* Read before the professional training section of the A. L. A. at Saratoga July 5, 1918.

ployed. St. Joseph has lowered the minimum age for admission to its training class from 20 to 18. Brooklyn and Milwaukee have modified their plans of training. Omaha and Davenport have re-established training classes or will establish them, and Rochester is about to begin one. In Massachusetts an inquiry conducted by the State Library Commission showed a general disinclination to start new local training courses to supply vacancies in library staffs. Dayton may employ older men and women for temporary service and assign trained people to the more responsible work.

In the library schools replying (which included those of the St. Louis Public Library and the University of Washington and all members of the Association of American Library Schools) there was only a slight general decrease in the number of students in 1917-18 (tho Atlanta reported a decided decrease in the number of candidates for examination). Most of the schools anticipate a marked decrease in numbers in 1918-19. The quality of the students was high, and in several cases a real improvement was noted. The most common method used to counteract the expected decrease in numbers has been increased advertising thru magazines and talks before schools and colleges.

In these days when fixed opinion on any subject is almost impossible it is almost inevitable that world conditions must react locally on any public institution, minor as well as major. It is no surprise to find that in most of the libraries reporting there is a marked restlessness or an indifference toward library work on the part of training class students. The same reason is given in every recorded case: low salaries and the apparent hopelessness of immediate substantial improvement. Where this spirit of restlessness is not the most marked characteristic, the training classes have shown increased appreciation of the possibilities of service in libraries. In several cases this is directly attributed to more public recognition of library service (including war service) or to the unconscious compliment paid libraries by the demand for li-

brary experience in filing and other forms of government work.

Aside from some desire to leave conventional library service to enter war library service and an inclination noticed in several library schools, to enter departmental service with the national government (an inclination which seems to have reached its height in some other schools), there has not been much apparent change on the part of library students in their attitude toward their chosen work. Doubtless more of them are more restless and discontented with their prospective salaries but on the other hand, more of them, it appears from the reports, have an increased respect for really good library service.

Dissatisfaction with library service and scarcity of applicants naturally suggest readjustment in training methods. It is not reasonable to expect old methods in any line completely to meet new and unexpected needs. It is therefore a gratifying surprise to find that so few material changes in training class or library school courses have been found necessary as yet. It is gratifying because the lack of change is as marked in the institutions training for local needs as in the general library school courses with non-local aims. In some instances changes have been made in the length of the course and in more insistence on clerical routine. Brooklyn and the District of Columbia have planned special courses of varying length and purpose for the different needs of their libraries. Several libraries, among them Queens Borough and Brooklyn, begin paying apprentices for whole or part time much earlier than formerly.

It is noteworthy that the libraries whose heads have been in camp libraries rather generally suggest increased attention to instruction in war library activities. Relatively few are planning to train assistants for clerical government service, tho this is suggested by Birmingham, Grand Rapids, Kansas City and Omaha. More attention to business library methods and more instruction in the relation of the library to the social and industrial activities of its community are frequently suggested. In

nearly every case there is a positive statement that the present standards of library training will not be lowered. This is often coupled with an expressed intention of definitely raising the standards.

Like the training classes, the library schools have so far made no radical changes in their courses and apparently few are contemplated. Simmons College has had a brief summer course for base hospital workers and nearly all the schools are planning to give increased time and attention to the place of the library in war activities. Simmons College and Western Reserve report the introduction of a few lectures on governmental service and the Carnegie School of Pittsburgh also plans training in this direction. This has also been done this past year at New York State and no doubt in other schools which have not specifically reported it. There is general agreement on the advisability of adhering to training for library work and of not becoming pseudo-commercial schools either permanently or temporarily. This has not prevented a more general recognition of the claims of business and other special libraries and more time will be given to them in the future. In no case is there an expressed intention of lowering standards to attract students. As one writer pithily puts it: "Surely we should not modify the training for a permanent (we hope) profession to fit the conditions of a temporary (we hope) catastrophe."

The lack of change, actual and suggested, is not stagnation. It is rather a disinclination to rush blindly into work which for the present at least, is likely to lead into professional blind alleys instead of into the high road. It is also a recognition of the fact that some place must be left for common sense; that training courses, like legislation, cannot provide for every emergency but must lay foundations on which adaptations can be made. In other words, where there is failure to meet conditions, it is probably as likely to be due to mistakes in admitting unsuitable students as to indicate serious defects in their instruction.

If the library is to do more and better work it must have more and better people to

do the work. The new conditions which will arise in the remainder of the war and the social reconstruction which will follow it must be anticipated in library training as soon as the needs are definitely foreseen.

Some changes are inevitable in future library training. Definite prophecy is hazardous now but probable reconstruction in training is foreshadowed in many of the replies on which this report is based, and to some extent, they have been suggested in it. Extension of training to all grades of library service seems not only inevitable but imminent. It is not unlikely that this may mean not only instruction in "extension centers" by an extension staff of competent librarians, but even the establishment of correspondence work in centers too remote and with library staffs too small to permit definite class work. The more or less distinct division of library service into clerical and professional seems anticipated, at least in the larger libraries.

None of these will be real innovations. Extension courses are already suggested by Miss Doren, of Dayton, and are under consideration by a very important educational foundation. For years the library institute has been doing extension work systematized and unsystematized. Correspondence work in library economy is already featured by the University of Chicago and is anticipated by the excellent "Apprentice course for small libraries" issued by the Library School of the University of Wisconsin. Brooklyn, the Public Library of the District of the Columbia and other libraries have already planned or are actually using in their training classes courses which distinguish between clerical and so-called professional service. The New York State Library has for years had thru the State Civil Service Commission two grades of help (1) the clerk and junior clerk grades and (2) the library assistant grade with its analogous examinations for higher professional grades. The New York Public Library also distinguishes between clerical and professedly professional positions. The probable change will be to bring together into a more or less harmonious plan, the best of these experiments and to urge thru the American Library Association and its affiliated sections

and organizations the acceptance of definite standards of service in libraries. This will not mean arbitrary uniformity. It will, on the contrary, mean the establishment of a norm from which variation may be frequent and extensive. Nevertheless, association or combination for similar practice will be a great step in advance of our present condition, which in many cases is not association as much as aggregation or even conglomeration.

Whether this will lead quickly and surely to definite certification of librarians and standardization of library service is not for me to prophesy. Even if it should, there is no positive cause for alarm. There was more real freedom under the Confederation than the individual colonies enjoyed and more real freedom under the Union than under the Confederation. Library autonomy is not necessarily endangered by central library control. The camp library service has not lessened the opportunities for war service by individual libraries even tho it has meant the adoption of much standardized practice and the subordination of many individual schemes.

This is not a problem for this section to solve alone. More and more the training class must be strengthened to perform its proper function; the library school course must be strengthened and become more and more distinctive in its broader, non-local service. Extension work must do its part increasingly in bringing professional instruction to every person in library service.

But, beyond all this, there must be a demand from libraries for better service and for greater recognition of better service. Extension course, training class and library school will be non-essential industries unless their products are put to use. Nor can their products be satisfactory unless the instruction is based on definitely recognized needs clearly expressed in terms of positions in individual libraries. There are no warehouses in which library training agencies can store their products to be drawn on in small lots at uncertain periods, for their products are professionally perishable in storage.

Constructive suggestions as to subjects and methods of instruction are invaluable.

Positions are essential but one other element is necessary for satisfactory library service. Too many libraries have paraphrased a well-known motto so that it might read: "The best assistants for the most libraries at the least cost." Of great significance and encouragement is the attempt of practically every reporting library to raise the salaries of its staff members and even more cheering is the success of many of these attempts. Perhaps most cheering of all is the admission that the largest salary increases are still inadequate and the regret that such is the case. The library schools are encouraged to learn that their students have received considerably higher average salaries than ever before.

I offer no apology for introducing this note into this medley of comment. The time has passed when asceticism, particularly of the involuntary type, necessarily makes for holiness. The joy of work is not lessened by ability to live decently and to provide oneself with a fair share of the things which make for higher enjoyment of life. Society approves the attempt of the masses to live in better houses on better food and to have more time for recreation. It is deemed patriotic to pay higher taxes and provide higher wages for more people in more subsidized industries. It is admitted necessary to raise huge sums of money for smileage books, Y. M. C. A. huts, camp libraries, and similar agencies to preserve the morale of our men who are fighting for freedom. We librarians are not necessarily unpatriotic if we demand at least enough to maintain the standard of living we need for reasonable comfort. It has been said that the old New England conscience was determined by two fears: the fear of God and the fear of the poor-house. The first was responsible for much of the best in our national life but it may at least be questioned whether a smaller measure of the latter, some generations ago, would have been entirely without beneficent local results.

Let us not deceive ourselves because of the generous recognition accorded our war service. Our home bases need improvement. A letter from Portland, Oregon, quoted by permission, is in point:

"I think the discussion in your section should be the most important of the conference and I say that with all due respect and enthusiasm for the war activities, but libraries have reached the point where the salary question is a daily issue. We are most of us, if not all of us, facing one of two alternatives; either we must retrench, cut off some of our activities, or we must content ourselves with poorly paid, which means poorly prepared and poorly educated, assistants. I've wondered for many years how much longer we might expect college bred, cultured men and women to give their lives for the love of the work alone. In Portland, and I fancy our experience is not unique, we no longer can hold our best people unless there are other ties to offset the salary. The war and the high cost of living are hastening the crisis. What is to be done about it? How can the tax-paying public be convinced that the library laborer is worthy of his hire? A conversation in my office the other day was illuminating. The president of one of the large ship-building plants had stopped in to consult with me as to which one of my meager staff he should ask to organize his new library. He remarked that he would give her \$150 this first month and after that if she were not worth \$250 or so she would be worth nothing at all. He concluded his plea with: 'And Miss Isom, this demand of the business man for the trained librarian will have a tremendous influence upon library salaries.' The president of my board happened to be present, and in a few words he outlined the extent of the library's activities and then said: 'And now, Mr. B——, would you as a large taxpayer be willing to vote for the amount needed to pay these librarians a proper wage?' And Mr. B—— said hesitatingly, 'I don't know that I would.' There is the situation that we are confronting. We are more than ready to release our people for war service, to train them for government employment—training them for business houses is another story.

"What can be done? Every live public library—and most of us are alive—has made its impress upon the community life—upon the city life. We are needed, we are indispensable, we are educational institutions just as the schools are and yet, as I

said before, we are not recognized nor financed as the schools are recognized and financed. Think of the magnificent work that the public libraries are doing the country over, yet nearly every salary list is a scandal and deserves investigation by the social worker."

Sporadic action in widely separated libraries will accomplish little. It is not library spirit but public feeling which needs education. Unless library assistant, librarian, library trustee, and library association from Maine to California and from Minnesota to Texas work together in demanding substantial recognition of the value of library service, we shall accomplish little. If presented properly as a general movement there need be nothing unprofessional in any phase of the demand.

Fine words butter no parsnips and when even parsnips are beyond the reach of our purses and the fine words must be mostly self-inflicted or administered by sympathetic but equally impecunious colleagues, the paths to librarianship will not be badly crowded by high-grade, enthusiastic applicants. I should personally be sorry ever to see the spirit of sacrifice lessen in any degree among librarians, but I trust that librarians may increasingly have the opportunity to make direct, voluntary sacrifice instead of aiding involuntarily in the conservation of public funds.

The conclusions which it seems reasonable to reach therefore, are these: (1) The libraries of the country need trained help as never before and the need is likely to increase; (2) existing agencies whether school or training class seem essentially sound in theory and to need adjustment rather than reconstruction; (3) these adjustments can be fully effective only when the extension course, the training class, the library school, the librarians, and the appointing officers of libraries work together in essential harmony; (4) it will be useless to plan training without having some one to train and there will not be enough persons to train unless enough salary can be offered to attract competent men and women from other lines which, to an outside observer, seem to give equal chances of service with more than an equal chance to live comfortably.

THE GOVERNMENT DIRECTORY IN THE SERVICE BUREAU AT WASHINGTON

BY EMILY A. SPILMAN, LL. M., *Department of Justice Library*

ON Mar. 19, 1918, there was created by Executive Order, under the direction of the Committee on Public Information, a Service Bureau, the purpose of which is to make available information as to the function, location and officials of all government agencies.

For a long time there has existed a need for some centralized bureau to act as a "clearing house" for inquiries coming to the executive departments about government work, and about many other things with which the government has no connection whatever. Efforts have been made in many bureaus and independent government establishments to meet this need by information divisions. These divisions, however, lacked authority to procure from departments other than their own, the facts requisite to make them of more than limited value. Such an information service, backed by presidential authority became a necessary "war service" to save the time of important persons having business with the government—also to save the time of government officials who were subject to constant interruption, by telephone and personal interview, about matters not within their jurisdiction.

F. W. McReynolds (professor of finance at Dartmouth College) was appointed director of this new work, and upon him devolved the organizing of the bureau to meet the specified requirements. To Dr. A. J. Klein, assistant to the director, was assigned the duty of securing the material from which, later, I was asked to build the Government Directory.

COLLECTING THE MATERIAL

Interest in the enterprise was stimulated by personal interviews with officials of departments, bureaus, etc., so that they were willing to supply upon forms furnished them, the data for compiling this great directory. This visiting was in itself a large undertaking, but resulted in the ac-

quisition of many valuable bits of knowledge picked up by Dr. Klein and Mr. Hackett in the course of enthusiastic conversations with those in charge, about the work directly under their supervision—information that would not have been otherwise obtainable. Just how to use the material when collected was the next important problem to be solved.

In the Executive Order which created the Service Bureau, the executive departments were asked to co-operate, and to assign to the Service Bureau such persons as should be necessary to carry on the work, thus providing for a highly trained force. At the request of the director, the Department of Justice detailed me to take charge of the compilation of the Government Directory.

It seemed rather a staggering proposition, especially when I found that a limit of thirty days had been allowed to accomplish the compiling. There was no precedent; nothing like it had ever been attempted, so a plan had to be formulated and a method of work; the number of workers needed, had to be decided upon; and, the best way of utilizing the material for the service to be rendered. A "picked force" of twelve catalogers was selected, and the director prevailed upon the departments to let us have most of those asked for. The cataloger of the Institute for Government Research (not a government bureau) volunteered her services. The War Department supplied the typists, and good ones, so we had everything in our favor as far as the working force was concerned.

I reported for duty at the Service Bureau on the 2d of April. The first catalogers were to report the next day, so the most vital need (after a plan for the directory) was some set of instructions to help them prepare the copy for the typists. These rules were made and mimeographed ready for the first cataloger who arrived.

SCOPE OF THE DIRECTORY

The point kept in mind in planning the scope of this directory, was that it must enable the Service Bureau to answer questions from any of the following stand-points:

- (1) What are the powers and duties of a certain bureau?
- (2) To what department does a given bureau belong? Where is it located?
- (3) Who has charge of a given department? Where is his office? Can he be reached by telephone?
- (4) Where would a given individual be found? Is a given person in charge of a given division?
- (5) Where would one apply for information on a given subject?

To make it possible to answer such questions from the directory, it must contain the full organization of the government; each department with its subordinate bureaus, divisions, sections, and offices must be represented by separate entry, giving in each instance the duties and powers of the office, the person charged with their execution, his telephone and branch number, and the location of his office. It must include all persons in charge of departments, bureaus, etc., and also all other persons having charge of particular work, if such persons are authorized to answer questions about matters under their control, and if inquiries about the work should be referred for their attention. It must contain a subject index, which would be a "key" to the functions of the government.

DIFFICULTIES TO BE OVERCOME

How to avoid repeating on each card, the department and the included bureaus and divisions, was an obstacle which seemed insurmountable. The position of the particular office in the whole scheme had to be shown, or the entry was valueless. In a printed directory or on a "visible index" this inclusion could be shown by indentation, but in a card record, every card must be complete in itself, and yet admit of being fitted in to form part of a larger plan. This repetition had to be cut out, but how? It seemed to me that there should be nothing in the entry, except the information for

which one would naturally look in that especial place. For instance, an entry like "Information Section" means nothing standing without its including offices, but an entry reading "Information Section, Air Division, Signal Corps, War Department" is decidedly clumsy, and to the searcher is rather annoying than otherwise. I decided that the cards could be arranged like a shelf-list, but a shelf-list has the classification mark to help in filing—then my bright idea arrived! Why not use a system of abbreviations, just as a call mark would be used on a catalog card? This was found practical and adopted. We call this abbreviation the "Identification mark" and it is used in the upper left corner of every card. An entry for the "Information Section" given above would appear like this:

WAR Signal	Information Section
Air .. Inform	Function: Collection and distribution of aeronautical material.
	In charge: (Name of officer) 635 F St.; M2570, Br627
	Note:

This is the form that was adopted for the main (or organization) card. The word "Function:" is dropped one space to make it stand out from the heading, followed by a brief statement of the work with which the office is charged. In writing the function the second line is always started exactly under the first word of the statement and the third line again brought out to the first indentation. If there is a note, it is dropped below the name of the chief, address and telephone number, and every line except the *second* line of the function and the *address of the chief*, is started at the same indentation. The identification mark comes in the upper left corner of the card and is out of the way unless wanted. This decision as to style was only reached after trying out many forms, and the final form of the card is the result of the interest shown by the catalogers in helping to make the directory a success. The indentation was chosen as being as clear as the ordinary spacing used on a catalog card, and to make

the work of typing less complicated. For the same reason we eliminated the use of red ink and all "cap" headings. The only "all caps" used were in the identification mark to denote an executive department. Abbreviations of independent bureaus or commissions were written with just the initial letters capitalized. Index entries were traced on the back of the organization card. Of course many difficulties arose each day and like the dragon in the path, had to be met and vanquished. Our abbreviations must be made according to some definite system, and by one person—it took the whole time of one cataloger. We found that seven spaces was as much as we could allow for an abbreviation on a single line—this caused us much agony of mind. Then when there were a number of abbreviations in one "mark" we must show each one definitely. The department stands at the top of the card in "all caps"; under it is the largest including bureau *underlined* to show that it is an alphabetic filing point under the department; under this comes the division which reports to the main bureau, separated from the next less important office by double dots.

Take as an example the card already given. Someone comes in and asks if there is any place where information about aeronautical material can be found. We look in our index under "Aeronautics" and find under this heading "Aeronautical material, collection and distribution," below, the name of the man in charge, address, telephone, etc. In the corner we read, beginning at the bottom abbreviation, "Information, Air Division, Signal Corps, War Department." If for any reason the main card should need to be consulted, we turn to the organization file, and find "War" on a *center blue guide*. Back of this in alphabetical arrangement on a *side blue guide* will be found the Signal Corps; back of the Signal Corps guide are alphabetically arranged, on third buff guides, all the offices reporting directly to the Signal Corps. Here will be found the Air Division. Offices reporting to the Air Division are in alphabetical arrangement shown by *fifth buff guides* and here Information Section would be placed.

ARRANGEMENT OF DIRECTORY

In the organization file we have a main alphabet composed of the executive departments, and all independent commissions and establishments of the government. This alphabet is on *center blue guides* (thirds), the center guides being used entirely for the main alphabet. Back of each *center blue guide* is a sub-alphabet composed of all bureaus, divisions, and offices reporting directly to the department indicated on *side blue guides*. Back of these *side guides* is an alphabetical arrangement of the offices reporting to the particular bureau or division which it follows. This alphabet is on *buff guides* (thirds). If these offices are so inconsiderate as to branch out on their own account, we show, back of the buff "thirds," the sections on fifth buff guides, again in alphabetic arrangement. This sounds very complicated, but in reality is easy to use, and clear, when the scheme is once grasped. It *works*—that is the main thing. When more detailed information is needed, the organization card can be turned to, from any other entry in the directory, by use of the identification mark. The directory is now arranged in three sections, the organization file, the personal file, and the subject index. It contains approximately 40,000 cards.

THE METHOD OF WORK

The plan as a whole once in mind, the abbreviations were the first thing to be decided, and one of the catalogers helped me work out from the Government Author Headings issued by the Superintendent of Documents Office, an outline of the main bureaus, etc. The material from which the directory was to be made was collected in folders, each folder containing one bureau, etc., and each office reporting on a separate sheet. These sheets must be handled by the cataloger, carefully read, and the necessary information briefed for entry on the card. Every card to be made, including personal cards, had to be indicated, and indicated in such a way that the typists could work out the form of the various kinds of entries from the slip given them, with the aid of the sample cards already in their possession. Each new sub-

ject assigned for the index was written on a small slip for filing, and turned over to the person in charge. In this way it was possible to maintain some degree of uniformity in entry. The abbreviations, too, as made, were copied on cards and filed by abbreviation to keep them uniform.

The plan in the beginning was to have each cataloger revise the typewritten cards for her own work. This interfered with the preparation of work ahead of the copyists, and one cataloger was chosen to do the revising. I had only one day's start of the catalogers, and they had only two days' start of the typists. Every problem which was presented to me by the catalogers for solution, was as new to me as it was to them—each difficulty with the form of the cards and the amount of information to be included, etc., etc., had to be decided at once, and I had not time to "think out" each and every detail. It was a time for action, not deliberation, and I believe every person detailed to work on the directory made it a matter of personal pride to do the "best work" and the "most work," and to co-operate in every way to make the directory when finally assembled, a great success.

We moved into new quarters after the first few days of work, only to discover when a week of rain set in, that these same "looked forward to" new quarters were not "water tight." More moves for workers, some of whom were obliged to stay away because of sickness. The amount of work still to be done loomed larger and larger—the thirty days allotted were passing all too swiftly! However, by the first of May, in spite of all the various disadvantages contended with, every bit of information that had been provided by the departments, etc., had been handled by the catalogers and was in process of being typed. The cards already finished were being assembled, and the directory was an accomplished fact. The delay in getting information was due to changes in the organization constantly going on in some of the departments because of pressure of war work. Changes in location of offices and telephone numbers after the cards were filed, added to our perplexities. Some divisions and

independent establishments were practically cataloged three or four times.

By the middle of May all the original material had been received, cataloged and assembled in the files, and the directory was in constant use. It is not perfect, but is moving towards perfection daily. At a time like this the changes to be made in a record of this kind, are a serious drain upon the time and energies of those in charge of the work. It takes the full time of five or six people to keep up with them. These changes must be made as quickly as possible, else the usefulness of the directory is materially lessened.

One word about the subject index, before I bring this to an end. The index entry is brief. A subject word is used on the top line of the card followed by a colon, and below, indented three spaces, is the explanatory information, and only so much as is necessary to show from what angle the particular office handles the subject matter. Navigation is handled by the Navy Department and by the Department of Commerce. It follows that each must have control of vessels, but so has the Director General of Railroads. The "index entry" shows which class of vessel is controlled by each department, and where the difference in the control lies. Fuel is another subject handled by at least six separate offices from as many angles. One office may make contracts, while another controls material when bought. The information contained in the directory as it was first compiled was absolutely limited by what was given on the sheets furnished us by the bureau or division listed; and in some instances where no information was forthcoming, by what could be gleaned from the Congressional Directory. In cases where the information seems inadequate, it is not the fault of those who made the entries.

Without the cordial help and encouragement given by all those associated with me in the work on the directory, it would have been impossible of accomplishment. The success of the work is due equally to each and every one who had any part in the enterprise. Especial thanks are tendered in behalf of my co-workers and myself, to

the director, whose persuasive powers brought from the Department of Agriculture, Bureau of Education, War Department, Department of Justice and Library of Congress, the catalogers to compile the directory, and from the War Department, the typists (and good ones) to write the cards; to the assistant director, whose hard task it was to extract information from places loath to give it up, and who was patient and forbearing under the strain of sheafs of questions turned in to him each day about people and things, which must be straightened out for the entries; and to the employes of the Service Bureau who were all courteous and helpful. The confidence expressed by those in charge, in the ultimate outcome of the undertaking as I had planned it, carried me over many hours of discouragement, and went a long way to "make the dream come true."

STATISTICS OF WOMEN IN LIBRARY WORK

In an article entitled "A census of college women" by Mary Van Kleeck,* there is a collection of statistics of much interest to women in library work. The author states the origin of these statistics as follows: "The year following the beginning of the European War, a census of college women was undertaken by the Association of Collegiate Alumnae, in co-operation with eight colleges for women, Barnard, Bryn Mawr, Mount Holyoke, Radcliffe, Smith, Vassar, Wellesley, and Wells, and one co-educational university, Cornell."

Of those reporting when this census was taken 5027 were teaching; 2175 were in "other occupations." In "other occupations," social service leads in numbers with 471, library work second with 293, and business third with 260.

A statement of "total earnings during the past year" was asked for. For the 4074 women reporting their earnings for a year the median income was \$1013, half receiving less and half more. Of the whole group, 3034 were teachers, and 1040 were in other occupations. The median earnings

for teachers were \$995, and for those in other occupations \$1065.

From the table of annual earnings are quoted the figures covering library work and the occupations with which it is most frequently compared, teaching, social service, and business. The numbers have been reduced to percentages for this table.

Earnings.	Per cent of Teachers Receiving.	Per cent of Social Workers Receiving.	Per cent of Librarians Receiving.	Per cent of Business Women Receiving.
Less than \$700	17.1	10.8	14.74	13.4
\$700-\$1000	33.3	26.1	37.8	34.8
\$1000-\$1200	17	19.7	23	12.3
\$1200-\$1500	14.6	20.5	11.5	24.7
\$1500-\$2000	8.5	15.6	10.89	7.8
\$2000-\$2500	3.2	5.2	1.2	2.2
\$2500 and over	5.9	1.8	.06	4.49

The medium earnings in each group were: teaching, \$995; social service, \$1132; library work, \$980; business, \$1027.

It is seen that library work has the lowest median earnings in these four groups. For salaries below \$2000 library work offers slightly better opportunities than teaching, but for the higher salaries the opportunities are considerably better in teaching. In regard to advanced and professional training after graduation, 39 of the 293 librarians reporting, or 13.3 per cent had taken graduate courses; 162, or 55.3 per cent had had professional training. Of the teachers, 2397, or 30.5 per cent of those reporting had taken graduate courses; 706, or 9 per cent had had professional training. These figures refer to graduate professional training, hence the low percentage of teachers reporting, since most teachers receive professional (pedagogical) training in their undergraduate courses.

The larger per cent of teachers having graduate work, 30.5 per cent compared with 13.3 per cent of librarians, may account in part for the larger per cent of teachers receiving the higher salaries.

In the comparison of salaries it should also be remembered that teachers usually work nine or ten months of the year compared with the librarian's eleven or twelve months.

MRS. J. T. JENNINGS,
St. Paul Public Library.

*A census of college women. Mary Van Kleeck. *Journal of the Association of Collegiate Alumnae*, v. 17, May, 1918. p. 557-591.

LIBRARY WAR SERVICE

Plans for the United War Work Campaign

THE United War Work Campaign is to be a real united campaign. As was announced last month, the Young Men's Christian Association, Young Women's Christian Association, War Camp Community Service, and American Library Association had agreed to join in a common campaign for funds to continue their work, the week of Nov. 11. The three other similar civilian organizations—National Catholic War Council, Jewish Welfare Board, and Salvation Army—were planning a joint campaign in January. On Sept. 5, at the request of President Wilson, the two groups agreed to unite in one monster campaign the week of Nov. 11. President Wilson's letter to Raymond B. Fosdick, chairman of the War and Navy Department Commissions on Training Camp Activities, in which the merger was requested, was as follows:

*The White House,
Washington, Sept. 3, 1918.*

My dear Mr. Fosdick:

May I not call your attention to a matter which has been recently engaging my thought not a little?

The War Department has recognized the Young Men's Christian Association, the Young Women's Christian Association, the National Catholic War Council, the Jewish Welfare Board, the War Camp Community Service, the American Library Association, and the Salvation Army as accepted instrumentalities through which the men in the ranks are to be assisted in many essential matters of recreation and morale.

It was evident from the first, and has become increasingly evident, that the services rendered by these agencies to our army and to our allies are especially one and all of a kind and must of necessity, if well rendered, be rendered in the closest co-operation. It is my judgment, therefore, that we shall secure the best results in the matter of the support of these agencies, if these seven societies will unite their forthcoming appeals for funds, in order that the spirit of the country in this matter may be expressed without distinction of race or religious opinion in support of what is in reality a common service.

This point of view is sustained by the necessity, which the war has forced upon us, of limiting our appeals for funds in such a way that two or three comprehensive campaigns shall take the place of a series of independent calls upon the generosity of the country.

Will you not, therefore, as Chairman of the Commission on Training Camp Activities, be good enough to request the societies in question to combine their approaching appeals for funds in a single campaign, preferably during the week of Nov. 11, so that in their solicitation of funds as well as in their work in the field, they may act in as complete co-operation and fellowship as possible?

In inviting these organizations to give this new evidence of their patriotic co-operation, I wish it distinctly understood that their compliance with this request will not in any sense imply the surrender on the part of any of them of its distinctive character and autonomy, because I fully recognize the fact that each of them has its own traditions, principles, and relationships which it properly prizes and which, if preserved and strengthened, make possible the largest service.

At the same time, I would be obliged if you

would convey to them from me a very warm expression of the Government's appreciation of the splendid service they have rendered in ministering to the troops at home and overseas in their leisure time. Through their agencies the moral and spiritual resources of the nation have been mobilized behind our forces and used in the finest way, and they are contributing directly and effectively to the winning of the war.

It has been gratifying to find such a fine spirit of co-operation among all the leaders of the organizations I have mentioned. This spirit, and the patriotism of all the members and friends of these agencies, give me confidence to believe that the united war work campaign will be crowned with abundant success.

Cordially and sincerely yours,
WOODROW WILSON.

The total amount to be worked for now is \$170,500,000, the largest ever asked in any single appeal. Its allotment, based on carefully considered budgets submitted by the various organizations, will be as follows:

Young Men's Christian Association...	\$100,000,000
Young Women's Christian Association	15,000,000
National Catholic War Council, (including the work of the Knights of Columbus and special war activities for women)	30,000,000
Jewish Welfare Board	3,500,000
American Library Association	3,500,000
War Camp Community Service	15,000,000
Salvation Army	3,500,000
Total	\$170,500,000

The surplus—of course there will be a surplus!—will be divided *pro rata* on this same basis.

The general plan of organization remains the same for the enlarged campaign. Plans and programs already adopted were accepted without reserve by the new elements brought into the larger combination. The committee of seven, for shaping and deciding policies, has been expanded into a committee of eleven, consisting of two representatives each from the Y. M. C. A. and the National Catholic War Council, one from each of the other five organizations, the national treasurer and the director of United War Work Campaign for New York City. The national executive committee of 20 has been expanded into a national executive committee of 35, consisting of five representatives from each organization.

Dr. John R. Mott is the chairman of the committee of eleven and the director

general of United War Work Campaign; Cleveland H. Dodge is national treasurer, and John D. Rockefeller, Jr., director for New York City. Emma V. Baldwin, secretary of the A. L. A. campaign fund committee, has been chosen secretary of both the joint committee and of the executive committee.

Under the direction of Dr. Mott and a cabinet composed of campaign directors and managers of the other organizations, and such others as may be drawn into the work, steps are now being taken to build, upon the foundations already laid, completely unified United War Work Campaign committees for the military departments of the country, the states within those departments, districts and counties within the states, and cities and localities within the districts and counties. It is important to remember that while there will be no merging of identity in the expenditure of the money collected during the week of the drive, library workers are expected to unite their efforts with the six other organizations in its solicitation.

To understand exactly the relation of the individual library worker to the present situation of a combined instead of an individual appeal for funds, it is necessary to visualize two distinct campaigns:

First, the United War Work Campaign, a campaign of *one week only* (Nov. 11-18), in which the identities of the seven organizations are to be merged and lost sight of in the single interest. This is a merger for the money-raising campaign, and for that purpose alone.

Second, the campaign of education, thru various forms and mediums of publicity, for Library War Service. This is a *continuing* campaign. It has a direct bearing on United War Work Campaign in that the more information the public has about the war work of each and every one of the organizations that have combined in the United War Work Campaign, the more readily the public will respond to the appeal for funds with which to support the work of all.

In order to help inform people about the service that the American Library Association is rendering, duplicate sets of ten

panels, each 30 x 40 inches, showing photographs of camp libraries, hospital libraries, dispatch offices, reading rooms on ships and in overseas huts, and printed captions of description, have been prepared for exhibition by public libraries and library associations, at state fairs and county fairs, at meetings of various kinds, wherever a large group of people is gathered. They are suitable for exhibition in libraries, in store windows, in Chamber of Commerce auditoriums, in theater lobbies, in railroad depots, in interurban waiting rooms, and at meetings of all kinds. These can be secured from headquarters in Washington. Other Library War Service publicity of an educational nature but carrying no appeal for funds, is also under way.

For the purpose of stimulating public interest to the point where it will respond readily to the appeal for funds there has been formed a national publicity committee of the United War Work Campaign. In order to avoid duplication of effort and undue pressure upon the newspaper press of the country, the individual publicity efforts of the seven organizations will, to a considerable extent, be merged in the work of this committee.

Publicity items in which the combination will be complete, and which have already been decided on, include the following:

1.—Fourteen thousand United War Work Campaign posters in eight colors, 24 sheets (13 $\frac{1}{3}$ x 20 feet) covering every billboard in America that will carry a poster this size.

2.—One million United War Work Campaign posters, half-sheet (20 x 30 inches) in three colors.

3.—Forty million United War Work Campaign window flags, for display in houses whose residents have subscribed to the fund.

4.—Fifty million United War Work Campaign buttons, in two colors.

5.—One million United War Work Campaign "stickers" in two colors for posting on automobile windshields.

6.—Seventy thousand United War Work Campaign street car cards.

7.—Twelve thousand United War Work

Campaign posters (36 x 56 inches) for use on sides of express wagons.

8.—Two hundred and fifty thousand copies of a combined book, carrying the financial statements of all seven organizations.

9.—One hundred million eight-page booklets telling the combined story of the general war work of the seven organizations participating in United War Work Campaign.

10.—Combined advertisements, full page, in a long list of November magazines (this thru the co-operation of the Division of Advertising, United States Committee on Public Information).

The United War Work Campaign publicity committee also has in preparation copy for a large variety of newspaper advertisements. This will be available for the use of local campaign committees. The cost of publication in local newspapers is to be underwritten by local merchants and others at the solicitation of local committees, as was done in the Red Cross and Liberty Loan drives.

In addition to these combined publicity efforts there will be contributed by the seven organizations for direct United War Work Campaign purposes about eight million posters, fifteen million booklets and thirty million leaflets on their respective lines of service. These will be apportioned among the different localities in the same proportions as posters, buttons, window cards, etc., and all will be shipped together to the local committees for posting and distribution at the beginning of and during the campaign.

For the purposes of some of the combined publicity for United War Work Campaign it was found necessary to adopt an emblem that could be used in connection with the emblems of the other organizations participating. The design reproduced at the head of this section is the one adopted for this purpose. When printed in colors the outer circle will be a solid band of blue and the initials will be printed in blue across the white pages of the open book, with the rest of the design in red. This will also be used as insignia on camp librarians' uniforms and on camp library buildings.

REGIONAL CONFERENCES

The regional conferences held during September preparatory to the nation-wide campaigns were an unqualified success in every section except New York City. Librarians in the district centering here will have to wake up and work much harder if they do not wish to be outdistanced by the other sections of the country. Dr. Frank P. Hill, chairman of the finance committee

for the second war fund, and Carl H. Milam, assistant to the director of Library War Service, went to the Coast and spoke at the meetings in Seattle and San Francisco, Mr. Milam telling of the work accomplished during the past year and Dr. Hill outlining the plans for the future. The other cities were visited by Wickes Wamboldt, national campaign director of the A. L. A., and Dr. M. L. Raney, director of overseas service.

News from the Camps

PELHAM BAY BUILDING OPENED

The new library building at Pelham Bay, where Blanche Galloway has the unique distinction of being the only woman in charge of a camp library, was opened Sept. 18 with special exercises. Speakers of note were present, and moving pictures were taken of the festivities.

MORE GIFT BOOKS ARE NEEDED

In an effort to secure more donations of new books for use in Library War Service, a letter has been sent from headquarters to the literary and review editors of newspapers and magazines asking the contribution of review copies of books for use in this manner. The giving of suitable books should be encouraged in every way that will not interfere with the success of the big campaign of the fall. In many cases it has been found that the public assumed that the special book campaign last spring closed because no more books were wanted. Be sure this is not misunderstood in *your* library.

SUPERVISORS FOR SMALL CAMPS WANTED

Closer supervision of the many small camp, station, hospital and training school libraries is being planned at headquarters, and a number of librarians of city libraries are being asked to act as supervisors in their vicinity. Formal letters of appointment, together with letters of introduction to the commanding officers and suitable insignia will be sent to these librarians, together with a "Small camp library handbook" which will explain what is expected of a supervising librarian.

EXEMPTION FOR LIBRARY WAR SERVICE

It has been decided by General Crowder that exemption requests for men employed in the work of the organizations affiliated with the Commission on Training Camp Activities, will be honored by draft boards, and useful and necessary men can now remain without embarrassment in their service. The War Department has stated that it will be glad to recommend for passports for foreign service the names of all men having the approval of their respective organizations.

ADDITION TO HONOR ROLL

N. L. Goodrich, librarian of Dartmouth College, holds a captain's commission in the Military Intelligence Division, General Staff, Washington. At present he is detailed to the map room of the office of the Chief of Staff, for map posting and geographical information.

BOOKS TO BE REMOVED FROM CAMP LIBRARIES

The War Department has requested the removal from camp libraries of the titles listed below.

- Balch, E. G. Approaches to the peace settlement. B. W. Huebsch.
- Berkman, Alexander. Prison memories of an anarchist. Mother Earth Pub. Co.
- Burgess, John W. America's relation to the great war. McClurg.
- Burgess, John W. European war of 1914. McClurg.
- Carson, Capshaw. Witness testifies. Carson Bros. Pub. Co.
- Daniells, Arthur G. World in perplexity. Review, and Herald Pub. Co.
- Daniells, Arthur G. World war. Review, and Herald Pub. Co.

- Granger, A. H. England's world empire. Open Court Pub. Co.
- Harris, Frank, England or Germany. Wilmarth Press.
- Hedin, Sven. With the German armies in the West. Lane.
- Henderson, E. F. Germany's fighting machine. Bobbs-Merrill.
- Howe, Frederic C. Why war? Scribner.
- Hugins, Roland. Germany misjudged. Open Court.
- Jones, Rufus M. A more excellent way. Assoc. Press.
- Leake, W. S. How to protect our soldiers. Publisher—the author.
- Lincoln, I. T. T. Revelations of an international spy. McBride.
- McAuley, M. E. Germany in war time. Open Court.
- McGuire, Jas. K. What could Germany do for Ireland? Wolfe Tone Co.
- Muecke, H. von. Emden. Ritter & Co.
- Munsterberg, H. The war and America.
- Reventlow, Ernst von, Vampire of the continent. Jackson Press.
- Schrader, F. F. German-American handbook. Publisher—the author.
- Skinneider, Margaret, Doing my bit for Ireland. Century Co.
- Thomas, M. M., and others. Conquest of war. Fellowship Press.
- Viereck, G. S. Songs of Armageddon. Mitchell Kennerley.
- (Anonymous). World's crisis in the light of prophecy. Review of Reviews.
- An earlier list included these titles:
- Barbusse, Under fire.
- Bierce, Ambrose. Can such things be?
- Bierce, Ambrose. In the midst of life.
- Century Company, pub. America after the war.
- Chesterton, Gilbert K. Utopia of usurers.
- Connolly, Nora. The unbroken tradition.
- Ewers, Dr. Hans Heinz. Let the rulers beware.
- Ewers, Dr. Hans Heinz. The vampire.
- Freitag-Loringhoven, Deductions from the World War.
- Glass, Mrs. Charles Wilder. Her invisible spirit mate.
- Grashoff, R. Tragedy of Belgium.
- Huebsch, B. W., pub. A German deserter's war experience.
- Latzko, Andreas. Men in war.
- Souiny-Seydlitz, Baroness. Russia of yesterday and tomorrow.
- Trotzky, Bolsheviki and world peace.

RECENT ASSIGNMENTS TO LIBRARY WAR SERVICE

Large Camp Libraries

- Camp Beaugard, Alexandria, La.....Louise Singley, hospital librarian.
- Camp Bowie, Fort Worth, Tex.....George B. Manhart, acting librarian (transferred from Camp Travis).
- Camp Cody, Deming, N. Mex.....Mervyn J. Neuburg, assistant.
- Camp Devens, Ayer, Mass.....James A. Lowell, assistant.
- Camp Dix, Wrightstown, N. J.....D. N. Handy, librarian.
James M. Johnston, assistant.
Jacob G. Le Van, assistant.
Alan F. English, assistant (transferred from Camp Wadsworth).
- Camp Dodge, Des Moines, Ia.....Marilla Waite Freeman, hospital librarian.
- Camp Doniphan, Fort Sill, Okla.....Blanche V. Watts, hospital librarian.
William B. Hunt, assistant.
William K. Porter, assistant.
- Camp Gordon, Atlanta, Ga.....Reginald A. Brewer, assistant.
- Camp Grant, Rockford, Ill.....Earl N. Manchester, librarian.
- Camp Greene, Charlotte, N. C.....C. M. Baker, librarian (transferred from Camp Jackson).
- Camp Hancock, Augusta, Ga.....Wm. A. Walsh, librarian (transferred from Camp Lee).
- Camp Humphreys, Va.....William E. Langdon, assistant.
- Camp Kearny, Linda Vista, Cal.....Angeline Marlow, assistant.
- Camp Lewis, American Lake, Wash.....William Rebec, hospital library assistant.
- Camp Logan, Houston, Tex.....Lincoln Doty Brown, assistant.
Mary Lena Megee, assistant.
- Camp Meade, Admiral, Md.....Herman H. B. Meyer, librarian.
Frances E. Bowman, hospital librarian.
- Camp Mills, Mineola, L. I., N. Y.....George G. Champlin, librarian (transferred from Camp Upton).
William A. Bedell, assistant.
Isabel Du Bois, assistant.
- Pelham Bay Naval Training Station, Pelham Bay Park, N. Y.....Mabel H. Brooks, assistant.

Camp Sevier, Greenville, S. C.....	Mary E. Martin, assistant.
Camp Shelby, Hattiesburg, Miss.....	Mrs. R. S. Martin, assistant.
Camp Sherman, Chillicothe, Ohio.....	J. C. Austin, assistant.
	Mrs. Ethel A. Washburn, assistant.
Camp Travis, San Antonio, Tex.....	Robert S. Fullerton, assistant.
	Paul B. Teeter, assistant.
	Cornelia Johnson, assistant.
Camp Upton, Yaphank, L. I., N. Y.....	Galen W. Hill, assistant.
Camp Wadsworth, Spartanburg, S. C.....	Earl G. Swem, librarian.
	Henry H. Harwood, assistant (transferred from Camp Jackson).

Other Points of Service

Ft. McPherson, Ga.....	Lucy D. Waterman, hospital librarian.
Mexican Border Service, El Paso District...	Cornelia Marvin, librarian.
Philippine Islands	Mary Polk, A. L. A. representative.
San Pedro Harbor, California.....	William E. Blaikie, library organizer.
U. S. General Hospital No. 16, New Haven, Conn.	Elizabeth P. Daniell, hospital librarian.
Walter Reed, U. S. Army General Hospital, Takoma Park, D. C.....	Clara W. Herbert, hospital librarian.

Dispatch Offices

Newport News, Va.....	Harold T. Dougherty, agent.
	Harriet E. Leitch, assistant.

Overseas

Paris, France	Mary J. Booth, assistant.
	Elizabeth Potter, assistant.
	Mrs. Frederick Palmer, assistant.

Field Representatives

E. Kathleen Jones, librarian of McLean Hospital, Waverley, Mass., has been appointed field representative in the hospital service.
 Samuel H. Ranck, librarian Public Library, Grand Rapids, Mich., is serving as a field representative.

Headquarters

Emma Felsenthal, for several years past instructor in the University of Illinois Library School, is assisting in book selection.
 Genevieve Clark White, of Lockhart, Ala., graduate of the Atlanta Library School, is assisting in book selection.

Libraries and Food Conservation

During the year just past the emphasis of the Food Administration has been put on the need of saving food for the immediate relief of our Allies in the face of an enormous food shortage. Now, with larger harvests being gathered in every corner of the country, the emphasis is shifted and all energies must be bent to the creation of food reserves. The need for the closest kind of economy still exists, but the appeal to be made is less dramatic in its nature than was the case a year ago.

In the schools the Food Administration plans to link its work with various courses. The drawing classes will once more be encouraged to design posters; domestic science classes will plan menus and prepare dishes

that will make best use of substitute foods; the English classes will use food conservation topics for essay themes; and the classes in commercial and physical geography will study food products as items of importing and exporting interest. In all of these plans the school and public libraries can give valuable help.

WHAT THE CHILDREN CAN DO

In a very interesting letter Marian M. Pierce, children's librarian of the Public Library in Flint, Mich., gives an account of what the children in Flint have done in connection with the library. She writes:

Last January, we formed a Hoover Club, with the idea of saving wheat, sugar and meat for Uncle Sam. Each child who desires

to join is given a card upon which his name is written. A duplicate card is kept on file at the Library. There are two clubs which meet each week—one for older children meeting on Wednesday afternoons, and one for younger children meeting on Saturday mornings. Each member brings a record of the number of spoonful of sugar he saves each week; of the meatless and wheatless meals which he has eaten. For three meatless or wheatless meals, he receives a gold star. For saving two spoonful of sugar, he is entitled to a star. After the member receives five stars, he gets an American flag. Twenty flags entitle him to a U. S. Food Administration emblem. Many of the children have won several emblems. They have an organized club, with officers for each separate club.

At present the emblem winners are rehearsing for a food play, "Uncle Sam's little food folks," which we hope to present in the early fall.

In May, we had a very successful street parade, with three bands, food saving floats and long lines of children carrying food-saving banners made and designed by the club members. Fifteen of the children wore costumes representing fruits and vegetable substitutes.

The Nelson Motion Picture Company in Detroit featured the parade, together with a play, bringing out the characteristic aims of the club organization, in a reel called "Waste not, want not. The story of the Flint Hoover Club."

Parents constantly tell us how careful the children are in their patriotism for this cause.

FOOD CONSERVATION EXHIBITS

The Public Library, Olympia, Wash., had charge of a display of food books made in a local grocer's window. The figure of Joan of Arc, bearing the flag, copied from the Food Conservation poster, made a pretty background for the display of books. Samples of food, made from the substitutes of flour, were supplied by members of the domestic economy class of the High School. Decorations were furnished by the grocer.

Similar co-operation was developed in Macon, Mo., where a grocer furnished window space and samples of the eight substitutes, rice flour, corn flour, barley flour, tapioca flour, soy-bean flour, cotton seed meal shorts and rye flour. In each case the source of the flour was displayed beside it, *e. g.*, rice and rice flour, soy-beans and the flour. The domestic science class of the high school displayed bread, muffins,

cake and cookies, demonstrating the use of each substitute with a copy of the recipe used.

An excellent library exhibition was arranged recently at Milton, Mass., by Dr. Harris Kennedy. The material used consisted of Food Administration posters and bulletins, with publications of the United States Department of Agriculture, Fuel Administration, Bureau of Fisheries, and State Experiment Stations, and publications issued by food manufacturers. This material was grouped on boards under such headings as "Better farming and more hogs," "Increased production and wiser use of the dairy products," "Increase in sheep raising," "Conservation of fuel," and the like. Special attention was paid to home-grown products, with canned, preserved, pickled and dried foods put up by Milton housewives. There was also a very comprehensive exhibit of wheat, butter and lard substitutes, protein foods such as beans, cheese, fish and nuts, and a group of vegetables and fruits selected to show substitute sources of sugar, ranging from squash, beets, carrots, onions, sweet potatoes and parsnips, containing four to ten per cent of sugar, to products with ten to twenty per cent or more, such as grapes, oranges, apples, bananas, figs, prunes, and the like, as well as corn syrup, maple syrup, light and dark molasses and honey. Good use was made of toy animals to visualize subjects like the community piggery, the saving of calves, the licensing of dogs to protect sheep, the growing of poultry in back yards and so forth.

In the Public Library at Pomona, Calif., an elaborate food conservation exhibit was held at the library. There has been a large circulation of recipes, Spanish translations being made for distribution among the Spanish population of the city. A Roll of Honor for wheat conservers is also kept.

At the meeting of the Old Colony Library Club at Pembroke, Mass., a little booklet of "War-time recipes" compiled by the club and printed thru the personal interest of some of the members, was distributed to all present.

WHERE there is no vision, the people perish.—KING SOLOMON.

WILLIAM HOWARD BRETT

WILLIAM HOWARD BRETT, dearly beloved by old and young in the library profession, was killed by a motor truck on the night of Aug. 24. He had gone out from the Cleveland Public Library in company with Miss Eastman, the assistant librarian, and was waiting in the so-called safety zone for the surface car which was to take him home, when the truck, in charge of a drunken driver, bore down upon him and hurled him against a tree. He never regained consciousness, and died an hour later.

All Mr. Brett's career was passed in Cleveland. In his youth he was connected with a local bookstore, and in 1884 his mastery of book craft won him recognition from the board of library trustees and he was appointed librarian of the Cleveland Public Library. If he had lived till Sept. 1, he would have completed thirty-four years in the one position, and it is as Cleveland librarian that he will be best remembered by his host of friends. John G. White, the president of the board, was also president of the board which appointed him, and the two men were close friends during all their years of work together.

Under their continued interest, the library grew from the 45,905 volumes it contained when Mr. Brett took charge, to a collection of over 650,000, while the circulation increased from 198,200 to over 3,400,000. Tribute to the efficiency of the Cleveland system, so largely developed by Mr. Brett, has been repeatedly paid by both librarians and public, and his finest monument will be the great institution so splendidly organized and so ably administered for the service of a great cosmopolitan community.

Mr. Brett was born in Braceville, O., July 1, 1846. He was a student in the medical department of the University of Michigan in 1868-9 and in Western Reserve in 1874-5. In 1894 Hiram College bestowed upon him the honorary degree of Master of Arts. On May 1, 1879, he was married to Alice L. Allen, of Cleveland, who with three sons and a daughter, survives him.

In addition to his work as head of the Public Library, he has been dean of the Library School of Western Reserve since 1903. He served as president of the Ohio Library Association in 1895-6, and as president of the A. L. A. in 1896-7, in which year he also edited the Cumulative Index.

Intensely patriotic, Mr. Brett from the very outbreak of the war made his library an active agent for the education of the public in the fundamental truths concerning the conflict, and he was a leader in the promotion of every patriotic movement. Not content with giving his three sons to the country's service, Mr. Brett himself labored unceasingly in building up by counsel and by personal service the Library War Service undertaken by the A. L. A. following the Louisville conference in 1917. When in the spring of this year he was asked to organize the combined dispatch office and library at Newport News, the biggest point of service in the country, he undertook the task joyously, and remained in active personal charge of the station up to the day of his death.

At a special meeting of the library staff the following resolutions were adopted in his memory:

We, the staff of the Cleveland Public Library, in a special memorial service assembled, testify to the irreparable loss we sustain in the death of our beloved leader, William Howard Brett.

To think of him is to think of joyous service directed by a generous, loving nature and a richly-stored and experiencing mind. Believing that one of the chief sources for the enrichment of life lay in the precious records of human experience, as set forth in books, he designed that the whole people of this great city, irrespective of age, class or creed, might each be able to draw from these records just that which would meet his highest need. With such love for humanity he labored with unflinching joy and optimism for the fulfillment of his vision. With such a vision, he never ceased to be creative. Entirely without ambition, he found his true reward, the well-nigh complete attainment of his clear-purposed goal. The future alone can reveal his full accomplishment: how wisely he waited at times to execute; how far he looked into the coming years.

To the members of his staff he was more than a friend. He rejoiced with us in personal good fortune, he sustained and helped us in adversity. With supreme tact and gentleness he guided us in our work. Always the master of the situation, he commanded only after untiring efforts to convince by reason and counsel. He inspired by sharing with us his most far-reaching plans, and by placing unbounded faith and trust in us. He was ever approachable, ever ready to give a generous hearing and to advise. He helped us to discover ourselves.

To his family we wish to send the message that we sorrow with them, and that we feel a deep sense of gratitude to them for having graciously recognized in all the many years of his public service how fully he belonged to his great work, and for having given him so freely to it. To have done this was to have increased his gifts to the people of Cleveland and to his beloved profession.

The precious heritage that he has left to us, the memory of his work and of the gallant spirit with which it was carried on, can be no more fittingly commemorated than by our resolving as a staff, to give to our work and to pass on to our future associates something of that spirit, and to continue to the people of Cleveland that joyous service which Mr. Brett so freely rendered.

BE IT RESOLVED, That a copy of this minute be submitted to the family of Mr. Brett as an expression of our deep and affectionate sympathy.

BE IT FURTHER RESOLVED, That a copy be sent to the members of the staff of the Newport News Dispatch Office, who were so closely associated with his last great task.

AND BE IT FURTHER RESOLVED, That a copy be offered to the Board of Trustees of the Cleveland Public Library, with the request that it be accepted and recorded in the minutes of the Board.

The library's board of trustees likewise met and put on record their deep appreciation of Mr. Brett's great service to the city, as well as their sense of personal loss, in the following resolutions:

In the passing of William Howard Brett, the City of Cleveland has been deprived of an honored citizen who has rendered it invaluable service as librarian of its Public Library during a continuous period of thirty-four years. During this period he built up and wisely administered one of the great library systems of the country, preeminent for the spirit of its service, and thus added to the City's renown. The City itself is to-day greater and fairer, many of its citizens happier, broader-minded, more intelligent and more useful, because he has lived.

His great work was the humanizing and socializing of the Public Library. His vision saw it as every man's library, every woman's library, even every little child's library, holding in its rich stores of printed wealth the wisdom of the world with its special messages for each; his was the task, so far as he could, to open its treasure to them one and all. This he accomplished thru the patient, often prosaic, but always practical application of his own best theories and those of his fellows in his profession, until the library has permeated the City with a quiet influence for the enlargement of life. He was a great educational leader in his clear, broad conception of the library as the institution which informally supplements and continues thru life the educational work begun by the public schools.

He considered the cause to which he had given himself worthy of his utmost efforts, and his dedication to it was complete. His energy and persistence were of a quality seldom seen; a hard worker, giving long days and most of his evenings to his labors, rarely taking a holiday, he yet brought to his daily tasks a zest and an enthusiasm which were a constant inspiration to those with whom he came in contact; he was modest, unassuming, sunny-tempered, straightforward and ingenuous as an unspoiled child, yet wise with the wisdom of great men, tender in his sympathies and instantaneous in his response to any human need, genuine and generous, self-forgetting, undauntedly optimistic, courageous and tenacious for the right as he saw it, just but lenient in his judgments and believing in the best in men, constructive in his thinking and planning.

His gentle manners, his kindness, his helpfulness and his spirit of youthful enthusiasm were most winning, and the friends who mourn him are legion.

The record of his accomplished work must be found in the history of the Cleveland Public Library system with its many outstanding progressive features; in the Western Reserve University Library School, of which he was one of the founders and its active dean, and whose alumni thruout the country have loved him as their professional head and wise advisor; in the Ohio Library Association, which owes its inception and much of its development to him, its first president; in the American Library Association, which he had served as one of its oldest and best-beloved members, as one of its most honored presidents, and one of its most wise and helpful coun-

sellors; in many other gratuitous services for the advancement of libraries and the welfare of librarians; in the unwritten and untold influence of such a character as his upon thousands of lives with which he came in contact; and finally in the unstinted giving of his utmost efforts in professional and personal service to his country in this great war for humanity.

His great unfinished tasks are a sacred heritage. The tasks which he saw set in clear lines of duty before him were: the planning and completion of the new Main Library building, with the many original ideas which he had contributed to it; the development of the branch system until every section of the City shall be provided with adequate library equipment and service; the provision, by endowment or otherwise, of sufficient book funds for the building up of the various library collections; and the provision for adequate compensation for the splendid staff of helpers which he gathered about him, bound together by devotion to him and to his ideals. These for Cleveland and the rounding out of the work which had grown to such magnitude under his guidance.

He worked definitely and zealously to extend the library service to the County, and for legislation to insure library progress for the State. Last of all, since America entered the war, came another great task, new in the history of the world, the furnishing of books by the millions for purposes of war, and the definite contribution of various library activities toward winning the war.

It is fitting that these great undertakings be here recorded, with the resolve that they shall be carried to completion as one of the tributes to the memory of a great and greatly beloved librarian.

In the death of Mr. Brett, the members of the Board, both personally and officially, have sustained an irremediable loss.

BE IT RESOLVED, That this minute be spread on the records of the Board and that copies, in proper form, be sent to the family of Mr. Brett, as an expression of the great sympathy which this Board feels for those whose loss is greatest of all; and that copies be sent to the Mayor and the City Council of Cleveland, to the Board of Education, to Western Reserve University, to the American Library Association and to the Ohio Library Association.

At the time of his funeral the family requested that no flowers be sent, but that the money be used instead to further this work in which he was so deeply interested, and the suggestion is made that at Ailes-Bains or some other suitable point a memorial library be established for the use of the boys in khaki and blue, whose welfare he had so much at heart.

"THE BOOKSHELF FOR BOYS AND GIRLS"

UNDER this title a new 48-page illustrated children's catalog suitable for library distribution is being prepared in this office. Its editors are Clara W. Hunt, superintendent of the children's department in the Brooklyn Public Library; Sheldon Fletcher, head of the children's department of the Newark Public Library; and Franklin K. Mathiews, librarian of the Boy Scouts of America. Imprint editions can be had for cost of manufacture.

FILING PAMPHLETS BY THE COLOR-BAND METHOD

THE following paragraphs are taken from a pamphlet recently issued on the "Colored-band method of filing," and were prepared for the meeting of the American Library Institute last spring. Several hundred war pamphlets done in this manner were exhibited at the meeting, showing how pamphlets by the colored-band method may be classified and given a notation which is perfectly visible and easily distinguished, altho the pamphlets stand in close ranks on the shelf.

By means of spots or bands placed on each of a collection of objects that are similar in shape and arranged in ranks or files, if the two factors of color and position are used in the application of the spots or bands, it is possible to divide the collection into any desired number of groups and sub-groups. These groups and sub-groups, down to the utmost analysis of the collection, can be quite easily distinguished from one another. The colors and positions of the spots or bands mark the classification or grouping so clearly that an object out of place in the system declares its error of position at once, and indicates its proper position.

The purpose of this note is to describe the adaptation of the color-and-position method to the classification of pamphlets, books or any other material by the decimal or Dewey system. Such an adaptation is quite possible. The character of the result and a suggestion of the methods possible is indicated by mention of the fact that, by adding the factor of number values to each of the ten colors used in the process, we can, using only four spots of color in any one object, give to each of 99,999 objects its own distinct, perfectly distinguishable and easily understood mark, each mark being equivalent to one of class figure groups in the first 99,999 places in the decimal system of notation.

The elements of the class-mark are quite simple. For purposes of illustration I assume that the objects to which the method is to be applied are pamphlets, large and small, thick and thin. With a few exceptions they are at least 9 inches high, and

those less than 9 inches are placed in manilla envelopes of that height, as are also single sheets.

Strips of gummed paper, quarter of an inch wide and one inch long, are used for color spots. They are of ten colors, each easily and quickly distinguished from all the others. In practice only seven colors, properly so called, are used, as it is not easy to find more than that number of sufficient vigor and carrying power to be easily distinguished. To the seven are added black, a checker-board pattern, and a pattern of black and white stripes.

To these are given number-values, those of the nine digits and zero, and these values are the same in all their uses.

The position values are given by dividing the backs of the pamphlets, on a scale drawn up for the purpose and the same for every pamphlet, into ten half-inch spaces, beginning an inch and a half from the bottom. The inch and a half at the bottom is used for class marks of the first 999 divisions and subdivisions of the decimal scheme. In this space, at the bottom of each pamphlet, the bands have their values as digits and are read from the bottom upwards.

In the space above this inch and a half the bands have their values of position and also their color-values as digits; the latter being always the value which is first read.

Let a person skilled in the use of the Dewey-decimal system now classify the pamphlets which form the collection to be given the color-and-position notation.

A clerk or assistant now applies the bands.

She first puts all the pamphlets in ten groups, dividing them according to the first of the figures pencilled on their front covers by the classifier. On every pamphlet in each group she pastes a band, quarter of an inch from the bottom of the back, the band for each group being of the color indicated, according to the table or guide, by the first figure on it.

This done, she divides each group into sub-groups, according to the second figures in the numbers the classifier assigned to them, and pastes bands on each, quarter of an inch above the first one, in accordance

with the table. For example, if the first number on a given pamphlet is 6, it will bear a yellow band near the bottom of its back. If the second number is 4, it will bear a green band, just above the yellow band.

Proceeding again in the same way, she divides the sub-groups into groups of the third grade according to the third digits in their respective class numbers, and puts bands on each, quarter of an inch above the second band, of the colors designated by their respective sub-numbers.

The pamphlets are now divided into so many of the first 999 divisions of the decimal system as they may need for their proper placing in the scheme.

After the pamphlets have received their bands their proper order on the shelves is obvious and, indeed, unmistakable. They stand, first, in the numeric order of the colors of their lowest bands. Next, within this grouping, in the numeric order of their second bands, and so on. Only one who has seen a large group of pamphlets arranged by this method can realize how inevitable it seems, even to those who have but slight knowledge of the method. The order seems not only rational to one who knows only that it is guided by a numeric sequence of colors; but also semi-automatic, in that any disorder betrays itself at a glance. A pamphlet that is not in its proper position calls attention to itself, and points even the casual observer to the place to which the color and sequence of its bands demands it should be moved.

JOHN COTTON DANA.

TO THE LIBRARIAN

Do you look upon your work as a job at so much an hour, or as an opportunity for personal service?

The preacher's voice reaches only to the outskirts of his congregation; the teacher's lessons are limited to the circle of her pupils. *Your* influence can be carried wherever a book or a magazine can be made to go.

Don't be content to hold down your job—make it your mission!

SOME INSTITUTIONAL LIBRARIES IN MICHIGAN

IN her customary report of visits made to libraries in different parts of the state, Nina K. Preston, state visitor, gives some interesting items about four of Michigan's institutional libraries in the *Michigan Library Bulletin*.

"The library of the Michigan Reformatory has 2406 volumes and the average monthly circulation is slightly under 5000 per month," she writes. "At the present time there are 638 prisoners. About 1000 of the books are non-fiction, and an average of about one-fourth of the non-fiction is in circulation. An inmate may have one book a day if he so chooses, and any special book that he may request. The warden has sometimes loaned books out of his own private library, even volumes of his encyclopedia. If the inmate has no choice, the book given him is the one just read by the man in the preceding cell. Unless special request is made for certain books the librarian selects from the library a book that has not circulated recently, leaving it at the first cell, taking from that cell the book just read, leaving that at the next cell, and so on thruout the corridors. That leaves the reading of the men very much under the control of the librarian, Charles Reasoner, who is a man of judgment and much interested in the men. The books seem well selected. Very few detective stories are bought and those of the best type. The librarian seems as careful in barring out immoral or unclean books as the most fastidious woman librarian. There is no regular appropriation for the library but the gate proceeds are used for the purpose. Every visitor pays twenty-five cents for the privilege of going thru the reformatory and thus he is unconsciously providing reading matter for the inmates.

"One hundred and fifty dollars was spent for books last year. All the books are recorded, all the authors arranged alphabetically in one large volume, and titles in another. All the books have a book card. Instead of being kept in the book when not in circulation, they are all kept in a file in the library, and the librarian can tell instantly by this file of cards, not only what

books he has in the library, but also what book is in each cell. His system is a modification of the public library system and adapted to institutional needs.

"G. A. Jackson, the new librarian of the Jackson State Prison, who has been chaplain since 1903, knowing something about the Dewey decimal classification from his long connection with Hillsdale College, decided that the unorganized mass of books needed to be classified, so he gave directions to two of the inmates, one of whom had worked in the library for many years. These men have done their best to follow instructions, and have the books roughly classified, and lettered in white ink with class number, followed by the number (accession number) of the individual book in each class; thus—820-295 indicates that the volume is the 295th in the class 820. A printed catalog (now in the hands of the printer) is to be given to each of the 1200 inmates so that he can know what is in the library and select just what he wants, providing the library possesses it. Every book has a book card which will be taken out and placed in space occupied by book, and reader's card will be placed in book. On reader's card will be man's number and cell, number of book he desires and date book is to be returned. Men may keep their books with privileges of renewal. The books are mostly gifts, good, bad, indifferent and old. There is a great lack of technical books and new up-to-date material. The librarian hopes now that the library will soon be ready for work again, to have money for new purchases. The books were all called in during the summer in order that the work of cataloging might be done, and the men in the meantime have been using the bound volumes of magazines. There are constant demands for the books, however, and the men will be delighted when they are again in circulation. Many of the men are taking correspondence courses, and 300 of the inmates subscribe for magazines and papers. A magazine club was formed by the librarian. Those who wish the first reading of the magazines subscribed for, pay \$2.25 a year for this privilege, and those who have the second reading, pay \$1.50. The list of period-

icals includes *Century*, *Harper's*, *Literary Digest*, *Red Book*, *Munsey*, *Cosmopolitan*, *Popular Mechanics*, and many others.

"The library of the State Hospital at Kalamazoo is housed in the male department of the institution in a small room off the main corridor. On three sides of the small room are the cases with glass doors. Because of an epidemic of scarlet fever and measles among the patients last year, the books were not allowed to circulate, and even yet, the books remain on the shelves untouched. The patients miss the reading and the attendants themselves are longing for the use of the books. During the year that the books have not circulated, many worn ones have been discarded and others mended and put in more presentable shape. The books are grouped on the shelves according to subject, but numbered on the back with the accession number. A printed catalog is in use, and inmates are allowed to choose their books from these. Between 1600 and 1700 volumes are in the library, this number including 200 volumes of bound magazines not of recent date. These are used for recreational reading and not for reference. The majority of the books have been gifts, some not being in the best condition when given. About half of the books are fiction, with history, literature, biography, some religion and a little science. The books all contain book pockets and cards, and books are charged as in public libraries. On the reader's card is space for the numbers of the books he wants to read, and his books are selected from these numbers. The great need seems to be new books and their circulation.

"The Michigan School for the Deaf has a library of over 5000 volumes. This differs from many of the institutional libraries, in that the books are good, well selected and evidently purchases, not the gifts of those who wish to cull the undesirables from their private libraries. The books are well arranged, well classified, well cataloged, accessioned, and shelf-listed as in a modern public library. Many analytics have been used, making the card catalog very complete. The library is located in a large room in Brown hall which has excellent light, there being windows on three sides

of the room. The shelving runs around the room between the windows, with comfortable seats in front of the windows. In the center of the room opposite the entrance is the librarian's desk, and on either side are large tables. The children come to the library by classes once a week with the teachers for the selection of their books. While the books are well selected, the selection has been made more for the teachers than for the children. Of the 5000 volumes on the shelves only one-third are juvenile, and of these juvenile books, the majority, while fine books, are beyond the comprehension of the children of the school. It is hard for the adult to realize how elementary must be the books for these children who have been so heavily handicapped. The books that appeal to them most are the primers that are well illustrated, well printed, and very simple in language. They are easily discouraged by the books that would appeal to normal children of the same age. Third year readers stand on the shelves in their pristine freshness while the easier books are loved and used. There is quite a sum of money that can be expended in purchasing books for the use of children now in the school. With these children it would seem to be a good idea to arrange their books according to grade, rather than according to more approved systems. If the books especially suited to their needs were separated from the others, the children would not be so discouraged by books that are too old for them.

A "TRENCH" LIBRARIAN

CHARLES FELLMAN, formerly a check-room boy at the Willard Hotel, in Washington, has earned the title of "trench librarian" at the Park Avenue Hotel, where he now works in New York. He has been collecting all the magazines and periodicals left in the hotel by guests and affixing 1-cent stamps so that they may go to the soldiers. Hundreds of these have been collected, and the hotel has now decided to pay the postage charges.

It is understood that the same idea will be inaugurated by other New York hotels and that thousands of magazines will thus be sent to the soldiers each week.

THE STORY OF THE HOUSE THAT JACK BUILT

"THE House that Jack built" was planned by the apprentice seamen and other enlisted men of the Navy to serve as a club room, a thing much needed at the Naval Training Station at Newport, Rhode Island. The idea originated February, 1916, and contributions were solicited from all the men at the station. Each contribution was small but as the number totaled several thousands, enough money was raised to buy the materials necessary for the construction of the building which was commenced Aug. 3, 1916. It was finished and opened on July 4, 1917. The names of the contributors to the fund were inscribed in a book which is preserved in the building.

The greater part of the work was done by the boys themselves, and when it is considered that the building is a concrete structure with steel frame work, about 100 feet long, 30 feet wide, and 20 feet high, it can be seen that the task was a difficult one. The difficulties, however, were in the main most admirably overcome and the building when completed was a thoroly creditable piece of constructive work.

After the entry of the United States into the European War the Training Station grew so rapidly that altho Y. M. C. A. and K. C. huts provided considerable recreational space it was found that "The House that Jack Built" was too small to meet the needs. Hence a larger building was fitted up for recreational purposes, making "The House that Jack Built" available for a much needed library building.

Anyone familiar with the requirements of a small library would be impressed immediately by the remarkable fitness of "The house that Jack built" for library use. So when the question arose of transferring the Training Station Library from its former unsuitable and inadequate quarters to a new place, "The House that Jack Built" seemed providentially supplied. This library had its nucleus in a Crew's Library, such as is placed on every large vessel in the United States Navy, and which consists of about 2000 very well selected books, as a rule under direction of the chaplain. This particular collection is known as the "Con-

stellation Library" and is assigned to that very famous ship of our old Navy which, at present, is moored at the Training Station dock, serving as a training ship.

The Constellation Library was housed on the third floor of one of the large barracks. These quarters were of course, more or less difficult of access, and were too small to permit great expansion. Furthermore, the rooms were needed for other purposes, hence it was proposed to move the library to a recreation hall over the gymnasium. The disadvantages of such a location were evident, and as the American Library Association had already presented the station library with some three or four thousand volumes, the representative of the association raised the question of using "The House that Jack Built" as the library building. Both Captain Campbell, the commanding officer of the Training Station and Chaplain Cassard, in charge of both the library and "The House that Jack Built," agreed heartily with this proposal and steps were immediately taken to obtain the sanction of the director of the A. L. A. Library War Service to aid in transforming this building into a first class library.

Captain Campbell directed that the expense of all fixed charges, such as shelving, modifications in the building, treatment of the flooring, etc., be borne by the Training Station. The library equipment such as tables, chairs, card cabinets and the books necessary to complete the collection, approximately twenty thousand, were provided by the Library War Service.

As this is the only Naval Service collection in Newport possessing a building entirely devoted to library purposes, it has been favored in purchases and in gifts. A very complete selection of technical books have been supplied by the A. L. A. Library War Service, and from the books gathered in Boston and Providence splendid reference works and standard sets have been obtained. The plan is to make a well-rounded and complete collection of the books that might interest the young men attending the Training Station. Of course, a very select body of lighter literature will be kept on the shelves which, in fact, already exists among the Constellation

books. The library differs very materially from those established at the camps and cantonments as it will be permanent and remain after peace is declared.

The modifications necessary to change the building into a library were completed within approximately a week, and two weeks later the furniture arrived and was installed.

The Station Library was moved into the building about the first of July and on July 7 the building was opened to the young men of the station, the Governor and other distinguished guests being present. The following quotation from the *Newport Herald* gives an interesting account of the ceremonies:

"The regiments marched over the north parade grounds to barracks and, under escort of Captain Campbell, Lieutenant-Commander Crosse, and Lieutenant Borland, the guests were taken to the new library which was formerly known as 'The House that Jack Built,' and has now been transformed into a library with its twelve thousand volumes. It has wonderful lighting effects and its pictures include one of the yacht *Aloha* under full sail, which boat Commodore James presented to the navy. Without were two large American flags and within there were numerous plants and palms.

"The books came from the American Library Association and include about every book on any subject that the men may wish to read. The arrangement is by Chaplain William G. Cassard, who will be in charge of the library with the assistance of Dr. Wiley, the local representative of the American Library Association, who have done a splendid piece of work in fitting out this establishment which means much to the Station."

EDWIN WILEY,
Librarian, U. S. Naval War College,
Newport.

THE first time I read an excellent book, it is to me just as if I had gained a new friend; when I read over a book I have perused before, it resembles the meeting with an old one.—OLIVER GOLDSMITH.

COMBINED GOVERNMENT EXHIBIT

WHAT the Government is doing to win the war through its military and civil departments is to be shown in a Combined Government Exhibit with five circuits including thirty-six state fairs. The circuits cover all parts of the country from New England to California, from Wyoming to Florida.

The purpose of the exhibit is to inform the people of the work the Government is carrying on, so that they may do their part intelligently. The Food Administration section of the government exhibit consists of oil paintings illustrating passages from Mr. Hoover's speech, "Food control—a war measure," and charts dealing with important food problems. Through the cooperation of the division of pictorial publicity, Committee on Public Information, paintings were contributed for the exhibit by fifty-five of the foremost illustrators in this country. There are sixty paintings in the collection, divided into five sets of twelve each. The paintings are so arranged as to set forth the conception of the work of the Food Administration as a war emergency institution. Each artist was given a passage from Mr. Hoover's speech to illustrate in his own way, which has resulted in five different conceptions of each passage.

In each set the first three panels state the problem: "The Food Administration is purely a war institution. Its first and primary concern is the feeding of our own people and those of the Allies, and thereby the maintenance of the strength of all the men, women, and children both there and here, and thus the strong arm of our soldiers."

Panels 4 and 5 show the way of accomplishing this end in a democratic way: each member of the community must serve according to his ability, and all must live simply.

Panels 6 to 11 give definite directions for the solution of the problem: we must stamp out hoarding; we must increase our local resources; we must build more ships; we must send abroad foods of the most concentrated nutritive value; we must use short shipping routes; and, above all, we must be *quick*.

The last panel sums up the story: "This Government is nothing more than the expression of the people and if we are to win the war it will be only because every man, woman, and child charges himself daily and hourly with the test, does this or that contribute to win the war?"

One of the most interesting panels is Edwin Blashfield's conception of the statement: "The American ideal in executive work is efficiency, but efficiency does not alone mean the best appliance and the greatest numbers made for the least cost. In war it involves a new factor that transcends all others, and that is speed."

Charles Livingston Bull illustrates the idea, "We must increase our local resources," in characteristic fashion. He shows a Gloucester fisherman, net in hand, waving a salute to a fleet of battleships steaming off toward the horizon. Over the fleet a giant eagle is faintly outlined in clouds. The illustration is captioned "I bring food from the sea that you may win victory."

At the end of the fair circuit the Food Administration hopes to send its exhibit on a special tour to cover the principal libraries of the country. Half-tons of twelve of the most striking panels and eight statistical charts have been prepared and sent out to over 2000 libraries, thru the state library directors.

This message of the Food Administration will reach 8,000,000 people thru the state fairs; it should reach as many more thru library bulletin boards. While the half-tone edition is not large enough to cover the whole country, every librarian can obtain a loan collection from her state library director. Now is the time to start a food conservation bulletin board if you have not already done so. No better material could be obtained than this set of half-tons properly mounted and displayed. A supply of the speech "Food control—a war measure" may also be obtained from the state library director for distribution in connection with the display.

Every library has a vital part to play in the winter drive of the Food Administration to build up an adequate reserve of foodstuffs both at home and abroad. This

"I WIN FOOD FROM THE SEA THAT YOU MAY WIN VICTORY"—*Charles Livingston Bull*

"A NEW FACTOR THAT TRANSCENDS ALL OTHERS—SPEED"—*Edwin H. Blashfield*

task requires education, requires an intimate understanding for each of the objectives of the Government and the duty that falls upon every citizen. "The libraries of the country are so organized as to keep in touch with all of our people."* The library, then, will take upon itself responsibility for the success of this campaign of universal education.

BOOKS ON PALESTINE AND ZIONISM

THE Brooklyn Public Library in one of its recent *Bulletins* printed a list of books on Palestine and Zionism. In its introductory paragraph the library explains that the Provisional Executive Committee for General Zionist Affairs, of which Louis D. Brandeis, Stephen S. Wise, and Nathan Straus are officials, has had, since the capture of Jerusalem and the British declaration in favor of re-establishing a Jewish state in Palestine, so many hundreds of letters from all parts of the country, asking for a list of books on Palestine, the Zionist Movement, and related subjects, that it has recommended a number of such books.

The list includes "Palestine, the rebirth of an ancient people," by A. M. Hyamson; "Zionism and the Jewish future," by various writers, and edited by H. Sacher; "Zionism: problems and views," by P. Goodman and Arthur D. Lewis; "Zionism," by Richard Gottheil; "Palestine and the Powers," by F. G. Janaway; "The Haskalah movement in Russia," by Jacob S. Raisin; "The story of Jerusalem," by Sir C. M. Watson; "The land that is desolate," by Sir Frederick Treves; "Palestine and its transformation," by Ellsworth Huntington; "Selected essays," by A. Ginzberg; and "A Jewish state," by Theodor Herzl, the father of the modern Zionist movement.

To supplement these officially recommended books, the library also suggests the following: "What is Judaism?" by A. S. Isaacs; "Zionism and anti-Semitism," by Max Nordau; "Judaism and its history," by A. Geiger; "The Jewish question," by Charles Waldstein; and "The Jewish question," by M. Green.

* Herbert Hoover.

HIS LEFT IS ALL RIGHT

HELPING to get men who have been invalidated home to overcome their dark and gloomy view of the future is one of the jobs of the librarians of the American Library Association on returning transports. On the way to Europe the librarian has little time to come into personal touch with the individual because there are too many men aboard demanding books from the ship's library. On the return trip there are fewer men and the librarian therefore has more time to become acquainted.

On a recent returning transport was a man with his right arm missing. He didn't see much of a chance for him, and he wasn't happy. He sat moodily on deck and spent much of his time brooding over his troubles.

"Can't I bring you a story to read?" the librarian inquired soon after the vessel started on its homeward journey.

"No," was the prompt reply. "I'm no good for love stories hereafter."

"How about a book on electricity?" the librarian suggested. "Most men are interested in electricity."

"There's nothing doing for me in that line," the wounded man replied with a glance at the place where his right hand used to be.

"We have a book on "Business letter writing," the librarian persisted.

"Oh, well, bring it along," the patient said with resignation. Apparently he had decided he had to take a book and one was as good as another.

The librarian brought the book, and it interested the wounded man until he thought of that missing right hand.

"What's the use," he said with disgust. "I can't write letters with my right hand gone."

"Let's see about that," said the librarian. "We're going to start a class of two in left hand writing right now. I never tried it, but I think I can learn it."

So the two got busy trying to write with the left hand. They kept it up for a short while each day, and before the boat arrived the wounded man had written several left hand letters to friends.

LIBRARIES IN ALASKA

IN an article in *Alaska* Margaret Duncan Green, librarian of Juneau Public Library, gives some interesting notes on the libraries now existing in that far-off territory, and sketches the possibilities for service which lie before them.

The coming of a library into such a land as Alaska means the salvation of many. The prospector returning from the solitude and isolation of the hills, the toil-worn and weary miner, the new-comer of the North, homesick and lonely and trying to keep abreast of the happenings in Europe and in our own country, the immigrant searching for material to fit himself for examination for citizenship in the United States, and last of all recruits to the ranks of civilization, the Eskimo.

The young Alaskan boys and girls are devotees of the library and it is no uncommon sight to see boys of ten or twelve poring over such books as Nansen's "Farthest north," Amundsen's "Northwest passage," or Stanley's "In darkest Africa." Surrounded by traditions of bravery, hard-ship and courage, they possess the spirit and passion of the pioneer. All that Alaska will be in the future depends upon what is done for her children now and nothing seems too good to give to help develop those who in a few years will "stand at the helm of the Ship of State and guide her safely thru treacherous waters. Many of these children know nothing 'outside of Alaska,' except what they read in books or see in pictures."

Alaska being our last frontier is unique in that it is being developed on lines that are most modern and approved. To Juneau, the center of all Alaskan affairs, the whole territory looks for an example of progress.

Be it said to her everlasting credit that Juneau has risen to the occasion, and her library is in keeping with her usual advanced ideas. It has been a boon to the people of Gastineau Channel, for tho maintained solely by the city of Juneau it has thrown open its doors to all adjacent towns, and aside from this local service has extended its work to the outlying lumber and mining camps and canneries and such

isolated districts as may be reached by a small gas boat.

Many pitiful stories have been told by prospectors, miners and others of their life in the hills where for months and months no reading material could be obtained, and men grew cheerless and morbid for want of it. Small wonder that such a starving soul welcomes the library as a thirsty traveler the oasis in the desert.

What the United States considers so essential to the moral and physical welfare of the Army should also be considered essential to the pioneer on the frontier, for he is a soldier with a pick on his shoulder and a pack on his back, and his enemies are the dangers of an unexplored country.

"There are at present several libraries in Alaska, tho, as far as I am able to ascertain, the one at Juneau is the only free public library in the territory," writes Miss Green.

"The Juneau Public Library is maintained by the city. It contains 2770 books aside from government publications and reference books, and pamphlet collections. During the year 1916, 17,096 books were issued. The present number of borrowers actually using the library is 1156. One thousand seven hundred and seventy-seven have registered since the library was opened two and one-half years ago. This number represents the stranger as well as the permanent resident of the town.

"The library has grown sufficiently to warrant having a library building and it is only a question of time before this will be accomplished. As yet Juneau has not been able to accept the generous offer of a \$20,000 building that was made to it a year ago by the Carnegie Library Foundation Association. As she has had the honor of such an offer at this time, it is to be hoped that she will soon be in a position to accept it.

"Two other libraries are maintained on Gastineau Channel. One is the Whipple Memorial Library at Thane, Alaska. This is supported by the Alaska Gastineau Mining Co. for the benefit of the employes of the Alaska Gastineau Mining Co. only. The other library on the channel is the one

at Treadwell, supported by the Treadwell Mining Co. for its employes exclusively.

"Ketchikan has a progressive library, tho not a free one as all borrowers have to pay twenty-five cents a month for its privileges.

"For a while a reading room was maintained at Sitka by the W. C. T. U. but that is no longer in existence and Sitka suffers thereby. So much for libraries in South-eastern Alaska.

"To the westward an effort is being made to establish libraries. At Anchorage the United States Railroad Commission maintains a library for the railroad employes. I have been told that when the town of Anchorage was planned four city lots were set aside for a library building. This shows the progressive spirit of Anchorage. I am told, also, that there is a movement on foot to establish a library at Seward and that this has the backing of a wealthy woman from the East. Valdez has a small library. It is under the auspices of the Civic League and is opened two days during the week. Since the recent fire it has been discontinued.

"In the interior of Alaska, the town conspicuous for its library work is Fairbanks. It has had a library for some years. Originally, the Thomas Memorial Library, it was later taken over by the Civic Club and has since been under its management. It is not a free library as borrowers pay \$2 a year for library privileges. Tho Alaska is an infant in the library world, her potentiality for future greatness is already manifest. What she needs to-day is a library law and it is hoped that at the next session of the legislature one will be incorporated into the laws of the territory."

THE ASSOCIATED MOUNTAINEERING CLUBS OF NORTH AMERICA

IN May, 1916, nine clubs and societies with common aims associated themselves in a bureau, with headquarters in New York, as described in the LIBRARY JOURNAL for December, 1916 (p. 950). The membership now numbers nineteen, comprising about 16,000 individual members, as follows:

American Alpine Club, Philadelphia and New York.

American Civic Association, Washington.
Appalachian Mountain Club, Boston and New York.

British Columbia Mountaineering Club, Vancouver.

Colorado Mountain Club, Denver.

Explorers Club, New York.

Fresh Air Club, New York.

Geographic Society of Chicago.

Geographical Society of Philadelphia.

Green Mountain Club, Rutland, Vermont.

Hawaiian Trail and Mountain Club, Honolulu.

Klahhane Club, Port Angeles, Wash.

Mazamas, Portland, Oregon.

Mountaineers, Seattle and Tacoma.

National Association of Audubon Societies, New York.

Prairie Club, Chicago.

Rocky Mountain Climbers Club, Boulder, Col.

Sierra Club, San Francisco and Los Angeles.

United States National Parks Service, Washington.

Many of the clubs and societies issue illustrated publications on mountaineering, exploration, and conservation of natural resources.

The bureau publishes an annual *Bulletin*, giving the officers, membership, dues, publications, lantern slide collections, outings, and other matters of interest to each club. Data on mountains and mountaineering activities is supplied in response to inquiries.

Acquaintance with the literature of a subject is essential to efficient work in the field, and the bureau sends many important new books on mountaineering and outdoor life to its members free of charge. A large collection of mountaineering literature has been gathered in the central building of the New York Public Library, and the American Alpine Club has deposited its books therein, providing a permanent fund for additions. A bibliography of this collection has been published by the library. An extensive collection of photographs of mountain scenery is being formed and is available to anyone wishing to supplement the literature of a region with its scenery.

LEROY JEFFERS, *Secretary,*
Librarian American Alpine Club.

BOOKS FOR THE DOUGHBOYS

TAKEN from *The Stars and Stripes*, the official newspaper of the A. E. F., in its issue for June 14, 1918, the following story of the A. L. A. overseas will be of interest to the A. L. A. at home:

**THREE MILLION BOOKS
FOR ARMY'S READERS
HUNDRED THOUSAND ALREADY HERE OR
ON WAY OVERSEAS**

Murder Yards to Milton

American Library Association Plan Now in Successful Operation

Of the 3,000,000 books which the folks back home contributed to the American Library Association for the leisure hours of the A. E. F., more than 100,000 are either here or on their way across.

They range all the way from the most hair-raising murder mystery to the latest and best text-book on aviation. And if any one in charge of a distributing point where you want to draw one of them tries to ensure its safe return by asking you to put up a cash deposit as a hostage, tell him he's out of luck. The A. L. A. is determined that its books shall circulate on the honor system.

"It has been the custom in many places to require the man taking out a book to make a deposit of two or three francs to guarantee its return," the association explained in its bulletin of instructions to all librarians. "The American Library Association is firmly opposed to this practice. It feels that no such barrier should be erected between the men and the books. If such a barrier is necessary it is because the administration is at fault. The honor system will unquestionably succeed with the right sort of helpful supervision and where proper care is taken to make the men understand just what is expected of them."

By way of making the men understand, a poster expounds the system at every bookshelf, with this sentence as a climax:

"These books are loaned on the honor system. If you fail, it fails. America is far away, tonnage scarce and books precious. Play square with the other fellow; he has played square with you."

About one-half of the A. E. F. area already has its first sprinkling of light and

heavy reading matter. This distribution will proceed rapidly, and in the meantime a new project is under way. Unless there is some unforeseen slip-up, the middle of July should see an elaborate library opened in Paris for the use of all of us.

The A. L. A. has had a million to spend and most of this has been devoted to the purchase of the best technical books that could be asked for by the ambitious soldier who is eager to know more about his business.

The Paris Library will have 10,000 volumes. Any officer or man, who desires a certain book and does not find it on the shelves at the hut near which he is stationed, may send in the title thru the secretary in charge there and the book will be sent him free of charge from Paris.

There are to be books everywhere. You could scarcely exaggerate the demand. Before the supply was as large as it is to-day, a single copy of O. Henry's "The four million," which one boy had brought over in his barrack bag, was split up into as many volumes as there were tales between the covers, and these were passed along the line and read and reread till the print was fairly rubbed off the pages.

The demand is for books of every kind. Probably the greatest call is for detective stories and tales of the Rockies. Next is the yearning for poetry, with Robert W. Service and Rudyard Kipling as the dough-boy's favorites.

The dashing adventure of "The three musketeers" and other Dumas heroes are much relished, for you can hardly journey five kilometers in France without running into some reminder of them. Histories of France, and particularly the guide books which tell you something of this chateau or that cathedral, are clamored for till the A. L. A. is at its wit's end to supply them.

Now and again the guardians of the books are moved to suspect that a boy in a rest camp has decided the time has come for him to read a book he has been meaning to read all his life. As when one of them asked, with a perfectly straight face, for Boswell's "Life of Johnson."

Of course, the campaign which yielded 3,000,000 volumes emptied many a dusty

and neglected shelf back home, and of course, many an inappropriate book had found its way over. You can imagine the emotions of one very hard guy who settled down for a quite evening in a "Y" hut, reached for something to read, and found himself staring at an Elsie book!

FEDERAL SHIPPING BOARD PLANS FOR MARITIME EDUCATION

THE *Journal of Commerce* for Sept. 3 devoted a half column to plans for a scheme of maritime education now being developed by the Shipping Board.

"In pursuance of its plan to inaugurate a scheme of maritime education, coupled with a campaign to arouse the interest of the American people in the sea as a profession," says the article, "the Shipping Board, it is reported here, has engaged Dr. A. W. Taylor, director of the Wall Street division of New York University, to visit the principal ports of Great Britain, France, and the United States for the purpose of establishing libraries of marine literature to be utilized by men engaged in operating American ships. A regular course of reading will be prepared, which will be available, thru the use of these libraries, for the men while they are actually employed on the ships.

"The understanding is that Dr. Taylor will start on this work shortly after Jan. 1 next and that he will establish libraries at the following ports, among them: Bordeaux, La Rochelle, St. Nazaire and Brest, in France; Portsmouth, Plymouth, Southampton, Bristol, Liverpool, Glasgow, Belfast, Cork, in the United Kingdom; Halifax, Montreal, Quebec and St. Johns, in Canada; in addition to the larger ports in the United States. The libraries, according to the present plan, will probably be placed in charge of the Y. M. C. A. secretaries, and arrangements will be made so that a man may borrow a book at one port, returning and receiving credit for it at the next, where he will be able to borrow another.

"It is learned further that Dr. Guy Sneider, professor of exports and imports at the College of the City of New York, will prepare the text book for the Shipping

Board's reading course, which will be designed to indicate the books that may be studied to best advantage. Examinations will be held at the various ports under the proctorship of the librarians, who will submit the papers, sealed, to Dr. Sneider for correction. The Shipping Board is expected to present a set of books on maritime subjects to all men making marks of 90% or better in the examinations.

"The aim of the plan is to give the men an opportunity to supplement their sea-going experience with a practical course of training that will acquaint them not only with the actual methods of handling and operating ships but with details of their management ashore. In this way it is hoped to build up a force of selected men, whose interest in the merchant marine has been aroused and who will be equipped after the war to take an active part in developing American shipping."

The Shipping Board, the *Journal of Commerce* also reports, proposes to promulgate propaganda everywhere to stimulate interest in shipping affairs. In this connection the maritime bibliography compiled by W. M. Brittain, secretary of the American Steamship Association, will be republished after careful classification according to specific subject matter.

WAR SUBSTITUTES

- Economy for Waste.
- Co-operation for Criticism.
- Knowledge of Prices for Gossip about Profits.
- Cornmeal and Oatmeal for Wheat Flour.
- Fish for Beef and Bacon.
- Vegetable Oils for Animal Fats.
- The Garden Hoe for the Golf Stick.
- Performance for Argument.
- Service for Sneers.
- Patriotic Push for Peevish Puerilities.
- Perishable for Preservable Foods.
- Greater Production for a German Peace.
- The Beef You Do Not Eat for the Rifle You Can Not Carry.
- Conservation for Conversation.
- Common Sense for Common Gossip.
- Marketing for Telephoning.
- Production for Pessimism.

BULLETIN BOARD ADVERTISING
IN THE NEW HAVEN PUBLIC
LIBRARY

THE New Haven Public Library has been making a special feature of bulletin advertising since last fall. With such a munificence of posters for Liberty Loans, Red Cross, Y. M. C. A., Boy Scouts, W. S. S., and all the other drives, it became necessary to find some place for them other than that provided in the original plan of the building. Therefore, the vestibule was chosen, and two large bulletin boards were put in such a conspicuous spot that everyone entering would be attracted by the sudden, vivid splashes of color. The vestibule is white marble; the architecture so austere that masses of color in two distinct places cannot fail to catch the eye. Such a variety of material comes in at times, that a selection is made, and changed from time to time. Harmonizing colors and subjects are sought. In the case of the Third Liberty Loan, there was so much to post that a change was made frequently. Three posters at a time on one board have been found sufficient. The casual massing of such material, which you see on every street corner, only tends to deaden the eye to the individual effect of each poster. Such a magnificent drawing as the red and black "To make the world a decent place to live in" is lost if thrown in with the Christy girl, all pink and blue, on one side, and the splendid Leyendecker Boy Scout group on the other.

"Toeing in!" is another motto. Where the action of a poster is towards the left of the picture, it is placed on the right of the board, and a second with the action converse is opposite it. In the center, a poster whose action is centralized, is always chosen. In this way, the action of the entire board is unified.

Of course, we haven't been satisfied simply to use the material furnished us; but have done some things for ourselves.

For about a month, a most successful exhibit of the countries of our Allies was carried out. Pictures were mounted showing numerous views of the country, customs, architecture, and characteristic art. A large sign at the top of the bulletin board

announced the name of the country illustrated, and a second stated that a special shelf of books on this subject was to be found in the Open Shelf Room.

As it often happened that there were special books to be advertised, and no posters to do it, suitable ones were made for the occasion. Perhaps the most attractive set were the garden posters, running in conjunction with a goodly collection of books. One was headed by a picture of Jack and the Beanstalk, taken from a discarded fairy tale, illustrated by Brock, and made pertinent by:

This is a picture of Jack and the Beanstalk.
Beans brought him luck.
Why don't you try them?
Have a garden!

The following original poem was surrounded by vividly colored vegetables and flowers cut from sundry seed catalogs:

WAR GARDENS

This year, my garden grows apace,
For I have dug up all the place,
And fertilized each foot of space
By rule.

I've read a stack of library books,
And planted all the little nooks,
And now, how fine my garden looks!
Just see!

I've saved to buy a Bond each time,
War Saving Stamps take every dime;
War Gardens constitute this rhyme
By me.

This is by no means all the work done by the New Haven Library. Its branches are also included. The posters, which are in many cases original and hand work, can be borrowed, as well as material made especially for branch use.

The so-called "Literature poster" has been unexpectedly useful in results. An illustration and the front page of some famous novel or worthwhile book are cut out, pasted side by side, and enclosed in lines to show they belong together, and enough of these sets are pasted around the margin of a large sheet of cardboard to give the effect of a border. In the center are "noble sentiments," carefully lettered in.

The following quotation was surrounded with extracts from "The Peterkin papers,"

"Christmas carol," Aldrich's "Story of a bad boy," etc:

"Some books never grow old. We read and re-read them when we are children, and when we grow up, we read them again. If they are old friends of yours, you will know why. Their echoes ring in our newer books, for those who write to-day, read yesterday. Some great spirit of truth, perhaps intangible and elusive, lies in these stories, to be felt to-day and tomorrow with equal honor and enjoyment."

Framed in a colored margin of English history illustrations was the following, entitled "The history of England":

"The story of England is not a dull routine of battles, kings, or dates, in which great deeds were done, not only for England, but for all humanity. A vivid pageant of men, women, and children, in the brilliant costumes of their time, surrounded by the glamor of other customs and ideals is the real history of England. History in the concrete is biography; in the abstract, it is the great purposes of mankind carried nearer fulfillment."

The Third Liberty Loan was celebrated as follows, to the edification of the public:

THIRD LIBERTY LOAN

We shook the dust from our bank accounts,
And set them to work anew.

We bought the first with a cheerful grin,
And saved for the second, too.

War Savings Stamps our carfare took;
But walking is healthy work,
And put a part of our wages back,
For the third we couldn't shirk.

Your boy, you know, and mine, you know,
Are fighting across the Pond.
We don't mind walking and working, too,
If we get our Liberty Bond.

The author descended into *vers libre* to herald the drive for Books for Soldiers last spring, in words like these:

BOOKS FOR SOLDIERS

Bud's gone across.
Some boy is Bud!
You wouldn't catch him wasting his valuable
time

Doing nothing.
Not on your life!
Books are the thing for him—
Good books.
He's particular—is Bud.

JENNIE GILBERT JEROME.

SALARY NOTES FROM EITHER COAST

THE Board of Trustees of the Tacoma Public Library voted salary increases beginning July 1, 1918, as follows: \$7.50 per month increase to all members of the permanent staff; \$5 per month to the temporary substitutes; 2½c. per hour to those paid on the hour basis. This will result in an increase of practically \$1200 in all for the balance of the year 1918.

The Public Library of Portland, Ore., is limited in its income to a half mill county tax. Expenses have so increased that it is no longer possible to make two ends meet. Moreover, with twenty-five changes in a staff of eighty-five during the year the necessity of raising salaries was obvious.

At the meeting of the board of directors in August the closing of several of the branches was considered, but a delegation of citizens appeared and urged the directors to make some arrangements to provide funds for the next few months and keep the libraries open. This is to anticipate the action of the legislature which meets in January and which will doubtless amend the library law and increase the half mill limit. This suggestion was favorably entertained. At the same meeting the salaries of the staff were raised on an average of \$10 apiece. A salary schedule was also adopted, approximating the librarians' salaries more closely to those of school teachers, an increase to be given at least once a year until the maximum is reached, the growth and efficiency of the assistant always to be considered.

Both the New York and Brooklyn Public Libraries, in their budgets for 1919, have requested salary increases for their staff averaging ten per cent. In long letters recently printed in the *New York Evening Post* both Tilloah Squires, president of the Library Employees' Union of New York, and Isabella M. Cooper, as a representative of the New York Public Library Staff Association, discussed the need of larger salaries for librarians and of a more equitable adjustment of rank and salaries for both untrained and technically trained librarians, and pointed out the difficulty of attracting and retaining in the

library workers who shall be "adequately educated, physically fit, and essentially courteous" in service which starts with a salary of \$50 a month.

THE RIGHT THING AT THE RIGHT TIME

IN cases of "shell-shock," sometimes a very little thing will accomplish what the psychiatrists with all their skill fail to do. On a transport coming from the other side a few days ago there was a "shell-shock" victim among those invalided home. He sat alone on the deck of the transport, and every effort to rouse in him an interest in life seemed useless. The librarian of the American Library Association tried books, but he wasn't interested in books. One subject after another was suggested, to no avail.

"Let me go down and bring half a dozen books and see if we can't find something that will interest you," the librarian said finally.

"Oh, all right," the patient replied. "I don't care."

When the librarian returned with the half dozen books from his little shelf the man was in the same attitude as when the librarian left him. He hadn't "perked" up in the least. When the first book was handed to him, the patient took it as tho he were doing the librarian a favor. He listlessly opened the book, and the first thing that met his eye was the book plate with the name of the donor of the book on it. He jumped to his feet as tho stung.

"Why, that book comes from my old school teacher down at Danbury, Conn." he explained, and for the first time on the trip his face lit up and he was interested in something. He sat down and read the book thru, then called for others.

"I've written her," he told the librarian just before the transport docked. His face was alight, and he had found a renewed interest in life. Also, he said, he had written letters to all his old friends, and he confided them to the librarian to be posted.

CHARACTER talks when we are silent.—RICHARD C. CABOT.

A CATALOGING SHORT-CUT

A VERY large amount of material (usually pamphlets, often unbound volumes) in the form of sales and exhibition catalogs comes to the art division of a large library. Not to list it at all is as objectionable as to put it thru the stately process of full cataloging. The desire to do away with the expense involved in sending such publications thru the regular cataloging mill has led us at the New York Public Library to devise a simple labor-saving scheme. It's all very uncomplicated and, we think, obvious. Yet description may save some even the slight trouble of concocting a similar plan for themselves.

Reproductions of the printed cards, to be filled in, which we use for auctioneers and dealers:

MAYX

The saving is apparent, and all necessary information is given. The birds are bagged with bowshot instead of being thundered at with siege-guns.

F. WEITENKAMPF.

PRINCETON UNIVERSITY HAS MAMMOTH SCRAPBOOK ON THE WAR

THE most recent acquisition of the library of Princeton University is a set of scrapbooks, designed to be a newspaper history of the war, as complete as it is possible to make it, from the outbreak, July-August, 1914, to the end.

It is the gift of Benjamin Strong, governor of the Federal Reserve Bank of New York City and chairman of the Liberty Loan Committee.

In order to assure the completeness of the work the original plan was to preserve all matter pertaining to the war that should appear in the *Sun*, the *Times*, the *Evening Post* and the *Evening Mail*. Afterward the *Evening Mail* was dropped from the list for reasons that need no explanation.

When it is considered that everything pertaining to the subject that appears in these three papers is preserved in these scrapbooks the magnitude of the job can be

appreciated. Not only the war despatches, but all cognate matter—editorial comment, local news, even stock quotations when they are directly affected by war news—is kept.

It is small wonder that the work soon outgrew the ability to cope with it of the staff of amateur workers whom Gov. Strong first engaged, so that after a time he placed it in the hands of Charles S. Hemstreet, under whose supervision it is now going on.

Up to Sept. 1, 127 volumes had been finished and forwarded to Princeton, where they are placed in the library of the university, available for daily use.

Each one of these volumes is a royal quarto of 400 pages, plainly but substantially bound in buckram, each volume representing a cost of production approximating \$100 and each page representing an amount of skilled labor only to be understood by those who have undertaken the keeping of newspaper scraps on a large scale.

These pages are 13 by 15 inches in size, neatly bordered with thin red lines. The paper is of superior quality, costing with the printed borders more than \$18 a ream, a ream making five volumes.

Each page has four full columns of clippings, the selection and placing of which requires the work of a dozen operatives. First, the newspapers as they are received go to the readers, who mark each item that is to be preserved. Then they go to the cutters and the clippings to the sorters and finally to the pasters. Paste is bought in fifty pound tins, ten tins at a time.

Each sheet when it is filled is laid aside for at least half a day to dry partially before it is put with a considerable number of similar sheets, nearly finished, in a press, where it remains for three weeks before the inset is considered properly fixed.

It is then finished and goes to the binder, who gets the sheets 200 at a time and turns out the completed volumes at the rate of about one a week.

Two things to remember: When you come to the library, bring a book for some soldier or sailor. Before you leave the library, buy a thrift stamp.—*Detroit Library Service*.

MOTION PICTURES IN EDUCATIONAL INSTITUTIONS

SOME notes on the use of motion pictures in educational institutions and libraries have been gathered together by O. G. Cocks, of the National Board of Review of Motion Pictures. In schools and colleges he finds that the most complete use of motion pictures in connection with the Visual Education Department in any state has been worked out thru the University of Wisconsin at Madison. The system can be explained by correspondence with the director of this department.

The Iowa State College at Ames, Iowa, thru J. Will Parry, the secretary, has been interested in the larger use of better motion pictures both in the colleges and schools as well as in the commercial houses thruout the state. They have published a bulletin dealing with the physical equipment and the circulation of films for schools and other organizations.

In Pasadena, Cal., Carl H. Carson, the president of the Visual Education Association of California, has been working for some time on a state-wide organization of educational institutions for co-operation in the use of motion pictures and other visual aids. His organization has representatives in many of the cities and towns thruout central and southern California.

In Los Angeles, the director of visual education, H. S. Upjohn, has developed a system of furnishing films to the schools and has issued a comprehensive pamphlet answering questions repeatedly asked regarding motion picture work in education. The pamphlet contains also a list of entertainment and semi-educational films.

Motion pictures have been used in New York in some of the public schools for several years. The newer schools have been equipped with motion picture booths and machines. In community center work in some of the schools the motion picture has been used regularly. In the spring of 1917 Clara Berg was employed to make a survey and to gather together a comprehensive list of educational pictures which might be used in the grades. An examination has been held for the director of a department having to do with educational films.

The National Community Center Association, of which Edward L. Burchard of Chicago, now with the Committee on Public Information in Washington, is the secretary, advocates the use of motion pictures in the schools and other community centers. They publish monthly a selected list of pictures in their monthly bulletin. The aim of such community groups is to make use of entertainment as well as educational films.

The Cleveland public schools are interested in the educational use of films. Wilson B. Little, the chairman of the school committee of the Cleveland Cinema Club, is interested in supplying the schools, high schools, and especially community centers with desirable films both entertainment and educational.

Mrs. Frederic Michael, chairman of the better films committee of the Illinois Congress of Mothers, in Chicago, is posting a list of selected pictures in every school in Chicago and expects to have the same list exhibited in every branch public library. There are many committees of this association and other groups who are interested in larger use of entertainment and instructional films in the cities and towns of Illinois. The subject is also being intelligently handled by Mr. Hieronymous, the community advisor of the University of Illinois at Urbana. Among other schools interested in the subject are those of Pontiac and Galena.

The Kansas state branch of the National Congress of Mothers and Parent-Teacher Associations has developed a system of giving information to the local branches and the public schools of Kansas regarding better motion pictures and films for educational purposes. The chairman is Mrs. J. L. Beggs. A similar movement is to be noted in the Texas state branch of this organization.

The headmaster of the Phillips Academy at Andover, Mass., has been following the pictures exhibited in his town and has successfully co-operated with the exhibitors in seeing that satisfactory pictures are shown both to the townspeople and to the students of his institution. This is illustrative of the action taken by many superintendents and school officials in smaller

cities and towns where schools, normal schools, academies, and other secondary institutions are located. The educational officials in many cases have developed cooperation with the exhibitors. In the larger towns they have purchased machines and have tried to obtain regular service. In many smaller towns where no exhibitor has located, the use of the public school for family nights and for children's entertainments has been undertaken.

The movement has also reached individual colleges. At the Agricultural College in Mississippi a theater is maintained and operated by the college thru a faculty committee. A similar movement is on foot at the University of Mississippi at Oxford, Miss. At Columbia, Mo., where the Bible College is located, the movement has been in the interests of furnishing better motion pictures thru the exhibitors in the town.

TYPES OF PICTURES

There are a number of commercial organizations furnishing educational or instructional pictures. The field is limited and some of these films have been made from the standpoint of entertainment rather than the intimate processes of education. Some films dealing with science, like physics, chemistry, geology, botany, zoology, and pathology have been made, also many films showing insects, wild and domestic animals, sea life, microscopic life, etc. A vast number of pictures are also in existence—of travel, geography, tribal and national customs, industries, outdoor sports, medicine and surgery, inventions, etc. Films can also be obtained dealing with public life, social agencies, agricultural diseases, safety appliances, trades, etc. No effort has been made to gather together such films in one place by one group. It is necessary to search for the individual film. In many cases also the subjects are presented as a part of a whole film dealing with many subjects in somewhat the same way that a magazine presents many fragments of ideas. The *Moving Picture World* has attempted a codification of such films and parts of films in a booklet published semi-annually. The existence of such films, however, does not guarantee the possibility of obtaining many of the subjects, since they

are made an integral part of the commercial service and are circulated thru business exchanges of the different film companies. The expense involved in the purchase of such films for individual institutions or for state-wide purposes has limited their use. The life of a film also has acted as a deterrent in all attempts at the use of films by various educational institutions. It must be remembered also that few films have been constructed with any one age group in mind. Few also have been made on what may be called strictly scientific or educational principles.

LIBRARIES

Among the many libraries that have been interested in the question of motion pictures for illustration of literary subjects, dramas, stories, etc., besides the list already codified in the questionnaire sent out by the National Board of Review in the summer of 1917, are the following: The Bureau of Libraries of the Department of Education, New York City; the Free Library of Philadelphia, 13th and Locust streets; the Cleveland Public Library, William H. Brett, librarian; the Library of the University of Michigan; the Carleton College Library, Northfield, Minn.; the Public Library of St. Paul, Minn.; the Library of Congress, Washington, D. C.; the Library Museum, Newark, N. J.; and many of the state libraries. The interest has been in a variety of subjects ranging from a request for literature dealing with the general question of the review of motion pictures and their regulation, better films for the family and for young people, and films for educational purposes, to definite suggestions of films to be used regularly in library work for young people and adults.

THE frequent appearance of bread, butter and jelly, on, in and outside of library books, as well as in the very hands of small borrowers, gave occasion in one Cleveland branch for this food conservation bulletin:

Are you hungry after school?
Eat an apple!
Save the wheat!

The graphic illustration of a tempting apple completed the suggestion.

LIBRARY EXPANSION IN CHINA BEGUN

"AFTER years of slow growth in circumscribed lines where every plan for wider effort seemed a barred zone, there is now before us a wide opening—the Boone Library has gone afield!" writes Mary Elizabeth Wood in a little booklet on "The Boone Library afield," which tells of the efforts now being made by that institution to carry the library gospel to other parts of China.

Last year Samuel T. Y. Seng, associate librarian at Boone, returned from a two years' course at the Library School of the New York Public Library, and almost im-

Ten Main Divisions.

mediately the opportunity came to him to put his knowledge to direct service. The A. L. A. had given to the Y. M. C. A. in China one-half of its exhibits from the Panama Exposition, and this material, with the special apparatus provided by the Y. M. C. A.'s lecture bureau, enabled Mr. Seng to prepare a very telling lecture on "The need of public libraries in this country [China]." He gave this lecture in Shanghai and Nanking, where it was heard by over 2500 people.

As a result, Mr. Seng has been invited by the Kiangsu Educational Association, a government organization, to return to Shanghai at a later date and hold a library training institute for the purpose of fitting young men for librarianship in school and college libraries. This organization has offered to meet all expenses.

At Wuchang likewise some advances have been made. When Boone Library was

opened in 1910 its aim was primarily to work with the students in the government schools, sending books to the schools when students were not permitted to go outside. This spring the upper floor of the library was opened to the public, the lower floor being reserved for Boone students. Here the leading Chinese periodicals and translations from Western books were placed, and by means of the catalog the readers have access to the whole Chinese department, amounting to about 9000 volumes.

Public lectures have also been given, with an average attendance larger than last year. Noteworthy in this extension work was a lecture on temperance by Mrs. Ren Yin-mei, the first time a woman had lectured in the library auditorium. A large

number of teachers and students from the various institutions in the city were in attendance.

The average number of Boone University students using the library each week is 460, with 240 outside readers. The books issued during the year to teachers and students of the university and members of the mission numbered 2105.

It will be recalled that in 1916 Mr. Seng contributed to the *JOURNAL* a discussion of the question "Can the American library system be adapted to China?" Apparently he has concluded that it can, for he has worked out and had printed in pamphlet form "A system of classification of Chinese books based on Dewey's classification," in which he uses not only ten main classes but subdivides his groups and makes use of the decimal. We reproduce two pages from his modified Dewey system, showing his ten main divisions and also the beginning of his development of the goos. This classification has been sent to the different libraries in China.

A report of these libraries, 33 in number, has been compiled by Mr. Seng, with as complete information as he was able to secure. But, alas, it is in Chinese!

DIVERSIONS OF A LIBRARIAN

THE LIBRARY AND THE CIRCUS

THE library assistant entered with an air of something unusual about to happen. "Well," she said, "I guess there won't be many children here for a couple of weeks, the circus has come to town!" "What circus, and where is it?" said the librarian. "The Greatest Show, of course. They are on the vacant lots over by the car lines and all the children are there!"

Soon came the janitor, "You won't see many young folks to-day, the circus is coming." But his cheery tone did not brighten the librarian. "Do they have performances all this week?" she asked. "No, they camp here this week, and don't begin performances until next week. It's their first camp out of winter quarters. They come for two weeks every spring." "Does everyone go?" inquired the librarian. "They all go over to look at it, not so many go to the

performances, the prices are too high. People come from all over the city."

"Well," said the librarian, "what are we going to do about it? Are we going to let that circus spoil our business? Let's get to work and make it a help instead of a hindrance."

They began to ask both adults and children whether they had been there and what was interesting. They visited the circus and found that one could peep into the tents in which the horses and ponies were kept, or, if properly chaperoned could go in and feed them sugar and the keepers would tell stories about the acting horses. A buffalo was out in an open cage where it could be seen, and the roars of lions and elephants were occasionally to be heard. Every day the horses were taken out for exercise and on the day of the parade one could see all the animals—elephants, camels, giraffes, bears, lions, tigers, etc. The children had seen these animals in the parks, too, and were interested in them.

The librarians saw that they must work along this line, and began to gather together animal books and circus stories. But one must also have pictures for bulletins. A search was made. Here was just the thing! A glorious picture of a circus parade on a magazine cover, and inside a whole page of animals and actors and wagons to cut out! Fine, just what was wanted! The cover picture was pasted on a large square bulletin board, and below was a list of circus books for children. For the cut-outs, a long, narrow bulletin was made, about a foot wide and four feet long, and they were pasted on to represent a parade. On this bulletin was printed a list of books for adults. Some good animal pictures were also mounted with lists of animal books.

The library is fortunate in having two large display windows on the street, and some of the bulletins and books were there exhibited to good advantage. A frieze of mounted colored pictures of wild animals decorated the children's room and other bulletins directed the children to the books.

The window displays attracted a great many boys to the library, and it seemed to the librarians as if a new spirit of friendliness was established by this interest

in the circus. It seemed that the library took a long step in showing that it is not only a "high brow" institution, but also has interests in the commonest occurrences and in books for all tastes, and that the librarians were as glad to supply a circus story as a history of the Middle Ages.

Except for the perennial "Toby Tyler," books on animal training won the most interest, and long after the circus left, its echo was heard in frequent requests for a "circus animal book."

EDITH H. JOHN, *Branch Librarian,*
Queens Borough Public Library.

INTRODUCING CHILDREN'S BOOKS TO THE BOOK TRADE

A SERIES of eight evenings in the children's room of the New York Public Library at Fifth avenue and 42d street are to be conducted during October and November by Annie Carroll Moore, supervisor of work with children, under the auspices of the New York Public Library in co-operation with the American Booksellers' Association, the Booksellers' League of New York, and the Women's National Book Association.

There will be lectures, discussions, and exhibits of books and pictures, the purpose being to familiarize booksellers and publishers with such aspects of children's literature as seem at the present time most actively to concern parents and teachers who buy books for children.

Part of each evening will be devoted to discussion of the lecture and to the booksellers' problems relating to stock, sales, customers, etc.

The schedule is as follows:

- Oct. 2—Children's Books: How a special literature for children originated, its growth and its expansion by subject.
- Oct. 9—Fairy Tales: Their defenders and objectors.
- Oct. 16—Histories: The readable and the reliable.
- Oct. 23—Books about the War.
- Oct. 30—Boys' Books.
- Nov. 6—Girls' Stories.
- Nov. 13—Illustrated Books, including picture books for little children.
- Nov. 20—The Holiday Books of 1918.

Tickets for the course are free and may be obtained at the children's room or from a number of the leading booksellers.

JUNIOR RED CROSS LINKS UP WITH THE LIBRARIES

THE primary aim of the recent membership campaign of the Junior Red Cross society was not the collection of money but an educational one, in the fostering of national ideals, good citizenship and international good will thru mutual knowledge and appreciation. The Junior organization wants to make its members intelligent, social minded citizens, the enrollment an accomplishment for peace as well as for war, a great volunteer army of American patriots 20,000,000 strong for community service, a patriotic citizenship of "world patriots" to fight ignorance.

To help in this aim a Junior Red Cross library committee was appointed by Dr. H. N. McCracken, president of the Junior Red Cross. The members of this committee are C. C. Certain, Cass Technical High School, Detroit, chairman; Effie L. Power, chief of children's department, Carnegie Library of Pittsburgh; and Elisabeth Knapp, chief of children's department, Public Library of Detroit.

The purpose of the committee was thus defined: To promote library service as one of the means of properly informing children concerning their national life and preparing them for intelligent participation in the activities of the Junior Red Cross and affiliated organizations.

The methods suggested by the committee are as follows:

- I. Co-ordination of library service with Red Cross activities, by
 - (a) Compilation and distribution of reading lists and leaflets published by the Junior Red Cross to be correlated with patriotic and educational programs.
 - (b) Publication of illustrated bulletins.
 - (c) Establishment of permanent Junior Red Cross shelves or alcoves in libraries to make accessible reports and all literature of Junior Red Cross and allied organizations.
 - (d) Clipping and mounting of material of local interest to branches of the Junior Red Cross Society.

- (e) Junior Red Cross week scheduled in libraries and schools, date to be specified later when exhibits can be prepared, lists distributed, stories told, plays acted and talks made.
- (f) Exhibits of books, pamphlets lent for advertising work of Junior Red Cross. An exhibit of this kind is possible with that of the handiwork of members.
- (g) Reading clubs, study clubs and debating clubs in libraries can do Red Cross knitting without interference with their usual programs. The programs of these clubs also offer unlimited opportunities for information.

II. Definite concerted effort on the part of librarians in helping to save the children of America from the unsettling effects of the war. The stimulation of imagination, refreshment of mind, creation of new interest and the reading for pure enjoyment are immeasurable assets in attaining the purposes of the Junior Red Cross.

At both the A. L. A. and N. E. A. meetings active co-operation with the plans of this committee was promised.

LIBRARY ON AMERICA STARTED IN ROME

CLOSER intercourse between the United States and Italy in the common cause of the war has caused rapid growth of interest in each other's affairs in the last few months, and with increased knowledge of Italy's contribution to the success of the Allies has come increased appreciation.

In a letter to the Librarian of Congress Mr. (Commendatore) H. Nelson Gay, who is associated with the Library for American Studies in Italy, writes of his work:

"We are doing what we can here to make possible future close relations between Italy and the United States, but such relations between the two nations can be established only when existing ignorance has been dispelled on both sides of the Atlantic. As you know, Italy is as ignorant of the United States as America is of modern

Italy, and no library in Italy contains even a decent collection of American books.

"The Library for American Studies in Italy has a plan by which it intends to rectify this situation and rectify it immediately. In a circular sent out recently we call for 5000 volumes and 50,000 lire by Jan. 1, 1919, double that number of volumes and double that amount of money by Jan. 1, 1920, and there is no reason why we should not eventually develop a library on the United States which for educational purposes will rank among the best—a library that will make it possible for university students in Rome to take their Ph.D. degree in American history, literature, economics, etc.; for Italian deputies to speak in parliament with authority upon American questions; for Italian journalists to clearly distinguish between the United States and Guatemala.

"Our purpose is to deposit the library for the present with the Italo-American Union, which has taken quarters facing the new entrance to Parliament.

"We need wide and vigorous support from America and we need it at once. We hope that you will find some way, we know that you will wish, to assist us. Can you not secure for us some official and other publications?

"Books should be sent singly, when possible, by ordinary post, *not* by parcel post when this can be avoided. I have received a hundred or more volumes from America in this way during the year without loss."

Books should be addressed to H. Nelson Gay, The Library for American Studies in Italy, Palazzo Orsini, Rome, Italy.

"THE old adage that there is a reader for every book and a book for every reader has still some truth in it, altho it is not entirely true; and the greatest fault in some otherwise good librarians and committees is a superior super-exclusiveness, which imagines for itself a mission to interest people in a selected circle of subjects. The fully-developed library, however, is the most catholic thing; it ignores nothing, despises nothing, except that which is actually evil."

THE STUDY OF GERMAN IN FRANCE

IN view of the extreme attitude taken in certain American communities against the continued teaching of German in the high schools and colleges, it may be well to consider a report received by the Department of State under date of June 14 from Inspector General Potel of the French government, in reply to inquiry concerning the study of the language in France since the war.

At first there was the same hostility there as is now shown here against instruction in German. Discussions of the question were opened in the newspapers, and attendance at German classes became poor. In September, 1916, an interministerial commission met at the Ministry of War to study the modifications to be made in the examinations for admission to the important military schools as regards foreign languages.

In the competitive examinations for admission to the Polytechnical School and the school of Saint-Cyr, candidates have always been allowed to choose as a required language, either German, English, or Russian. In a letter addressed to the minister of public instruction on Nov. 26, the minister of war, commenting on this regulation, says: "The university must counteract, in so far as it lies within its power, the tendency to which the inspectors general, members of the commission, have called attention, which manifests itself among the pupils to abandon the study of German."

On his side, the minister of public instruction invited the heads of institutions to exert their influence with the families to have their children inscribed for the German course.

During 1916 and 1917 attendance at the German classes increased, the number of pupils varying from one-fourth to one-third of the total number. It is in the public schools that the abandonment of German has been most marked. In the universities and in the commercial schools the German language and German literature are still studied.

"But the studies," writes M. Potel, "from the fact of the war, have undergone pro-

found changes which the programs did not need to prescribe, because they occurred, so to speak, spontaneously. Already the ministerial instructions of 1902 specified that 'apart from the language itself, the foreign country and the people who live in it should furnish more particularly material for instruction.'

"To-day less than ever should there be ignorance of Germany. One must first study her on the spot, follow her economic evolution and the development of her social institutions, the movement of her associations, the instruction given in her universities. One must watch over all the manifestations of her activity, and, in order to be exact, our information must be based on a knowledge of the German language. If we are ignorant of German, we do not know Germany, or, again, what is more serious still, we shall only know and see of her what she wishes to show us. She will appear generous, humanitarian, and pacifist, and will conceal, under the veneer of an innocent good nature, her moral hideousness, which, when she reveals herself, revolts the human conscience.

"When peace is signed the Germans must be watched at home, but they must also be watched here with us. What makes the strength of Germany is above all the manner in which she has known how to establish herself in all countries. . . . Do not let us hope to raise a wall which will protect from attempts at invasion on the part of Germany. She will have abroad her associations, churches, lodges, choral societies, patronal or workingmen's syndicates who will all prepare for the next war. It would be culpable not to speak the language of all these artisans of a powerful country like Germany, for one must understand what they say, read what they write, and endeavor to learn what they think."

A RULING has been made by the War Department that books and periodicals can be sent by individuals to American prisoners of war in Germany only when they are ordered thru the publishers and are dispatched from the offices of publishers.

American Library Association

PUBLISHING BOARD

Arthur E. Bostwick and Matthew S. Dudgeon have been reappointed by President Bishop to the A. L. A. Publishing Board for terms of three years each. At the Saratoga conference the Executive Board appointed Josephine A. Rathbone a member of the Publishing Board to fill the unexpired term of the late Henry E. Legler.

The composition of the A. L. A. Publishing Board is now as follows: Arthur E. Bostwick, acting chairman, Mrs. H. L. Elmendorf, M. S. Dudgeon, Carl H. Milam and Josephine A. Rathbone.

Library Schools

NEW YORK STATE LIBRARY SCHOOL

The school will open Sept. 18. While the attendance will be considerably smaller than usual, the loss in attendance will probably be a little less than was anticipated earlier in the year.

Several changes will be made in the faculty. Katharine Dame has left, on leave of absence, to do Red Cross work in Italy. Her place will be taken by Sabra W. Vought (1901) who will divide her time between the school and the State Library. Jennie D. Fellows will give up her course in advanced cataloging. The two courses will probably be consolidated in one briefer required course. Edna M. Sanderson, the school's registrar, will go to Washington during October and November to assist Caroline Webster in personnel work for camp and hospital libraries. Her work will be largely assumed by Hazel M. Leach (1919) who has just joined the staff of the school.

Mr. Biscoe has given another rather notable lot of bookplates to the school collection. It includes several rare plates by E. D. French, not previously in the school's possession.

The annual report for 1917, which was much delayed in passing thru the press, is now out. Any one of the alumni who has not received one may have a copy on application to the school.

Since the regular commencement exercises, Rachel A. Harris and T. C. Tai, both of the class of 1918, have been granted the degree Bachelor of Library Science.

Nathan R. Levin, B.L.S. 1918, now on the staff of the Chicago Public Library, was married to Henrietta Zuckerman August 31.

FRANK K. WALTER.

PRATT INSTITUTE SCHOOL OF LIBRARY SCIENCE

The summer of 1918 was kaleidoscopic in the number of changes it brought in the library staff, among the graduates, and in the ranks of the entering class. Fortunately the faculty of the school has survived untouched, and enough applications came in during the summer to balance the withdrawals and bring the class up to its usual size.

The class of 1919 promises to come up to our usual standards; certainly the members bring to the common store a breadth and variety of experience that augurs well for an interesting school year. There are four from the Pacific Coast, four from Greater New York, three Canadians, three Pennsylvanians, two from Connecticut, two from the District of Columbia, two from Ohio, and one each from New Hampshire, New York state, Florida, and Wyoming. All but four have been in libraries, and experience in the methods of many different kinds of libraries will add interest to the class room discussions. Large systems like New York, Brooklyn, Portland, Oregon, and Washington, D. C., medium-sized libraries as Hartford, Conn., and Harrisburg, Pa., and smaller town and village libraries are all represented, as well as children's work, high school library work, and that of several special libraries. In addition to library work several of the students have had business or secretarial experience, three have taught, and one has been in a bookstore.

ALUMNAE NOTES

Cards have been received announcing the marriage of:

Ida W. Lentillon, 1912, branch librarian, Queens Borough Public Library, to Joseph Ervin Rutledge.
 Florence L. Crosier, 1914, branch librarian, Cleveland Public Library, to Arthur Bennet Loomis, Jr.
 Inger H. Garde, 1915, branch librarian of the Copenhagen Public Library, to Peter Fangel.
 Mary Louise Knox, 1916, to Robert Roland Finster, of the New York Public Library.
 Florence Dewey, 1917, head of the circulation department of the Waterloo Public Library, to Frank Leslie Novak.

The following appointments among the members of the class of 1918 were made too late for inclusion in the July number:

Mrs. Emilie P. Chichester, assistant, office of the Mayor's committee for community councils.
 Anne Cunningham, assistant, circulation department, New York Public Library.
 Marjory L. Hawley, assistant, Bloomingdale branch, New York Public Library.
 Ruth Hoffman, assistant, children's department, New York Public Library.
 Mary Brown Humphrey, reference librarian, State College of Washington, Pullman, Wash.
 Lillian Sabin, assistant librarian, State Normal School, Tempe, Arizona.

JOSEPHINE ADAMS RATHBONE,
Vice-Director.

LIBRARY SCHOOL OF THE NEW YORK
PUBLIC LIBRARY

The period of preliminary work for students who have had no library experience opened on Monday, Sept. 9. As was the case last year a number of instructional hours are included in this, the purpose being to hasten the process of familiarizing students with library terms and the simpler library methods. The first semester proper began on Monday, Sept. 23. No marked changes in the outlines of the work are contemplated, altho it might be mentioned that except for some incidental discussion of the subject the instruction in technical French and German is to be dropped. The hours thus released will be devoted to increased emphasis on administrative topics and to more careful inspection and study of the varied types of libraries represented in New York City. It is probable also that last year's plan of "lumping" assignments for practical work will in the coming winter be carried still further, and that these will be concentrated in four consecutive weeks of field service, as is the custom in some other library schools.

The advanced courses are scheduled to open on Tuesday, Oct. 1. The work necessary to qualify for the diploma is, in amount, the same as that required last year, but because of war conditions there will be less latitude than formerly as regards electives. For the first semester there will be offered courses in administration, book-selection, advanced reference, and children's work and literature, and for the second semester courses in administration, book-selection, book-making and collecting, and the library and the community. The compilation of bibliographies and the preparation of these will remain as possible substitutes for certain of the instructional courses.

ERNEST J. REECE, *Principal*.

IOWA SUMMER SCHOOL FOR LIBRARY
TRAINING

The seventeenth session of the Iowa Summer School for Library Training was held June 17 to July 26 at the State University of Iowa, Iowa City.

Miriam E. Carey, who was to have served as director, was released for work in the camp hospital libraries. The corps of instructors included Julia A. Robinson, instructor in library administration, book selection and trade bibliography; Jane E. Roberts, instructor in classification; Grace Shellenberger, instructor in children's literature; Clara L. Abernathy, reviser and instructor in minor topics. The courses in cataloging and reference were given by the director.

The school was most fortunate in having several special lectures by members of the University faculty and Iowa librarians. Much of the success of the school is due to the inspiration brought by these lecturers. The following were speakers: Mrs. Max Mayer, of Iowa City, a representative of the Food Administration; Dr. Ellsworth Faris, of the university, on child welfare; Maria Brace, librarian of the Waterloo Public Library, on publicity; Ione Armstrong, librarian of the Council Bluffs Public Library, on war books; Mary Marks, reference librarian of the Iowa Library Commission, on traveling libraries; Dr. B. F. Shambaugh, of the university, on the State Historical Society of Iowa; Helen Proudfoot, children's librarian of the Des Moines Public Library, on publicity in children's work; F. B. Spaulding, librarian of the Des Moines Public Library, on modern poetry, and a second lecture on camp library work. Interesting reports from the meeting of the American Library Association were given Johnson Brigham, librarian of the State Library, Julia A. Robinson and Helen Proudfoot.

In addition to the special lectures given before the library school a course of lectures on the present war, given by the departments of history and economics, sociology and commerce, was open to students in the library school and many took advantage of the opportunity to attend these lectures.

Twenty-seven regular students were in attendance, two of whom were from South Dakota, one from Nebraska, one from Wyoming, and the remainder from Iowa. Five special students were registered for the courses in classification, reference and cataloging.

BLANCHE V. WATTS, *Director*.

RIVERSIDE LIBRARY SERVICE SCHOOL

The course for candidates for work in camp libraries ended August 9. Five men completed the course and have been assigned as follows:

Lincoln Doty Brown of New York, to Camp Logan, Houston, Texas.
Robert S. Fullerton of Boston, to Camp Travis, San Antonio, Texas.
Merwyn J. Newburg, San Bernardino, Calif., to Camp Cody, Deming, New Mexico.
William E. Blaikie of Los Angeles, formerly of Boston, to the camps and stations at Los Angeles Harbor.
George E. Chase, of Walnut Creek, Calif., formerly of Boston, will not be available until October 1st when he will be assigned.

Two other Riverside Library service school men are now in camp library service: Alvan W. Clark, formerly of San Jose, at Camp Sevier, South Carolina, and Ralph Beals, for-

merly of Santa Ana, now at Camp Cody, New Mexico.

These men were selected from seventy-five candidates and should make good. Another group will be formed soon.

Margaret Guthrie, Riverside 1918, has been appointed librarian of the Orange Union High School, California.

Betty Mary Smith, Riverside 1918, will begin work at the El Paso Public Library October 1st.

The library at March Aviation Field shows an active use by the thousand men including the ground school and cadét fliers. The shelving has been increased, more books have been added and an excellent selection of technical books has been sent by the A. L. A. The gratitude of all the men in camp for periodicals and technical books sent by the A. L. A. would convince any one that the money is well spent.

JOSEPH F. DANIELS.

UNIVERSITY OF WASHINGTON LIBRARY SCHOOL

Lillian Anderson, 1916, has been appointed librarian of the Lincoln High School, Tacoma, Washington.

Dorothy Hayes, 1918, has been appointed to a position in the Circulation department of the Seattle Public Library.

Helen Stone, 1918, comes to the University of Washington Library October 1st, as Circulation assistant.

Nell Unger, 1918, has accepted a position as librarian of the Lincoln High School, Seattle.

Ruth Reynolds, 1916, was married in May, 1918, to Edwin E. Severns of the U. S. Navy. Mrs. Severns will continue her work in the Seattle Public Library for the present.

Harriet Smith, 1916, was married June 1, 1918, to Lieut. Frank S. Buckley.

W. E. HENRY, *Director*.

ST. LOUIS LIBRARY SCHOOL

All of the graduates of the class of 1918 have received appointments, the following serving as assistants in the St. Louis Public Library:

Sofia Assmann, circulation department.

Margaret Donan, children's room.

Norma Klinge, stations department.

Bonnie Moore, open shelf department.

Evalyn Jackson and Janet Hannaford, reference department.

Elizabeth Wagenbreth, Nina English, Annalil Huning, and Lucille Buder, catalog department.

Asenath Barnes of Portland, Oregon, accepted the position of assistant in the Public Library of Mason City, Iowa.

Gertrude Davis of Muskogee, Okla., re-

turned to take a position in the Muskogee Public Library.

Alice Rodgers of Como, Tenn., goes to Columbia, Mo., to take charge of the Agricultural Library, a department of the University Library.

HARRIET P. SAWYER, *Principal*.

Reviews

EDUCATION IN WARTIME

The school and the war: being no. 41 of *Teaching*. Emporia, Kan.: Kansas State Normal School. April, 1918. 56 p.

In this special number of *Teaching* inspiring editorials deal with the broad aspects of the war in relation to the school. Two battle lines must be made to hold, one in France, one in America. War, the leveller, carries within itself the seeds of reconstruction; and the new education will more closely fit the nation's need. In a country where every citizen is to have a vote the responsibility of the teachers is great. The student must be trained to fill his place in the community, state and nation, so that democracy be made safe for the world.

Then follows a review by Dr. P. P. Claxton, Commissioner of Education, of statistics showing decrease in registration at high schools and colleges. He urges the nation's need of men and women of scientific knowledge who shall safeguard the state from weakness and corruption from within, and pleads for the continuance of the training of all students who "cannot render some immediate service of great value."

The result of the war will be determined by the quality of the men who have to carry on the world's work after the war, says Dr. W. D. Ross; it is therefore as patriotic that we be willing to spend money to educate as to spend it to fight. Gov. Arthur Capper urges this also: "No narrow-minded men can sit in the parliament of men and the federation of the world for whose inauguration we are fighting." Charles F. Scott points out the increased opportunity for the trained, when, after the war "our country will be left the commercial, industrial and financial leader of the world."

Members of the faculty of the Kansas State Normal School contribute practical suggestions for war service work in schools and show how the questions raised by the war and recorded in the daily papers may form the subject of class work in weather-study, hygiene, general science, history, geography, English; how the manual arts class can make

furniture for camp use and knitting needles for the Red Cross; how the rural teacher may help by teaching canning without sugar, preservation of waste apples, etc.; how groups of musicians may make themselves welcome in the local camps.

A 3-page Teachers' directory for patriotic service lists official, national, and state organizations; welfare and patriotic organizations; important books and reference sources; and institutions giving further information; and the number concludes with an account, quoting statistics, of war activities in Kansas schools.

A UNION LIST OF SERIALS

Rochester Public Library. Union list of serials in the libraries of Rochester. Rochester, N. Y.: The library, 1917. 147 p. O.

The plan for the list was launched under the auspices of the Rochester District Library Club, and the work undertaken by the Rochester Public Library shortly after its organization in 1912.

"It [the list] is a revelation in one sense at least," says Mr. Yust. "It shows a wealth of periodical literature in our libraries which will be made more useful through this publicity. Its preparation and publication has promoted library co-operation, a thing of value to both libraries and readers."

Thirty-two libraries have contributed, including the six branches of the Public Library, various institutional libraries and the reference collections of factories and business corporations. Information is given with regard to the hours of opening of these libraries; conditions of use; number of volumes contained; number of periodicals taken; name of the librarian, the specialty of the library and any other matter which may be of interest to the public. There are 3065 titles listed, and 1048 references given. The arrangement is alphabetical. The nature and number of the references render the use of the list an easy matter. Notes directly under the title show continuations, changes of title, amalgamations, and, in the case of society publications, the name of the issuing body. Abbreviations and symbols are well chosen and well explained, and a clear statement is given of the scope of the list and of the plan on which entries and references are made.

The list must be a welcome tool alike to layman and librarian; and one looks forward to the day when, inspired by this enterprise, other libraries may prepare similar lists for the centres in which they are situated.

Librarians

ADKINS, Venice A., New York State Library School 1912-13, resigned her position with the circulation department of the New York Public Library to become indexer and cataloger for the Bridgeport district of the Ordnance Office at Bridgeport, Conn.

ANDERSON, Mrs. R. R., Library School of the New York Public Library 1916-17 (Pratt 1911), is now service directory librarian for the Community Clearing House, New York City.

ANDERTON, Dorothy, Library School of the New York Public Library 1914-15, has resigned from the staff of the circulation department of the New York Public Library.

BOSWELL, Harriett, Library School of the New York Public Library 1917-18, (Atlanta 1916) has been appointed assistant secretary of the Kentucky Library Commission, Frankfort.

BROOKE, Evelyn, Pratt 1916, has gone overseas with the Red Cross.

CHARLTON, Ruby, New York State Library School 1911-12, has resigned as assistant librarian of the State Teachers College at Cedar Falls, Ia., and will go to California for the winter.

CLEMENTS, Ruth, first assistant in the Chelsea (Mass.) Public Library, has resigned to take a position in a newly created department of the Bay State Street Railway.

CONDELL, Lucy, Library School of the New York Public Library 1915-16, (Drexel 1904) is now a file clerk for the U. S. Port Supply Office, New York City.

CONKLING, Portia M., Pratt 1915, of the Troy Public Library, returns to the Pratt Institute Free Library as general assistant.

COWING, Agnes, Pratt 1902, has been given a six months' leave of absence from the Pratt Institute Free Library to take charge of the Base Hospital Library at Camp Merritt.

DEVOY, John W., for eighteen years treasurer of the Brooklyn Public Library, died of heart disease on Aug. 18, in Watertown, N. Y.

DEXTER, Elizabeth, has resigned her position as high school assistant in the schools division, Carnegie Library of Pittsburgh, to enter war service.

ELKIN, Bertha D., who has had experience in the Library of the University of Kentucky and more recently has been a substitute in the Hutchinson, Kansas, Public Library, has been appointed an assistant in cataloging in the Wichita City Library, beginning Sept. 1.

ENCKING, Louise F., Pratt 1907, has resigned from the librarianship of the Oshkosh Normal School to accept that of the Normal School at Tempe, Arizona.

ENDICOTT, Grace, first assistant in the children's department of the Carnegie Library of Pittsburgh, has succeeded Miss Lewis as branch librarian at Homewood.

FLEMING, Ruth, Library School of the New York Public Library 1915-16, is now reference librarian at the Oregon State Library, having formerly been an assistant in the Library Association, Portland.

GIBBS, Dorothy D., New York State Library School 1919, has been appointed assistant in the New York State Library.

GROUT, Edith N., B.L.S. New York State Library School 1913, resigned her position with the Minneapolis Public Library to go to the New York Public Library as assistant in the information department.

HALL, Anna G., B.L.S. New York State Library School 1916, resigned the librarianship of the Endicott (N. Y.) Public Library to fill a year's engagement as library organizer for the Educational Extension Division of the New York State Education Department.

HAY, Elsie, Pratt 1912, is organizing the files and records of the National City Bank of New York.

HIRST, Lois F., has resigned from the children's department of the Newark (N. J.) Free Public Library to become children's librarian at the Atheneum Library in Westfield, Mass.

HOISHOLT, Lucia, Riverside 1917, was married at Oakdale, Calif., to Captain Nolan West Ferguson.

HOLMES, Florence I., B.L.S. New York State Library School 1912, is engaged in indexing and cataloging for the Bridgeport, Conn., district of the Ordnance Office.

HOWELL, Sarah Lyon, Drexel 1910, who resigned from the Order Department of the Library of the Engineering Societies, New York City in April, 1918, to take charge of the filing department of the Planes and En-

gine Inspection Section, Bureau of Aircraft Production, has also been organizing the library in the Y. M. C. A. hut at Camp Meigs, Washington, D. C.

HULL, Ruth S., Pratt 1915, has been made librarian of the Department of Labor and Industry, Division of Municipal Statistics, Harrisburg, Pa.

JEBSEN, Elisa, New York State Library School 1917-18, who has been engaged on a special piece of cataloging at Harvard University Library during the summer, will remain on the staff for the coming year.

JOHNSON, Cornelia, Library School of the New York Public Library 1917-18, is assisting in the library at Camp Travis, Texas.

JOHNSON, Ethel M., librarian of the Women's Educational and Industrial Union in Boston, has accepted a secretarial position in Boston as the Union has arranged to unite the library with its book shop for children. Miss Johnson organized the special library on women in industry in 1910, and has been in charge eight years. The new arrangement went into effect Sept. 1.

JOHNSON, Mary Augusta, Pratt 1917, has left the New York Public Library to become assistant librarian at Madison, N. J.

JOHNSTON, Alice Haywood, wife of John M. Johnston, assistant librarian of Cooper Union, New York City, died suddenly, August 14, at Loomis Sanatorium, Loomis, N. Y. Mrs. Johnston was a graduate of the training class of the New York Public Library (1907) with which library she was connected until her marriage in 1911. She is survived by her husband, a daughter and a son.

JONES, Caroline L., has resigned her position as branch librarian at the Hazelwood branch of the Carnegie Library of Pittsburgh to become hospital librarian at the United States General Hospital No. 1, New York city.

KERR, Julia, Albany 1916, has resigned her position in the catalog department of the Carnegie Library of Pittsburgh and has accepted a position as an assistant in the Schenley High School Library, Pittsburgh.

KOSTOMLATSKY, Zulema, New York State Library School 1912-13, has resigned her position as chief of the circulation department of the Seattle Public Library to become assistant librarian of the Portland, Ore., Library Association.

LEACH, Hazel M., New York State Library School 1919, has been appointed assistant in the New York State Library School.

LEWIS, Sarah V., has resigned her position as librarian of the Homewood branch of the Carnegie Library of Pittsburgh, to become superintendent of circulation, Seattle Public Library.

LINDGREN, Elin, Pratt 1913, resigned from the Pratt Institute Free Library to take charge of the work with convalescent soldiers at the United States General Hospital No. 3, Colonia, N. J.

MCCRIGHT, Edith, cataloger at Riverside Public Library, went to the El Paso Public Library Sept. 1.

MCLAUGHLIN, Ruth, Library School of the New York Public Library 1912-13, is acting as catalog and file clerk for the Production Division of the U. S. Ordnance Department, Chicago.

MAGEE, Anna Mary, a graduate of Wisconsin Library School, joined the staff of the reference department of the Carnegie Library of Pittsburgh on August 1.

MATTHEWS, Evelyn, Pratt 1917, for a year general assistant at the Osterhout Library, Wilkes-Barré, Pa., has been appointed librarian of the State Normal School, Indiana, Pa.

MAY, Anna, Pratt 1911, children's librarian at the Mount Vernon, N. Y., Public Library for several years, has been appointed librarian at the New York General Hospital No. 10, Fox Hills, Staten Island.

MAYES, Olive, Pratt 1913, resigned from the Alabama Girls' Technical Library to go into Library War Service and is now librarian of the hospital at Camp Hancock, Ga.

MONTGOMERY, Ruth, New York State Library School 1917-18, has received an appointment as first assistant in the Legislative Reference Section of the New York State Library.

MORGAN, Helen H., Pratt 1915, joined the staff of Columbia University on the closing of the Hispanic Museum.

MORGAN, Margaret J., was married on July 6, to Edgar P. Bengert, of Columbus, Ohio, who has been for some time connected with the Department of English, in the Ohio State University. The Providence Public Library thus loses another of its well-equipped and efficient workers. Miss Morgan had served

as the head of the foreign department since Miss Reid's retirement (also thru marriage), in 1916.

PULLING, Arthur C., librarian of the University of Minnesota Law School, has gone to Washington to become librarian for the War Department.

QUIGLEY, Margery C., New York State Library School 1916, resigned the headship of the Divoll branch of the St. Louis Public Library to succeed Anna G. Hall as librarian of the Public Library at Endicott, N. Y.

RANKIN, Hilda M., Pratt 1916, leaves the staff of the Pratt Institute Free Library for a position in the circulation department of the New York Public Library.

RAYMOND, Esther, Pratt 1910, since graduation connected with the library of the American Society of Civil Engineers, died at her home in Rochester, Sept. 9.

RAYMOND, Mary, a Simmons graduate, has joined the staff of the catalog department of the Carnegie Library of Pittsburgh.

REID, Jeannie, Library School of the New York Public Library 1916-18, has been appointed first assistant in the People's Library, Newport, R. I.

REILLY, Genevieve Osborne, Pratt 1916, resigned as assistant librarian at Madison, N. J., to become librarian at Bloomsburg, Pa.

REYNOLDS, Margaret, Wisconsin 1907, who for six years has been the librarian at Milwaukee-Downer College, has resigned to accept the recently created position of librarian at the First National Bank of Milwaukee.

RHODES, Gertrude, Library School of the New York Public Library 1917-18, has taken a position as assistant in the library of the American Social Hygiene Association, New York City.

ROBBINS, Mary E., has finished her work with the Library School, Carnegie Library of Atlanta, Ga., and is at her home in Lakeville, Conn.

ROBIE, Amelia H., Pratt 1914, formerly of the Carnegie Library of Pittsburgh, has accepted a position on the Pratt Institute Free Library staff.

ROOT, Harriet, first assistant at the Wylie Avenue branch of the Carnegie Library of Pittsburgh, has become librarian of the Hazelwood branch.

SANFORD, Mrs. Winifred Mahon, Library School of the New York Public Library 1916-17, is chief file clerk for the Vulcan Steel Products Company, New York City.

SANTES, Marie M., New York State Library School 1918, has gone to the University of Minnesota as assistant cataloger.

SCHOWALTER, Elma C., Riverside 1916, has been appointed librarian at McKendree College, Lebanon, Ill.

SINGLEY, Louise, first assistant in the Schools Division, Carnegie Library of Pittsburgh, has been granted a year's leave of absence to accept the position of hospital librarian at Camp Beauregard. Miss Singley's position has been filled by the appointment of Muriel Crooks, of the New York Public Library School.

SLOAT, Minnie F., Library School of the New York Public Library 1917-18, has accepted a place as index and catalog clerk for the U. S. Ordnance Department, Bridgeport, Conn.

SMITH, Ruth E., New York State Library School 1919, has been appointed assistant in the book selection section of the New York State Library.

SPOFFORD, Walter R., librarian of the University Club in Chicago, was married July 2 to Miriam M. Larck of that city.

STETSON, Oberum Orrin, for more than twenty years document clerk in the Maine State Library, resigned his post on July 1.

TIEMANN, Edith, Library School of the New York Public Library 1911-13, has left the circulation department of the New York Public Library, and became on Sept. 1 registrar of the Library School of the New York Public Library.

TODD, Nancy, H., B.L.S. New York State Library School 1918, has joined the staff of the Carnegie Library at Pittsburgh as first assistant in the Homewood branch.

TURNER, Elizabeth T., Library School of the New York Public Library 1916-17, has resigned her place in the Kansas City (Mo.) Public Library to become an assistant in the circulation department of the New York Public Library.

UNGER, Nell, who recently went from Seattle to Hood River, Ore., as county librarian, has tendered her resignation, and will return to her home city to engage in library work.

VAN EMAN, Edith K., Pratt 1913, has been appointed librarian of the Public Library at Oshkosh, Wis.

VONHOLD, Mrs. Gladys Schummers, Pratt 1915, resigned as librarian of the Fair Haven branch, New Haven Public Library, and has joined the staff of the Carnegie Library of Pittsburgh.

VROOMAN, Janet, Library School of the New York Public Library 1916-17, has left her place in the Library for the Blind at the New York Public Library, and is now at her home in Kingston, N. Y.

WALLACE, Edith, University of Washington Library School 1918, has been appointed an assistant in the circulation department of the Seattle Public Library.

WALLER, Florence M., B.L.S. New York State Library School 1918, began her work in June as technology librarian in the Seattle Public Library.

WARRICK, Ruth E., Simmons 1917, and an assistant in the New York Public Library the past year, has accepted the position of cataloger in the Wichita City Library and will begin work Sept. 1.

WENNERBLAD, Sonja, University of Wisconsin Library School 1917 and Cleveland Training Class for Children's Librarians 1917-18, will begin work in September as children's librarian in the branch department of the Seattle Public Library.

WEST, Eva, Riverside 1914, has been appointed cataloger at the Lane Medical Library, San Francisco, to begin Oct. 1.

WHITCOMB, Alice J., for three years library cataloger in the U. S. National Museum, Washington, D. C., resigned on April 30 to accept the position of assistant cataloger at Dartmouth College Library, Hanover, N. H.

WIGGIN, Mary P., New York State Library School 1917, has been engaged as librarian of the Public Library at Danbury, Conn.

WINSLOW, Mary E., Library School of the New York Public Library 1913-15, has been compelled by ill health to give up her position in the circulation department of the New York Public Library.

WRIGHT, Ruth, Pratt 1903, librarian since 1911 of the Normal School at Temple, Arizona, has been made librarian of the Van Wert County Library, Ohio.

THE LIBRARY WORLD

New England

VERMONT

Bennington. Helen B. Shattuck, librarian at the Billings Library, has received some war documents from the "Asile des Soldats Invalides Belges." Among them are envelopes which contained letters smuggled from Belgian soldiers to their relatives, posters having to do with the soldiers and refugees, fac-similes of German notices published in Belgium, and copies of the Belgian paper, which no matter how many times it has been suppressed, is still appearing. Miss Shattuck has placed all of these articles on sale at the library and the proceeds will go to the Society for Belgian Relief Work.

MASSACHUSETTS

Athol. The new Carnegie Library, built for almost three years and never occupied, was opened Sept. 9. The hours are to be from 2 p. m. to 9 p. m., with an additional two hours Saturday, from 10 to 12 a. m. The children's rooms will not be open in the evening. The library has practically no new books, as was hoped for at the time of its opening. The money which would ordinarily go for that purpose has been used to defray the moving expenses, no money for which was provided by the town. The sum of \$2000 will be used by the town for the upkeep of the building.

Boston. An excellent résumé of the Public Library situation, including both the attempted unionizing of employes and the recent investigation of the entire library system by a committee of library experts, was contributed to the *Springfield Republican* of Sept. 4 by its Boston correspondent.

Lynn. The training class for library assistants opens Oct. 1, graduates of the city high schools as well as members of the senior classes being eligible.

Lynn. The Wyoma Carnegie branch of the Lynn Public Library was formally dedicated and opened to the public Thursday evening, Sept. 19. The mayor of the city, the municipal council and the board of trustees of the library were present and took part in the exercises.

CONNECTICUT

South Manchester. When the new Free Library building is constructed it will occupy

the site at the junction of Forest and Main streets, where the old Keating homestead formerly stood, tho it was the original intention to have the new library building grouped with the school buildings on Recreation square. After the big school fire of October 23, 1913, in which the South Manchester Free Library building was also burned, temporary quarters were established for the library in the Eldridge home on Main street. This location has been found very convenient and the circulation of the library has greatly increased there. This matter of convenience no doubt has led Cheney Brothers, who are to pay for the cost of the building, to alter their former plans. Some months ago they purchased the Keating property and the old homestead, which was damaged by fire, has been razed. It is hardly possible that anything will be done in the matter of constructing the new library building until after the war.

Middle Atlantic

NEW YORK

Claverack. At the fair held in Memorial chapel in August for the benefit of the Free Library and Reading Room about \$275 was realized.

Endicott. The Endicott Free Library has moved to new quarters in a community house recently given the village by Mr. and Mrs. George F. Johnson. The library (about 7000 volumes) occupies the lower floor. The upper floors contain four club rooms, a kitchen and an assembly room seating 150. These rooms are under the supervision and control of the library and are to be used by the people of the community and surrounding rural districts under the usual conditions.

New York City. For the first time since its foundation, shortly after the American Revolutionary War, the Mechanics' Institute Free Circulating Library, on West Forty-fourth street, closed for a period of two weeks in September. This was done to enable the librarian and his assistants to take their annual vacations. Owing to the shortage of help, it was found impossible to obtain substitutes to relieve them in their work.

New York City. At the request of Dr. John R. Mott, the library of the International Committee of the Y. M. C. A., including the "Bowne Historical Library," has become a

division of the association's bureau of records. This library contains the best of the expressions, convictions, actions and experiences of association leaders for the past seventy years. It has sections for general reference works; for association publications; for official reports of conventions and conferences; for kindred organizations; also for the student, railroad, boys, physical, educational, religious and other departments of Association work. An effort is being made to secure and preserve here duplicate copies not only of books, but of all material, both past and present, that records the life and activity of the association. This includes reports of all conventions and conferences, printed and written matter, resolutions, programs, photos of men, of buildings and of activities, posters, bulletins, films, statistics, charts, and so on.

NEW JERSEY

Newark. The former president of Colombia, Dr. Carlon E. Restrepo, was an unexpected visitor at the Colombian exhibit in the Public Library recently. The visitors were greatly pleased with the exhibit and in-dorsed the proposed plan to take it on tour after it closes in this city.

PENNSYLVANIA

Corry. The new library on North Center street is finished and the work of removing the books from the former library room in the High School to the new location began Sept. 7. When the furniture and certain fixtures are in place the library will be opened to the public. It is thought that eventually a lecture room will be arranged in the basement of the new building. Such a lecture room has been badly needed in this city for some time.

Pittsburgh. The library of classical works which belonged to the late William S. Pelletreau, brother of Helen E. Pelletreau, for many years president of Pennsylvania College for Women, has just come into the possession of the college, the gift of Mr. Pelletreau's niece, Mrs. John Biddle Clark of the class of '84. The announcement of this gift was made at commencement exercises of the college in June. The collection has 300 volumes, embracing texts, translations, grammars of individual authors, indices, and critical works. Another gift to the college library has been announced. Dr. E. J. Bailey, recently elected to fill the place left vacant by the retirement of George W. Putnam as head of the English department, has given to the college a library of English literature of 500 volumes, many of which are first editions.

Dr. Bailey was professor of English literature at Cornell.

South Atlantic

NORTH CAROLINA

Durham. The Durham Colored Library has secured a charter from the state and has purchased the present site from John Merrick. In the purchase of the site Mr. Merrick donated \$1000 to the library fund. After two years of struggle the colored library has now become one of the most valuable assets of the community. During the two year period 2000 volumes of good literature and reference books have been accumulated. As the colored library does not participate in the Carnegie appropriation, an appeal has been issued to white and colored friends of the library to give assistance in raising the \$825 borrowed, on personal security, in order to pay the full price of the much needed building. The library is the headquarters of the colored branch of the Red Cross, the club room of the embroidery, sewing and social clubs composed chiefly of girls who work in the tobacco factories and hosiery mills, and it is a rendezvous for the small children's classes in story-telling and instruction in expression of sympathy, friendship and helpfulness.

GEORGIA

The bill to enlarge the duties of the State Library Commission and to appropriate \$5000 for the development of traveling libraries for the rural districts, has been killed in the legislature.

East North Central

OHIO

Cleveland. The books in foreign languages in the main library have been transferred to the sociology division, and an additional assistant assigned to help in the work with foreigners. Under this arrangement it is hoped to be able to continue this important work with as much emphasis on Americanization as in the past and with the same helpfulness to those whose only reading can be in foreign languages.

Fremont. Birchard Library has completed its forty-third year of service, and at the recent annual meeting of the board of trustees reported a fund of \$25,000 invested in Liberty Loan Bonds; a raise in the tax levy for library purposes to .18 mill; and cost of maintenance the past year \$4,332. In compliance with the recommendation of the Association of Library Schools, the salaries of both li-

brarian and her first assistant were increased. A bequest of \$2,000 for building purposes was received from the late Dr. M. Stamm, a former trustee. A fresh inventory, after considerable weeding out of books, shows 13,000 volumes on the shelves. Additions of the year number 1,752. Circulation has doubled, 42,436 books circulating, of which 20,700 were juvenile. Posters for the alcoves were designed and made by pupils in the schools. The drive for soldiers' books brought in several thousand volumes, and \$600 for the soldiers' book fund. A Red Cross station was maintained at the library, the librarians acting as receivers. Even during the extremely cold weather of the winter, the library did not close for a single hour of its regular ten-hour a day schedule. The work of publicity included two large exhibits—a flower show, visited by over 600 citizens the first day; and an exhibit of rare bookplates. The museum, lodged in the open balcony, is one of the library's greatest assets and its displays are more and more co-ordinated with the work of the library below.

INDIANA

Indianapolis. The six months' training class for service in the Indianapolis Public Library begins the first week in October. Half the work (236 lecture hours) is devoted to lectures and the preparation of assigned work, and the other half to required practice work in the various departments and branches of the library.

MICHIGAN

Evansville. "In spite of the limitations imposed upon us by the purchasing power of the shrinking dollar we opened two new branches: at Howell, February 17, and in the Coliseum building, April 8," writes Ethel F. McCollough in a summary of the fifth annual report of the Public Library. "The office was moved from the West Side library to the Coliseum branch, which has also been made the information center for all business and technical questions. The circulation gain of 64,248 volumes over the previous year brought our total book issue up to 301,032 volumes. Ninety-six thousand, two hundred forty-five volumes were issued thru the schools, an increase of 18,450 volumes over 1916. This does not include 13,709 volumes circulated in Perry Township. The total number of card holders using the library is 22,001. One of the most satisfactory achievements of the year was the organization upon a definite working basis of the extension department. Fundamental questions of policy

have been formulated, report blanks, estimates of time and cost and a fairly adequate system of book exchanges between the stations worked out." The total number of books in all branches at the close of the year was 41,724. Total receipts were \$42,244.17, and expenditures \$38,642.55. Staff salaries took \$15,506.93, books \$10,526.25, periodicals \$1390.69, and binding \$1887.13. The library has no central building but has six branches, three in separate buildings.

East South Central

TENNESSEE

Knoxville. The Lawson McGhee Library has received permission to establish a branch in the Moses School building, which will be open to the public every afternoon.

Memphis. By arrangement with Cossitt Library a branch has been opened in Rozelle school. The branch is for the use of all the people who live in that section of the city, and is not confined to families of school pupils. The salary of the permanent librarian will be paid, half from the school funds and half by Cossitt Library. Similar libraries are already established at Central High and Riverside schools. Later, other such libraries will be established in other schools, with the intention of thoroly covering the city with them.

West North Central

MINNESOTA

St. Paul. The office of the J. J. Hill Reference Library was moved July 29 from the Great Northern building to the new Public Library.

IOWA

Des Moines. A short course covering the elementary principles of library work will be given in the Public Library from Oct. 1 to Dec. 20. Instruction will be given by the heads of departments in the library, and others qualified, and supervised practice work will be given in all departments. Supplementing this will be a course of lectures, not only on library topics but on literary, civic, and other subjects of general interest. Those completing the course will be eligible January 1, 1919, for appointment to the staff of the Des Moines Public Library, tho no guarantee of appointment is given. Instruction and practice will entail the student's presence at the library every week day, or a total of forty-two hours each week, the equivalent of the full working time of the staff.

MISSOURI

Poplar Bluff. The Public Library suffered the loss of some of its 1918 funds when the city collector absconded last spring. Since the latter part of March the building has been open afternoons and evenings only.

St. Joseph. The board of directors has decided to conduct a library apprentice class during the coming year beginning in October. Applicants for admission to the class must be between the ages of twenty and thirty-five years of age and must have completed a high school course or its equivalent. The entrance examination was held in June and covered the following subjects: history, literature, current events and one foreign language.

St. Joseph. The Public Library has been suffering from the vandals who mutilate magazines and books. The mutilation of magazines is the more common offense. Not long ago two girls were caught clipping a bound volume of *Theater* on the balcony at the central library, and were found to have clipped all the best pages, leaving the volume worthless. The girls are now denied library privileges and are even denied the right of coming into the library buildings. High school students tear pages from reference books to save spending time at the library to read them or the inconvenience of carrying the books home. It is practically impossible to keep a translation of the Latin texts used in the high schools. Students have been known to rip out whole chapters. Books are still stolen once in a while, but this offense is less frequent than in former years.

Shelbina. The Carnegie Public Library, completed last spring, is built of red brick and granite, and is centrally located in the railroad station park.

KANSAS

Wichita. The tax levy of the City Library has been raised from \$15,000 in 1918 to \$17,500 in 1919. Wichita is fast trying to make up for lost time as the following figures will show. In 1914, with rooms in the City Hall, the levy was only \$3500. In 1915 and 1916 the Carnegie minimum of \$7500 was voted. In 1917 this was increased to \$10,000, and in 1918 to \$15,000. It was in 1915 that the present librarian, Julius Lucht, took charge of the library, and its rapid development since that year is largely due to his energy and suc-

cess in building up a service that is reaching every element in the community.

West South Central

TEXAS

Houston. A branch of the Public Library has been established in the Lubbock school and will be open one afternoon a week.

Pacific

OREGON

Klamath Falls. With a view to the co-ordination of the work of the five different library systems of Klamath county, State Librarian Cornelia Marvin met with local city and county officials in August and worked out a plan by which it is believed that a unification of systems may be effected. The County Library, in the Hot Springs addition, the City Library, the High School Library, public school and rural school libraries are all operated under different managements at present, with a duplication of work, and in many cases a duplication of books. As a result of the meeting, petitions have been prepared and are being circulated asking the county court to appoint a commission of five members in which will be vested the complete powers of management of the entire library work here.

OREGON

Portland. Mr. S. Benson, who gave to the city a very fine Polytechnic school, has decided to endow the school with a library. He has given the Library Association of Portland \$1000 for an initial purchase of books, and this will probably be added to from time to time as the necessity arises. It is hoped to make this as fine a technical library as may be found on the Coast.

Foreign

SWITZERLAND

Geneva. The library of the city and University of Geneva having decided last year to form a collection of war archives, addressed a circular letter to the accredited diplomatic representatives resident in Geneva. This met with a prompt response and material began at once to accumulate. The collection is to consist of official documents, political and diplomatic, of belligerent and neutral governments, and of such non-official material as has a distinct historical value. Following the example of the libraries of Zurich, the library has also undertaken a union card catalog of the various Genevese libraries.

LIBRARY WORK

Notes of development in all branches of library activity, particularly as shown in current library literature. Material printed in this department is cumulated each year in the "American Library Annual."

CHILDREN, WORK WITH

Says the *Christian Science Monitor*, in its library column:

"Among the things which have been done for the children here and there, and of the nature of seed corn for other librarians, are these: One librarian has discovered for herself, apparently, that the Bible stories always have a compelling interest for children, and writes of the 'spellbound' boys and girls about the story-teller's chair as she talks about Joseph and his brothers, Elijah and the prophets of Baal, and Shadrach, Meshach, and Abednego in the burning fiery furnace.

"Another has had a guessing contest of famous sayings in war time. One can imagine the enthusiasm. 'Who said—?' 'Who said—?' down thru the year, until 'Who said—"We are here, Lafayette!"' is reached with no end in sight. And trust the children not to leave the matter there, but to prepare themselves for future contests by keeping a sharp lookout for great sayings in this their own day when grand words are being uttered and splendid deeds done; and so all unconsciously benefiting from the opportunity to decide for themselves as to the qualities that go to make a saying great.

"Still another, mindful of the right of the children to an understanding of other lands and peoples than their own, bethought herself of the 'Little cousin' series, and organized a friendly competition of memory, as to the surroundings and ways of other children all over the world, a sure aid to the enlargement of brotherly ideals in the minds of the children participating."

Library work with children. Memoranda received by the library development committee [of the Library Association of the United Kingdom], as bases for discussion. *Lib. Assn. Rec.*, March, 1918. p. 64-76.

In Memorandum I, L. Stanley Jast emphasizes the child's need of a library as a place in which to become a reader as distinguished from a place which is merely a shelter or play-room. He offers the following outline of conditions of effective work: (a) The open shelf is the only sound basis of work with children. (b) The room must have comfortable chairs and tables, book shelves within easy reach, a few pictures.

In short, a tasteful, "intimate" restful room. (c) The person in charge must be one who understands books and children, one who will establish pleasant personal relationship with the children, and make them feel the room to be their own. (d) The use of the room must be so planned that the discipline question resolves itself; e. g., there shall be no more children in the room than can use it comfortably; the librarian shall not be expected to issue books for home-reading at the same time that she is seeking to introduce the book to the future reader.

The selection of books and editions for children is discussed in Memorandum II by H. G. T. Cannons, who quotes largely from the Manual of Library Economy of the American Library Association and gives lists of helps to the selection of books for children. Miss Kate E. Jones contributes in Memorandum III an account of the work with picture collections of the Cardiff Libraries.

Collections of mounted pictures are circulated largely among teachers and students; and special picture-talks are given by the teacher or librarian on, for example, history and travel, the children afterwards writing compositions on what they have seen.

CLASSIFICATION. See SUBJECT HEADINGS.

ROOF READING-ROOMS

The roof reading-rooms of certain of the New York Public Library branches are described in *Branch Library News* for June.

In the plans of the Rivington Street branch (a Carnegie building opened to the public June 10, 1905) was incorporated a new feature in library construction,—an open air reading-room, or "library roof garden," as it was then called. It is believed that this roof reading-room was the first of its kind in the United States, or at least the first to be included in the plans of a new building. It is not unlikely, however, that out-of-door reading-rooms of some sort had been tried previously by other libraries.

This experiment proved so successful that similar use of the roof was provided for in the new buildings of the Columbus, St. Gabriel's Park, Hamilton (Fish Park), and Seward Park branches, which were opened during 1908 and 1909. The open air reading-

rooms on the roofs of the Rivington Street, Hamilton Fish Park, and Seward Park branches have been popular and have seemed to meet a real need of the neighborhoods. However, those located on the St. Gabriel's Park branch, at 303 East 36th street, and on the Columbus branch, Tenth Avenue near 51st street, were not used sufficiently to warrant the expense of their maintenance and so have not been opened for the past five or six years.

The three roof reading-rooms now in active use are all located on the lower East Side, and are open from about the middle of June until the middle or latter part of September, the exact limits of this period depending largely upon weather conditions. The space on the roof devoted to this purpose varies from 700 to 1300 square feet, and the rooms are open on three sides and protected from sun and rain by heavy awnings. High iron railings at the edges provide ample safety, but do not cut off the striking views over wide stretches of roofs with tall buildings in the distance and an occasional glimpse of the East River and its bridges. Flowering plants in long boxes lend color to the brick walls and iron barriers.

These reading-rooms are connected by broad stairways with the top floor of the building, and while no permanent stock of reading matter is kept on the roof, books and periodicals may be brought up from other parts of the building. At the tables on each roof from fifty to seventy-five persons may be accommodated at a time. During the season, the three open air rooms are used by approximately 30,000 persons. In addition to their ordinary use as reading-rooms, meetings of neighborhood organizations are held there, and story hours for the children.

Both grown-ups and children, who live in the vicinity of the three branches named, have already learned that on these breezy roof-tops they find welcome places of refuge from sweltering streets and houses and are able during the most sultry hours of day or evening to read in comparative comfort and quiet.

SCHOOLS—CO-OPERATION WITH

Library and high school—democratic agencies. Bessie Sargeant Smith. *Pub. Libs.*, Feb., 1918. p. 64-66.

Co-operation and co-ordination as a saving power is the order of the day. This is increasingly true in the schools where teachers of English and teachers of history are relating their subjects by means of debates and the requirements of English composition. The

public library, too, is working toward co-ordination.

Thus we have two great forces working toward the same end, the attainment of social usefulness thru the book. But much loss of effort could be prevented, and a considerable economy effected, if school and library would work together.

This is most true in relation to the use of reference material. For example, almost all schools must have one encyclopedia available, but distances from the school to the library are usually so slight that all can go to the library for such a purpose; biographies and current magazines, which usually have the best material on debate themes, are much better found in the reading room of a library than in a corner of a school, and the money saved can be devoted to work distinctly belonging to the school.

Then for introducing the student to the writers of the best current fiction, much money could be saved if the school would use the town library, which can supply more than a school needs to have and moreover can borrow from libraries in large cities nearby.

The economies would not all be on the side of the school, for if the librarian knew better the requirements and equipment of the schools nearby, many a title would be left off the library shelves.

Furtherance of the aims of democracy would be the next result of this ideal co-operation, for both the public school and public library have always aimed to meet the needs of a democratic community.

The experiences of a city library and a city high school are easily adapted to a town where there has been no understanding or effort toward co-ordination of these institutions. The librarian must first of all be willing to go more than two-thirds of the way to extend the hand of understanding toward the teacher and pupil, and in some way should cement the bond, for if not, the library will some day be in the rear of the guard of the forward moving agencies for education.

One librarian in the Far West has set aside a spot in the library where are gathered together books suitable to the high school pupil, books for recreational reading as well as books assigned by the teacher to be read. This spot the librarian wishes the high school pupils to feel is their special property and it may be the birthplace of a flourishing high school library.

Even in cases where a school library has

been established and no connection made with the public library there are many ways for the librarian to find out the needs and desires of the school. The public librarian should never lose sight of the goal, the establishment of a mutual understanding with the teacher. When the school library has been established in the school building the public librarian should keep herself in close touch with the teacher and pupils by mutual help and service.

SHAKESPEARE. See SUBJECT HEADINGS.

SUBJECT HEADINGS

A model set of subject headings and cross references, to be used under names of countries and Australian states in the catalogs of the Public Library of New South Wales, also one for use under the heading "Shakespeare," has been printed and issued by the library.

The principles under which subject entries are placed under names of countries rather than under subjects subdivided geographically are as follows:—

1. When the name of a country is used as a subject heading the subject is that country as a social entity and not a geographical division, *e. g.*, Fine Arts is a subdivision under the country, because it refers to the fine arts of the people of the country, whereas Botany is not a subdivision under the country, because it refers to the country as a geographical division.

2. The subdivision under the name of the country will deal only with *general* subjects as applied to that country. The subdivisions of these subjects must go under the specific heading in the general alphabet, *e. g.*, England.—*Fine Arts* will cover general works on fine arts in England, but a work on Gothic Architecture in England will go under both Gothic Architecture and English Architecture, but not under England.—*Fine Arts*.

The phrase used in references to a subject heading in the general alphabet divided *By Country and State* means that apart from other subdivisions of that subject in the general alphabet it is also subdivided by the names of countries and *Australian* states.

The headings therefore used under country are: Antiquities; Architecture; Archives; Army and military defences; Bibliography; Biography and genealogy; Boundaries; Civil service; Colonies and dependencies; Commerce, industries and resources; Constitution and government; Courts; Directories; Early voyages and coastal explorations; Elections; Emigration and immigration; Exploration;

Finance; Fine arts; Foreign relations; History and colonization; Maps and surveys; Navy; Public lands; Public works; Religion and religious history; Social life, manners, customs, national characteristics; Statistics (general and vital).

The cross-references are well illustrated and annotated.

Works under the heading "Shakespeare, William," are to be arranged as follows: Collected works, arranged chronologically, with translation in alphabetical order of language; groups of plays with works about these groups put with the works on Shakespeare in the subject arrangement that takes up the larger part of the outline; separate plays, arranged alphabetically, with editions arranged chronologically; Poems, arranged chronologically without separating the sonnets; separate poems, arranged alphabetically with editions arranged chronologically. Attributed works, collections arranged alphabetically, then each work alphabetically and chronologically; Selections, quotations, etc. The headings for the subject arrangement are, first, General, then Acting and representation, Authorship, Bibliography, Biography, Characters, Chronology, Costume and illustrations, Criticism, Environment, Folklore and mythology, Language, pronunciation and versification, Learning, Miscellanea, Music, Natural history, Periodicals, Plots and sources, Portraits and autographs, Religion and ethics, Study and appreciation, Supernatural, Tales, Technique, Textual criticism and forgeries, Translators and editors, Wit and humour. Many cross references are also supplied for use with these headings.

Bibliographical Notes

The New York *Tribune* prints each day on its editorial page a short list of "war names in the news," with pronunciation indicated.

In "Fuel facts," issued Aug. 1, the U. S. Fuel Administration reviews the whole fuel problem and gives much interesting and valuable data on the subject.

The *Library Messenger* of the Missouri Library Commission is not so very new, but it is new to us. The two copies sent us (March-April, May-July) are full of interesting items and suggestions and we recommend that all commissions and others interested in bulletin-making subscribe regularly.

The Atlas Portland Cement Co., 30 Broad street, New York City, will be glad to send to any camp or hospital library its excellent pamphlet publications on concrete and its uses.

The Metropolitan Trust Co. (60 Wall Street, New York City) has just issued a very useful booklet which will be sent gratis on request as long as the edition holds out. It is written by Irwin G. Jennings and is called "Government financing."

The war map of Western Europe, mounted on cloth and published by Nelson Doubleday (Oyster Bay, N. Y. Price \$2) is recommended by the Missouri Library Commission. A 21-page index locates some 7000 cities and towns frequently referred to in the papers.

The *Maine Library Bulletin* for July has some twenty pages of material on the history of the American flag, including the stories of the flag of the *Bon Homme Richard*, the flag which inspired the writing of the "Star spangled banner," and "Old Glory," the treasured possession of Captain William Driver.

The Lake View Woman's Club of Chicago has recently published a book called "Balanced meals, with recipes." The entire proceeds are used for the benefit of the club's Friendly Fund for Aid of the Blind, which lends money without interest to the deserving blind, trained for self-support, but prevented by lack of money. The book is now being done into Braille.

A "Report of preliminary tests in reading" by Samuel P. Hayes, director of psychological research of the Pennsylvania Institution for the Instruction of the Blind, has been published by the institution. The paper is the report of a first attempt to adopt a standard reading test to blind pupils, and will be followed by reports on other reading tests and the results obtained from them.

In a leaflet "The Pan-American Union" the union describes its origin and purposes, the facilities and working of its library, and other points of its equipment at the headquarters in Washington. This leaflet and a list of other publications issued by the union will be sent upon request. The more recent are, "Foreign commerce of Argentina for 1916," "Argentine Republic," "Commerce of Brazil for 1916," and "Brazil, the extraordinary."

The public health section of the Council of Organizations for War Service located in New York City, has just issued a public health manual which is designed to meet the needs of women who are doing patriotic

work. The manual explains the facilities for care of the sick which are open to the public in New York City and the laws governing health matters. It is distributed at cost, and may be had by application to the office of the council, 4 East 39th street.

In "Americanization as a war measure" the Federal Bureau of Education has published (Bulletin, 1918, No. 18) the report of the conference called by the Secretary of the Interior in Washington last May. There were in attendance governors of a number of states, members of the national and state Councils of Defense, representatives of chambers of commerce, trade and other associations, and various industries, and notable educators, and the pamphlet prints in full the addresses made.

The Carnegie Library of Pittsburgh issued several publications for the N. E. A. meeting in Pittsburgh last July. These consisted of selected lists for each of the first eight grades, two high school lists—"Interesting people" and "At the front with our allies"—a reprint of Miss Elisa May Willard's "What a public library finds to do," and a preliminary edition of a handbook entitled "The Carnegie Institute and the Carnegie Library of Pittsburgh" which will be published in complete form some time in the near future.

The Council of the Royal Irish Academy of Dublin acquired from the publisher some years ago the *Archiv für Celtische Lexicographic*, edited by Whitley Stokes and Kuno Meyer, for use in the compilation of their Irish Dictionary. The Council now offers the complete set of subscribers to the Academy's "Dictionary of the Irish language" and to others interested in Celtic studies, at the greatly reduced price of one guinea. It contains many original documents published nowhere else, which are indispensable to students both of Irish and of Welsh.

likely to be a boomerang? If sent by express to be paid by receiver (about the only way of making him pay), receiver has the right to refuse to accept, and in that case, the parcel is returned to shipper, who must pay both ways. I know, for I once tried sending back a book without waiting to write about it, and I had to pay as described. It may be that you can serve advance notice, in some way, but that should be made clear, or others may be caught as I was.

S. M. JACOBUS, *Librarian.*

Pomona, California.

A "NEW" BOOK THAT WAS FIRST "MADE IN GERMANY"

Editor Library Journal:

A circular received recently from the Architectural Book Publishing Company, New York City, advertises "Lessons on form," by A. Blunck as a "just published" book.

I find that the library has already an earlier edition, purchased in 1905, with this added information on the title-page: "Written and drawn at special request of the Prussian Ministry of Commerce and Industry, translated from the German by David O'Connor."

As I have written the publishers to find out in what ways this new edition differs from the old, and have received no response to the inquiry, it will be of interest for librarians to know what may be gleaned from the circular. The pagination of the two inside pages agrees exactly with the earlier edition, but there is one change which surely brings the book right up-to-date. Page 66 contains five lines of "artificial forms." The first two are identical with the earlier edition, while the third, fourth and fifth are now made to read as follows:

<i>Old version:</i>	<i>New version:</i>
(3) Fürst König	Red Cross
(4) Kaiser	Wilson
(5) Berlin . 99	Pershing

That fifth line looks as tho the book might have been first published in 1899. Why not put the date after Pershing? "Pershing in Berlin 1919"!!!

Vol. 43

NOVEMBER, 1918

No. 11

THE great drive for the United War Work Campaign will be made during the week beginning Nov. 11, and will need a "long pull, a strong pull and a pull all together," to get the \$170,500,000 to be raised, which Chairman Rockefeller, of New York City, now says needs to be raised to \$250,000,000 at least, to serve fully our largely increased forces abroad! Out of this the American Library Association is to receive the \$3,500,000 asked for, or that proportion, about two per cent of the total realized. Coming after the strenuous campaign for the Liberty Loan this achievement will not be easy, but the generosity of the American public knows no bounds, and with the triumphant end of the war in nearer perspective, there is additional stimulus to raise the required amount. If it is said that the end of the war is so near that so much money will not be needed, the reply should promptly be made that much of the service, not least the service of books, will be even more needed during the season of the peace negotiations and pending the return home, when our soldier boys will have more leisure than they want and should have their minds and hearts filled with the best that can be given them. The A. L. A. is not as big as the Y. M. C. A., but its work is proportionately not less important. It should, moreover, be recognized that the librarian is peculiarly at the center of affairs and has a point of vantage in the local community, for in many places, from the great metropolis down to the country village, the library building focuses attention and is a natural center for the combined efforts. If a local librarian is not asked to participate in a joint local organization in which he or she may take full part, this may be because no such organization has been started, and it is then up to the li-

brarian to see that it is started at once. No false modesty should stand in the way, and the members of the other organizations, especially in the central organization, cordially welcome and appreciate library co-operation. The local library should also be the useful center for the distribution of preliminary documents and information during the campaign, and library trustees will not criticize the librarian who gives most of the library time during that week to the patriotic service of the drive. How much the work abroad heartens our boys is shown by Mr. Stevenson's inspiring letter, printed on another page.

THE Y. M. C. A. is the chief servitor among the Seven Sisters of Service, second only to the Red Cross in its splendid work. It will surprise many to learn, from the facts given elsewhere as to the work in France, how much the Y. M. C. A. has done in the direct distribution of books and in providing editions of text-books needed by the boys in France. These figures are phenomenal and astonishing and creditable in the highest degree to this international organization. But each one of the seven has done its own splendid work, the Salvation Army doing wonderful outpost service with the men at the front, as perhaps no other organization has done. So we may hope that the A. L. A. and each and every one of the other organizations may work in perfect accord toward the great end which they have in common of making the boys who represent us at the front as safe and comfortable as war conditions permit and giving them the opportunities of development, thru education and recreation, which will make them better men and better citizens in the happy days when they return home.

RARELY has any death called forth such

affectionate expressions of personal esteem as has the passing of William Howard Brett. It seems a pity indeed that such expressions as constitute the symposium of appreciation which is a feature of this month's LIBRARY JOURNAL, should not have been made known to Mr. Brett himself during his lifetime. He won the respect of all by his effective work, and the love of all by his lovable character. No man could have a better monument than these loving words of praise. Yet a monument of another kind his memory should also have, and it is a happy suggestion that some library in France, which can be of service during the war and which can be made of permanent usefulness to our French brethren after the war, should be his physical memorial. Nothing would have pleased him more, for his ardent desire to be of personal service looked forward beyond the great and perhaps larger service he was actually doing at Newport News, to come into personal touch with the war and its needs thru work on the actual soil of France. It is proposed, therefore, that a library at one of the furlough and rest places, as Aix-les-Bains, should be made the Brett Memorial Library, first, as a library of books in English for our soldiers, and thereafter as a library of French literature and American books for a French local constituency. This would be the more fitting because it would help to give stimulus to the movement for popular libraries already under way in France by providing a public library on the American plan with the distinguished American name of an ex-president of the A. L. A.

"A LITTLE nonsense now and then is relished by the wisest men"—such as librarians. In fact, more than one "learned society" has its inner circle of fun-makers who introduce an element of light-hearted gaiety. The British Society of Antiquaries once appointed a committee to find the site of the ancient Roman city of Novio-

magus and the learned gentlemen and their feminine folk had so good a time in seeking it that they resolved always to seek and never to find, and thus the order of Noviomagians had its start. Similarly, within the American Library Association there has been that noteworthy body, the Congress of Librarians, whose seven members associated under that august name at the Atlanta Exposition, kept up their organization for a considerable time, disporting themselves on the first Saguenay expedition under the shadow of *habitant* hats, with the assistant of the official photographer and the Rabble. During the second expedition to England, the Holie Alliance, etc., etc., was formed by four stretches of the truth with intent to deceive their fellow-members, which has remained the most select and exclusive of all library associations. From the Lake Placid meeting of the New York State Library Association there emerged a body, less select to be sure but more impressive in quantity, the Nondescript Alumni Association, which, at its initial dinner, quite eclipsed in dignity of bearing and hilarity of joy the outdistanced and overwhelmed contingents of the several library schools. Long life to the Nondescript Alumni Association and may its shadow and its fun never grow less!

A PICTURE postcard is a publicity medium of great value and yet in a large proportion of towns, even where the Carnegie library is one of the notable features of the town, one looks in vain at hotels and postcard shops for the library picture. Some of the larger libraries have made a specialty, as has the new Harvard Library, of sets of postcards showing exterior and interior views, which can be purchased at the library. But even in this case such postcards are not to be found at the shops. To assure the publication of a postcard sometimes means the ordering of a specific number of copies, but these may well be utilized by having them on sale at the library counter.

THE DREAM OF TOMUS*

BY WILLIAM F. YUST, *Librarian, Rochester Public Library, and President, New York Library Association, 1917-18*

THIS so-called President's Address is like a dream in at least two respects. It is short and somewhat fantastic. The introduction is a biographical sketch of the House of Tomus.

Coincident with the first record of human history there originated in Assyria or thereabouts a remarkable tribe. For many years they were few in number owing to great travail in reproduction. Only on rare occasions and in the presence of strong guards did they expose themselves to human gaze. They moved in exclusive circles, especially among the literati, the prophets and seers. But wherever they went they began to build an aristocracy of the mind.

About the middle of the fifteenth century a specialist discovered a method whereby their reproduction, hitherto long and laborious, was made short and simple and painless. This discovery produced radical and far-reaching changes in the history of the tribe and of the world. Immediately there began a widening of the thoughts of men and a new birth of literature.

The tribe now increased rapidly, and with the increase came a development of numerous characteristics. Among these were: First, Specialization. Most of them had a hobby. Each informed himself thoroly on one subject, thought and talked of nothing else, and commanded respect accordingly. A few prided themselves on the many subjects of which they had a very limited knowledge, but had it so well ordered that it could be instantly produced, which gave them also a good standing in society.

Another trait was silence and self control. Tho ever ready, they never spoke unless spoken to. But when approached they had a happy faculty for adapting themselves to the moods of man, bringing "for his gayer hours a voice of gladness and a smile and an eloquence of beauty and gliding into his darker musings with

a mild and healing sympathy that steals away their sharpness ere he is aware."

Long life was one of their cherished hopes. They soon discovered among their patrons also a deep seated longing for immortality. By fostering this hope and buoying this belief they extended their power over men. Indeed by devoting themselves to the treatment of immortal themes they themselves become immortal.

Early in their evolution they showed the usual tendency to divide into groups. A few words regarding the chief divisions will serve to identify them.

First came those who devoted themselves to language, on which the very existence of the whole tribe depended. They dealt with the medium employed by all the others. A numerous body of them divided the whole world into sections large and small, and furnished information about each part. A small group whose watchword was the love of wisdom concerned itself with the fundamentals of thought and belief.

Another dealt with the relations of human beings toward one another. A neighboring group emphasized the dependence of human beings upon a higher power, which gave them unusual influence over whole nations.

An inquisitive and active group was constantly prying into the mysteries and secrets of nature, exposing her ways and formulating her laws. The application of these laws for the service of man and the resulting activities consumed the entire attention of a sixth group.

Many indeed were they which devoted themselves to the cultivation of the beautiful in all its forms in nature and in the works of man's hand and his mind and his spirit.

A final group spent all its time in making careful record of the achievements of men.

Thus while they essayed every subject in the universe, they did everything with an eye single to its effect upon man. A

* President's address, read before the New York Library Association at Lake Placid, Sept. 23, 1918.

human atmosphere was essential to their life and purpose and they were vigorous and virile in proportion to the intellectual progress of mankind.

But the farther man advanced the faster this tribe increased. Millions were still born or perished for want of nourishment. Other millions lived but a day, a month, or a year. And yet not a leaf fluttered to the ground without making its contribution to the evolution of the tribe. The very death of these countless millions made possible those giant figures among them which stand as beacon lights of the world for all time.

Among these giants was Tomus, in the prime of life, stately and strong, a real super-son of his tribe. He was a dreamer of dreams as well as a worker. It was in one of these visions that his consciousness of power led him to declare, "I will organize for world dominion. I will draft into my service the learned professions.

"I will begin with the minister because of the reverence and respect in which he is held. I will furnish him treatises, models, texts, illustrations, anecdotes, thought, yea even sermons. By spending long hours with him in seclusion and meditation I will lead him to link me with the plan of divine sovereignty and place upon me the stamp, 'Thus saith the Lord.' This will ally me with Providence and bring me close to men while they are in the attitude of devotion. This will promote the cause of religion in philosophy, literature, art, and science, it will exalt the ministry and magnify me.

"I will be a friend to the teacher. I will call him and instruct him how to bend the twig and incline the tree. I will give him a broad outlook, a deep insight, and a strong uplift. He will pay me homage, and this will lead his pupil to love me and adore the printed page.

"He will develop the habit of reliance on me. He will lay the foundation for my forts. He will build the highway for my future triumphant march.

"I will go with the pupil when he leaves the teacher, go with him to his home, to his business, wherever he goes I will go and stick closer than a brother. Thus by

taking possession of the youthful mind and heart I will become forever fortified in the citadel of the soul.

"I will form a league with the lawyer to promote the formulation and preservation of rules of conduct. Together we will circumscribe the actions of men and safeguard life, liberty and the pursuit of happiness. Thru magna chartas, declarations of independence, constitutions, and legislative acts we will protect the people against tyrants and against one another. The analysis, interpretation, and application of this vast body of laws will form a profound system of jurisprudence which only a few can fathom. Our position as containers and keepers of the law will be impregnable.

"I will be a partner to the physician. Together we will serve as guardians of the public health. Our motto will be 'Health and strength in all its fullness and joy.' We will acquaint the people with the constitution, development and care of their bodies. For tactical purposes we will divide into various camps, which may bewilder our friends, but it will do the same for our enemies.

"In health people will be indifferent to us and we shall need to go to them; in sickness they will come to us. Suffering will drive them to us and the promise and prospect of relief will make them our willing servants.

"So far I have spoken only of my non-commissioned officers. My commissioned officers shall be the librarians, a group selected for their allegiance to the House of Tomus, their knowledge of its inherent superiority and innate right to rule, its long and honorable history, its present wide-spread power, and its future plans for world dominion.

"I will establish schools where these commissioned officers shall be trained in strategy and tactics as well as in the art of peaceful penetration. For in my campaign every legitimate method known to civilized nations is to be employed.

"I will establish a fort in every city and town in the land and put one of these officers in charge, who will proclaim me as the Head of the spiritual and intellectual forces at work in human society. This fort

is to be the dominating influence in its territory. The officer in command as my official representative will be responsible for the attitude of citizens toward the rule of the fort. That attitude is to be one of enthusiastic allegiance in return for services rendered.

"The officer will co-operate with every agency which makes for progress. He will so marshal my forces that they will grow stronger from generation to generation until I am absolutely supreme in the affairs of men."

At this point Tomus was suddenly challenged by an enemy emerging from the darkness, saying, "Who art thou, with this bold plan to place the world under the rule of a Bibliocracy?" Tomus replied:

"I am the recorder of the ages.

"I speak every language under the sun and enter every corner of the earth.

"I bring information, inspiration and recreation to all mankind.

"I am the enemy of ignorance and slavery, the ally of enlightenment and liberty.

"I am always ready to commune with man, to quicken his being, to spur him on, to show him the way.

"I treat all persons alike, regardless of race, color, creed or condition.

"I have power to stretch man's vision, to deepen his feeling, to better his business and to enrich his life.

"I am a true friend, a wise counsellor and a faithful guide.

"I am silent as gravitation, pliant and powerful as the electric current and enduring as the everlasting hills.

"I am the Book."

BOOKS FOR THE POILUS—AN INFORMAL CIRCULATING LIBRARY

LIBRARIANS and all other book lovers will be interested in the account given by Mildred Aldrich in "On the edge of the war zone" of the way she came to supply books to the *poilus* in her vicinity. The affection she felt for these boys—they were little more—shows thru the lines, and it is easy to understand how the home of the "American lady who would lend the soldiers books" became a Mecca for them.

"Amélie called up that there was 'un *petit soldat*' at the door," she writes. "I went downstairs and found a mere youngster, with a sergeant's stripe. . . .

"This boy looked prosperous, and in no need of anything but kind words in English. He did not even need cigarettes. But I saw him turn his eyes frequently towards the library, and it occurred to me that he might want something to read. I asked him if he did, and you should have seen his eyes shine—and he wanted English at that, and beamed all over his face at a heap of illustrated magazines.

"The result was, early the next morning two more of them arrived—a tall six-footer, and a smaller chap. It was Sunday morning, and they had real, smiling Sunday faces on. The smaller one addressed me in very good English, and told me that the sergeant had said that there was an American lady who is willing to lend the soldiers books. So I let them loose in the library, and they bubbled, one in English and the other in French, while they revelled in the books. . . .

"In the meantime they had decided what they wanted for books. The English-speaking French lad wanted either Shakespeare or Milton, and as I laid the books on the table for him, he told his comrade who the two authors were, and promised to explain it all to him, and there wasn't a sign of show-off in it either. As for the Child of the Regiment, he wanted a Balzac, and when I showed him where they were, he picked out 'Eugénie Grandet,' and they both went away happy.

"I don't need to tell you that when the news spread that there were books in the house on the hilltop, that could be borrowed for the asking, I had a stream of visitors. . . .

"It was exactly four in the afternoon, March 18, 1917, that the news came that the French had pierced the line at Soissons—just in front of us—and only a quarter of an hour later that the assemblage general was sounded and the 118th ordered '*sac au dos*' at half-past six.

"For half an hour there was a rush up the hill—boys bringing me back my books, coming to shake hands and present me with little souvenirs."

THE BOOK—IN WORLD-WIDE USE AND INTERNATIONAL CO-ORDINATION AFTER THE WAR

BY PAUL OTLET*

FOR twenty years great efforts have been made in several countries to obtain international co-operation in the field of Publication, Information, Bibliography and Documentation. The International Congress of Librarians and Bibliographers belongs to this movement. The International Institute of Bibliography founded in Brussels in 1895 was constituted especially to elaborate and propagate schemes of information and methods adopted by the second of these Congresses, and to furnish a center for the works made in co-operation.

It had large results in this way. The work has been described often. It is sufficient to remember here these facts: (a) A concrete program of organization was drawn up and extended to all the branches and functions of Books and Bibliography. (b) A comprehensive international code was elaborated for the work, containing principles and rules, and fixing the first elements for standardization. (c) A universal classification was adopted and adapted for indexing the several kinds of collections and indexes (the Decimal classification expanded). (d) A universal bibliographical Repertorium was elaborated as manuscript, containing eleven million cards in 1914, classified by authors and subjects. (e) An international encyclopædic library, with scientific and technical archives, was founded and comprises already the collections of about forty international associations. (f) A large co-operative movement was organized for the adoption of these methods and the centralization and exchange of books, and governmental help began to be required.

The war suddenly interrupted this big

movement. The International Institute, in a country actually occupied in a criminal way by the Germans, is in Brussels, chosen as the international center for a great many institutions, founded co-operatively by several nations, just because of Belgium's safeguarded neutrality! Delusion! But in the last months new efforts have been made abroad by the directors of the Institute, to enlarge the previous organization and adapt it to the new conditions of the world.

It appears clearly now that after the war the nations who actually constitute the Allies, will give an organic structure to their relations. League of Nations, League of Peace, or Society of Nations, whatever may be the name or the form of this organization, one fact remains certain: more co-operation, more co-ordination, more centralization will exist between America, England, France, Italy, Belgium and Russia in all the fields of private and public life, intellectual as well as political and economical. The book, in all its forms (volumes, serials, magazines, books, newspapers, official and public documents, commercial literature, etc.), will become more and more the necessary medium of such intercourse. This demands an interallied organization for the book. This means: common collections of printed matter, common catalogs, bibliographies and indexes, common books for reference, digests and encyclopedias, common rules for publication and classification, common services for exchange, loans and reproductions.

Therefore propaganda has been started anew to the end that the organizations and services created during the war may adopt the recommendations of the previous international conferences. The following are new developments in this respect:

(1) In France the bibliographical problem was put recently before the Engineering Congress (Congrès Général du Génie Civil, Paris, March, 1918) which, considering all the questions arising from the war, including those of technical information

*M. Otlet has been the general secretary of the *Institut International de Bibliographie* at Brussels since its establishment in 1895 during a first International congress of organizations and individuals interested in the production, preservation, and utilization of the Book. He has labored unceasingly for the advancement of this end, and even during the past four years, when exiled from his native land by the German occupation of Belgium, he has continued to work and plan for the further development and perfection of international co-operation in the field of the Book.

and documentation, adopted conclusions in accordance with the international movement.¹

(2) In England, the Library Association has again considered the matter. During the war the Association has been publishing in the London *Athenaeum* a subject index to periodicals, classed by the universal system. Good work has been done also by the committee appointed by the English Library Association to extend the use of technical literature.

(3) Recently after general meetings, the decimal expanded classification was adopted by the technical Department of Air Craft Production, the most progressive organization of the war in England. It is to be hoped that the adoption by other services, will soon be obtained thru the British Government.

(4) At the same time the reorganization of the International Catalogue of Scientific Literature has come under consideration, discussion being now in progress in London, Paris, and Washington. Tendencies exist toward such improvement in the catalog as will make it in the future a part of universal bibliography instead of remaining a separate work alone amongst all others. Changes of classification are desirable² precedent to the issue of a second edition of cards.

(5) It is also proposed in leading associations that technical, social, political, and military literature having an interest for the allied nations equal to that of pure science, shall have also their own international catalogs.

(6) In Rome the International Institute of Agriculture continues to publish its splendid work, the survey of agronomic publications. Its catalog is issued on the basis of the decimal classification. Its library is managed as an international exchange receiving more than 2000 interesting agricultural periodicals. What Rome does, may be extended to other international associations, which must be interested in bibliographical work.

(7) Recently the question has been raised of giving a consolidated organization to the work of analysis and reviewing. Before the war Germany monopolized this work in large measure in the *Centralblätter* and *Jahresberichte*. It is desirable that in the future this work should be done completely, impartially and also in co-ordination with the general bibliographic work. What an immense waste of effort, money and time, for what a pitiful result, lies in duplication!

(8) The Interallied Parliamentary Conference of Commerce, held in Paris in 1916, Rome 1917 and London 1918, discussed the important question of international patents, which raised the cognate questions of the classification and cataloging of the immense mass of Patent Literature. The questions of exchange, classification and indexing of the legal literature and of the public documents are now much discussed in several circles which watch the problems of reconstruction. Comparative materials are needed for this work.

(9) The importance of photographic documents has grown thruout this war. Every army has created a photographic service in connection with the press and by mutual exchange. The care of photographs and films becomes of great importance. The French service has more than 100,000 pieces.

(10) On the other hand, each government has created three important new services: a censorship for the control of all literature published in the country, a bureau for the survey of all literature published abroad, and another for the issue of propaganda literature at home and abroad.

These services need and produce an immense number of documents and it is safe to assume that after the war the governments will find some way to adapt these powerful organizations for the works of reconstruction and of peace. The question of their interchange in connection with the other branches of the book and documentation ought also to be considered. It is now evident that it is possible for all works as published to be read systematically in special offices and their most valuable data to be spread thruout any country thru the press and thru official publications.

¹ See "Rapport du Général Sibert au Congrès du génie civil," and article on the same, in *Génie civil*, Paris, 1918.

² Paul Otlet. La réorganisation du Catalogue international de la littérature scientifique. *Revue générale des Sciences*, Paris, April, 1918.

(11) The governments have also created and supported war museums which contain large collections of printed matter (London, Paris, Rome). What shall be their relations in the future? All these museums have the same field—The World War. It is to be presumed that under arrangements between the allied governments for an international history of this great war, these museums and collections will become a basis for such work. We must remember that the greatest medical library of the world, the Library of the Surgeon-General's Office in Washington, was created in connection with the medical history of the American Civil War.

(12) Unity in military control and in the production of munitions; common handling of economic resources (food and other) and of their distribution; unity of diplomatic front, and a more and more concerted action between the Allies, have made necessary a free exchange of laws, regulations, public and administrative documents. This kind of work was initiated years ago by the Smithsonian Institution. It now needs further extension and regulation on a larger and broader base. The more advanced views expressed on the exchange question are now up to date.³

(13) The war connections have brought great changes in the old bureaucratic system. Office efficiency is required and this means work accomplished in inverse ratio to expenditure of time, effort, material. The principles of efficiency existing in industry are now extended to public services. But administration is only possible with written paper. Thus methods of dealing with written paper (editing, distribution, indexing, filing, digesting) have become of vital importance. On the other hand, administration can not be kept apart from knowledge; more and more scientific information must be utilized by every branch of the public service. Therefore, the need exists of a unified method applicable alike to manuscripts and books.

The facts being as stated, the present aim must be to co-ordinate all these movements immediately. The Allies have brought together all their resources of

men, money and material, and they declare that they will co-operate in the same spirit after the war. Why may it not be the same with the intellectual resources, the resources which are contained in the books, periodicals, newspapers, official documents, information sources of all kinds? For such a work of progress and civilization, all the fundamental elements are ready. We have programs, a preliminary organization, rules for work, and in all our countries big collections and men of good will. But if we have the players, the instruments and the arrangement of parts necessary to form an orchestra, we also need a leader.

Private and co-operative initiatives are not sufficient. We want a governmental initiative. What will America propose? How will its government act in this direction? Who can press it to act? The American Library Association, the Library of Congress, the Smithsonian Institution, the Information Branches of the military and civil services?

The ideal unity of collecting, indexing and diffusing human knowledge becomes necessary to maintain economy of thought and action, both in peace and war. All that has been done, or rightly proposed, must now culminate in a great and happy achievement.

This is the hour of co-operation to win the war. But tomorrow in every country there will dawn the day of co-operation to reconstruct life and society. President Wilson has given the support of America to the old aspirations for world organization. He formally proposes, as the final object of the war, to establish a Society of Nations. How can this be formed if a political society and even an economic one is not based on an intellectual society? And how can intellectual relation exist if scientific management and international co-operation do not direct the production, conservation, circulation and utilization of the Book?⁴

WILLIAM HOWARD BRETT: IN MEMORIAM

BOYHOOD DAYS

THE little village of Braceville, Ohio, was the scene of the brief experiment of one of the Fourierist societies, the Trumbull Phalanx, which was formed in 1844 with one hundred and fifty members and was closed in 1848 because of the admission of unsuitable persons, and of sickness in the community.

It was here that William Howard Brett was born in 1846,—the eldest child of Morgan Lewis and Jane Brokaw Brett. Morgan Lewis Brett was reared in New York state, but was of an old New England family, John Alden being one of his ancestors; his wife was born in Ohio, of Virginian parentage. He, from all accounts, appears to have been a quiet, high-minded, gentle-mannered idealist. Mrs. Brett, I knew as a bird-like little old lady who seemed to radiate happiness; as a young woman she must have been a bundle of cheerful, practical energy.

The young couple were disappointed in, perhaps disillusioned by, the Phalanx, and soon withdrew from its membership and moved to the larger town of Warren, nearby, which was to be the family home for about twenty-six years; and here William Howard Brett grew up in the simple, wholesome, small-town environment and school life of that period.

Mr. Brett's younger and only living sister remembers him first as a merry, teasing brother. She recalls her mother's statement that William learned to read early, without any instruction, and "before she knew it."

Mr. W. C. Cochran of Cincinnati, a school-mate and life-long friend, one of the speakers at the memorial session of the Ohio Library Association on Oct. 2, gave some most interesting reminiscences of Mr. Brett's boyhood and school life which it is hoped will soon be available in print. He told of the ease with which Will Brett got his lessons, of his retentive memory, of his youthful pastimes and active interests.

Undoubtedly among the most important

formative influences in the young boy's life were Mr. W. N. Porter and his book store. This little shop was around the corner from the Brett home, and the small boy soon found a short cut thru the back way. Mr. Porter was himself a man of fine character, and of student tastes, who evidently became interested in the little lad and discerned at least some of his unusual qualities. William early became Mr. Porter's errand boy after school hours, and when at fourteen or fifteen he left school to try various kinds of work it was not long before he became a clerk for Mr. Porter; thereafter for the next twelve or thirteen years he spent long periods in this book store, and it became a family pleasantry that "whenever Will had nothing else to do, Mr. Porter would always take him back." Work there was not too strenuous to allow of much poring over the contents of the shelves, and many a lengthy discussion of books with his employer friend, and with the bookish frequenters of the place, all of whom were attracted to him.

Shortly before leaving school he made his first essay at librarianship. Mr. Cochran writes: "In my recent historical studies, my attention has been called to a movement in the Ohio Legislature to legalize and establish school libraries, in which movement Prof. James Monroe, then a Representative in the Legislature from Lorain County, afterwards a Member of Congress for some fourteen years, took the lead. This was in 1858-9. A library was installed in the Warren High School in 1859 or 1860. In the latter year, Mr. Brett, then fourteen years old, was installed as librarian, and remained as such until he left school to work for a living. At the age of 14 I was installed as his successor. How many 14-year-old boys are employed as librarians at the present day? He knew every book in the library, its place on the shelves, and what it contained between its covers. He knew also, just who had a particular volume when it was not in its place on the shelves. There was no such thing as a card catalog,

or a charging system, and each librarian devised his own methods for keeping track of the books. The salary was the fines and hence the librarian drew no salary."

One of Miss Brett's vivid recollections of her brother is of his sitting up reading aloud to her mother night after night as she sat at her sewing, after the rest of the family had retired, and he has himself spoken also of reading aloud much to his father in the latter's last years.

Despite his mother's Southern allegiance, the opening of Civil War hostilities stirred all of his Northern fighting blood, and he repeatedly endeavored to get into the army before he was old enough to be accepted. One can imagine the wrathful impatience of the slender blonde youngster at the repeated admonition of the local recruiting agent, "Willy, you go right back home to your mother, where you belong." He ran away from home to enlist at the Columbus Barracks, but was not accepted, and it was not until the last year of the war that he finally succeeded in getting into the army as a bugler or a drummer with the "hundred day men," but in his first engagement he exchanged his instrument for a musket and engaged in the fight. He was captured by Morgan's raiders and taken thru Kentucky. Later he guarded prisoners at Johnson's Island,—and served in the Shenandoah Valley attached to headquarters as orderly and dispatch rider. The official records list him in the 196th Ohio Volunteer Infantry. His interest in war history was so keen that it seemed inevitable that two of his sons should train for the army in the peaceful years when few Americans were thinking of war and that they should now be making records in France as Lieutenant Colonel and Major, while his son-in-law ranks as Captain and his youngest son is a First Lieutenant. Mr. Brett's fighting spirit was always a surprise to those who knew him as the gentlest and most tender-hearted of men.

After the war he went back to work but began thinking about a career, and by the fall of 1868 he had saved enough money to enter the University of Michigan as a medical student; he soon decided, however, to change his course to the regu-

lar academic studies, which he pursued there that year. He spent another year at Western Reserve, then located at Hudson, Ohio, but lack of funds prevented his completing his college course. In 1894 Hiram College conferred on him an honorary Master's Degree.

Along in the seventies, Clevelanders began to notice an unusually well-informed, unusually obliging and helpful young man in the Cobb and Andrews Book Store, for it was there that Mr. Brett settled down to definite regular work in the book business. Miss Mary Frances Isom of Portland, is one of the many people who have recently told me how they used to wait around in that old store, ostensibly browsing until Mr. Brett was free to wait on them, as no one else ever gave them such service as he did.

In 1879 he married Miss Alice L. Allen of Cleveland, and founded his own home. Mrs. Brett and five children, all now married, and six grand-children, survive him. Several of us who have worked with Mr. Brett so long in the library have watched the growth and development of that fine family with the greatest interest, and when, at our staff memorial service at which the President and Vice-President of the Library Board, and Allen Brett were the speakers, the latter told of many little intimate experiences with his father, it seemed quite the most fitting and the most comforting service possible.

My own acquaintance with Mr. Brett dates from the time when I was a small girl in his sister Mary's Sunday School class at the Franklin Circle Christian Church. At that time my brother had Mrs. Brett's mother for his teacher, and Mr. Brett himself was for a brief period the superintendent. His winning personality even then attracted us children, and we felt that his kinship with our teachers was somehow reflected to us.

In 1884 Mr. John G. White, the present honored president of the Cleveland Public Library Board, then on the Board and president for the first time, saw possibilities of improving what some one has described as "about the worst library in the world," and when a change of librarians was to be made the young man whose

knowledge of books and untiring service in the principal book store of the city had been so noteworthy was asked to take the appointment.

The story of Mr. Brett's life from that time on is to be read mostly in the history of the Cleveland Public Library, for he bent all of his energies toward its development. Readers of the JOURNAL have at least partial knowledge of what that system has become under his guidance; the forthcoming memorial number of the *Open Shelf* will contain a brief summary of his thirty-four years' work for it. Some selections from the hundreds of spontaneous appreciations of his remarkable qualities and of his contributions to the library world at large will also appear there.

Probably no librarian ever had more friends, but no one not on his own staff can quite realize what his going means to them, nor perhaps understand how impossible it is for them as yet to express their regard for Mr. Brett except thru the determined effort to perpetuate the wonderful spirit of his work.

LINDA A. EASTMAN,
*Vice-Librarian, Cleveland
Public Library.*

HIS RELATIONS TO HIS TRUSTEES

SOON after I became a member of the Board of Trustees of the Cleveland Public Library, in the early 80's, a vacancy occurred in the position of librarian. At that time the chief employe of the largest book store in the city—indeed, the largest west of Philadelphia—was a slight, alert, courteous and obliging gentleman who had made friends among all the book lovers in the city. He was elected to the position of librarian. It was Mr. William H. Brett.

The Board was entirely ignorant as to the qualifications necessary for that office. He had as little idea, but told me that he meant to make it a life work and give to it all his knowledge and powers and ability. For several years afterwards we studied together the various problems of library management and economy, he rapidly acquiring grasp of the work and a clear vision of its possibilities. Shortly afterwards I ceased to be a member of the

Board and only returned thereto a few years ago.

In the interval I supposed I had kept in touch with the library, being frequently consulted by Mr. Brett, and supposed I was thoroly acquainted with its details. When I came again on the Board, however, I found everything revolutionized. From one library it had grown to twenty-three branches and sub-branches, aside from the main library, and over a hundred stations and instrumentalities by which books were brought almost to the door of every citizen of this large and rapidly growing municipality. Not only this, but the field of library activities had immensely expanded into many allied fields of civic usefulness.

Work among the children had been taken up and had grown so that it had become a most important factor in the education and Americanization of our foreign population and in the redemption of the poorer parts of the city. It was once truly said to one of our branch librarians, by a woman of the neighborhood, that the branch library was worth half a dozen policemen in taking the half grown boys off the streets and restoring peace and quietude. It was pleasant in the poorer parts of the city to see one little tot bringing in another, leading him or her up to the wash basin, and instructing them that with clean hands and clean face, all the resources, all the pleasant and beautiful things of that house might be freely used.

Going thence clean to their squalid homes, bringing books which they were told must be kept clean, they brought to their parents, fresh from the oppression of Poland and Russia, filled with suspicion of all constituted authorities, the belief that here was liberty, here was a public institution which was desirous only of their good.

This work was done by assistants who had got this spirit of love and helpfulness from the example of Mr. Brett. It has gotten to be a saying in the city when any question arises, when any information is needed, "Go to the Public Library and there you will get the help and the information you want." He has changed the library from a thing only known to exist to a great institution in which the whole city takes pride.

Greatest of all of Mr. Brett's achievements is the improvement in the staff. When I left the Board few of our assistants had as much as a high school education. When I came back upon the Board, all of the assistants had at least a high school education, and most of them were college or library school graduates. In the interval he had established here a library school. Indeed, he had made the library itself, and the library service here, a training school for librarians. But above all, he had infused in the whole body of the staff a spirit of comradeship and *esprit de corps*, a desire to do all possible for the people, pride in the library and its power for good, a consequent placing of the interests of the library above personal advantage and the knowledge that they might expect from the librarian not merely equal and exact justice, but sympathy, advice and a kindly consideration of all their needs. This was coupled with no want of efficiency, no lack of discipline.

When I left the Board we were longing for some method of learning and utilizing the capabilities of each assistant, of getting from them their willing best, something more than eye service. When I came back upon the Board, becoming acquainted, in such small part as falls within the purview of a trustee, with the daily business of the library, I found that Mr. Brett had an exact knowledge of the attainments, capabilities and disposition of each member of the staff; that he shifted them from place to place until he found the one which best suited, so that many times those who had been so incapable in one place as to make them seemingly impossible of retainment, when shifted to a position more congenial, had not only made good, but shown surprising power of continued improvement in service.

Others can speak better than I of his attainments and skill as a librarian, but we members of the Board know better than can be known elsewhere, what he has done for the library, what he has done for the city, what he has done for the citizens.

JOHN G. WHITE,
President, Board of Trustees,
Cleveland Public Library.

MR. BRETT AS A UNIVERSITY OFFICER

In the year 1903 Mr. Carnegie gave \$100,000 to found a Library School in Western Reserve University. At once, on the acceptance of the gift, a conference was had with Mr. Brett regarding the elements that should enter into the proposed school. In the counsel he gave, were included the great qualities of his character, and of his professional training, experience and skill. Presently he was made Dean (an office which has been for fifteen years coordinate with the office of director, now filled most effectively by Miss Tyler), and thru his acceptance of this office the school was brought into intimate personal association and working relations with the Public Library system of Cleveland, and the School itself became a training field for workers in the great system.

In the counsel which Mr. Brett gave then and afterward, and in all the direction of the succeeding years, he showed the great qualities of character and of administration which we have come to respect and to admire. Vigilance and intellectual alertness united with caution; sanity of judgment joined to warmth of heart; kindness and appreciation of duty linked with a mighty sense of righteousness; a proper conception of the justice due himself co-operating with a warm desire to help his associates, simplicity of character, rich and fine itself, flashing out like powder in moral indignations at wrongs or any injustice; a young man's progressiveness associated with a proper conservatism;—all these contrasted elements, and more, were among the great qualities he brought to the office of the University administrator. He was worthily proud of his profession. Proud of it because of its power to bless and to elevate and to instruct, and to work in and for and thru the School in the promotion of his profession and of its human relations was his supreme aim.

Tho Mr. Brett desired to make a close and hearty co-operation between the Public Library and the Library School, he did not forget that the School was a part of the University. He recognized that the University was primary and fundamental, and that without the University the School

would lack a certain connection with the past and fail in a certain recognition of its larger scholarly relations. The co-operative connection gave breadth, dignity, atmosphere.

May I be suffered to add a personal word? For I respected, admired, and loved Mr. Brett. Our fellowship was intimate, and to me it was very dear. His death is one of the great and lasting sorrows.

CHARLES F. THWING,

President, Western Reserve University.

AS DEAN OF THE LIBRARY SCHOOL

To the man of vision, with a heart in touch with humanity, many vocations might provide a satisfactory field of service and self-expression, and doubtless our dear friend who has gone from us might have expressed himself in some other field with equal distinction and effectiveness. It was, however, as a librarian that he found the absorbing, satisfying and enlarging field of service to which he gave himself so joyously and to which he made such rich contribution. His far-seeing vision and love of his fellows, his engaging personality, and his wide reading and knowledge of books, gave to him the elements of leadership in the profession which he loved and adorned for so many years.

The buoyancy of his nature made all things seem possible and the spirit of eternal youth was his in unusual measure. His rebound from conditions that were sometimes discouraging was a constant surprise and stimulus to those associated with him, and this was not the superficial "let us be happy" type of cheerfulness, but the deep and convincing belief in the ultimate triumph of right and the faith and courage of true optimism. With such a nature and such an influence it was inevitable that the Cleveland Public Library system which now stands as a great monument to William H. Brett should be pervaded by this spirit of helpful service; and that all who were associated with him keenly feel his loss, as a personal sorrow in the passing of a true friend.

Intimately associated with his development of the Cleveland library system was his belief in library training and his con-

viction "that trained service in library work must raise the standard of the work required in our libraries and increase their efficiency and value"; this was doubtless his own statement in the plans for the establishment of a Library School at Western Reserve University which he and others formulated in 1903. With devotion to his ideals and with this conception of trained library service he gave unsparingly of time and effort thru the fourteen years since the Western Reserve Library School was established, serving as Dean without compensation—giving time and thought and inspiring the students with his own sincere and winning personality as he came from time to time to lecture to them.

In this, as well as in his great work in the Cleveland Public Library, he always generously expressed his recognition and appreciation of the services of his co-workers, and this was probably one of the most distinctive marks of his greatness. He gathered about him those in whom he believed, he trusted them and generously acknowledged the contribution that each made to the work he had in hand.

Not alone in the Cleveland Public Library, but in the whole library world his constructive mind was active. He loved his profession and his fellow workers, and was more than willing to share with them all that had come to him and to his library in advancing the cause of librarianship. The service of books in a democracy and in the making of good citizens was to him a very vital and fundamental creed of librarianship; and his patriotic devotion to war service was a part of this creed.

His inspiring life work will go on, and American librarianship and trained library service is richer and stronger, with larger ideals because of his simple, kindly, personal life which made his large visions and plans so truly human and helpful.

ALICE S. TYLER,

Director, Western Reserve Library School.

HIS SERVICE TO THE A. L. A.

THERE are a few men in each profession whose places no one can take. I am sure Mr. Brett was one of these men. The

American Library Association will miss him sorely. To the work of that association he gave unstintedly of his time and thought. Its president in 1896-97, and chairman or member of committees without number before and since his presidency, he was always to be counted on for constructive service. His was an ironic temperament, and he held together for creative work many a group of divergent minds. He served well his fellows and the cause in which they are united. No one else will give us exactly his ripe judgment, his gracious guidance, his friendly help.

A few men show transparently in their faces a noble soul. Brett, from the time I first saw him in 1896 until my last meeting with him in July, grew steadily upon me. The evident simplicity, keenness, directness, loftiness of character which shone in his face one learned to love and to revere.

I remember him as one illuminated when he spoke to the library school students at Western Reserve in June of 1917, accepting their gift of a flag to the school. His evident emotion, springing from sturdy patriotism, the thought of his three sons in the service, his sense of the great tide of humanity rising to meet the country's foe, almost overcame him. The clear eye, the steady tho slight frame, the eager gesture, quick but restrained, the quiet, earnest words were one with his earnest and glowing face. How others felt, I know not—but I seemed to rest under a veritable benediction.

And yet the man was no visionary or emotional dreamer. That evening we sat until late at night over the plans for the new building of the Cleveland Public Library, discussing with unflinching energy on his part the pros and cons of various solutions of the practical problems of housing a great working force. For that was what he made of his library. It touched many sides of the city life—the children, the schools, the business men, the mothers and fathers in their homes. He saw its work grow and grow, meeting more surely year by year the great need of people for books. Buildings to him mattered little. For decades his library was inadequately, even

meanly housed—as some would have felt and said. But always there were the space and the facilities for effective work—work that grew apace under skillful hands that he brought to it from far and near. And now he is snatched away before the new and beautiful home is even well begun.

We have lost many able and fine men of late years. I may not here call the roll. But we have lost none whose going leaves quite the same void in our ranks. When others failed or drew back, there was always Brett to be counted on for wise advice, for earnest effort, for sincere sympathy. In him librarianship surely was justified in its claim of earnest and efficient service well rendered.

WILLIAM WARNER BISHOP,
*Librarian, University of Michigan;
President, American Library Association.*

IN LIBRARY WAR SERVICE

THE many appreciations of Mr. Brett which are reaching you will in common testify to the general respect, regard, and affection in which he was held; and some of them will, of course, testify to his ability, his devotion, and his achievement as a librarian, and as a veteran member of our Association. We shall all be glad to adopt as our own all such testimony.

Let me add a note from another record—that of our Library War Service.

Mr. Brett was intensely for the war. He was particularly earnest as to the part that our libraries and librarians should play in it. He thought the libraries had a duty to it far more affirmative than might generally be conceived; and before the Louisville conference consulted me as to the expediency of some statement there defining his duty in the respects in which it might be obscure: especially as to the suppression from their circulation of literature antagonistic to, or calculated to weaken, the cause for which we were fighting,—and the active promotion of literature in aid of it. Himself a veteran of our war of '61, these duties were to him also personal. Two of his sons already in the military service, he promptly encouraged a third to enter it; and exulted in the dedication of them to it.

He was enthusiastic for the service to the forces proposed by the A. L. A., and so ardent in the campaigns for money and books, that he caused Cleveland to rank among the first of our cities in its contributions; and when the library at Camp Sherman was inaugurated, and thru the entire period succeeding, he provided from his own staff at least one highly competent assistant for it.

So, thru the winter, in unremitting interest, effort, and contribution.

In the spring I suggested to him a contribution more personal still: it was of himself, for some feature of our Camp Service. His modesty characteristically hesitated; but yielded to his intense desire to omit nothing within his abilities. And when our Library and Dispatch Office at Newport News was projected it was he whom we asked to organize it. He did so: instituted the relations with the military and welfare agencies, secured a site, arranged for and supervised the construction of the building, and pending its erection, organized a service, and from rented rooms initiated it. The building completed (in May, 1918) he continued the active administration of the entire establishment until the day of his death.

He was enabled to do this because of the loyalty of his staff at Cleveland, and the extraordinary confidence and affection of his Trustees; but as his home post required attention at intervals it meant for him a journey between Cleveland and Newport News twice every month thruout even the heat of mid-summer. He bore this not merely uncomplainingly, but with a sort of exultation—declaring that he was “having the time of his life” and “never better” physically. For a man past seventy the demonstration was an enviable one.

For a librarian of his rank it was the most unselfish and useful contribution made to our direct service in the camps; and in my Annual Report at Saratoga I referred to it as the unique such service by any veteran librarian of the first rank.

For us too, at Headquarters, it had qualities almost uniquely grateful: the extraordinary modesty and subordination of spirit and of attitude that it indicated thruout.

Not a military service, ours must have some of the incidents of one: including the necessity of summary decisions by a central authority and a “truce to argument.” Many—too many—of our camp librarians overlook this; Mr. Brett never did. Every recommendation of his was presented temperately, was urged moderately, and, if negated, was waived with the best of humor and of spirit. Never, from him, the impatience and the peevishness which we have had to endure from lesser men. From a librarian of his standing and experience the contrast was a matter of wonderment—or would have been, had not Mr. Brett’s characteristics of mind and heart and breeding been so familiar.

The importance of his service cannot easily be estimated. Entitled a Dispatch Office—for Overseas Shipments—the establishment at Newport News is also a Camp Library, with a service, not to a single camp, but to a congeries of camps totaling not 20,000, but over 100,000, men: men under training for all three branches of the service—Army, Navy and Marine—and for almost every characteristic subdivision of it.

This diversity meant a multiplicity of relations, and a great variety of activity. Mr. Brett’s success in instituting the relations—especially with the military authorities,—was due in part to his own military experience; but his success in the accomplishment as a whole required the application of his long experience as librarian and administrator, and was due to the notable energy, industry, good sense, good temper, and devotion which were characteristic of him thruout his professional career.

HERBERT PUTNAM,
*Librarian of Congress,
General Director A. L. A. Library
War Service.*

THE INDEFATIGABLE WORKER

SOME men—most men—are old and are thought of as old at seventy-two. Not so Mr. Brett. His youthfulness of body and of spirit were the wonder of his friends. This energy, sprightliness and at times almost boyish joy of life were so inseparably a part of him that there is a measure of

consolation in the thought that our good friend and genial companion was spared the declining period—that period of inactivity which would have been as exasperating to him as it would have been to Mr. Legler, the first anniversary of whose passing has just occurred. The last committee service of Mr. Brett to the A. L. A., outside of the war work, was, I may note, to serve as member of a committee to draft a memorial minute for Mr. Legler, for between these two men there had been for years a warm bond of affection and admiration.

A member of the A. L. A. since 1885, present at no less than 26 of its annual conferences, its president 1896-97, presiding at its conference in Philadelphia in 1897, Mr. Brett gave himself unstintedly to the Association's demands, serving on many committees, preparing papers for its meetings, and giving wise counsel when sought, but always with that modesty and deference to the opinions of others that characterized his whole bearing. Scarcely an annual conference or mid-winter Council meeting for many years on which Mr. Brett did not stamp with his light but firm touch the imprint of his thirty years' library experience and rare good judgment and love of justice and tolerance of the minority, in which he never hesitated to stand if he were convinced the side of the minority was the side of right.

Every member of the Association looked forward with pleasure to a visit or stop-over at Cleveland, however short. Mr. Brett was never too busy to plan a luncheon, arrange a staff meeting, and take his guest for a tour of Cleveland's wonderful library system, itself an abiding monument to the man who created it and was for thirty years its head.

Mr. Brett's crowning Association service was in its Library War Service. His clear direct optimistic report at Saratoga of his service in this field proved to be his last public word to the Association, but the stimulating example of his many services, covering many years, many parts of our country, the professional exchange of thought and feeling with many of his

colleagues, is his large and permanent legacy to the American Library Association.

GEORGE B. UTLEY,
*Secretary, American Library
Association*

HIS SPIRIT INFUSED INTO HIS LIBRARY

MY first visit to the Cleveland Library was made nearly a quarter of a century ago. From it I learned anew, what I had already gained from Mr. Brett himself and from his reports, that a public library which is interfused with the desire to be cheering and helpful to every citizen of every kind and age,—quite regardless of all conventions and all rules,—is the only library that deserves its title of "public," and then as now the Cleveland Library seemed to be in all good things a little in advance of all others and even of the times.

Now that Mr. Brett has been taken from us in this shocking and overwhelming way, I can not be too proud of the fact that four years ago, in a paper I prepared for a Conference in England, I took his library as a text, and made in effect the statement that we librarians of America looked upon the Cleveland Library as a model which we all put before us as an ideal. What a loss is ours!

J. C. DANA,
*Librarian, Free Public Library of
Newark, N. J.*

THE VISION OF THE PIONEER

THERE are two kinds of pioneers. One was at the forefront years ago; we read of him in the history books. Another is at the front now, leading the way from the present to better things in the future. It is given to few to play both rôles. William Howard Brett took a foremost part in that development of the modern library which has now become historical. And in the development which is still going on he was at the front when he was struck down. To Mr. Brett's library one went to see the modern phases of those things which he helped years ago to take their place in that assemblage which we call a modern, as distinct from an old-fashioned library system—the open shelf, for instance, the children's room, the branch

library. In all these and their kind he was a pioneer, and no one would have thought ill of him had he long ago turned his back on the future and resigned himself to the contemplation of that good old library day when he and others were building the structure that we now administer and use.

But William Howard Brett was not that kind of a man. He lived vitally in the present and looked out on the future, keeping abreast of the problems of both and busying himself with their solutions. And so to his library one also went to find what was doing in the library world—to see the latest devices and the most recent methods—nay; to ascertain the trend of things and to discover what good libraries are likely to be a score of years from now.

Mr. Brett was an opportunist in the best sense. What would have been a misfortune to some men was a chance for him. Obligated, for instance, to locate his library temporarily in a commercial building of unusual dimensions and shape, he did not attempt to force into it his old library arrangement; he evolved a new one to fit it, and in so doing he may, so some of us think, have taken a step toward the library of the future. The next step—the application of his idea to Cleveland's new library building, he was not permitted to take, except on paper. That his fertile brain and his guiding hand are removed from the work at just this critical time is a tragedy past our understanding.

But with all Mr. Brett's unusual capacity for leadership and for hard work in the library field, many of us are thinking most of all just now of the personal loss caused by his death. Those who knew him loved him—there was no other feeling possible. Genial companionship, good company, loyal friendship—he embodied them all. These things must go—it is the world's way; but to have them all crushed down in a moment, uselessly, in a peaceful spot and with no hint of danger—this is almost more than we can bear.

Every place, house, spot or institution, is haunted—some by good spirits and some by bad. I love to think of those that hover around the library. Hard workers,

men of wisdom, scholars, builders, lovers of their kind; their ranks grow stronger year by year. And of them all, there is no spirit that will add to those guardian ranks more of what we love to think is characteristic of the greatest and best among our library pioneers, past and present, than that of him whom we lately loved and now lament, William Howard Brett.

ARTHUR E. BOSTWICK,
Librarian, St. Louis Public Library.

HIS PATRIOTIC ZEAL

MR. BRETT united in himself two characteristics which do not always go together, the most charming amiability and great personal force. He was very lovable and decidedly vertebrate. In my opinion he was one of the biggest men in the profession, and certainly the one with the finest spirit. About two years ago I was surprised to find that he was then seventy years old. Certainly he was the youngest man of his age I ever knew. Altho he was seventy-two at the time of his death, I should say he died in his prime; for I knew nobody with a more flexible mind or with a mind more open to new ideas. At the Saratoga conference he told me one night for the first time that he was a veteran of the Civil War, that he was under age at the time, and volunteered as a musician, and then exchanged the musical instrument, which he could not play, for a rifle—all with the connivance of the captain. Young as he was, he was under fire in two or three skirmishes. He was justly proud and happy that he had three sons and a son-in-law in the service of his country in the present war. He never said anything about it, but the pride and the happiness shone in his countenance. As every librarian knows, he was deeply interested in our library war work; and since his death I have learned that he had set his heart upon going to France to supervise personally the book service to our soldiers in the furlough zone. This is no place to list Mr. Brett's services to the library profession in this country. There is no reason, however, why one should not mention a few of the high spots in that service. He was one of the champions of the open

shelf. In the selection of associates and assistants in his work in Cleveland, his judgment was remarkable. The spirit he infused into his staff was never excelled in any library that I know of. The library world has lost one of its most important representatives, and Cleveland one of its most useful citizens.

E. H. ANDERSON,
Director, New York Public Library.

HIS SYMPATHETIC AND LOVABLE QUALITIES

IN the mass of people about us, struggling for the daily needs of life, or ruminating with bovine complacency over having attained them, we occasionally glimpse a vivid personality whose connection with stolid mankind seems somewhat incongruous.

This was my first impression of Mr. Brett a dozen years ago, and our too infrequent meetings since then have only strengthened it. Of all our library friends, no one's work had more intimate or forceful connection with the work-a-day world about, but personally no other library worker ever impressed me as so unlike that very same world.

Of Mr. Brett's work in Cleveland, little need be said since it always spoke for itself. His quick and responsive sympathies, his indefatigable zeal to make books the zest of life to all, as they were to him, his abilities as an organizer and executive, are of common knowledge. These and his services to American library work in general are a matter of professional pride and of library history. But to us who knew him, if only thru occasional meetings, what Mr. Brett had done was always quite unimportant as compared to what he was.

Nature usually seems chary in the distribution of her gifts, but to Mr. Brett she showed a singular prodigality, and he continually gave of his riches with no diminution to himself. One of his charms to me was his unreserved and naive pleasure in those nearest him,—his personal and professional families in particular. At the Saratoga conference, he appeared in the dining room one morning and with an aversion to solitude characteristic of him, sought our table. With unaffected pride he spoke of his son in France who accompanied

Secretary of War Baker on his recent inspection, of his other sons and son-in-law in the service, and then with particular enthusiasm, of his small grandsons he had just seen in Washington. Then, as always, Mr. Brett was not the librarian of the Cleveland Public Library, dean of the Western Reserve Library School, or anything else in particular so much as a lovable man who, thru his boyish charms, his bubbling merriment and joy in life, had in some place discovered the fountain of eternal youth.

CHALMERS HADLEY,
Librarian, Denver Public Library.

AN INSPIRATION TO HIS STAFF

THE spirit of William Howard Brett lives and will continue to live for many years to come in the spirit of service which he has inspired in every member of the staff of the Cleveland Public Library and every librarian or library assistant who has gone out to other work from the Cleveland Public Library. His conception of public service was democratic and impartial. The only unforgivable error on the part of one of his staff was failure to serve any member of the public to the utmost limit of his ability and to the limit of the ability of the library to produce the desired material. Shortcomings in library technique or errors of method were as nothing to him if the real purpose of the library—getting the book to the reader—was accomplished. Not that he despised technique. He had a wholesome respect for it, but with him it has always been secondary to the real accomplishment of library service. When other libraries were puttering about and emphasizing method above all things else, Mr. Brett never ceased his effort for extension and betterment of service. Always did he keep in mind the ideal of the public library for the whole public of the whole city and in no other city in the world has this ideal of complete library service been so nearly approached as in Cleveland.

In selecting his associates to carry out and carry on his broad and far-seeing policies Mr. Brett had a method peculiarly his own. Given the necessary qualifications of training and experience, the all-important

qualification was personality to fit into the ideals and purposes of the institution of which the candidate might form a part. Written testimonials had little weight unless backed up by personal acquaintance. He spared no time and no effort to weigh completely any possible associate. His most characteristic way of getting acquainted with a candidate was to spend a precious day of his own time in a whirlwind trip to the widely scattered and numerous Cleveland branches, punctuated midway by a quiet and pleasant luncheon in some unassuming restaurant. From such a jaunt Mr. Brett always came bounding back to his office full of energy for his neglected day's work, while his guest, much his junior in years, went footsore and weary to his train or hotel.

The spirit of youth never died in William Howard Brett. Optimistic, open-minded, enthusiastic, and with unbounded energy for every new task and problem, he was always young to the day of his death. Never pedantic or hidebound, he was always approachable by his associates. This quality, coupled with the respect and love and friendliness with which every member of his staff regarded him, was perhaps one of the greatest factors in his success as an administrator. Always willing and anxious to give his subordinates credit for new ideas for the development of the service, none of them spared effort to do his utmost best. The humblest book boy thought of Mr. Brett not as his boss but as his very good friend and that feeling permeated the entire ever-increasing staff. As one who was fortunate in serving for six years with him and in having his friendship for a good ten years, I shall always bless the day that brought us together and deplore the cruel sadness of his death.

HERBERT S. HIRSHBERG,
Camp Perry, Great Lakes, Ill.

RELATIONS WITH THE CARNEGIE CORPORATION

It must be over fifteen years ago that I first met Mr. Brett. He often recalled the circumstances of his calling at Mr. Carnegie's house on 51st street, New York, referring appreciatingly to the considerate

treatment he, a stranger, received. But who could meet such a gentle, kindly man without warming to him? As I recollect his reminiscing, he quite worked himself up to impress Mr. Carnegie with an enthusiastic appeal for a library building for Cleveland, but he didn't feel he was getting anywhere. Of course he was mistaken. He was only being put to the test by a kindly but intensely shrewd judge of men. After exhausting his efforts without eliciting any sympathetic response to his arguments for a large library building for Cleveland, and feeling very much discouraged, Mr. Carnegie made the casual observation that if it had been a matter of branch libraries, bringing books close to the homes of the people, instead of this grand project of a monumental building— They spent a long time together talking about Mr. Carnegie's old friends in Cleveland, and Mr. Brett finally left the library a very happy man, as much on account of the good time he had had, as because of the concrete reason for satisfaction he took away with him.

My regard for Mr. Brett grew with the years and he rarely came East but we spent an hour or two together, and whenever the many calls on his time permitted, he went home with me to be a guest more welcome on each succeeding visit. I regret keenly now that I never found the opportunity for what would have been a mutual pleasure, a visit to his home in Cleveland.

No one who had not occasion, as I had, to consult him continually on library matters, can imagine the loss Mr. Brett is to the profession he loved. His long experience in library work, always in the van of progress, his knowledge of everything and everybody in the library world, and the trust and affection with which the whole library world regarded him, made Mr. Brett an invaluable counselor. His knowledge and ability were always freely at the service of those needing help, notably myself, and it may be said that he spent of both freely and without stint.

I never think of Mr. Brett without a feeling of admiration for his noble family of sons. It is difficult to realize that Brett of the laughing, boyish face has four big sons, Lieut. Col. Morgan, Major George,

Lieut. William, his daughter's husband, Captain Ralph, in the United States Army,* and his civilian son, Allen Brett. If Mr. Brett had done nothing else but rear these boys so that they would be at his country's call for such distinguished service, he would deserve the fullest meed of praise from his fellowmen.

Our friend led a beautiful, happy, busy life. He was one of the rare characters who stand out unique among one's acquaintances, for to few is it given to know more than one such man. For me at least his memory will be always green.

As to his thirty-four years of service to the City of Cleveland, it is not for me to speak. That great city has not "entertained an angel unawares," and may be trusted to show its appreciation not only for thirty-four years of devoted work, but for the honor reflected on it by having the Dean of the library profession in its service.

JAMES BERTRAM,
*Secretary, Carnegie Corporation of
New York.*

TRIBUTE FROM THE SECRETARY OF WAR

I KNEW Mr. Brett intimately, and was closely associated with his work for Cleveland and for the public library idea throughout the country. He ought to be ranked as one of America's great educators as well as one of Cleveland's most useful citizens. His death will not stop the great work with which he was associated, either at home or abroad.

As Secretary of War, I am glad to be able to express my appreciation of the splendid contribution which Mr. Brett made to the soldiers in France and at home. His work is a part of theirs, and altogether it represents the best that America has yet done for the world.

NEWTON D. BAKER,
Secretary of War.

MEMORIAL ADOPTED BY THE WAR SERVICE
COMMITTEE

This memorial minute was adopted by the War Service Committee of the Amer-

ican Library Association at Lake Placid Sept. 25, 1918:

In the death of William Howard Brett, the library profession has lost a great leader and the War Service Committee of the American Library Association an ardent and untiring member. He was a pioneer of the social and democratic spirit in a new field of educational and community service—the Public Library—and his contributions in almost every line of endeavor within this institution's scope have been significant and epoch-making. He introduced cumulative indexing, proved it practicable, and triumphantly justified his early faith in the open shelf system; conceived upon the broadest scope, library and school co-operation; developed the branch library system, fostered library instruction, built into library architecture the principle of response to both community and administrative needs; in library legislation he was a recognized authority. Thru the Cleveland Public Library's work, thru state and national library associations, for a generation he spread the spirit and ideals of a new force in education and society. But to the city whose life he has enlarged and adorned thru its Public Library, and to others of his colleagues, belongs the memorializing of these manifold and generous labors.

To the War Service Committee there remains the distinction of recording the noble and self-sacrificing service which he rendered to his latest hour in the newest and, to him, the most deeply significant development of that profession to which he had already devoted a lifetime.

From the beginning of the war, and long before our entrance into the world conflict, he was vitally concerned as to its issues. He entertained no hesitations and no doubts as to the course which we should pursue as a nation. His fighting spirit as expressed in his own field, whether by good generalship, by fine sense of relationships, or in generous rivalry of service, was thruout his life, always clear and definite in its objective. And action—direct, personal, and constructive action—was, saving his considerate and democratic spirit, his foremost characteristic. When but a lad he ran away from home to enlist in the Civil War.

*Lieut. Col. Morgan Lewis Brett, Office of the Chief of Ordnance, Amer. E. F.; Major George H. Brett, American Air Service, France; First Lieut. William H. Brett, Jr., Inspection Division of Ordnance Department; Capt. Ralph Spengler, Ordnance Department.

Too young to fight, he could only be a bugler boy, but there he was on the spot, to be and to do whatever he could. Before the close of the war however he was privileged to serve in the ranks.

When the time came to put libraries into winning this war he was at hand, with all the resources of his varied and rich experience; himself, his library board, and his library staff attuned to the task of mobilizing the service of books to the needs of civilians and soldiers for winning the war, whether at home or abroad. From the very first hour that such service was conceived, he began his work. A member of the Library War Finance Committee upon whose success depended the whole camp library project, he was active personally and officially in formulating plans, in shaping policies and in raising funds. These larger functions did not prevent his personal attention to the immediate and definite work of initiating the Library War Service in his own state and directing the work of collecting funds, of supplementing the library at Camp Sherman, hastening the realization of an adequate building, the first in the country to be dedicated, and later in sustaining the stream of efficient camp library service by supplying workers from his own staff. Subsequently, at the request of the General Director, he organized and directed the work of one of the two largest dispatch offices for forwarding books over seas, that at Newport News, and extended its work as a book distributing station to over thirty camps in the vicinity. A cherished dream of his, unfulfilled because of the tragic accident of his death, was to work in France among the soldiers in the furlough region of the American Expeditionary Forces.

His candor, his utter absence of pose, his magnanimity, his kindly, buoyant, tempered spirit, thinking no evil, hoping all things, placed each man at his best and acted as a solvent upon every problem and in any crisis; but underlying these qualities was the tenacious will, which halted at no obstacle until the goal was compassed. A vital, constructive personality, royally democratic, has passed from among us. In the fullness of years yet with vigor undimin-

ished and vision undimmed, he went out in the full tide of action.

Be it therefore resolved, That the sense of our irreparable loss in counsel and in action be recorded in the minutes of this Committee, and that, as a fitting memorial of the life purposes and last work of our late colleague, we co-operate to the fullest extent with the library board and library staff of Cleveland in furthering in France the work which he so ardently desired to undertake.

Be it further resolved, That a copy of this memorial be sent to the members of his family, to the Cleveland Public Library Board, to the vice-librarian, Miss Eastman, and the library staff.

TRIBUTE READ BEFORE THE OHIO LIBRARY
ASSOCIATION

OUR friend and co-worker has passed from our midst. The founder of the Ohio Library Association, twice its president, always its cordial host and wise counselor; for thirty-four years a leader in library administration, in legislation and the larger relations of library work in this state; yet above all, thru his personality, he has left indelible impress upon our own and the succeeding generation of librarians. We shall see his face no more but his shining personality remains a light upon our path. What he has been to this our association, in spirit, in act, in continuing interest, one and all—younger as well as older—each knows for himself. There was nothing that we thought good in our work that we were not keen to know what he would think of it; there was nothing untoward in our library circumstances that we did not feel we could seek his counsel and help to put it right. So much was he one of us that his own successes have even seemed to be our success.

Death has done for him what it does for all. It has strained out time and circumstance and left the essence. All the works of a lifetime, great and small, for the moment of memory, become but the background against which stands out in clearer relief that which transcends "works"—the significant, urgent, striving spirit of the man.

The splendid library system of Cleveland is not only a monument to his genius as a librarian, but thru it he gave a compelling interpretation of the place and power of books as a force in education and society. And it is just this vision for his own community as he knew its needs and sought to meet them, that he wrought into tangible forms and wrought also into the thought and will of his library staff: a vision so inspired that its realization stands as a beacon to other library communities here and abroad. But the library, its buildings and its books alone, was not all that he accomplished for his city. He attracted into its library service able, highly endowed men and women, provided definite training and opportunities of experience for developing them in their special lines and welded into one great harmonious whole a capable staff of librarians, themselves leaders. Now that his visible presence is withdrawn, this great institution moves forward in its appointed course with its progress assured, still guided by that spirit which he impressed and drew forth.

To pause to enumerate or to enlarge upon the many individual contributions of Mr. Brett to professional library training, to library science, to bibliography, to library administration and architecture, original and epoch-making, as these have been in the course of the development of a new profession, would at this point be to obscure by details the larger scope and significance of his career. It was his character quite as much as his attainments that made his career what it was. While it seems impossible for us to think of him in any other sphere than the Public Library, his chosen one, nevertheless it is clear that Mr. Brett's keen perceptions, strong sense of reality, high purpose, sagacity, powers of persuasion, persistent will, and unflagging industry must have won for him distinction in any calling that he might have entered. That he did choose the library field at a time when it was rather an adjunct or side line to education than a main current in civic and community life, was doubtless due to his faith in good books and his love for people. There was also the strain of ardent

idealism which, like a fire, ran thru and fused all the elements of his whole nature, making him the dynamic force that he was. It was this idealism which placed his friendships, his standards of action, his goals. High enterprises drew him as a magnet. He was not changeable in his attachment to them, for once espoused, he kept them always in view; but "not disobedient to the heavenly vision," he could never refuse the challenge of opportunity to extend and develop. Thus, he often became overloaded with important projects, yet by what he dared to undertake, he attracted those forces and persons sufficient to carry them thru.

He was quick and childlike in his feelings. Each day the world was a new creation to him and he was ready for fresh beginnings; he could never be blasé; likewise, his sympathies remained vital. He would enter into another's burden of weakness or confusion, and with true understanding lift the burden and try to clear up the difficulty. For a mean spirited or cowardly attitude, he had only hot scorn and indignation. He was not too forgiving, but he struggled for fair-mindedness and he not only achieved justice but he was magnanimous. An overcomer, he was: his sanity and balance, his wholesome reassuring presence, like all spiritual support, were not without cost, but the cost he paid, not others.

His modesty was proverbial. References to himself, he was an adept in parrying. Once during a winter filled with emergency demands and important official engagements, someone ventured to remind him that he must be weary. With a puzzled gaze he listened respectfully and uncomprehendingly to the well-meant but for him ill-placed solicitude. Then, his face lighting up, probably with escape in sight, he said in the most engaging manner, "I've been reading Thoreau this winter, am re-reading 'Walden' just now, and do you know it just makes you over new."

He was approachable; he was never too busy to see a visitor, especially a library visitor. As we all know, whenever possible he personally escorted him on the tour of the libraries, a liberal opportunity indeed

for the student. The admiration and praise drawn forth on such occasions he would evade—"Do you know all this makes me feel very humble—for I didn't do this, it is the people who are with me that really do things." The simplicity and directness of his manner; his real deference for the viewpoint of others and consideration of their comfort and welfare, while placing each at his best, supplying the genial medium for their own self-expansion, was an atmosphere so diffused that it concealed its source and we forgot his greatness in his kindness. Such a one we love to remember him, "the most widely beloved of librarians" as a recent president of the A. L. A. has said of him.

His last days were his busiest; his field widened; his horizons moved on. During the seven crowded months at Newport News, where he was in charge of one of the two largest dispatch offices forwarding books overseas and also serving over 30 camps in the vicinity, he still kept his hand on the home work, making frequent journeys back to Cleveland. In the work for the soldiers which he furthered so actively on the Library War Service Committee he saw to the boundaries a new field of extension. He was full of the will to win this war and shyly cherished for himself the great desire and hope for personal work with the American Expeditionary Forces in the furlough region of France. Just as ardent, just as personal and as intimate was his thought of service for the men over there, as when thirty years before he daily read aloud for the aged father in his home.

It was this homelikeness about him—this impression that he gave that it's easy to be happy and natural to accomplish big things and that, all contradictions in it admitted, yet this is a world somehow good: it was this attitude that was so invigorating to all who came in contact with him. He did not talk poetry or religion but we who knew him confess with joy that he loved them both.

At the Saratoga meeting he was in fine form, buoyant, genial, active, planning work for Cleveland, planning work for the Dispatch Office, planning work for "over

there";—full of high hopes for the future of his splendid sons,—on the last Sunday taking communion in the old historic church of Saratoga, as it were dedicatory of the sons in the Service. Then a few weeks later at home, in front of his own library, the sudden transition:

O strong soul, by what shore
Tariest thou now? for that force,
Surely, has not been left vain!
Somewhere, surely, afar,
In the sounding labor-house vast
Of being, is practised that strength,
Zealous, beneficent, firm!

ELECTRA C. DOREN.

ON CLASSIFICATION

IN the introduction to his supplementary list of references on colonial architecture in the *Architectural Record* for August, 1918, Richard F. Bach, curator of the School of Architecture at Columbia University, makes some interesting remarks on the subject of classification in general.

"Classifications that aim to arrange kinds of human interest—and art is one of the chief of human interests—can never be made satisfactory for all concerned," he says, "because too many things are known by more than one name, or are felt in more than one way. To be finally good and workable a classification must be distinctly and rigidly arbitrary, else it can never be detailed. But to be humanly interesting a classification must be elastic and allow for the eternal relativity of things, and the degree of allowance it makes is also the degree in which it ceases to be an ideal classification. All of which means that our own colonial literature classifications are only as good as necessary to be as useful as possible, but not by any means ideal, for then they would have no place in these pages. The ease with which we may be able to classify screws and nails does not apply to books on a formative type of art expressing vividly what may be vaguely termed the 'growing pains' of a nation."

W. S. S.

OUR fighting boys say: "You lick 'em on the back; we lick 'em on the front."

THE UNIVERSITY, THE UNIVERSITY LIBRARY, AND THE RETURNED SOLDIER*

BY JOHN RIDINGTON, *Acting Librarian, University of British Columbia, Vancouver;*
President, Pacific Northwest Library Association.

THROUGHOUT the course of my career as a librarian, I have observed that those responsible for the preparation of programs at library association meetings appear to function on two principles, both of them definite and easy to discern. The first is, to secure for addresses and papers those of acknowledged authority, or admittedly successful accomplishment, in some phase of professional or related activity. Their contributions, together with the interesting routine reports, constitute the major portion of most conference programs. But every program committee desires to add to this total of anticipated items some element of the novel and unexpected. They then begin to function under their second operating principle. They elect a topic—almost always one bristling with difficulty (I sometimes think that the greater the difficulty, the better are they pleased)—and assign it, with or without consent, to some meek member for discussion. He may protest his inability to do the assignment anything like justice, but his objections are seldom sustained. He may suggest the name of another member, of greater experience and wider knowledge, as the victim. That artifice is too transparent—he is always overruled. Under combined duress and flattery he is disarmed, tho desperate, and in the end resigns himself with whatever of grace he can to the inevitable.

Ever since the distribution of the printed program it will have been obvious to most of you that the item on the conference agenda we have now reached is the outcome of the second principle of program construction. But why select the librarian of the youngest Provincial University in Canada—the youngest, probably, in North America—to shed light on “New opportunities for home service for the University Library?” Pondering this matter, I have

alternated between two opinions. The first is far from flattering to myself: the executive, with sound strategy, directed its attack at a point that promised easy victory; the second is a tribute to the wary wisdom of other university librarians, better versed in the wily ways of conference program builders.

The University of British Columbia is but four years old. The province it serves, though rich in varied natural resources, has a total population of but four hundred thousand people—not as great as the combined populations of Seattle and Tacoma. As yet the University Library has scarce thirty thousand volumes. Its staff is manifestly unable to do much that bigger institutions undertake as part of their ordinary routine. Years of development, organization, wise expenditure, will be required to put it on any sort of parity, in point of service, with sister institutions on the Pacific Coast. We have far to travel, on roads already built, before we need to strike into the trackless unknown, and blaze new trails of university library service.

But while this is undeniably true, so far as recognized and ordinary services performed by university and college libraries are concerned, there are other aspects of academic responsibility that every university, and every university library, be it ever so small or so young, shares in common with the oldest and greatest institutions of learning. These responsibilities are new—new to all alike. Of guiding precedent and experience for the efficient and honorable discharge of these obligations there is a little to help the men of the great as of the small university. Yet to the solution of these problems every educator, every librarian, every patriotic citizen, stands squarely committed. To these problems all must address themselves, for on their rightful solution depend not alone the place that higher education will in days to come hold

* Read before the Pacific Northwest Library Association at Seattle, Sept. 3, 1918.

in the esteem of democracy, but also much of the capability and character, the very fabric and fibre, of democracy itself.

For more than four years Canada, for nigh two years the United States, have been at war. All national effort in both countries has been subordinated to one great and grim, one holy and impassioned determination—the survival, the unimpaired maintenance, the triumphant extension of those principles of freedom embedded in the very foundations of democratic civilizations. The Dominion has five hundred and fifty thousand men under arms,—has sent four hundred thousand of its sons overseas! The Republic has nigh on two million men now in France, and plans to have double that number there by next summer. It is these men, the living bulwark of human freedom, that constitute our new and high responsibilities. It is they who afford us new opportunities for service that are honorable privileges as well as plain, patriotic duties. These men have been taken from peaceful occupations, and trained and disciplined in the bloody business of war. In a few months, or years, the war will be over and these men will return. Then, and before, many will be incapacitated for the occupations in which they were engaged before they went overseas: others, with new outlooks, will desire wider and better vocational training.

It is hardly necessary to state that both our nations will do everything possible to mitigate the suffering of the disabled: patriotism and humanity alike demand this, and national gratitude will manifest itself, as of old, in pensions and soldiers' homes. This is in itself a notable advance on the treatment given returned veterans in other days. The broken soldier of the Marlborough and Napoleonic wars, as shown us in Goldsmith's "Deserted village," who wept o'er his wounds, and talked the night away with tales of sorrow, was little better than a beggar, an object of pity and charity. We live in days where no nation will content itself with merely physical care for its disabled veterans. Since the Crimean and Civil wars there has been an enormous expansion of the conception of public responsibility to a nation's representatives on its

battle lines. Side by side with the wonderful developments in finance, commerce and industry, that have marked the past half century, has been a corresponding enlargement of the sense of public indebtedness to those who serve the state by the sacrifice of personal ease, and at hazard of their lives. The contrast between the sanitary, medical or commissariat departments of the armies of to-day and those of, say, the American Civil War, is not more startling or impressive than that existing between the ideas held by the ordinary citizen of the twentieth century, and those of his grandfather, as to the range, extent and nature of a state's indebtedness to its fighting men. Significant as is this fact, it is matched by another, equally vital and hopeful,—the general, almost universal, desire, the eager disposition, to acknowledge this obligation, and to meet it in the fullest and most generous way. The really superb undertaking of American libraries, in supplying reading material for soldiers in home training camps and overseas, is but one illustration of the many ways in which this general, eager desire to do war service is manifesting itself.

The United States has not yet been confronted with the problem of the returned soldier, tho American casualties already exceed 42,000. The bulk of its overseas troops have but recently crossed the Atlantic. Hundreds of thousands of them are yet in training camps in France, completing their military training under conditions of actual war. Such few disabled men as have already returned are easily cared for by existing organizations. Upon them is lavished every possible attention that a proud and patriotic people can give its brave defenders. But "if blood be the price of admiralty," as Kipling asserts, then Americans, Frenchmen, Britishers, and Canadians will have to pay that price in full. Every time the front page headlines flare with the news that your boys have been fighting, you will turn the paper quickly over to where the casualty lists are printed, and draw a quick breath of thankfulness that therein is not included some beloved and familiar name. There will be days with you, as there have been, and will be, with

us, when you will see whole columns of such names, and then will come national realization of the need for adequate national organization for the mental and social, as well as physical, care of these men. There is therefore facing you, in the very near future, the problem of the soldier who, disabled by wounds or disease in battles for your liberties, has the right to demand whatever help it is in our power to give. What can the university, what can the university library, do for these men?

Then, in the glad, good days to come, "when the war drum throbs no longer, and the battleflags are furled," when we address ourselves, with gratitude, humility and courage, to an even greater task than that of winning the war—the rebuilding of our social and economic structures on bases not only of liberty but of righteousness—we shall be confronted with another phase of the problem of the returned soldier. There will then be millions of men coming home to this continent, the great majority of them in the prime of their physical powers, all with ideas enlarged, and standards modified, by contact with other civilizations, men of courage, character, determination. These men will be the most potent element in our national lives for the next decade. Long revered political shibboleths will become mere mouthing mumbo-jumbos at their stern laughter: long worshipped idols of many sorts will fall from their pedestals at merest touch of soldier hands. I think we are all agreed that the permanent future character of our democracies will largely be shaped and fashioned in the years next following the declaration of peace. "It shall never happen again!"; "There will be no more wars!"; "Social and economic justice!"; "Reconstruction!"—these are among the ideas in the minds of thoughtful men, looming up behind personal interests and national undertakings. The returned soldier is cast for a major role in the drama to be played out in the first years of peace. That he may play his part worthily, he will demand of the state whatever education is necessary to equip him for the work he has to do, whatever training is required to enable him to take a self respecting and self supporting place

in the civil life into which he must be re-absorbed. The state will recognize the justice of this demand, and will do its utmost to meet it. It will turn to the universities, as existing public institutions entrusted with the responsibilities of higher technical, agricultural, professional and cultural education, and commission them as agents of the state to carry out this work. For much of what will have to be done the universities are today but partially and imperfectly equipped. Perhaps important modifications must be made in their organizations, in their systems of instruction, in their type of teachers, to enable them to do this new work successfully. Some things that many of us prize may have to be discarded when these new responsibilities are assumed: but at whatever cost the need must be met. How shall it be done?

One part of the problem can be met by the organization of special university courses for returned soldiers. We Canadians have already undertaken this, and are dealing with it with some courage, and more and more of certainty. Walk along the street of any Canadian city, and you will see dozens of men in khaki, with the blue armet betokening that they are patients in a military hospital. With bandaged bodies and splinted limbs, they limp along on sticks or crutches, or are wheeled in invalid chairs by friend or comrade. Always they have a ready smile or friendly greeting, even for strangers. Some are painfully relearning to walk, some trying to make one arm serve in place of two, some are emerging slowly from the strange and disturbing mental conditions caused by shell shock. Above the cuff of the left sleeve, you will see a narrow reversed chevron of gold braid, the military sign for "wounded on active service."

Canada has organized an Invalided Soldiers Commission to look after these men, and is utilizing the universities to provide courses of instruction to meet their educational, re-educational and vocational needs. What is being undertaken may be gathered from a summary of what the University of British Columbia is now doing or contemplating.

Many of the returned soldiers desire to

go on the land. For such, three-month courses are given in agriculture. Agronomy, animal husbandry, horticulture, poultry, apiculture, tractors, carpentry, blacksmithing, and bookkeeping have places in the course, thruout which special emphasis is laid on laboratory and field work, and practice work in a wide range of farm operations, from land clearing to harvesting crops.

The university has also inaugurated six-month training courses for returned soldiers in its mechanical engineering and allied departments. There are courses for chauffeurs, for auto mechanics, for stationary and marine engineers (both gas and steam), for general electricians, moving picture operators and general machinists. Buildings are now being erected, and courses will commence immediately on their completion, for naval and mechanical draughtsmen, boot makers and repairers, stenographers and telegraphers. Further, plans are being formulated to give courses to returned men of a less intelligent or poorly educated type as apartment house or office building janitors. They will be made competent to do general repair work, operate a heating plant, and give general care and attendance. Foundry moulding, oxy-acetylene welding, and blacksmithing courses are in process of arrangement, and will almost certainly be given during the coming winter, while courses in forestry, assaying and other subjects are being discussed.

At the present time, more than a hundred returned soldiers are students at the University of British Columbia. Before Christmas that number will be doubled. The attendance is limited only by the facilities the university can offer. Every course at present in operation has had more applications than can be accepted.

By these intensely practical vocational training courses, of three or six months, one young Canadian university is making its contribution to the solution of the returned soldier problem. Tho but a beginning has as yet been made, the demand for what is offered exceeds the ability of the institution, as now staffed and organized, to supply. Without exception the soldier

students are enthusiastic concerning the work. They are clamorous for lengthening existing, and establishing new, courses. The enterprise is being watched by the Canadian people, and meets with warm approval by whomsoever investigated. It is being watched, too, by the Great War Veterans, by the Comrades of the Great War, and other societies organized by the returned men,—societies that already are electing members to our legislatures over candidates of the old political parties, and that promise to have a dominating influence in Canadian public affairs as more and more of our fighting men come home. It has established new bonds of brotherhood between the men of the sword and the men of the lecture room—bonds of mutual service. It has given to Canadian universities a broader, deeper, higher, more general public respect, the result of fuller recognition and appreciation of the truly national work thus undertaken, and its obvious initial success.

As more and more men return, these courses must be extended, and others established. Dangers of the most serious sort have in the past sometimes attended the disbanding of armies. The later Roman consuls kept their legions at the Empire's frontiers—their return to the capital too frequently foreboded revolution—and history repeated itself under the French Directorate. Nothing of the kind will occur when peace is next proclaimed, but it is well to remember that there never were such vast armies to be reabsorbed into civil life, that many momentous questions must at that same time be dealt with, and that therefore we should so arrange matters that the process of reabsorption should be as free as possible from pain or peril. The knowledge that the state, thru its higher education system, has already done much, and will do all that can be done, to equip our returned men for honorable and self supporting positions in civil life, will go far, very far, to remove any dangers that might otherwise be feared.

It may well be that what is being done among the Canadian troops in England will be done here in America. Dr. Torrey, president of the University of Alberta, con-

ceived the idea of a "Khaki University," where the men went to school as they went to bomb throwing or bayonet drill, under discipline. Major Brock, dean of applied science in the University of British Columbia, was appointed director of Seaford College, of the "Khaki University," and three others of our fighting professors were on its teaching staff. Education was originally perhaps not the sole aim—the university was as much a device for the profitable employment of the men's leisure, when picture shows palled and worse indulgences threatened, as a serious and avowed educational effort. But ere long the movement abundantly justified itself on its intrinsic educational merits: the "Khaki University" is today a recognized and valuable department of Canadian military organizations. We might do something of the sort for our returned men: instead of mustering them out, giving them their discharge, they might be kept under military discipline, and given military pay, while such of them as desired or required it are given the vocational or other training that will best equip them for the honorable places they have earned in civil life.

These are merely suggestions of what the state, thru the university faculties, might do, and an outline of what is already being done in Canada, for the returned soldier. University organizations must be made sufficiently flexible to meet the conditions as they arise; courses must be adapted to the men, not the men to the courses. Their interest must be secured and maintained, their co-operation achieved, whatever the sacrifice to rigid and accepted academic theories. If such adjustments as events show to be required are made from time to time, and the work kept vital, efficient, progressive, the universities undertaking it will deserve, and receive, all needed public support, and general public gratitude.

Before I close, I want you now for a few moments to consider the part that the university library—the part that we, as university librarians—have to play in this big general scheme.

The first and most obvious suggestion that occurs to me is that the university library

should organize some system that will enable returned soldier students to continue their education by means of reading courses. These courses should be laid out by the returned soldiers' teaching staff. They should be closely adjusted, not to any purely academic scheme (that does not presuppose that they should be educationally defective) but to the things in which the soldier-student is interested. This feature I regard as essential, vital. Some books may have to be written with this special purpose in view: all included in the list should be most carefully selected by those in closest touch and sympathy with the men it is sought to serve. A handbook explaining its scope, and serving as far as possible in place of tutorial guidance concerning the significant things to be looked for, should accompany each course.

Next as to distribution. Could we not adopt or modify the travelling library system, and apply it to the scheme? Could not all the books in these reading courses be kept in boxes, labelled Economics 2, History 5, Agronomy 3, Marine Gas Engines 1, Naval Draughting 4, and so forth, and could not these boxes be sent to soldier-readers as part of the work of university library circulation? I am confident that this can be done, and that this extension of university library activities will more than repay, in appreciated public service, the cost and trouble involved.

So far the new library service outlined is a logical outgrowth of the soldier-student courses already adopted in Canada, and only in the matters of faculty selection and guidance, and in the adoption of the travelling library idea, differs from what most universities are today willing to do for all students continuing their work. No provision has as yet been made for the returned soldier who for physical, financial or domestic reasons cannot take advantage of the special university courses offered. Can the university library do anything for him?

I think it can. If we can give facilities for supplementary reading and study courses to soldier students, we can give reading courses adapted to men equally anxious for knowledge, equally or less intelligent, but for various reasons debarred

from university attendance. I have pointed out that great judgment and care are necessary in the selection of books for the supplementary courses: these qualities are absolutely imperative in reading courses undertaken without tutorial guidance. The books should be designed to lead the reader, by way of things in which he is already interested, to others in which interest can be aroused. These reading courses should not only be progressive, but graded. There should be elementary and intermediate, as well as the more advanced supplementary courses, and cultural, as well as vocational courses should be included.

It is of course true that in some studies books cannot take the place of practical work as a means of education. No amount of reading of texts alone will make a man a practical chemist, farmer, or mechanic. I heard once of an earnest-minded youth in the East who was moving out to Montana. As a preparation for residence in a cattle-riding country he took a correspondence school course in broncho-busting! He may have been complete master of the theory of equitation, but the sad and simple fact is that his stay astride the back of the first cayuse he mounted was but momentary! Practical work in the field, the shop, the laboratory is essential in many lines of education, but side by side with this must be much that can be learned from books, particularly when intelligent guidance governs the reading. In agriculture, for example, it is safe to say that much more general instruction is given by the printed than the spoken word. How otherwise can we explain the enormous circulation of our farm journals, or the demand for Farm Bulletins or Agricultural Station Reports? Do not these supplement and reinforce the work of our agricultural colleges, and bring to hundreds of thousands professional training of which they would otherwise be deprived? What these do for the farmer, the plan I have outlined will do for men learning other vocations, and, in the case of reading courses not designed for vocational benefit, will broaden the sympathies, quicken the intelligence, expand the capacities—make those thus educating themselves better and more desirable citizens of Canada, of America, of the world.

In Canada, where by the British North America Act (corresponding to the Constitution of the United States) all education is controlled by the Provinces, arrangements have been made by the Dominion Militia Department, or the Invalided Soldiers Commission, with the provincial Departments of Education for the carrying out of this returned soldier work. But in the United States there would appear to be a ready-made, efficient, centralized authority—the Bureau of Education at Washington, which for years has done splendid work both in initiating new and co-ordinating existing educational efforts—that needs only enlargement or adaptation to undertake with success the direction of this forward new national enterprise. And tho today I am supposed to hold a brief for the universities only, extensions of my suggestions will be obvious. Public libraries in cities, and county libraries, might have a place in the scheme; high school libraries certainly should. Perhaps the distribution of the books in the elementary and intermediate reading courses might be wholly taken over by these branches of the national library system.

To enable us to personalize and visualize the suggestions I have been making, let us take the case of a young American soldier who has served in France. He is perhaps hardly an average specimen of your fighting men so far as mental training is concerned, for he has had but three or four years at the public school, and then, if he came from a rural community, went to work on the farm, or, if from a city, at a trade. In either case the probabilities are strong that the only life he knew was that which all his years had been his environment. He has little knowledge of, and perhaps less sympathy with, the language, history, institutions, ideals of peoples of other lands. He is "just plain American"—shrewd, industrious, observant, confident, provincial. His number is up when the draft lists are printed. He reports at training camp, and in learning his drill begins to learn to subordinate his independent individualism to discipline and co-operation. After a few weeks he starts in a troop train for the Atlantic Coast. He crosses great mountain ranges, swings over limitless prairies, gets

new impressions of America's size, resources. He gets glimpses of great cities, of busy industrial regions, of corn or cotton lands, of sweeping stretches of wheat fields. He reaches the eastern seaboard, and finds himself a human unit in a vast military organization for which a tremendous transportation system has been organized. He voyages over the Atlantic, conveyed by mighty cruisers, guarded by swift destroyers. He escapes the menace of Hun submarines, and lands at a French port rebuilt almost overnight by the magic of American industrial genius and energy. He hears strange speech from men who are to be his comrades in arms, from women grateful beyond expression to his native country, and testifying to that national gratitude by personal kindness to him as an American soldier. He goes to his French training camp, sees picturesque old cities, wonderful cathedrals, tiny fields tilled like gardens. He goes on to the fighting front, fraternizes with the poilus, "borrows the makin's" from a dark skinned, grinning Ghurka or Algerian, learns that most Englishmen are human, likeable, reliable, cheerful sort of chaps, chums with Canadians, Australians, South Africans, and at the picture show behind the lines often sees Portuguese, Punjaubees, Cingalese. He swaps yarns with an Irish comrade,—maybe some dour Hielander will even offer him a drink! All around him is a new world: far overhead great mechanical birds swing and dart at heights and speeds far beyond challenge by any of their feathered prototypes. In a neighboring field he sees ungainly, misshapen, mechanical monsters lurch and waddle over every obstacle like gigantic prehistoric beasts. He stands his share of lonely midnight vigils: explores in silence and darkness that narrow strip of death, "no man's land": and one misty morning "goes over the top" behind a lifting, creeping barrage devastating as a tornado, yet controlled like a machine and timed like a chronometer. He sees with what gaiety and coolness men dare death while doing unbelievable feats of heroism: unconscious of it, he is himself the peer of the bravest: he sees agony conquered by fortitude, courage and con-

stancy displayed under every conceivable personal discomfort. Above all, he realizes to his innermost spirit that he is part of a mighty force co-operating with diviner powers that liberty shall not perish from the earth.

At length the cause for which he is fighting triumphs, and our soldier boy comes home. Is he the same man that went away? Can he possibly be, after his mind has received such a multitude of new and wonderful sensations and impressions, after all he has seen, and dared, and done? Will he not be wanting to develop, and expand the new knowledge gained? He may have picked up enough French to be misunderstood in an estaminet. No matter! he will probably want to learn more, if only to read the newspapers some French girl sends him. So we will provide for him a teaching and reading course in French. The books must be simple: they must tell of the cities he saw, the men who fought in the armies of victory, more about the curious and interesting customs he himself observed when in France. When he knows somewhat of the language, he perhaps will want to know somewhat of the history of France. Very well: let us provide him with books to that end—books setting forth opposing views, together with such suggestions and help as will enable him to arrive at just, intelligent, unprejudiced judgments. Very likely, having got thus far, he will be making comparisons between the systems of life in his own country and those of France—and not necessarily in every particular to the advantage of his native land. He will be reading some books on economics—he can get them, if the service I am advocating be adopted—and some day you will hear him comparing British and American labor ideals, discussing syndicalism, pointing out the economic fallacies of the I. W. W. program of sabotage, or the madness of the Bolsheviks.

Our returned man has travelled far, mentally as well as physically, since he went for a soldier! Is he not in every way a better man, a more desirable citizen, a greater national asset, because of his awakened, responsive mind? It was the war that started his mental development, but it was

books—the kind of books I would like libraries to be responsible for supplying these men—that continued it, broadening and training his sympathies and faculties thru his curiosities and interests, and, at the same time, thru vocational studies, making him a more productive individual factor in national wealth and power.

"What will all this cost?" I hear some cautious citizen enquire, and I hear the question repeated by shrewd politicians, who have long since realized that library votes mend but few political fences. I cannot say. The cost will depend on the magnitude of the work (which today none know) and the efficiency and thoroughness with which it is done. Truth to tell, I am not now greatly concerned with the financial aspects of the question. If my suggestions point a way to meet an imminent, inevitable national need, I feel sure that, whatever the cost, the money will be found. In the past four years all theories of national finance have been upset. We were told that the war would be over in six months or a year, because the treasuries of the belligerents would be empty long before that time. But the fact is, that even the poorest of the nations at war—Turkey, Austria—have somehow found money to go on fighting. When I think of how Britain for three years bore the heavy end of the Allies' money burden, of the titanic load she today carries, and apparently hardly stoops under,—when I recall the vast sums poured into our national exchequers from Canadian Victory Loans and American Liberty Bond issues, of the money raised for the Red Cross, the Y. M. C. A., and A. L. A.—the cost does not dismay me. Nations that can find money for war can be educated to find money for peace. If necessary, let us issue Peace Bonds, for it is in peace that the liberties defended in righteous wars must be extended and democratized. Men and women can be kindled to as fine and high a passion for construction and reconstruction as today we all feel for sacrifice. This may call for a more abiding faith, an even more enduring courage. But, as I see it, it is to this direction that the new patriotism leads, and every true son and daughter of

democracy should set their feet in these paths, to which the finger of Opportunity is already beckoning, and, with all who believe and hope, march steadily and valiantly to larger fields of social service and higher planes of human happiness.

REMINISCENCES OF LIBRARY PIONEERS WANTED

THE following communication has been received from Dr. Bostwick relative to the proposed series of library biographies which the A. L. A. Publishing Board is planning to issue:

Regarding the biographical series of American library pioneers, Dr. Melvil Dewey has made a suggestion which I am here adopting, that persons who have known these pioneers in the flesh be requested to contribute reminiscences of them, or give estimates of their work, in such shape that they can be placed on file and used by the writers of the sketches.

I am sending enclosed a list of names that have been suggested for inclusion in the series, together with the number of persons from whom the suggestion has come. I have made no attempt to indicate which of the names should be included, and doubtless a large proportion will be omitted, while others not mentioned here may be added. Your opinion on this point will be of value.

If you have had personal acquaintance with any of the persons named, will you not kindly write out your recollections of their personality and work, and send them at your convenience to Arthur E. Bostwick, librarian, St. Louis Public Library:

LIBRARY WAR SERVICE

Progress in the Work Overseas

We are printing just as it was received a personal letter from Burton E. Stevenson, in charge of the A. L. A. headquarters in Paris, that everybody may be thrilled as we were by the vivid picture he gives.

I know how anxious library people in America must be to have all possible news about our service over here, and I have been intending for a long time to sit down and write something for you; but I have really not had time to do any writing either for myself or anybody else since I have been in France. And since I have been sending publicity material and reports regularly to our headquarters in Washington, I have felt that all required information could be sent out from there—as it doubtless has been. But there are so many interesting things about this work, so many things coming up every day, so many opportunities of service, that—well, I only wish that all the library men and women in the United States who have labored so faithfully and so unselfishly to make this War Service the big thing it has grown to be, could come over here for a few days and see for themselves what a great thing that work is for our men.

Just yesterday a librarian was in from Butte, Montana, and it did us all good to see how she was thrilled by the sight of the boxes which she had helped to pack with books being opened in our basement. We are so used to opening boxes over here, and have grown so accustomed to the most extraordinary incidents, that it was refreshing to have someone with us who was new and fresh and receptive.

It is that way with everyone who comes into our headquarters. They are so thrilled and excited—the tears come into their eyes—as they do into mine even yet!—at the pathetic eagerness of our men for the sort of service we are giving them, at their gratitude, at their delighted astonishment that this service is really for them. I wish you could see our reading-room right now, crowded with men eager to read. It is cold and damp this afternoon, so we started a wood fire in the reading room for the first time, and I wish—

Well, I could go on like that for hours. But what I am trying to say is that I want all those thousands of men and women back home who have given themselves to this service to know what a godsend it is proving; and I want them to realize that every book they label and pocket and prepare is like a messenger from heaven to our men over here! Only we need more and more of them—our dispatch stations write me that already they are running short, that they are

not getting all the books they could handle. That must not be—there must not be an instant's slackening of the flood until our men are home again.

I wish our men and women—our women especially—could realize fully what it means to our men to have a place like this open every night till ten o'clock—a place that is warm and bright, full of good books, and of the heartiest welcome we know how to give. And not in Paris alone—in Tours, Dijon, in a dozen other places, such centres are being planned. They will serve as book centres for their districts—another step toward that ordered library service which I have been trying to build up ever since I have been in France.

This is no place for statistics, but you will be interested to know that we now have book installations in over six hundred Y. M. C. A. huts, in more than a hundred hospitals, in every Salvation Army cabin, in every Y. W. C. A. hostess house and nurses' club, in half the K. C. centres (and the others are waiting only till we can obtain transportation); as well as in dozens of other recreation places of various sorts. We are rapidly equipping military units with their own libraries; we have placed collections on every hospital train, in every cement section, in many forestry camps (and in all of them very soon); we have made a special effort to reach the small detached units detailed for some special duty miles from anywhere; and the cap-sheaf of the structure is the mail service which started two weeks ago and which has already almost outgrown our ability to handle it.

Library service, you know, consists not in giving a man a book, but in giving him the book he wants. Frequently our men can find the books they want in the hut or hospital collections; more frequently they cannot. So I took the question up with General Pershing; I told him if we could have the franking privilege, we would send the men the books they wanted thru the army post-office—and the privilege was given us instantly. It was a unique recognition of the value of our service—a service which General Pershing, and, indeed, all the army heads, have done everything they could to promote. So we started in with a little announcement in the *Herald*, followed by others elsewhere. Next week the *Stars and Stripes* gives us a special write-up; the *Temps* paid us the compliment of a delightful editorial the other day. . . .

And I wish you could see our mail. The most exciting time of the day is when we open it. Such requests—such incredulous amazement. I am attaching copies of some of the letters; and the great thing about it

TWO NEW A. L. A. POSTERS—THE FIRST, IN BRILLIANT ORANGE AND BLACK, FOR USE IN THE CAMPAIGN FOR FUNDS; THE SECOND, IN MORE RESTFUL TINTS, INVITING THE SOLDIER IN THE CAMPS TO USE HIS LIBRARY FREELY

is that we are able at once to fill about seventy-five per cent of the requests. But it keeps us jumping. And what a shout of joy there is when we find the exact book the man asks for—the more unusual it is, of course, the more pleased we all are! There are books which I once despaired of ever using which have become the head of the corner. Do you remember Mr. Funk's book, "The widow's mite"? Well, somebody actually asked for that!

We are now getting a couple of hundred letters a day; pretty soon we will be getting a thousand. One of my assistants laughingly remarked the other day that this was the first library she had ever worked in which was run like Sears-Roebuck!

Of course this special service will always remain a comparatively small part of our work, no matter how big it grows. The big basic service is the placing of balanced collections of books in every recreation center which serves our men, and keeping them properly replenished. During September we have sent into the field direct from our two warehouses more than fifty thousand books, and I am hoping to double that number for October. But the supply must keep up—and practically all of it must come from America. This fifty thousand was in addition to the shipments received at naval bases, to the 25,000 brought over by the Red Cross which have just reached Paris and will go a long way toward equipping the hospitals which we have not yet been able to reach; and to probably 15,000 retained at the base ports for the equipment of those areas. Also we have built up here in Paris a central library of about seven thousand volumes which is being added to as rapidly as our small force can accomplish it.

Let me add a word about that force. You have already been sent a list of the personnel: Mrs. Elizabeth Potter, of Oakland, California; Miss Pauline Fullerton, of New York; Miss Mary Booth, of Charleston, Illinois; Mrs. Frederick Palmer, and Mrs. Stevenson, with one or two volunteers from time to time. Mrs. Stevenson's whole time is taken up with the filling of mail requests, so that only four are left to run the library and to keep it open thirteen hours every week day and eight hours every Sunday. And they do it. They not only do it, but, in spite of my expostulations, they persist in coming around when they are supposed to be off duty, and pitching in again. This is Sunday, but when I came over this morning, I found Miss Fullerton at her desk writing catalog cards, and Mrs. Potter and Mrs. Stevenson in the basement picking out some books. Miss Booth at this moment is at Great Headquarters organizing the army library there; but during her absence I managed to get in Miss Goddard, of Perth Amboy, whom I have placed in charge of the central library at Tours, and she was here too. It certainly makes

one proud to be associated with such a staff—but just the same it isn't fair to them, and I am moving heaven and earth to get two more people for our staff. I will do it, too, before long; in fact, more than that have offered their services, but I want to get trained library people if I can, and also, you will understand that it is not everyone who can measure up to the standard which these young women have set!

The letters attached, written after the first announcement of the mail order service, show that men were asking for books on fire and life insurance (including the method of handling it in French); intelligence work, observation and reconnaissance, target and landscape sketching, map making and reading (from F. D. Seward, son of the Binghamton librarian); ancient history of France; criminal law, the law of torts and agency (from a law student from the University of Illinois); mechanics, artillery practice and theory; Herbert Spencer's "Synthetic philosophy"; commercial law, banking; and general bookkeeping; "The U. P. trail," "Desert Gold" or "Nedra"; algebra, trigonometry, electrical and mechanical drafting and electrical engineering; aviation "as it is in France today"; French grammar; volume I of Beveridge's "Life of John Marshall," Woodrow Wilson's "History of the American people," or "some standard work of biography or history of either United States, France, or Great Britain."

[It might not be out of place to mention here that the New York dispatch office (and we presume all the others also) reports an unceasing demand from soldiers and sailors who visit the office, for trigonometries. If you have a trigonometry, or know anyone who has a trigonometry, that is not in use, it is your patriotic duty to see that it is forwarded to the dispatch office, just as you gathered Baedekers a few months ago.]

A. L. A. HEADQUARTERS OPENED IN PARIS

On Aug. 29 the A. L. A. Library at 10, rue de l'Elysée, was formally opened. This is the first of a number of central or reservoir libraries to be opened by the association, around which the entire library service for the A. E. F. and for all American war workers in France will be

built. Burton E. Stevenson, formerly librarian at Camp Sherman as well as librarian of the Public Library of Chillicothe, Ohio, has been in active charge of the work in France all summer, working first from rented quarters. The present building was originally the *hôtel* of the Papal Nuncio to France, and is now used jointly by the A. L. A. and the Y. M. C. A., the former having the ground floor and the basement and the latter the rest of the building. The library and reading rooms are on the first floor and the basement is used for shipping books to all member of the A. E. F., wherever they may be located.

The staff of the Paris library already has a number of American librarians enrolled. Mrs. Stevenson is Mr. Stevenson's first assistant; Mrs. F. B. Smith, Jr., of the Smithsonian Institution Library, is the secretary; Mrs. Elizabeth C. Potter, a

graduate of the University of Wisconsin Library School and member of the staff of the Oakland (Calif.) Public Library, is the headquarters librarian; Mary J. Booth, librarian of the Eastern Illinois State Normal School, is reference librarian and branch organizer; Pauline Fullerton, New York Public Library, is the cataloger; Mrs. Frederick Palmer is the reading room supervisor; W. D. Davies, of White Plains, N. Y., is the superintendent of the stock room and shipping department; and Mary L. Wallace, New York Public Library, is a volunteer for evening work.

The library is open every weekday from 9 a. m. to 10 p. m. The reading rooms are light and spacious and amply fitted out with good periodicals and daily newspapers. All Americans in war work are invited to use them, and the rooms are full every evening.

United War Work Campaign

In *War Libraries*, no. 4, there is an article by Frank Parker Stockbridge, national director of information for the A. L. A., emphasizing the value of newspaper publicity in relation to the United War Work Campaign, and pointing out exactly what makes local news. "It is," he says, "local news that the librarian and the six or the six hundred members of his or her staff are taking part in the campaign, to begin with; it is local news that you have received word from the headquarters of Library War Service that more than 1,200,000 books have been shipped overseas, and more money is needed to buy more books. What makes this last local news is not the fact that more than a million books have been sent abroad but that *you*, the local librarian, have *received* that information." Wickes Wamboldt writes on the subordination of the seven organizations taking part in the campaign under the title, "The strength of each for the good of all"; and the number concludes with a three-page "Who's who in the campaign."

PUBLICITY MATERIAL

Shipments of publicity material—posters, booklets, leaflets, buttons and window cards

—from United War Work Campaign headquarters to local United War Work Campaign committees began during the second week in October.

In these shipments were included the United War Work Campaign posters, United War Work Campaign pamphlets, United War Work Campaign window flags and buttons, and also the posters for general outdoor display of the Y. M. C. A., the Y. W. C. A., the War Camp Community Service, the National Catholic War Council, the Jewish Welfare Board, the Salvation Army and the American Library Association.

In addition to these United shipments direct shipments were made to libraries from A. L. A. campaign headquarters in New York city, of the following special library publicity material: Rotogravure display sheets in three different sizes, 20 x 30, 15 x 20 and 10 x 15 inches; maps showing the distribution of Library Service, size 21 x 26 inches; and book-marks for insertion in all books circulated so long as the supply lasts. These pictorial sheets, maps and book-marks are not primarily campaign material, but are a part of the general publicity plan for Library War

Service. Their use will, of course, aid in the money campaign. Their purpose, however, is as much for the continuing education of the public as to what Library War Service is and does, and particularly that part of the public which uses the libraries.

An 8-page supplement showing the work of the organizations was planned in all the New York dailies for campaign Sunday, Nov. 10, but the priority order for necessary paper was refused by the chairman of the pulp and paper section of the War Industries Board. An appeal by John D. Rockefeller, Jr., chairman of the campaign in Greater New York, to Bernard M. Baruch in Washington, was unsuccessful in securing any reconsideration of this decision. Mr. Baruch courteously acknowledged the worthiness of the cause, but hesitated to create a precedent which would open the doors to every applicant, and called attention to the fact that similar requests from the Liberty Loan and the Red Cross had also been refused.

What Home Libraries Are Doing

RECORDS OF ENLISTED MEN

Considerable interest is being aroused in the "War album" which the Bangor (Me.) Public Library has undertaken to compile. It is to contain portraits of every Bangor man in military and naval service in the present war, if they are obtainable; also all others in service who have been identified with the city in the past but who have gone from other places.

As the city is already credited with 1400 men, the undertaking is a large one.

PUBLIC LIBRARY CO-OPERATION WITH CITY Y. M. C. A.'S

One of the fruits of the war is already at the doors of the public library. Hoping to parallel his experience with the A. L. A. Library War Service, William Orr, director of the Educational Department of the International Committee of Young Men's Christian Associations, 347 Madison avenue, New York city, desires to extend the co-operation of public libraries with city Y. M. C. A. organizations.

Mr. Orr believes that some of the ob-

SPEAKERS' BUREAU ORGANIZED

A National Speakers' Bureau, consisting of representatives of the seven organizations, has been formed which will secure and assign to the important cities of the country speakers of national importance. A United Speakers' Bureau will also be formed in each department, state, county and city. Library speakers are being recruited and will be reported to state and departmental bureaus and may be available for assignment within those districts.

Applications for speakers should be made to the bureau of the city or county and by them will be forwarded to the state or department when the request cannot be filled locally.

A speakers' handbook, entitled "Soldiers, sailors and books," containing facts with regard to the reading of the men, figures, stories, anecdotes and information generally about Library War Service, has been published and a copy forwarded to every library.

vious enterprises that might be conducted jointly are:

1. Maintenance of branch libraries in the Association buildings. This is being done to some extent.
2. The distribution of library publicity literature from the desk in each Y. M. C. A. building in our cities.
3. The organization of reading clubs and circles for which books would be provided from the public library.

Will not public libraries communicate direct with Mr. Orr, making comments or further suggestions? His splendid co-operation, in the past months so much appreciated by the Library War Service, is now offered in his new field to public libraries, with his influence toward extending library use among city Y. M. C. A. organizations.

SOME GOOD FREE MATERIAL

The U. S. Department of Agriculture Library is issuing a splendid series of 4-page library leaflets with colored covers of poster type, which libraries should get.

The seven already issued are entitled "Raise chickens," "Raise pigs," "Raise sheep," "Bread and cereals," "Vegetables and fruits in war time," "Meat: and meat substitutes," and "Fats and sugar." Two of the covers are designed by C. B. Falls, who does the Library War Service posters, and the others have been contributed by other artists. Each leaflet has a simple, readable story on its particular subject, embodying references to all the excellent free bulletins on the subject issued by the department, and giving references to the best books for additional reading.

Excellent bibliographies on food and allied subjects are being sent out by the Library Publicity Committee of the Illinois Food Administration with their "Library

letters." Recent subjects have been "Canning, preserving, drying and storage of fruits, vegetables, and meats," "Textile conservation," "Sheep husbandry," and "Fish as food." One letter was accompanied with a very full description of the patriotic food show given at the University of Illinois, together with the tested recipes distributed there. Another was a very suggestive statement of the many things that children's librarians can do to aid the work of the Food Administration, contributed by Alice I. Hazeltine, supervisor of children's work in St. Louis. Much of the credit for the success of Illinois libraries in furthering the efforts of the Food Administration may be traced to these very useful library letters.

Field Representatives

- L. L. Dickerson, who organized and served as camp librarian at Camp Doniphan, has been assigned field representative supervising the Texas camps.
Address, Library War Service, Library of Congress, Washington, D. C.
- Ernestine Rose, who has served at various periods at headquarters, has been assigned as field representative in hospital service.
Address, Library War Service, Library of Congress, Washington, D. C.

Headquarters

- Elizabeth B. Steere, assistant law librarian of University of Michigan Library, Ann Arbor, Mich., is assistant in personnel selections.
- Herbert L. Cowing, head of the loan department of the Free Public Library of New Haven, Conn., is assisting in book selection.
- Edna M. Sanderson, registrar, New York State Library School, is assisting in hospital library service.
- Jessie Tupper, of the Reynolds Library, Rochester, N. Y., is assisting in the work of supplying books to the various naval stations.
- Annette L. Clark, librarian of the Public Library, New Albany, Ind., who was granted leave of absence for three months to take charge of the naval stations, has returned to her work in New Albany.
- Anna B. Thomas of the Youngstown, Ohio, Public Library, who has been assisting in book selection at headquarters, returned to Youngstown in September.

War Service Committee Meets

Meetings of the War Service Committee were held at the Lake Pracid Club Sept. 24 and 25. At the first meeting a memorial minute to William H. Brett [printed elsewhere in this issue] was read and unanimously adopted by a rising vote.

Dr. Putnam, the general director, presented a letter from Malcolm L. McBride, acting chairman of the War Department Commission on Training Camp Activities, saying that draft boards would be instructed to honor exemption requests for men employed in the work of the organizations affiliated with the commission in welfare work with the soldiers, altho it would be necessary for the heads of such organizations to write to the respective boards where these men are registered. He also wrote that the War Department itself would be glad to recommend for passports the names of all men who have the approval of their respective organizations for foreign service and who have passed the necessary individual examination.

It was voted, after discussion, that the opportunity offered by the above letter for general exemption should not be availed of.

The question of supplying library service to workers in munition plants, ship-building yards and other industries engaged in war work came next under consideration and it was voted that it be taken as the sense of the committee that so far as books and money shall permit, it is the policy of the committee to provide book service to workers in munition plants and other industries engaged in war work where local libraries, library commissions or other local agencies can not provide it.

The committee voted its approval of the action of the Library War Finance Committee in joining in a financial campaign with six other organizations, viz.: the Y. M. C. A., the Y. W. C. A., the National Catholic War Council, the War Camp Community Service, the Jewish Welfare Board, and the Salvation Army, and also approved the proposal and accepted the offer of this same Finance Committee making available its campaign organization for the conduct of a book campaign as soon as possible

after the money campaign of the week of Nov. 11.

At the second meeting, the chairman having presented a plan proposed and prepared by J. L. Wheeler for the preparation and publication of certain war time reading lists in co-operation with the U. S. Bureau of Education, which plan proposed a grant of \$1500 from the Library War Fund, to be used in editorial and clerical work, it was voted, that the War Service Committee approved the plan proposed by Mr. Wheeler, but found itself unable to make the requested grant at the present time. The committee is willing, however, to make such grant if the forthcoming campaign yields a sufficient sum in excess of \$3,500,000, and in the meantime the matter is referred back to the A. L. A. Publishing Board, with the recommendation that the project be presented to the libraries of the country, and that they be invited to subscribe to the carrying out of the work.

A communication from Dr. E. C. Richardson was read relative to possible war service for libraries (chiefly along the lines of research work), aside from furnishing books and library service to the military and naval forces. In the hope that the approaching campaign may yield funds enough to undertake any worthy form of war service (heretofore limited to service to army and navy by the form of the first appeal for funds), the committee adopted a minute welcoming this communication, and authorized the chairman to name Dr. Richardson as chairman of a sub-committee of three on library research as war service (the two remaining members to be added by him) to prepare and submit a detailed plan for such work with any appropriate suggestions or recommendations.

Proposals for a memorial to the late William Howard Brett having been brought to the attention of the committee, a vote was taken approving the suggestion for a memorial and authorizing the chairman to appoint a member to represent this committee on a committee representing the American Library Association, to co-operate with a special committee of the Board

of Trustees of the Cleveland Public Library; and ordering this action to be reported to the Executive Board. [Note: To represent this committee the chair later appointed Miss Countryman.]

The chairman submitted to the committee a statement prepared by the general director showing the sum spent on each building, a tabulation showing building details and variations from standard plan in each, a separate audit of the Carnegie Corporation grant made at the instance of the A. L. A. Finance Committee, a list of constructing contractors and a copy of the uniform contract executed with each.

The final vote taken was that the chairman or some one appointed by him, be requested to visit the camps once or twice a year.

R. R. Bowker, of New York, has been appointed member of the A. L. A. War Service Committee to succeed the late William Howard Brett.

BRITISH LIBRARY ASSOCIATION HOLDS BUSINESS MEETING

THE forty-first annual business meeting of the British Library Association was to be held in the Council Chamber at Caxton Hall, on Friday, Oct. 25. The items to be considered were the report of the Council, including the treasurer's audited accounts for 1917, with reports of the committees and the branch and district associations; the election of honorary auditors; and consideration of the proposed application to the Lords of the Privy Council for alterations in Bye-law 3, giving the Council power to increase the entrance fees and annual subscriptions, payable by fellows and members as the meeting may determine. On this matter the Council expected to submit specific recommendations.

G. F. Barwick, Keeper of the Printed Books at the British Museum, has recently become joint honorary secretary in association with Frank Pacy.

THE Belgians have established a university at the front, with nearly 200 students, and courses leading to degrees in philosophy and literature.

SHIPMENTS OF FOREIGN BOOKS ARRIVE IN THIS COUNTRY

SUCCESS at last! Four shipments of German periodicals, costing about \$15,000 have reached New York from Rotterdam, and two consignments from Geneva have been received in Washington. All these parcels for 108 institutions have passed the Censorship Board without criticism. The American Library Association is trusted.

Mr. Nijhoff has made the desired reduction in his charges, so that we are seemingly about on a par with the British now. He cancels the so-called 5% war tax, and in his July bills lowers the conversion rate of the mark to guilder from .55 to .45, and also in his latest bills reduces the combined transportation rate to London and insurance to America from 6% to 4½%. The carriage charge from London to New York proves to require only an additional 1%. So that, despite the very high rate of Dutch exchange (the guilder costing 49 cents instead of the peace time 40), subscribers, after meeting all charges, will get their periodicals at the publisher's price, with the mark at about 23½ cents—a lower rate than charged them by American agents in 1917.

Finally Librairie Kundig's bills show probably even greater moderation, for the mark is converted into Swiss francs at .72; *i. e.* about 17 cents. The transportation charges are in this case not yet at hand, but if they prove no higher than Nijhoff's, the final value of the mark in settlement of the Swiss bills would be under 20 cents. The difference is fully accounted for by the enhanced value of Dutch money in today's international exchange.

The additional orders now being received for 1918 will be sent to Geneva.

Libraries are accordingly asked now to make immediate payment of the bills which have been sent them, whether or not all the parcels listed have arrived. Periodical subscriptions are payable in advance. The agents made payment months ago.

The bills of Kundig are to be settled just as presented. In the case of Nijhoff's bills two changes are to be made by the subscriber. First, strike out of all bills the so-called 5% war tax. Second, convert marks into guilders at .45 instead of .55.

The draft, of course, is made out to the agent, but it must not be mailed directly to him, for this would be a violation of law, since trading with the enemy, directly or indirectly, without a license is illegal. The individual library does not hold a license, but the American Library Association does. Hence the latter must forward payment, and in every way be the intermediary between institutions and agents. Do not, of course, send cheques on American banks. Money orders are also inadvisable. Buy exchange on a Dutch bank (or Swiss, as the case may be) from an American bank or express company, and forward promptly to the Secretary of the A. L. A. Committee on Importations, at the Johns Hopkins University, Baltimore, Md.

The secretary will appreciate also prompt payment of the personal bill sent out to cover transportation charges from London to New York. He had to advance this money in their behalf.

Perhaps it is not out of place to say that the service of this committee has cost two years of unremitting labor, and several hundred dollars, not one cent of which have the institutions been asked to meet. The trail has led thru the Department of State (with five changes of officials); British Embassy, British Foreign Office, Board of Trade, Stationery Office, Postal Censor, Library Association; the American War Trade Board and Censorship Board; the American Embassies in London and Paris, the Legations at The Hague and in Berne; the French Ministry of Foreign Affairs; numerous agents and over a hundred institutions. In the end there is success, but it has been a hard road. Will libraries accept the service of the committee in the patriotic spirit in which it has been rendered, and meet the bills sent promptly and without quibble?

Two cautions—both against the advice of well-intentioned agents. Mr. Nijhoff sends American subscribers a facsimile of a letter from the British Postal Censor, advising him that no license from that department is necessary in order to supply scientific publications from enemy countries to the American Library Association, or universities, or colleges. He then draws the hasty

conclusion that American libraries can now trade directly with him. This, of course, is incorrect. A license from our War Trade Board is necessary, and only the A. L. A. has that. Dealings must be thru the A. L. A. committee on importations.

Again, an American importer, frightened by the possibility of the German Government's seizure of his goods impounded in Germany, advises his clients to disregard all back orders with him and reorder thru the A. L. A. committee. This is sound advice so far as 1918 and thereafter are concerned, even imperative advice. But if the agent has been paid for earlier years, had we not better still look to him to supply us after the war and take potluck with the Germans. If the seizure were made there would probably not be enough left to go around.

M. L. RANEY, *Secretary,*

A. L. A. Committee on Importations.

September 23, 1918.

SALARY HEARING IN NEW YORK AND NOTES FROM OTHER CITIES

At the public hearings before the Board of Estimate and Apportionment of the City of New York held on Oct. 15 and 16, representatives of the trustees of the Brooklyn and New York Public Libraries, of the Staff Association of the New York Public Library, of the Library Employes' Union and of the New York Woman Suffrage Party protested against the cutting of the public library appropriation in the proposed city budget for 1919. The New York Public Library, in submitting its budget, asked an additional appropriation of \$93,280 for salary increases for 1919, but the proposed city budget cuts the appropriation to \$72,000 less than that for 1918.

The Board of Trustees has already conceded the demand of the City Administration for a cut in the appropriation for books, said Mr. Henry W. Taft, himself a trustee, at the hearing, but they did so on the ground that the money be put into salaries, in order to enable them to keep an adequate staff during the coming year.

Isabella M. Cooper, president of the Staff Association of the New York Public Library, pointed out the increase in the work of the public libraries since the outbreak

of the war, showed the library's value in combatting juvenile delinquency and encouraging community activities, and urged the necessity of keeping the library staff together and the difficulty of doing so under the present salary rate. Considerable interest in the proceedings was shown by the public, there having been much discussion of the question of salaries in the press during several weeks previously, and the Staff Association having issued a Budget Publicity letter, of which 1000 copies were sent to clubs asking members to uphold the librarians in urging the adoption of a budget by which librarians will be granted an increase equal to that allowed to other city employes.

The mayor showing no interest in the arguments for an increase in appropriations, Mary Garrett Hay, chairwoman of the New York Woman Suffrage Party, spoke on the second day of the hearing, in support of the efforts of the Staff Association, pointing out the qualifications necessary for librarianship, and the value of the service rendered by the profession, and asked whether it was because the majority of them were women that the City Administration discriminated against the librarians.

When his attention was called to the matter of librarians' salaries, previous to the hearing, the president of the Board of Aldermen, Alfred E. Smith, said that he had not studied the question but that he presumed that the library workers had got the \$100 salary increase that all city employes, on a wage of \$1800 or less, have been accorded. This has never been received, possibly because the mayor has so far failed to recognize that they are city employes.

The Pomona (Calif.) Public Library has made salary increases amounting to \$870 for the year. Part of the increase has come out of the amount formerly set aside to pay substitutes for workers on sick leave. It was decided that the certain advantage of five dollars a month more would be more useful to the staff than the privilege of three days' sick leave on pay. In addition, it is more fair to the staff as a whole. The rest of the increase is provided for by rearrangements of schedule.

LIBRARY WEEK AT LAKE PLACID ONCE MORE

FOR the first time since 1905, Library Week of the New York Library Association was held at Lake Placid, the headquarters being at the "Lakesyd Hous" of the Lake Placid Club, and the dates being Sept. 23-28. The general theme for the week was "The mobilization of book power to promote the prosecution of the war," and in the intervals between listening to the twice-daily concerts of the Boston Symphony septet, tramping thru the woods and over mountain trails, boating on the lake, and motoring over roads that wound thru the most brilliant autumn foliage, the librarians did gather and consider this question of the mobilization of book power. The thought emphasized was that the author is the creator of book power, the publisher the multiplier of that power, the bookseller and the librarian joint distributors, and the reader the ultimate consumer.

There was an attendance of about 175, in spite of the inaccessibility of the place and the increases in railroad fares. Besides the state association, the Executive Board and the Library War Service Committee of the A. L. A. also met here during the week.

The sessions opened Monday evening when William F. Yust, librarian of the Rochester Public Library, read his presidential address entitled "The dream of Tomus," printed in full elsewhere in this issue. Dr. Melvil Dewey was to have given formal welcome to the association on behalf of the Lake Placid Club at this session, but an attack of laryngitis kept him from all meetings until Friday afternoon, when he talked most interestingly of the establishment and development of the club.

H. W. Wilson spoke at this meeting on "Mobilizing book power," speaking of the value, and indeed of the absolute necessity, of indexes to make available the information otherwise hidden away in books and periodicals. With the great changes coming in society during the next few years as a result of the present war, we cannot afford to delay an hour in giving to every individual an understanding of the trend

of thought abroad as well as at home on the economic and sociological needs. Much information already exists in the publications of societies and governments, as well as in periodical form, and Mr. Wilson proposed the organized co-operation of libraries in a way to make possible the prompt publication of a standard international cumulative index to about 100 of the best periodicals of the world, together with a selection of the best serials published. Much interest was shown in the proposal, and at the Thursday morning session the matter came up for general discussion and endorsement. A committee of three—Frank K. Walter, William F. Jacob, and H. W. Wilson—was appointed to take up the matter further and see to what extent libraries in general would be willing to contribute to the financing of such a co-operative index.

The last speaker Monday night was Col. William Cary Sanger, assistant manager of the Potomac Division of Red Cross. In his paper "Arms, books and the man," Col. Sanger dwelt on the relation of books to the world's greatest crisis and man's control of force, arms typifying force and books typifying the spirit which should guide men in the conduct of their lives and in the exercise and control of force.

Tuesday morning the association's service flag, with 55 stars, was presented to the meeting by N. Louise Ruckteshler, librarian of Guernsey Memorial Library of Norwich. It was accepted on behalf of the association by William R. Eastman, the "grand old man in New York state library work," himself a veteran of the Civil War. Then followed reports of the secretary, the treasurer, and of the committees on library institutes, legislation, and merit system. This last report was referred to a special committee of three and came up again at the final business meeting, at which time certain recommendations were made and approved for transmittal to a new committee to be appointed by the new president.

The first address Tuesday morning was a stimulating one by William Warner Bishop, president of the A. L. A., who spoke on "Changing ideals in librarianship," from the collector and conservator of yes-

terday to the exponent of widespread service today. He was followed by Edith Guerrier, who directs the library publicity of the U. S. Food Administration, and who talked on "Libraries and food conservation." Her talk will be found elsewhere in this issue.

In the evening Frederic G. Melcher, managing editor of the *Publishers' Weekly*, was the first speaker. Mr. Melcher took up the general topic of the convention, "Book power," and spoke of the publishers' place as multipliers of books, of the peculiarities of the publishing business, of the characteristics of its organization, its imprint standards, and sales methods. In reviewing the present outlets for books in this country, he spoke of the great possibilities for increased distribution thru increasing public recognition of the library, thru a wider spread of bookstores, and thru America's entrance into the book exporting field.

Caroline Webster, of the Library War Service headquarters staff, then talked about "Women in library war service," particularly in the hospital libraries, describing the organization of the various kinds of hospitals, and reading excerpts from letters and reports of hospital librarians that showed the great variety and interest of the work. The last speaker was Dr. Charles H. Parkhurst, pastor of the Madison Square Presbyterian Church in New York, who gave a powerful talk on "The balancing of accounts at the end of the war." The world will never be permitted to rest in a state of confident security, nor will the Germans be worth anything to themselves, until they have been thoroly humiliated, he said, and it is the duty of the pulpit, the press, and all private citizens to see that all overtures short of unconditional surrender are rejected. The evening closed with the new war song brought by Mr. Wyer from the Syracuse meeting, which proclaimed that

The American flag will be flying over Germany

In less than a year from now.

Wednesday morning, library war service was the first subject. Dr. Frank P. Hill made the announcement of the drive for funds to be made by the seven welfare or-

ganizations in November, outlining the manner of organization and setting the goal at \$170,500,000 for the seven. He was followed by J. I. Wyer, Jr., who told of the work accomplished by the library war service during the past year, and also gave a glowing report of the inspiring district meeting of the different organization representatives at Syracuse earlier in the week. Frank Parker Stockbridge, director of information for the libraries in the next campaign, then told exactly what sort of publicity was being planned and what the part of each library would be in making the campaign successful in its community.

Shirley Putnam, daughter of Dr. Herbert Putnam, just back from thirteen months of Red Cross service in France, then told a few of her experiences in the hospitals where it has been her privilege to be one of the searchers who connect a man in France with his lost family in America or a family in America with a missing man overseas.

The last speaker of the morning was Dr. Earl E. Sperry, librarian of Syracuse University and director of its Library School, who gave what proved to be one of the most important addresses of the week, on "German propaganda in the United States." For many years several organizations operating from within the German Empire have been prosecuting on the soil of the United States a separatist movement. Its aim has been to keep alive German national consciousness in German emigrants to the United States and in their descendants. They have been taught that in spite of their American citizenship they are members of the German nation and should assist the German government in carrying out its plans, including the vast scheme of attaining world dominion. The agencies in the United States which have co-operated in this attempt to organize here a branch of the German nation are the German language press, German-American societies, German schools, German teachers and clergy. The National German-American Alliance, the charter of which has been annulled by Congress, was the most powerful and active of all the organizations engaged in the work of segregating Amer-

icans of German descent from other Americans. An idea of its spirit and purposes may be gained from the following motto which was inscribed on a banner hung across the hall at the convention of the New York State branch of the Alliance held at Utica in 1915:

Einig und stark,
Deutsch bis zum Mark.

This means "United and strong, German to the marrow." Whether the National Alliance was German or American is shown by the fact that it raised \$800,000 for German war relief, but not one cent for American war relief. The German government has given support and approval to this separatist movement in many ways, chiefly by the enactment of Delbruck's law which makes it possible for the German emigrant to retain his German citizenship after being naturalized in a foreign country. Since the German language press and many of the German-American societies are agencies of national disruption, it is the duty of patriotic Americans to discourage them.

In the evening there was to have been an Indian Council Fire in charge of Godfrey Dewey, but the rain made it impossible. Library school reunion dinners were the order of the day, and the gay paper caps furnished by Mr. Gaylord made the dining room a festive looking place. This meeting will ever be famous in library annals as the occasion of the "first annual reunion" of the Nondescript School for "girls and boys who have become famous without library schools." As a result of the energetic efforts of Mr. Melcher, Mr. Gaylord, and Mr. Jacob, 49 "graduates" of the "Library School of Hahrde Knox College" (as the school of experience was also dubbed) were gathered together for this first annual reunion, and marched into the dining room in an impressive procession, headed by Miss Hewins and the president of the A. L. A. Class songs and a college cheer were repeated at intervals during the dinner, and in noise as in numbers the school can claim distinction. Mr. Melcher acted as song and cheer leader for this evening, and before the party disbanded had appointed Paul M. Paine president for next year. Membership in the school is

open to all who can disclaim any relations with accredited schools and short courses, and at the next reunion with the A. L. A. in 1919 it is expected to have hundreds present. For the benefit of prospective members who may like to organize other chapters in their own states, to be affiliated with this Alpha chapter, we are glad to give both the cheer and the words of the songs.

(Cheer)

There's no B. L. S. on us,
There's no B. L. S. on us,
What a hullabaloo, 'bout a letter or two,
There's no B. L. S. on us,

The two songs ran as follows:

(Tune: Mary had a little lamb)

We're orphans with no alma mater,
Alma mater, alma mater,
We're orphans with no alma mater,
How do we get along?

How do you think we get along,
Get along, get along,
How do you think we get along,
Without degrees or frills?

Well, people take us at our worth,
At our worth, at our worth,
We'll make you take us at our worth,
You cannot keep us down.

We've not been standardized as yet,
'Dized as yet, 'dized as yet,
We've not been standardized as yet,
But cannot be kept down.

(Tune: Hail, hail, the gang's all here.)

Pratt, N'York, and Albany are here,
We never went to your school,
We never went to your school,
Pratt, N'York, and Albany are here,
What does any one care now?

Drex'l, Simmons, and Illinois are here,
And all the scattered small fry,
And all the scattered small fry,
Drex'l, Simmons, and Illinois are here,
What, the what, do we care now?

The Albany table replied with parodies of these classic songs, and drew upon themselves an added stanza before the last of the dinner festivities took place.

Yust, Wyer, and Walter all are there,
And all the Albany small fry
And all the Albany small fry
Yust, Wyer, and Walter all are there,
And they are wearing fool's caps too!

With this parting shot President Bishop was allowed to rise and make an eloquent address to the president of the association,

in which he felicitated him on his success in all his library undertakings, culminating in the present most successful meeting, and concluded by offering to him, in token of the appreciation of those present, a most wonderful cut glass water set, "the richest which the town afforded." But alas, there may be also many a slip 'tween glass and lip, and somehow, only one tumbler survived to reach the president's hand.

There was no formal program for this evening, but Miss Hewins gathered a group together around one of the fireplaces and treated them to a "random scoot" thru her early memories, as well as a more serious talk on what, in her mind, teaching patriotism to children really means. In the music room at Forest Hall another group was delighted with a number of Indian stories by Mabel Powers (Yeh-sen-noh-wehs), who was adopted into the Iroquois tribe eight years ago as official story teller. Motion pictures of summer and winter sports at Lake Placid were shown and explained by Godfrey Dewey, and these were followed by a film furnished by the General Electric Co. of Schenectady, giving the life story of Thomas Edison.

Thursday morning William F. Jacob, librarian of the General Electric Company at Schenectady, spoke on "Books and kilowatts," working out very thoroly, from an engineer's point of view, a parallel between physical power and book power. He was followed by Mrs. Kate D. Andrew, librarian of Steele Memorial Library, Elmira, who discussed some of the recent war poetry, reading a number of selections. The rest of the morning's program was filled by a symposium on "the best book I have read during the war," conducted by Leta E. Adams. The speakers, and the books to which they gave five-minute discussions, were as follows: William R. Watson talked on Seymour's "Diplomatic backgrounds of the war"; Mrs. Willis H. Kerr—White's "Martial adventures of Henry and me"; Frank K. Walter—Reider's "Comrades in courage"; Adeline Zachert—Mrs. Fisher's "Home fires in France"; Mr. Wyer—Sinclair's "Tree of heaven"; Alice S. Sanborn—Mortane's "Guynemer, the ace of aces"; Paul M.

Paine—Brown's "Flying Teuton"; Mrs. Elizabeth W. Blackall—Kellogg's "Head-quarters nights"; Ernest J. Reece—Fielding-Hall's "The world soul" and Bridges' "Religion of experience"; Anna G. Hall—"The little grandmother of the Revolution." Last of all Mr. Eastman was asked to review the whole field of literature for examples of "book power," and beside the Bible, most powerful of all books, he cited Maeterlinck's "Wreck of the storm," Mary Antin's "Promised land," and "Robinson Crusoe."

Thursday evening Charles H. Brown of Brooklyn presided over the session, which was devoted to "American democracy, the camp and the library." The first speaker, Major John T. Axton, chaplain in charge of the Port of Embarkation at Hoboken, talked on "Democracy and the camp," in an address that moved his audience from tears to laughter and back again. Following him, Earl B. Browning told of the library work in the military prison at Paris Island, and Blanche Galloway described the organization of the jackies' library at Pelham Bay Naval Training Station. Frank L. Tolman, who has been librarian at Camp Upton since its organization, gave a fine talk on "The library's aid to the camp as a melting pot," and Miss Hitchler closed the evening's program with some remarks on "The camps and libraries by an outsider," based largely on her visit to several California camps last winter.

Friday morning an advertising symposium was conducted by Paul M. Paine, to which Miss Adams, Mr. Browning, Mr. Paine and Willis H. Kerr contributed papers. The most spontaneous discussion arose for a casual remark by Mr. Paine that he thought a large sign announcing "Smoking Permitted" would go far to attract men to the library building, and for a time the sparks flew—tho there was no smoke—while the controversy raged. Miss Isom told of the work the Portland Library is doing with the men who are cutting spruce in the Oregon forests, and incidentally of the Loyal Legion of Loggers and Lumbermen (commonly called "the four L's"), who have done so much to improve

conditions in the logging camps and to increase the output of the lumber essential for the manufacture of aeroplanes.

In the afternoon Mary C. Richardson presided over a symposium on children's books. Martha Wilson spoke on "School library measurement" and the importance of establishing the library as a very definite part of the school. Mr. Certain's "Report on standard library organization and equipment" was commended by both Miss Richardson and Mr. Kerr as the most significant thing that has yet happened in school library work. Mary S. Saxe read a chapter from Dickens' "Uncommercial traveller" which had delighted her as a child, and Miss Powers once more told Indian stories.

For the rest of the afternoon Dr. Dewey held the attention of all with the tale of his early vision of the great need for popular education. Since school days are soon ended, but all of life is a school, he saw the place the library could fill and after a brief period of teaching, turned his attention to librarianship. The first call for organization of the A. L. A., the establishment of the LIBRARY JOURNAL, the establishment of the first library school at Columbia University, the administration of the New York State Library, were successive steps in this development. Coincidentally he became interested in the introduction of the metric system into this country, the initiation of spelling reforms of which he is still an ardent champion, and the organization of the Library Bureau and the Efficiency Society. Finally, he felt there was a need of some place where people doing a maximum of work in the world might rest and gather strength, and so the Lake Placid Club was organized some 24 years ago, and has succeeded far beyond the early dreams of its promoters.

In the evening A. L. Spencer of South Canisteo, champion of a flat rate of a penny a pound for library books sent out over rural free delivery routes, presented his views, which were cordially endorsed by special resolution on Saturday. Orrin G. Cocks, advisory secretary of the National Board of Review of Motion Pictures,

read a paper on "The drama and the motion picture as forms of book power," speaking first on the motion picture with reference to books; second, motion picture audiences; and third, a co-ordination of the motion picture and the reading public.

At the final business meeting Saturday morning the usual resolutions of appreciation to speakers and to all who had helped to make the meeting a success, were adopted. In addition special resolutions were adopted in memory of Winona Martin, who was killed during an air raid in Paris, and of William H. Brett. The service flag, by special action, was committed to the care of the secretary who shall be responsible for the keeping of a complete record of those there represented. The following officers were elected for the coming year: President, Paul M. Paine, Syracuse Public Library; vice-president, Anna G. Hall, New York State Library; secretary, Carlina M. Monchow, Dunkirk Public Library; and treasurer, Mary C. Richardson, Genesee State Normal School Library.

F. A. H.

Y. M. C. A. DISTRIBUTION OF BOOKS TO THE A. E. F.

THE report of James F. Mason, the director of the Bureau of Libraries and Periodicals of the A. E. F. Y. M. C. A., dated Sept. 1, has some figures to make us pause and meditate on the magnitude of the Y. M. C. A. work, of which this is but a small part:

"During July and August," he writes, "the Bureau of Libraries and Periodicals distributed a total of 2,726,870 items. As it is the privilege of this department to purchase and circulate practically all the literature used by the Y. M. C. A. in France this report covers a rather wide range and to some very slight extent is indicative of the literary taste of the army.

"It would not naturally be supposed that with so many of our divisions in active service there would be at this time a great demand for text books, yet to the contrary we were called upon to ship 25,349 volumes of texts and books of general literature of a substantial character as against the shipment of only 36,602 items classed as fiction.

The text books have been so scarce that shipments have only been made in very limited quantities and the demand has far exceeded the available supply. The main subjects for which texts have been requested were, in order of demand: French language, mathematics, history, primary readers, penmanship and geography. We now have in press a second edition (25,000) of Prof. Gourio's French course, 100,000 French-English dictionaries, 50,000 Hugo's French simplified, 100,000 copies of Prof. Applebloom's French phrase book, 5000 "Facts about France," 10,000 Duruy's History of France, 10,000 Popular history of France by Le Roux, and there are on order upwards of 100,000 other text books.

"We have received from the American Library Association during July and August for our hut libraries 34,902 volumes. The shipment by this bureau of other bound books to the Y. M. C. A. divisions during the same period amounted to 163,063, making a total of 197,965 bound volumes sent out in the last 60 days.

"The Mail Order and Sales Department has proved an increasing convenience to the army and sales amounting to 9486 francs show an appreciation of the service rendered. It is very interesting to note that when the soldier purchases a book he rarely, according to the records of this Bureau, selects fiction. In a single week we have received orders for the following titles, indicating clearly that our men are thinking of the more serious subjects: Complete bookkeeping, drug gardening, textural criticism of the Greek testament, plane and solid geometry, bee culture, copy-books for penmanship classes, Pitman's shorthand, bridge building hand book, plane and spherical trigonometry, cement and stone work, electrical engineers' hand book, "The Rubaiyat of Omar Khayyam," Greek grammars, logarithms and tables, architectural gardening, forestry, and algebra. One secretary urgently wired for ten French teachers, 200 French-English dictionaries and 200 elementary text books to be shipped immediately.

"Perhaps the most popular service rendered by the Y. M. C. A. is the selling of daily papers and the free distribution of

magazines for reading table use. 1,840,231 newspapers and magazines were shipped during July and August. Newspapers have been sent right up to the front line trenches and the joy exhibited by the men has been a sufficient reward for the extremely difficult and dangerous task of delivery. It necessitates a rather smooth running machine to keep up daily shipments when divisions move rapidly and without warning, but so faithful have those in charge of this branch of our service been that rarely have the papers failed to reach the proper railroad on time. Within a short while we expect to enlarge our magazine service for the combat divisions and allot one magazine to every 24 men per week.

"As the winter months draw near and the evenings grow longer, the question of music for the camps becomes of increasing interest. The music department of this bureau has made a careful study of the demand and after consultation with entertainers, musicians and educational secretaries, a book of popular songs with music has been compiled which it is hoped will be ready for publication by Oct. 15. An edition of half a million copies, containing the words only, will be ready about the same time. The total number of song books, piano solos, band music, orchestrations and hymn books distributed during the past two months was 84,493 and in addition large quantities of sheet music presented to us by friends of the soldiers were sent out to the field.

"Largely due to the splendid efforts of Prof. Daly there has been an increasing interest shown in the study of geography; this is indicated by the sale of nearly 8000 copies of maps of Europe and France. Many of our huts have been supplied with the Colin educational maps which are designed primarily for class work. Prof. Daly is now engaged in the preparation of a large two-sheet map of the United States drafted so as to strikingly present the elementary geographical features of our own country. A further interesting work has been the supplying of a sectional road map 16 feet long by 5 feet high showing the battle front in detail. Supplemented with pins and colored cords to show the war lines

this map has proved a center of attraction in many a hut in France.

"24,402 hygiene and health books in bound and pamphlet form have been added to the literature in the field under the direction of the Department of Health and Recreation.

"The Department of Religious Work has distributed thru this bureau 448,541 books and pamphlets and in addition have furnished the religious directors in the field with 32,099 Testaments.

"197,500 educational pamphlets and posters have been published. These comprise special editions of The Constitution of the U. S., money exchange tables, "The ideals of our home land," Chesterton's excellent essay on the Americans, "The question of the left bank of the Rhine," and posters of Foch, Joffre, Poincaré and other noted French officers.

"The nucleus of a headquarters reference library has been created. When developed this selected reference collection will enable educational secretaries to obtain valuable material for lecture courses and provide opportunity for the examination of books for class work and for sale.

"The total number of bound volumes and pamphlets sent out since this bureau was established amounts to 6,574,428."

HIS PLEDGE TO SERVE

ON the day the Yanks went across the Ourcq and up the hill, Private M. A. Treptow, of Iowa, a dispatch runner, ran his last race with death. Later, in the pocket of his blouse, they found his diary. On its first page he had written something that many a man in his company has since copied into his own diary. It was this:

America shall win the war;
Therefore I will work,
I will save,
I will sacrifice,
I will endure,
I will fight cheerfully and do my utmost
as if the whole issue of the struggle depended
on me alone.

Treptow had called this "My pledge," and thereto he had subscribed his name.—*Stars and Stripes.*

American Library Association

EXECUTIVE BOARD

A meeting of the Executive Board of the American Library Association was held at Lake Placid Club, Tuesday, September 24, 1918. Those present were President Bishop, Vice-President Belden, Miss Eastman, Miss Rathbone, Dr. Hill, Mr. Bailey, Mr. Strohm, and Mr. Utley, secretary.

The minutes of the meetings of July 1 and 5, 1918, were read and approved.

The president informed the board that he had appointed Messrs. Bostwick and Dudgeon to succeed themselves as members of the A. L. A. Publishing Board, for a term of three years each.

It was noted that the report of audit of the accounts of the Library War Service from the beginning of operations of May 31, 1918, made by Marwick, Mitchell, Peat & Company at the direction of the A. L. A. Finance Committee, be adopted.

M. S. Dudgeon, having submitted, thru the secretary, a preliminary and informal report on a plan to promote the reading of the best of the current non-fiction books, in co-operation with the editor of the *Atlantic Monthly*, it was voted that the Board express to Mr. Dudgeon its interest in the project as outlined, and request him to submit if possible within three months, a definite plan on which the board can act; and that the board also express its appreciation to Mr. Ellery Sedgwick, editor of the *Atlantic Monthly*, of his interest in this matter.

It was recorded as the sense of the board that the midwinter meetings of the Council should this year be omitted.

The subject of the meeting place for the next annual conference being under consideration it was voted that (1) the meeting be held at a summer resort rather than in a city; (2) that it be held at some point east of the Mississippi river; and (3) that further action relative to place be deferred to a future meeting of the board.

A brief report from the chairman of the advisory committee on Decimal classification, Dr. C. W. Andrews, was received and adopted as a report of progress.

The President was authorized to appoint a committee to draft a memorial minute for the late William Howard Brett on behalf of the Executive Board. The president named as this Committee Adam Strohm, chairman, Frank P. Hill and R. R. Bowker, who submitted the following minute:

"The Executive Board of the American Library Association record their sense of irreparable loss in

the death of William Howard Brett, which will be felt thruout the library profession in every feature of its service at home and abroad. He was always a pioneer in any fresh advance which would give to the library service wider scope and closer response to public needs. In making the Cleveland Public Library the first great library to grant the public access to open shelves, in promoting library work for and with children in separate housing, in developing the departmental system which will be the most notable feature of the great Public Library building which Cleveland will owe to him, and, finally, in giving himself heart and soul to the patriotic work at Newport News where he was the animating center of war work more comprehensive and far reaching than at any other post, he showed himself a leader who knew full well that leadership in a democratic community meant service to all. As an unflinching patriot he gave both himself and his sons willingly to his country's service and no duty ever called to him without immediate response. To the leaders of the profession he was always a support and inspiration, to all he was a cheering standard bearer and to those who knew him best he was one of the most beloved of men."

The same committee was also asked to prepare a minute on the same subject to be presented to the Association at its next annual meeting.

A communication was read from Everett R. Perry, librarian of the Los Angeles Public Library, recommending the appointment of a special committee to make a survey on the subject of the salaries of librarians and library assistants. A committee of three, consisting of Adam Strohm, chairman, Everett R. Perry, and one other member to be named by them, was appointed to make a preliminary survey, upon which a plan for a report on librarians' salaries and library conditions can be based, this committee to report at the next meeting of the Executive Board.

The Executive Board having been informed that the War Service Committee had voted not to avail themselves of the opportunity offered to men in Library War Service for general exemption from military service thru a communication from the acting chairman of the Commission on Training Camp Activities, War Department, the board voted to approve this action of the War Service Committee.

It was brought to the attention of the Executive Board by a resolution of the War Service Committee, and by a communication from Miss Eastman, a member of this board, that there is in contemplation a memorial to the late William Howard Brett, in which the participation of the American Library Association is invited. The board expressed its hearty approval of this project, and authorized the appointment of a committee of three to represent the association in conjunction with a special committee of the Board of Trustees of the Cleveland Public Library. (The president later appointed Adam Strohm, chairman, and Azariah S. Root, who together with Gratia A. Countryman, duly appointed as the representative of the War Service Com-

mittee, constitute this committee.) The sum of \$100 was appropriated from available funds in the hands of the treasurer of the association towards the proposed memorial.

GEORGE B. UTLEY, *Secretary*.

Library Organizations

SUMMER CONFERENCE IN MASSACHUSETTS

The third summer conference of the Free Public Library Commission of Massachusetts was held thru the courtesy of the Simmons College authorities at the college July 30-Aug. 1. The program was arranged with the problems of the small library in view.

The librarians were welcomed by Mr. Lowe of the commission in the absence of Mr. Belden. During the three days of the conference the following program was successfully carried out:

- "Saving of books in the small library," James W. Kenney.
- "Bulletins for small libraries," June R. Donnelly.
- "One result of our recent campaign: the establishment of base hospital libraries," E. Kathleen Jones.
- "Co-operation of Massachusetts libraries with the United States Food Administration," Edith Guerrier.
- "How the small library can use some of Boston's Library resources: the Town Room," Florence Johnson;
- "Art Museum Library," R. L. Dunn;
- "New England Historic Genealogical Library," Charles K. Bolton;
- "the State House," J. Maud Campbell.
- "How the libraries can help the rural schools," Hannah P. Waterman.
- "Uncle Sam's gift books," June R. Donnelly.
- "Best recent non-fiction for a small library," Ida F. Farrar.
- "Evaluation of fiction," Lucy Richmond.
- Round table on recent books, conducted by Miss Farrar.
- Round table—"Puzzling problems," E. Louise Jones.
- "The preservation of local history, especially during the war," Agnes J. Goodwin.
- "Librarians' opportunity for service in war time," J. Randolph Coolidge, Jr.

The librarians had the privilege of visiting the Overseas Dispatch Office at Harvard where Dr. Mawson explained in detail the work of the office. They also visited the Food Facts Bureau and other cottages on Boston Common devoted to food conservation activities.

E. LOUISE JONES.

UTAH LIBRARY ASSOCIATION

The annual meeting of the Utah Library Association was held in the Salt Lake Public Library Oct. 5, 1918.

The president's opening address by Esther Nelson was on the A. L. A.'s War Service, including a brief history of the work from the beginning. Miss Nelson closed with an appeal to the librarians of the state that they get the necessity of this work before the public before the \$170,000,000 drive for funds for the seven camp activities is begun Nov. 11.

Miss Judson read a paper prepared by Miss Ferris, of the Salt Lake Public Library, on

library work with children, emphasizing the necessity of a careful selection of books. A paper on the new war books was given by Grace W. Harris, of the Ogden Library. Miss Strong of the West Side branch of the Salt Lake Public Library, gave the last talk, on "Keeping the small public library alive." In the afternoon Joanna Sprague conducted a round table talk on the U. S. Food Administration, discussing methods by which libraries may do their part in educating the public in conservation of food. She called for and received reports from librarians present about the work of individual libraries along these lines.

The following officers were presented and unanimously elected for the coming year: President, Joanna Sprague, Salt Lake Public Library; first vice president, Hattie Whornham, Beaver Public Library; second vice president, Mrs. Ellis R. Carter, Mount Pleasant Public Library; secretary and treasurer, Vivian Wallace, Murray Public Library; Executive Committee, Mrs. E. C. Watson, Cedar City Public Library, and Elva Littlefield, Ogden Public Library.

GRACE W. HARRIS, *Secretary*.

TEXAS LIBRARY ASSOCIATION

The Texas Library Association held its annual meeting in Dallas, Sept. 25 and 26. Sessions were held in the Hotel Southland and the attendance register showed a total attendance of some thirty-three members and friends. Most of these had arrived the day before for the United War Work Conference on Sept. 24.

The program for the first day was as follows: "Mexican border travelling library service," Harriet C. Long, San Antonio. "Base-hospital library service"—at Camp Bowie, E. Sue Goree, hospital librarian,—and at Camp MacArthur, Mrs. J. E. Morgan, hospital librarian. "United War Service financial campaign," Elizabeth H. West, state librarian. "Making of a newspaper," Tom Finty, Dallas *Evening Journal*. Round table discussions of newspapers and periodicals were led by Willard P. Lewis, Waco; war books, Julia Ideson, Houston; and war work of individual libraries, LeNoir Dimmitt, Austin.

The next day the subject "Library legislation" was discussed by Lillian Gunter of Gainesville and Rosa M. Leeper of Dallas. "Small libraries and Texas legislation" was taken by Octavia F. Rogan, Austin.

Wednesday evening the members enjoyed a pleasant reception at the home of Mrs. J. H. McDonough, a trustee of the Dallas Public Library.

The following officers were elected for 1918-19: President, Lillian Gunter, Gainesville Public Library; first vice-president, Betsie Wiley, Dallas Public Library; second vice-president, Willard P. Lewis, Baylor University Library, Waco; secretary, Rose Hutchenrider, Waco Public Library; treasurer, William N. Daniels, A. & M. College Library, College Station.

After bringing in resolutions endorsing the war work, thanking the Dallas Public Library and Miss Wiley its librarian for their hospitality, endorsing a movement for systematic distribution of state documents and authorizing a committee for the drafting of a new library legislative program, the association adjourned to meet in Brownwood in 1919.

WILLARD P. LEWIS, *Secretary pro tem.*

WYOMING LIBRARY ASSOCIATION

The Wyoming Library Association held its fifth annual meeting on Oct. 1, at the Carnegie Library at Cheyenne. Twenty librarians were in attendance representing libraries thruout the state.

One of the important items of business transacted was the passing of a resolution to print the proceedings of the annual meetings. This work will be in the hands of a committee and the publication will be made within the next few months.

J. A. Lowe, camp librarian at Camp Devens, Massachusetts; Dr. Herbert T. Harris of the Public Health Service; and Dr. Grace R. Hebard of the U. S. Food Administration Publicity Department, were among the speakers at the conference.

The following officers were elected: President, Mrs. Bertha K. Van Devender, librarian Carnegie Library, Basin, Wyo.; vice-president, Mrs. C. S. Smith, librarian, Moorcroft, Wyoming; secretary-treasurer, Agnes R. Wright, State Librarian, Cheyenne, Wyo.

AGNES R. WRIGHT, *Secretary.*

Library Schools

NEW YORK STATE LIBRARY SCHOOL

Twenty-six regular students are enrolled—the smallest number in years. War work and the unusual demand for college graduates in several lines of relief work are chiefly responsible for the large number of deferred and pending applications. Three of the foreign students have been unable to enter as yet on account of passport complications and the scarcity of steamships.

Miss Hawkins will conduct the Senior Course in cataloging. It will begin about Jan. 1, and will combine features in both of

the courses formerly offered by Miss Dame and Miss Fellows. Miss Sabra W. Vought, who succeeds Miss Dame in the Catalog Section of the State Library, will give the courses in Loan and Shelf Work. The part of the Library Extension course formerly given by Miss Caroline Webster will be conducted by Miss Anna Gertrude Hall, who takes her place as library organizer.

The class of 1919 has elected as its officers for the current school year: President, Jane L. Burbank; vice-president, Julie Rummelhoff; secretary-treasurer, Robert E. Stauffer.

Hazel B. Warren is temporary chairman of the class of 1920, pending a permanent class organization.

F. K. WALTER.

LIBRARY SCHOOL OF THE NEW YORK PUBLIC LIBRARY

With the opening of the school year 1918-19 twenty-four regular students enrolled. Ten of these are from New York state, while the others represent eleven states and dependencies of the United States. One has a Master's degree, nine have Bachelor's degrees, and four others have had some college or normal school work. Seventeen of the twenty-four in the class have had library experience. The advanced students number eleven, all of whom received their certificates at the Library School of the New York Public Library in 1917-18 or in previous years.

New features scheduled for the advanced courses include a series of lectures on accounts and book-keeping by Elizabeth Haseltine, librarian of the School of Commerce of New York University; several hours devoted to new material in the 300's, conducted by Corinne Bacon; and a number of "staff-meeting" discussions of new books led by Gabriella Ackley, librarian of the Yorkville branch of the New York Public Library. Isadore Gilbert Mudge will give her work in advanced reference and Prof. Azariah S. Root his lectures on "The history of the printed book," as in previous years.

Before his departure for Washington, F. W. Jenkins, formerly librarian of the Russell Sage Foundation, spoke to the incoming class on "The library as a civic factor." Jessie F. Brainerd, a former student of the school, who is now librarian of the Hackensack (N. J.) High School, discussed "The administration of a small library" at a joint meeting of the regular and advanced classes on Oct. 8.

The program of library visits for 1918-19 begins with a trip to the Newark Free Public Library on Friday, October 18, at which time the class will have an opportunity to view the Colombian exhibit now on display there.

ERNEST J. REECE, *Principal.*

SIMMONS COLLEGE SCHOOL OF LIBRARY
SCIENCE

College opened on scheduled time, Sept. 20, for but one prosperous week, and then closed as a precaution against the spread of Spanish influenza. At the time of writing it is thought the date of reopening will be Oct. 14.

Mrs. Martin Peck has been released from her full time appointment to join Dr. Peck, now stationed at Plattsburg, but she will return in April to give a two months course in "Library work with children."

Marion Hayward, Simmons 1916, has been appointed as assistant in the library department.

JUNE RICHARDSON DONNELLY, *Director*.

PRATT INSTITUTE SCHOOL OF LIBRARY
SCIENCE

An interesting letter has been received from Carol Hurd, 1912, who went to France in the service of the Y. M. C. A. Miss Hurd writes "I happen to be in the library department of the Y which occupies the floor above the A. L. A. The numerous mirrors, much gilded ceilings and red velvet handrails seem neither warlike nor businesslike. However, we are busy. I spend more and more of my time with newspapers—starting, stopping, decreasing and increasing orders and everlastingly changing addresses and checking bills—1800 papers for the — Division for 14 days at .20 centimes'."

JOSEPHINE ADAMS RATHBONE.

CARNEGIE LIBRARY SCHOOL

The School opened for its eighteenth year, Sept. 18. Twenty-nine students matriculated: thirteen in the general library course, and sixteen in the children's librarians course.

FACULTY

Marie Hamilton Law, registrar of the School, has been appointed assistant to the Principal, and assumed her new duties with the opening of school.

Lucy E. Fay of Austin, Texas, comes to the School in October as head of the bibliographic course. Miss Fay received her A.B. degree at Sophie Newcomb College 1895; her A.M. degree at University of Texas, 1901, and the degree of B.L.S. from New York State Library School in 1908. Miss Fay was librarian of the West Virginia Library, Morgantown, W. Va., 1910-1910, and is at present librarian of the University of Tennessee Library.

Ruth Moss Paxson, A.B. Wellesley, 1912, certificate, Carnegie Library School 1916, has been appointed reviser.

SARAH C. N. BOGLE, *Principal*.

CHAUTAUQUA SCHOOL FOR LIBRARIANS

The school has assumed additional activity and interest in developing a full year's course on the installment plan. Students are now coming four summers to complete a course equal to that offered by a one-year library school.

From the eighteen annual summer sessions already held, 550 librarians have had training and been scattered all over the country doing effective library work. Many of them want to return for further study and advanced work. An increased number of students also will take advantage of the opportunity to complete a full year's course. Many cannot afford, for financial, home duty, or other reasons, to give up their work for a continuous year, but can get away for summer study, thus having the same opportunity for library training that teachers do to complete courses in our great universities.

The school is unique in that only those are accepted who are already in library work or under definite appointment to positions, hence the name, "Chautauqua School for Librarians." This means that every student who finishes the course will have also at least three full years of actual experience, while most of them will have had more.

The visiting of libraries and places of book interest will be done under direction between sessions, and also the required reading, followed by reports and discussions at the school. Students also will keep a record of perplexing problems met in their work thru the year, to be discussed and solved at the school.

In addition to hearing inspirational and instructive addresses from librarians and instructors in other library schools over the country, thru the four summers, the students also have the unequalled opportunity of listening to splendid addresses and interesting discussions of present-day problems by the greatest speakers which this and other lands afford. As the place is so delightful for spending the summer it is easy to secure leading experts of the country for special subjects. A number of other schools at Chautauqua also offer courses directly related to library work with which to affiliate.

The librarian trained under such favorable conditions has not only technical foundation, but also a degree of liberal culture, which is a service of intellectual inspiration to the community she serves.

Two groups of students were in session from July 6 to August 17. Class work continued thru Saturdays, thus giving seven school weeks instead of six. There will be three groups in 1919 and four in 1920 and the years following. The first group will gradu-

ate in 1920 when the school will be full-fledged.

The new development has created much interest. Every one is enthusiastic and it is working out even better than the most optimistic could have thought or dreamed. The opportunity for comparative study between the various phases of this new plan and the continuous year schools, offered keen interest to the instructors of long and wide experience.

The war work is taking so many librarians from regular positions that the demand is now far greater than the supply. This demand, which cannot at present be met, is bound to increase salaries and cause many to seek library training as the source of greater efficiency. The course of study is planned to accomplish the most possible in each summer's work.

The first group has regular lectures and lessons including courses in cataloging, classification and allied subjects, reference work, organization and administration, and story telling.

The courses of the second group doing advanced work include the history of libraries and bookmaking, and types of libraries, cataloging, classification, reference work, book-binding, and round tables on administration.

Mary E. Downey, director of the school, lectured daily on subjects relating to library organization, administration, and on the history of libraries and book-making, and types of libraries. Anna R. Phelps, organizer of the New York State Library Extension Division, taught cataloging, classification and allied subjects. Mary L. Sutliff, instructor in the Library School of the New York Public Library, gave the reference and subject heading courses. The first group had Mabel Bragg's story telling course, and the second group a bookbinding course under Mae Byerley.

Aside from attending lectures on the general program related to library development, special lectures were given before the classes by Prof. Vaughan MacCaughy on "Nature study books," Louis Walden on "Printing," Mrs. Harriet McCrory Grove on "The library and the community," and "New thought books," Mrs. O. B. Eichelberger on "Illuminated manuscripts" and Miss Adeline Zachert on "The development of the Rochester Public Library."

Lectures continued each day from 8 to 12 a. m. and laboratory work thru the afternoon. Practice work was carefully revised and opportunity given for questions relating to library experience.

Visits were made to the Westfield, Mayville and Jamestown libraries and to the Art Metal Construction Company for the examination of

library furniture and equipment. Students also assisted Miss Phelps in organization work at the Mayville Public Library. Visiting librarians and trustees attended lectures and consulted in regard to library matters, making this feature a very important part of the work. Trustees and heads of schools also came seeking librarians or assistants.

The classes consisted of 31 students representing 10 states as follows: Ohio 13, Indiana 3, Michigan 3, Kansas 2, New York 2, Texas 2, West Virginia 2, Utah 2, Florida 1, Illinois 1.

MARY E. DOWNEY, *Director.*

WESTERN RESERVE LIBRARY SCHOOL

The opening of the fifteenth year of the School was saddened by the great loss that has come in the death of Mr. W. H. Brett, the Dean of the School since its founding in 1903. His inspiring life, his keen personal interest in the students, even amidst the unusual stress of recent years, his occasional lectures and informal talks to the class out of his ripe experience,—all these have left an impress on each class as it has come and gone that will surely be manifest in their attitude toward life and the profession which he loved and so nobly adorned.

About two weeks before the date for the beginning of the year the School was suddenly confronted by the necessity for immediate removal from the building it had occupied since its organization. The building was taken over by the Government for the barracks for the Students Army Training Corps and the Library School is now located in the Law Building on Adelbert Road not far from the old location.

Regular school work began Oct. 1 with a registration of 23 students, representing the following states: Ohio 9 (8 from Cleveland); Indiana 1; Michigan 1; Iowa 7; Montana 1; Pennsylvania 2; Connecticut 1; Rhode Island 1. The students have shown fine spirit in adapting themselves to the limited quarters in the new location, and both faculty and students are united in their determination to maintain the standards and spirits of the School during this war period. The faculty and course of instruction will be as last year with certain slight modifications made necessary by unusual conditions.

The class of 1918, completing the course last June are in positions in the following libraries: Detroit Public Library, Gertrude E. Barth, Marjorie J. Darrach; Pittsburgh Carnegie Library, Adaline Bernstein, Nell Lynch; East Cleveland Public Library, Joyce G. Bisbee; Kent (O.) Normal School Library, Marjorie A. Borne; Iowa Library Commission, Emma M. Boyer; Buffalo Public Library,

Mary I. Britt; Oak Park (Ill.) Public Library, Elvira Charlton; Minneapolis Public Library, Alta I. Hansen; N. Y. Public Library, Clara H. Findling, Winifred M. Fisher, Frances H. Gates; Ft. Wayne (Ind.) High School Library, Florence A. Klenkenberg; Council Bluffs (Ia) Public Library, Lorena L. Scott; University of Missouri Library, Emily B. Smith; Cleveland Public Library, Emily R. Cornell, Grace A. Haskin, Lillian L. Hutchinson, Bianca M. Morse, Alma Schultz, Mary M. Taylor; Washington, U. S. War Dept., Mabel M. Richardson.

ALICE S. TYLER, *Director*.

LIBRARY SCHOOL OF THE UNIVERSITY OF WISCONSIN

The University opened Oct. 3, a week later than usual, which will be offset by a shorter vacation at the holidays. The registration for the year is 28. This number represents eight states and the Philippine Islands, with seven from Wisconsin, six from Iowa, three each from Illinois and Minnesota, two from South Dakota, one each from Colorado, New York, and Ohio, and four from the Philippines. The coming of the young men, Gabriel A. Bernado, José M. Munda, Cirilo B. Perez, and Eulogio B. Rodriguez, from Manila, sent by the Government of the Philippine Islands, brings a group of earnest students who are preparing for library work in their own country. They are all graduates of the College of Liberal Arts, University of the Philippines, their studies having included advanced courses in English composition, English literature, and library science. In connection with their library school work they are taking courses in economics and political science in the University of Wisconsin, as they are to specialize in legislative and municipal library work for the Islands.

The educational qualifications of the other students maintain the standards of previous years, for twenty have a college background, four with bachelor's degrees, eight seniors in the College of Letters and Science, six with two years of college work, and two with one year. Ten of the class have had from one to eight years of library experience.

The schedule of lectures, discussions, and assigned work bids fair to follow the usual order of previous years, tho it is a little early to be fully sure, in these days of war time activity, that an academic routine may not meet with reverses.

MARY EMOGENE HAZELTINE, *Preceptor*.

LOS ANGELES PUBLIC LIBRARY SCHOOL

Marion L. Horton, formerly instructor in the Los Angeles Public Library School, be-

comes acting principal with the opening of the 1918-19 term. Since Mrs. Brewitt's resignation in June, Miss Horton has had charge of all details of student work and appointments, of new applicants, and entrance examinations. She also prepared and conducted the special summer course for junior assistants, which, undertaken as an experiment, has already proved its value to the library. The enthusiasm of spirit and high technical excellence that have characterized Miss Horton's work thruout her school relationship are assurances for the continued development of the school under her direction.

EVERETT R. PERRY, *Librarian*.

Several files of library periodicals and many pamphlets have been added to the school collection during the summer with the purpose of making it a complete collection of material published by libraries and about library economy. Additional desks and typewriters and other equipment make it possible to increase the number of students admitted this year. In spite of war conditions and the increase in the tuition fee the school has had a greater number of desirable candidates this year than ever before.

Changes in the faculty include the appointment of Arnie McPherron Leaf as instructor and Elizabeth Williams as reviser. Mrs. Leaf will teach the classes in cataloging, subject headings and minor related subjects, and will share the reference course with Miss Haines. Mrs. Leaf was assistant in the English department at Stanford University after her graduation there, and has also studied in the Los Angeles Normal School. She is a graduate of the Los Angeles Library School and has been an assistant in the Hollywood branch and in the juvenile department. Miss Williams graduated from the Los Angeles Library School in 1918.

MARION L. HORTON, *Acting Principal*.

RIVERSIDE LIBRARY SERVICE SCHOOL

The Riverside Public Library has developed its war work to such dimensions and such intensity that war work stands first in point of service.

The call for library workers and for office workers in Washington has taken a great many of the staff members from Riverside. It was found necessary to advertise in the daily papers for young women or young men of good education in order to keep the library open and get the work done.

Another course for camp librarians is announced at Riverside.

JOSEPH F. DANIELS.

Librarians

ADAMS, Ida E., a Simmons graduate, is in charge of the West Seattle Branch of the Public Library, Seattle.

ADELBERG, Carolyn E., who has been connected with the Louisville Free Public Library as librarian's secretary since March 1913, has resigned.

ALLEN, Evelyn Hess, Western Reserve 1913, is librarian of the Birchard Public Library, Fremont, Ohio.

ANDERSON, Mrs. Rachel Rhoades, Pratt 1911, has been made junior examiner of the Department of Labor, U. S. Employment Service.

ANDREWS, Marie Le Baron, Library School of the New York Public Library 1917-18, is now an index and catalog clerk in the office of the Quartermaster General, U. S. War Department, Washington, D. C.

APPLE, Miriam, Simmons 1918, who has entered the U. S. Government Service, has been assigned to service in France. Her address is Index and catalog clerk, Q. M. C. Office Chief Q. M., American E. F., France.

APPOLD, George, of the New York Public Library, who has been on leave of absence in order to attend the Student Army Training Corps at Plattsburg, has now received his commission as second lieutenant of infantry. He expects to be sent to Johns Hopkins University for further training.

ATWATER, Mary T., Pratt 1915, has gone for a long visit to Honolulu where she will be living at the Pearl Harbor Naval Station.

AUSTIN, Violet D., Western Reserve 1915, announces her marriage to Arthur L. Silverman of Honolulu.

BANES, Mary, Carnegie 1913-14, has resigned as children's librarian of the Public Library, Birmingham, Ala., to study nursing.

BATE, Nellie M., Riverside 1918, has been appointed librarian at Fullerton Union High School, to succeed Miss Hoge.

BAXTER, Ethel L., New York State 1917-18, has been elected assistant librarian of the Iowa State Teachers College, Cedar Falls, Ia.

BEAL, Stella, Simmons 1908, has been appointed secretary in connection with the A. L. A. War Service and U. S. Bureau of Education Work, to Mr. Wheeler, librarian of the Public Library, Youngstown, O.

BEALE, Helen M., recently promoted to be assistant librarian of the Adelbert College Library, Cleveland, has been serving as acting librarian during the five-months absence of the librarian.

BEDLOW, Elinor, Simmons 1917, is now with the National Bank of Commerce, New York.

BEEBE, Harriet M., reference room assistant and librarian of the Alfred E. Burr branch of the Hartford (Conn.) Public Library, has a year's leave of absence to attend Pratt Institute Library School.

BIEN, Corabel, Library School of the New York Public Library 1915-17, has given up her place in the reference cataloging division of the New York Public Library to become reference and periodical librarian in the University of Oregon Library.

BLACKSHIRE, Deane, Simmons 1917, is now librarian of the Township High School Library, Centralia, Ill.

BOARDMAN, Marguerite, Library School of the New York Public Library 1915-17, has left the circulation department of the New York Public Library to accept an appointment as head of the Pocatello (Ida.) Public Library.

BOSWORTH, Harriett, Simmons 1918, has been appointed assistant in the Perkins Institution for the Blind.

BROCK, Genevra, who has been doing county library work in Madera, Calif., has resigned her position and returned to Buffalo, Wyo., to spend the winter with her parents.

BETLE, Clara, Simmons 1914, is a cataloger in the New York Public Library.

BUTTERFIELD, Alice, Riverside 1914, for the past few years a member of the staff of the Riverside Public Library has been appointed librarian of the Girls' High School, Riverside.

BYRNE, Paul R., New York State 1915, librarian of the National Bank of Commerce, N. Y., is a member of Co. I, 1st Provisional Depot Brigade, Camp Sevier.

RIDLON, Margaret, Simmons 1912, is now librarian at the Highland Park, Ill., Public Library.

RITCHIE, Mrs. Charles M., has been appointed librarian of the Public Library of Fairmount, W. Va.

RITCHIE, Ella G., Simmons 1910, is now index and catalog clerk, Signal Corps, Division of Military Aeronautics.

ROBERTSON, Florence R., head of the binding department and librarian of the Dwight branch of the Hartford (Conn.) Public Library, has a year's leave of absence to attend Pratt Institute Library School.

RONSHEIM, Isabelle McConnell, Carnegie diploma 1916, substituted in the children's department of the Carnegie Library of Pittsburgh, Aug.-Sept., 1918.

ROSENRETER, Martha, Library School of the New York Public Library 1915-17, who went to Portland, Ore., last year as first assistant in the branch department is now librarian of the Albina Branch.

ROWE, Alice, Simmons 1917, is with the Portland, Ore., Library Association.

ROYCE, Ruth, for 35 years librarian of the State Normal School in San José, Calif., resigned her position last May, altho the resignation was not announced at that time. At the meeting of the board of trustees in September resolutions were adopted expressing the board's high regard and appreciation for Miss Royce's untiring efforts in behalf of the school.

RUSSELL, Helen, Simmons, 1917, of the Buffalo Public Library has been made librarian of their Jubilee Branch.

SCARF, Joice, Simmons 1917, of the Iowa State College Library, has been made librarian of their Engineering Library.

SCHAER, Mildred, Los Angeles Library School 1918, is cataloger in the Kings County Free Library, Hanford, Calif.

SCHMIDT, Ilona B., has resigned her position as assistant in the catalog department of the University of Chicago Libraries to accept a position as head cataloger in the Library of the Minnesota Historical Society at St. Paul.

SIBLEY, Jessie G., has resigned from the children's room of the Main building of the New York Public Library, and will go overseas to do canteen work with the Y. M. C. A. She will be succeeded by Lenore Power.

SHIELDS, Ethel A., B.L.S. New York State 1917, is now first assistant in the technical department of the Bridgeport (Conn.) Public Library.

SIGLER, Grace, Simmons 1917-1918, has been appointed assistant in the New York Public Library.

SIMONDS, Ella Gage, Library School of the New York Public Library 1912-13, is an assistant with the National Committee of Patriotic Societies, New York City.

SINGLEY, Louise, Carnegie certificate 1913, has been granted leave of absence from the Carnegie Library of Pittsburgh, to do hospital library work. Miss Singley is librarian of the Base Hospital, Camp Beauregard, Alexandria, La.

SMEAL, Hilda, Riverside 1915, is now an ambulance driver in France on the Western front, and has written a number of extremely interesting letters to Riverside library staff members.

STETLER, Hortense E., Western Reserve 1916, is children's librarian in the Public Library, Virginia, Minn.

STEVENS, Gladys, Riverside 1917, was married Dec. 6, 1917, to Wm. H. Mickel, and is now living at Pittsburg, Calif.

STRANGE, Joanna Gleed, assistant in the division of economics and public documents of the New York Public Library from March 1915 to May 1917, died in New York City, August 23.

SULLIVAN, Helen Marie, Carnegie 1915-16, has resigned from the staff of the Carnegie Library of Pittsburgh.

SUTHERLAND, Lillian, 1908-10, has been made secretary to the principal and board of directors, Washington Seminary, Washington, Pa.

TALBOT, Marjorie, Simmons 1911-1912, is driving an ambulance in France.

TAYLOR, Florrie Lee, who has been connected with the Louisville Free Public Library as assistant in the Circulation Department since November 1916, has resigned.

THODE, Christel, has accepted the position of librarian of the Rawlins High School Library at Rawlins, Wyo.

THOMAS, Mildred L., Western Reserve 1917, announces her marriage to Robert D. Abbott, of Akron, Ohio.

THOMPSON, Grace, Simmons 1915, is now cataloger in the library of Radcliffe College.

VITZ, Elsie M., who has been connected with the Louisville Free Public Library as assistant in the Order Department since February 1915, has resigned.

WADSWORTH, Mildred, has been appointed cataloger in the Dartmouth College Library.

WALKLEY, Raymond L., B.L.S., New York State 1913, assistant librarian of the Minneapolis Public Library, is temporarily attached to the 8th Battalion of the Depot Brigade at Camp Devens.

WARREN, Hall, who has been connected with the Louisville Free Public Library as assistant in the Parkland Branch and Circulation Department since September 1910, has resigned.

WIEDER, Callie, has been appointed to undertake for the North Dakota Public Library Commission the organization of small rural community and school libraries. Miss Wieder resigns the librarianship of the Fond du Lac (Wis.) Public Library, to take up the new position.

WILKINSON, Mary S., Carnegie 1910-11, 1917-18, is children's librarian of the Public Library, Duluth, Minn.

WILLIAMSON, Dr. Charles C., has been reappointed chief of the economics division of the New York Public Library, in place of Miss A. R. Hasse, who is no longer connected with the library. Dr. Williamson has come back to the work which he began at the opening of the new central building in May, 1911. On November 1, 1914, he was transferred to the Municipal Reference branch as librarian, rendering notable service in this post until his resignation on May 1 of this year to take a position with the Americanization Study of the Carnegie Corporation. He will retain his connection with the Americanization Study, but resumed his work at the Public Library on October 19.

WISE, Flora E., for many years cataloger and classifier of the Newton (Mass.) Free Library, has resigned her position to accept an appointment on the staff of the Wellesley College Library.

YELGERHOUSE, Frieda J., Western Reserve 1917, Library School of the New York Public Library, 1918, is an assistant in the Public Library, Erie, Pa.

YODER, Mary E., Western Reserve 1914, is librarian of the experimental department in the Goodyear Tire & Rubber Co. plant at Akron, Ohio.

THE LIBRARY WORLD

New England

VERMONT

The Free Public Library Commission has under consideration a suggestion that the commission conduct some kind of a library course next summer for the benefit of those librarians in the state who have not had the advantages of study at regular library schools. This will probably take the form of an institute of a week or ten days, held in some center convenient of access, possibly Montpelier, where the services of trained librarians could be had and the possible presence of some instructor from one of the noted schools. The aim would be to make it so inexpensive that it would be possible for librarians with the most meagre compensation to attend, and to adapt it especially to the needs of the remote and smaller libraries.

Newport. By the will of the late ex-Gov. G. H. Prouty the Goodrich Memorial Library will receive \$15,000.

MASSACHUSETTS

Springfield. One of the interesting developments of the year as noted in the annual report of the City Library was the organization of the Poetry Society of Springfield, which is affiliated with the library, holding most of its meetings in the library hall, in which case they are always open to the public. Large audiences have thus had the pleasure of listening to Miss Amy Lowell, imagist; Louis V. Ledoux, classicist; and Padraic Colum, Irish lyricist—a selection which testifies to the catholicity of the society. At informal meetings, the poets treated in Miss Lowell's "Modern American poetry" have been taken up, and on other occasions, original verse by members of the society was read, and a lecture given by Mary A. Jordan of the Smith College faculty on "The old and the new in modern verse," while Emil K. Janser gave a talk on "Poetry and music," illustrated with songs by Mrs. F. L. Sample. A contest was held at which the best poems submitted by members were presented, and the concluding meeting was given up to a poetic play by Anna Hempstead Branch.

Stockbridge. The will of Jane Minot Sedgwick Ricciardi, late of Stockbridge, which has been filed for probate, leaves \$150 to the Stockbridge library.

Worcester. All departments and branches of the Public Library were closed to the public Oct. 6, to remain closed until the spread funds and members at the loan desk.

of the Spanish influenza epidemic in the city should be checked. Attendants were on duty in all buildings from 9 a. m. to 6 p. m. to answer telephone inquiries for information.

Middle Atlantic

NEW YORK

Antwerp. The cornerstone of the new library building, donated to the village by G. N. Crosby of Rochester, was laid without public ceremony June 4, 1918. Work which had begun a year ago was interrupted for many months by shortage of labor and difficulty in securing materials. It is expected that the building will be brought to completion this fall. In addition to the building, which may cost under present conditions from \$20,000 to \$25,000, Mr. Crosby provides a permanent library endowment fund of \$10,000.

Brooklyn. Two noteworthy gifts of books were presented to the Brooklyn Public Library last summer. One is a collection of chess and checker books, owned by the late William T. Call, the other is a music collection which was presented by its former owner, T. W. Parker. The Call collection is said to contain one of the finest and most extensive checker libraries in the world. It is also rich in works pertaining to chess. It includes books, pamphlets, and periodicals on chess and checker playing, the origin and history of these games and other subjects. Many of the works are extremely rare. The literatures of England, Scotland, France, Italy, Spain, Germany, Holland, Sweden, and America are all well represented. The Parker music collection consists of about six hundred pieces of popular American sheet music and a number of American music books, ranging in date from about 1808 to 1885. It includes also a great number of pieces of sheet music from the Civil War period, and a smaller number of Mexican War pieces. The work of cataloging both collections is under way at the library.

Dunkirk. The Assembly room of the Free Library has been transformed into headquarters and work room for the Dunkirk chapter of the Red Cross. The room now contains a cutting machine, six cutting tables, two sewing machines and the necessary equipment for various classes in surgical dressings, and is the center of continuous activity. Red Cross work is also helped by a direct propaganda for

Johnson City. The free library is making a special effort to secure and preserve a good photograph of every Johnson City man who enters the military or naval service of the country. With the photograph are filed all personal data regarding each man that can be collected, such as date and place of birth, name of parents, school, church and other connections, occupations, positions filled, etc., together with each step in military record.

Lackawanna. A petition has been presented to the city council of Buffalo, which owns the potter's field, for permission to use part of the field as a site for a public library building.

New York City. The College of the City of New York this winter is offering four courses for the staff of The New York Public Library covering Economics, the World War, Reference work in the library, and Literature of southern Europe. The fee is only one dollar per course.

New York City. At the request of Dr. Albert Shiels, director for the Executive Committee on Community Councils of National Defense and Co-ordination of War Work, the Municipal Reference Library is gathering together an extensive collection of data concerning all organizations and societies in New York City which are engaged in special war-time activities. A great deal of material has been received thus far and is now being classified and indexed for quick reference.

New York City. The records of what is known as the Old Town of Harlem have been presented to the New York Public Library by the Title Guarantee and Trust Company of this city. The records consist of nine small thin volumes, written in Dutch. The original records of the old village of Harlem form the nucleus of the collection. These contain not only the real estate transaction but wills, surveyors' reports, auditors' accounts and law suits, many of the latter of the most trivial nature. There are useful and valuable topographical maps of the Netherlands and many note books filled with extracts from French and Dutch works in the collection, as well as copious extracts from early American sources, some of them not elsewhere available. All the data on which Riker founded his *Annals of Newtown* will be found here, also much research into Long Island family history, including copies of town and church records.

Richfield Springs. Property valued at \$9317.17 has been left jointly to the public library and St. John's church by the will of the late Samuel D. Styles.

Salamanca. An agreement has been reached between the Carnegie Corporation and the city council modifying somewhat the terms of the original proposal for a grant and reducing the proposed gift from \$25,000 to \$17,500 and the city's annual appropriation to \$1750.

NEW JERSEY

Jersey City. The new Hudson City branch of the Public Library, on Zabriskie street, was formally dedicated Oct. 1 after being open all day for inspection.

Little Falls. The new Public Library building was opened with patriotic exercises Sept. 14. The library was first organized and maintained by the Little Falls Woman's club. In 1916 the people of the town voted to support the library, whereupon the township committee purchased the plot of ground at Stevens avenue and Warren street, opposite the municipal building. Application was then made to the Carnegie Corporation for funds with which to build a library and \$10,000 was granted. Plans were drawn by Architect H. B. Crosby. The building consists of two large reading and stack rooms, with the librarian's receiving desk in an alcove on the main floor and a lecture room, staffroom and comfort station on the ground floor.

PENNSYLVANIA

Philadelphia. The library of the late Judge John L. Kinsey, bequeathed to the Free Library of Philadelphia by his widow, may be declined by the trustees on the ground that the nature of the collection does not warrant its maintenance in a separate alcove as the will requires. The Free Library has never maintained any separate collections.

Philadelphia. The \$2,500,000 contract held by John Gill & Son for the construction of the new free library building on the Parkway at Nineteenth street, work under which was halted in consequence of a Supreme Court decision last June, was again under discussion before President Judge Audenried, in Court No. 4 in September. This was a final hearing on the taxpayers' suit brought to enjoin the improvement because of alleged failure to comply with old ordinances of Councils which stipulate that all stone used in such municipal structure must be cut in this city. The library contract, because of the provision relative to the stone cutting, has been in controversy for several years. Court of Common Pleas No. 4 first heard the suit brought by Walter R. Taylor, as a taxpayer, against the Mayor, City Councils and trustees of the library and the contracting firm of Gill & Son, which had been awarded the contract.

South Atlantic

GEORGIA

Atlanta. A loan library to be built up with books donated by former students has been started by the Commercial High School, and all graduates of the school have been urged to send in their old text books in order that pupils now in school may benefit by them.

Savannah. The Wymberley Jones De Renne Georgia Library at Wormsloe has been closed until further notice on account of the war, and no books are being bought. W. W. DeRenne is sailing for France as an officer in the army and the librarian, Leonard L. Mackall, has resigned to enter Red Cross work. An elaborate account of this library was printed in the *Georgia Historical Quarterly* for June, 1918.

East North Central

MICHIGAN

Nashville. Though the generosity of the late Charles M. Putnam, the wealthiest citizen of Nashville, who recently committed suicide, his residence will be turned over to the village for use as a library, according to provisions in his will. In addition he leaves an endowment fund of \$10,000 to support the library. The village will receive the gift when his widow is thru with using the property.

OHIO

Cleveland. The Library of Western Reserve University has received from Mrs. Solon L. Severance, in memory of her husband, a fund amounting to \$10,000, the income of which is to be used for the purchase of reference books. This is the largest gift to the library in the history of the university, except the gift of the library building. A memorial book-plate is provided by Mrs. Severance. Mr. Severance, in whose memory the gift is made, was, up to the end of his life in 1915, one of Cleveland's leading citizens, prominent as a banker and philanthropist.

ILLINOIS

Evanston. A new station of the Public Library has been opened in the Noyes school building with about a thousand volumes. It is open Friday afternoons from 2 to 6 o'clock for the people of the neighborhood.

East South Central

KENTUCKY

Louisville. The report circulated last September that unless the library received \$15,000 more than last year it was probable that some branches would be closed or book

purchasing stopped, brought forth protest from many quarters. A mass meeting, attended by representatives of every civic organization of Crescent Hill, was held at the Crescent Hill Library, when resolutions were adopted protesting against the closing of any branch library in the city. In addition to adopting the resolutions, several speakers delivered brief addresses, in which they voiced their protest to closing the branch libraries during the war. Petitions signed by 1000 school children of the city were presented at the meeting, protesting against closing of the libraries.

West North Central

MINNESOTA

Duluth. The new Public Library at the East End was opened Sept. 16. The reading rooms and circulation department are open daily from 2 to 9 o'clock p. m. for adults and from 2 to 6 for children. On Sundays, the reading room is open from 3 to 6 but no books are loaned.

Minneapolis. War schedule hours have been announced at the Minneapolis Public Library, and affect the central and all the branch stations. To comply with the fuel saving regulations all the branch libraries remain closed in the forenoons and the central library does not open until 10 a. m. Sundays and holidays the newspaper room, technical departments and all other departments of all the libraries are closed. Since the branches close at 8.30, protests have been received from workingmen and students who find practically no time now when they can use the library.

St. Paul. The Engineers' Society of St. Paul in the revision of its constitution and by-laws has provided for a library committee to advise and consult with the librarian of the St. Paul Public Library with reference to technical books, magazines, reports, etc., to be purchased or obtained for the technology department of the Public Library. "This committee shall consist of at least one member of each branch of engineering or applied science represented in the society membership; they shall keep in touch with the reviews of all technical literature, and when desirable, secure copies of new books and review them. They shall recommend exchanges to be made with other engineering organizations, technical magazines to be kept on the reading table, technical reports, government or otherwise, that should be secured, and trade catalogs that should be preserved. They shall

work with a view to building up the library which has been donated to the City of St. Paul by this society, to the end that it may become a great technical library."

IOWA

Des Moines. A new art department has been opened on the second floor of the Des Moines Public Library. Mrs. Don V. Gerking, a graduate of the Art Institute of Chicago, has been appointed art librarian. Mrs. Gerking also serves as assistant secretary of the Des Moines Association of Fine Arts, the secretary of which is the librarian of the Des Moines Public Library.

Des Moines. A reference collection of books on the world war has been installed by the Public Library in the club rooms of the Des Moines Chamber of Commerce. The Chamber of Commerce is the center of civilian war activities in Des Moines, and the books are much used by the four-minute speakers, officers of various civilian war activities, and business men who make the Chamber rooms their headquarters.

MISSOURI

Kansas City. So great is the demand for librarians and so difficult are they to secure, that the training School formerly conducted by the Public Library but closed for several years, has been reopened this fall.

West South Central

TEXAS

Dallas. There has been placed in the lobby of the Dallas Public Library an engrossed copy of a resolution which the board of trustees drafted at the time Rosa M. Leeper resigned as librarian. She was the first librarian, organized the library, and for sixteen years directed its upbuilding. The text of the resolution follows:

Whereas, in the summer of 1916, in compliance with her frequently expressed wish, a leave of absence was granted to Miss Rosa M. Leeper in order that she might seek in travel a needed rest from her labors of fifteen years as librarian, and with the hope that after such rest she might resume her work here, and

Whereas, Miss Leeper then informed the board that she probably would not wish to undertake again so arduous a task, and she now has notified it that in justice to herself she cannot do so. Now, therefore, be it

Resolved by the board of trustees of the Dallas Public Library, That the board and the users of the library have lost in Miss Leeper a librarian whose loyalty, industry and efficiency have been always above question, and have contributed inestimably to the more than five-fold increase, which during her administration the library has made in size and in usefulness to the public served by it. Be it further

Resolved, That the trustees individually have lost thru Miss Leeper's departure a pleasant companionship, and an intercourse wherein merely official relations had long since become merged in those of personal friendship. Be it further

Resolved, That the board and its individual mem-

bers extend to Miss Leeper their best wishes for length of years, abounding prosperity and comfort and all the happiness that can come from a life well lived.

Mountain

UTAH

Nephi and Tremonton have recently levied a library tax, thus giving Utah 36 towns with tax support for libraries.

Pacific

CALIFORNIA

Sacramento. Weeks & Day, San Francisco architects, have been announced the winners in the competition for plans for the two new state buildings to be erected opposite Capitol Park. They are to be classic in design, to conform to the architecture of the present building, and are to be somewhat under 200 feet square. One will be used for offices and the other, a five-story structure, will house the State Library and the courts. In the library building the central portion will house the library sections, the rim of the structure being used for offices for the librarian and his staff on the first, second and third floors, with a music room containing a piano for practice and several private study rooms. There will also be reference rooms and reading rooms. The fourth floor will contain the Supreme Court room and chambers, and also the chambers of the Appellate Court Judge. On the first floor will be an assembly room. An appropriation of \$3,000,000 has been made for the completion of the buildings, which will not be erected until after the war.

Los Angeles. In response to the appeal of Public Library officials, the City Council has authorized the submission of a charter amendment at the November election increasing the yearly tax appropriation from four to five mills on each dollar for public library purposes. The proposed tax increase will allow the library department about \$50,000 more than at present.

Canada

ONTARIO

London. By the gift to the Western University of his large private library of more than 40,000 volumes, J. Davis Bennett of Stratford has ensured a large and permanent usefulness for his remarkable collection of books. Under the terms of his agreement with Western University the books in the collection are to be at the service of any serious student in Canada and available for loan under inter-library privileges. Special features of the Barnett library are the Shakespearean and early Canadian groups. Mr. Barnett is to retain connection with his library, thus assuring its growth in years to come.

LIBRARY WORK

Notes of development in all branches of library activity, particularly as shown in current library literature. Material printed in this department is cumulated each year in the "American Library Annual."

AMERICANIZATION

The library's part in Americanizing foreigners. *New York Libraries*, Aug., 1918. p. 88-89.

Editorial. To help the librarian who seeks to make of an incompetent, indifferent alien or hostile member of the community, an intelligent, loyal citizen, the recommendations for a library program in the work of Americanizing aliens from the 1918 Outline of library institutes are given:—

"1. Have made, with the aid of volunteers, a careful survey of the foreign elements of your population; keep at the library as accurate a record of these as possible.

"2. Provide for the use of this population a collection of easy books in English for beginners in the study of that language; and of books in their own language covering American history, biography and civics, giving the story, spirit and ideals of our country and its great men.

"3. Keep on file such of the issues of the War Department, Food Administration, Council of National Defense, State Defense Council and community councils as are issued in foreign languages represented in your community. Keep also on file copies of the Bureau of Naturalization laws. Where the foreign element is at all extensive, maintain a regular bulletin board for the display of pertinent notices or information in foreign languages.

"4. In larger libraries, assign one of the assistants to have charge of the foreign-born inquirer so that the stranger may find the same assistant ready to welcome and help him when he makes successive visits.

"5. See that an invitation and borrower's card are sent to every home among the foreign population to use the library, sending such invitation and card either personally or thru churches, clubs, trade unions, etc. Some libraries have had good results in this work by holding special receptions at stated times for different groups of the foreign population.

"6. Co-operate with other patriotic agencies in the organization and maintenance of special classes for education in citizenship. When possible, offer a room at the library for the holding of such classes.

"7. Send books to factories where classes have been organized for the adult education of foreigners."

BLIND, WORK WITH

A part of the eighty-fifth annual report of the Pennsylvania Institution for the Instruction of the Blind is devoted to a discussion of the adoption by the American Association of Workers for the Blind of a uniform style of embossed type. While realizing the importance of a uniform type, the report states the belief "almost universal in the United States . . . that in adopting English Braille the United States has taken a backward step . . . in discarding a simpler for a more complex system . . . whose adoption for use in the American schools is of doubtful wisdom, and warranted only on the ground of expediency." Supplementing the annual report is the list of publications in American Braille stereotyped by various schools and societies during the year, together with reproductions of the American Braille alphabet and of the method of writing music and mathematical notations.

BOOK SELECTION

Books for men. Helen A. Bagley. *Pub. Libs.*, Nov., 1917. p. 355-358.

A pleasant discussion of some of the reasons why men in the past have not used the small library more freely, together with notes on some books especially attractive to men.

BOOKLISTS

The Kellogg Public Library, Green Bay, Wis., has issued on a slip printed on one side an alphabetical list of some forty French cities thru which Allied forces are now advancing, with a brief note of descriptive material on each, for example:—

Aix-les-Bains—Baedeker, South-east France
Amiens—Marshall, Cathedral cities of France
Baedeker, N. France
Singleton, Turrets, towers and temples
Arras—Baedeker, N. France
Hare, N. France
Auvergne—Gostling, Auvergne and its people
Pennell, French cathedrals

Such a list might be first printed in the local newspaper, in place of the list of recent accessions which so often is the library's sole contribution to the daily "news."

BOOKS—EXPENDITURE FOR

A comparison in expenditure. *Pub. Libs.*, May, 1918. p. 215-216.

This is an extract from an article in the *Boston Transcript* showing the income, book expenditure and percentage of the total income assigned to book purchase of some seventy city libraries in the United States, and pointing out some striking contrasts.

BORROWERS' PRIVILEGES

A recent change in routine in the circulation department of the Seattle Public Library includes the adoption of a plan which enables a borrower to replace a lost card immediately by paying 25 cents, or to obtain the new card free by waiting 14 days as formerly. This has reduced irritation at the desk. Another change in routine is the removal of the restriction which permitted only two books of fiction to be taken on one card.

At a meeting of the St. Paul Library Council in September, it was resolved that the library rules be amended so as to allow library cardholders to borrow ten books at one time, including three of fiction. The rules hitherto permitted them to borrow only five books.

CHARGING SYSTEM

The dating outfit and its functions. Jessie Welles. *Wisconsin Lib. Bull.*, Dec., 1917. p. 293-295.

The stamping of a date when charging books to readers can serve three purposes, namely: (a) inform the reader when the book is due; (b) enable the librarian to recall an overdue book; and (c) show the use of the book within a given time. Let, therefore, Miss Welles urges, the date stamped be the date due; let the date appear not only on the borrower's card and on the book card but also on a slip tipped into the book; and let the year appear on the stamp. Further, a dignified use of the stamp has its value. A neatly and precisely marked date, possible only with a good quality stamp carefully used with ink pads which do not wear the type, contributes to the reader's respect for the book and his consequent good treatment of it.

CLIPPINGS

Clippings and other frail items which accumulate in great quantity at the St. Louis Public Library are being, where practicable, grouped by subject, e.g., war slang, Christmas customs, or war poetry, put into thin scrap books similar to those used for soldiers, and filed in the vertical file exactly as are the envelopes in which the material was formerly preserved.

CO-OPERATION

Co-operative work for a Branch Association. Archibald Sparke. *Lib. Assn. Rec.*, March, 1918. p. 57-63.

In this, his presidential address, delivered at the North-Western Branch meeting, Southport, Eng., in January, 1918, Mr. Sparke outlines a program for increased usefulness of branch associations thru co-operation with one another and with outside agencies.

He urges the purchase of the Athenaeum Subject Index to Periodicals by all libraries, whether the magazines indexed be subscribed to or not—volumes not owned being borrowed from a neighboring library or from the Central Library for Students.

In the purchase and classification of technical books help may readily be obtained from the Civil, Mechanical and Electrical Engineers' Associations, the Chemical Society and other such associations, which will gladly consider proposed purchase-lists and will read proofs of classed catalogs, suggesting additions and deletions.

The publication of these classed catalogs would render unnecessary the purchase of many of the books by certain branches, since the catalog shows where the book may be obtained.

Another suggestion is that the local libraries take over from the National Lending Library the distribution of books for the blind.

Again, county, and incidentally, national bibliographies might speedily become a *fait accompli* if each town library were to send to a central editor an author entry for every known book having any connection with that town or district.

Similarly, the compilation and publication of statistics would inform not only the library issuing the report, but others, willing to extend their work, what had been accomplished, and at what cost.

Finally, a central authority on the Dewey classification, to whom inquiries might be addressed and in whom some standard of uniformity could be maintained, would be of use.

EUROPEAN WAR—EFFECT ON THE LIBRARY

War and the library. Marilla W. Freeman. *Pub. Libs.*, May, 1918. p. 216-219.

This is a practical paper by the librarian of the Goodwyn Institute, Memphis, Tenn., showing how the librarian who stays at home may also serve, and may achieve great results from the least costly materials. For example, information is wanted regarding the castor bean, for castor oil has been found to be the

best lubricant for aeroplane motors. This information can be had from the United States Department of Agriculture, the local Congressman acting as accelerator. Some of the state experiment stations will also send material, and the local paper will gladly print the chief points in castor bean raising, as indeed it will print lists of books on any subject even indirectly bearing on the war. The *Food News Notes* of the Food Administration are full of suggestions for intelligent "Hooverizing" for the housewife. These, as well as the bulletins on food conservation issued by the state universities, notably those of Wisconsin and Illinois, and the Farmers' Bulletins of the Department of Agriculture may be obtained freely for distribution. There is also a Farmers' Bulletin on small vegetable gardens, and the National War Gardens Commission (Maryland Building, Washington, issues a free War gardening manual. The library which welcomes the man in uniform and then provides him with what he needs, "from the soldier's handbook to the most cabalistic work on military topography" is rendering service; but perhaps equally so is the library which attracts to it the general public for information on food conservation, War Savings Stamps, Liberty bonds, and all other questions of the day.

FILING SYSTEMS

Filing systems of the National City Bank. Florence Spencer. An "up-to-the-minute" geographical filing system. J. W. Kelsey. *Filing*, Aug., 1918. p. 43-48.

Miss Spencer enumerates and defines the scope of the various filing systems, namely: the foreign department with its one large central file for general correspondence and small units located in different foreign departments; the general file for all correspondence pertaining to direct work; the foreign credit department; the domestic credit department divided into Federal Reserve districts; the foreign trade department; the check and record file in the accounting department; and the employment file.

Mr. Kelsey describes the general scheme of the foreign file department in which five to seven thousand letters are handled daily. He gives an outline of the assignments, or department divisions, showing incidentally the usefulness of the department as a training school for junior clerks, describes with considerable detail the progress of the mail from its being collected from the various departments, thru the current file to the permanent file, and explains the method of checking each operation. Reduced facsimiles well illustrate the

forms used—requisition form, the cross index card, the "out card," the charge stamp and the folder.

Commercial filing. A. L. Robinson. *Filing*, Aug., 1918. p. 49-51.

Having outlined the qualifications necessary to make a good filer—imagination and intuition, for material is asked for in impossible ways; initiative so as to grow as the file grows; tact and patience, accuracy, a well developed instinct for a story which greatly helps in work that otherwise tends to monotony—Mrs. Robinson tells of the general file of the Texas Company of which she has charge. It is a subject file, "with subdivisions of alphabetical, geographical, and numerical filing, capable of almost indefinite expansion." In order to get quick service and make a check for the file, "two carbon copies of all outgoing letters are sent to the file. One goes into a letter book and one into the file. The letter book runs alphabetically and chronologically and the file by number and subject, so that no matter how vaguely a file is asked for there are three ways of finding it—the file, the index and the letter book." Subjects supposedly "dead" and eliminated from the active file often come to life again, the transfer is therefore run exactly as is the active file, and is stored at no great distance from it.

HIGH SCHOOL LIBRARIES

A day in a modern high school library. Mary E. Hall. *Pub. Libs.*, Feb., 1915. p. 51-59.

A detailed description of the plan and equipment and of the days' many activities in the Girls' High School Library in Brooklyn, one of the busiest and most progressive school libraries in the country.

The Schenley High School, Pittsburgh, Pa. Clara E. Howard. *Pub. Libs.*, Feb., 1918. p. 67-69.

The terms of agreement between the library and the Board of Education, by whom this school library is co-operatively run, are given in full in this paper. Its organization, equipment, and administrative practices are all described.

INSTRUCTION IN USE OF LIBRARIES—IN SCHOOLS

An outline for "a study on the use of simple reference books, grade 8, is printed in *Public Libraries* (Nov., 1917, p. 398). The lessons cover the use of textbook, dictionary, encyclopedia, atlas and gazetteer, and Poole's Index.

An outline for library training in high schools, as given by the school librarian in Portland, Ore., is printed in the issue for February, 1918, p. 79-80.

LIBRARIANSHIP

Concerning some library fallacies. Mary J. L. Black, *Pub. Libs.*, May, 1918. p. 199-204.

The fallacies which obscure the librarian's vision as distinguished from that of the public's are the subject of the President's address at the Ontario Library Association meeting, April, 1918.

One is that every worker in a library is a librarian—the failure to distinguish between the librarian and the library clerk. In contrast to this is the equally harmful fallacy that the librarian is omniscient, and an authority on questions obvious or obscure, instead of a person informed as to the contents of books. Again there is the mistaken idea of the right of censorship, also the idea that the way to prevent damage to the books is to “stand over the reader with all the importance and futility of a policeman.” Then the fallacy “held by many librarians of a very high type,” namely, that librarians take their work too seriously, “that the library is only a business concern in which they are engaged to give a definite service for a wage”; and closely allied to this, the mistake, “for which again some of our cleverest and best workers are responsible,” namely, that it does not do us any injury for them to write humorous articles for general publication, taking as their topic the foibles and limitations of librarians. And, finally, having considered the object of the public library, and thus having defined our work to our satisfaction, the fallacy of thinking that we have thereby accomplished it.

Qualities and training necessary for a business librarian. J. H. Friedel; J. C. Dana. *Pub. Libs.*, Nov., 1917. p. 361-362.

Addressing the Special Libraries Association at Louisville, June 1917, Mr. Friedel speaks from personal experience of the value to the reference assistant of a first-hand knowledge of the matters of which the books treat (in his case social service and economics), attributing his position to-day “as the librarian of the greatest organization of business men this country has yet seen” to his training and preparation thru actual contact with business and economic problems.

“The special library to-day,” he says, “entails specialized training and specialized knowledge. It calls for individuality, for initiative, for forcefulness, for a higher type

of ability and leadership than the public library. . . . The business librarian is a whole public library himself—administrator, head-cataloger, chief of the order division, of the circulation department. What does the library school offer to fit him for his work? How many library schools, admitting students without college training give even an elementary course in economics, so essential in any kind of work whether in the library or not?”

And he answers his own questions. The library school, generally drawing its staff from those with public library experience, has followed the trend for the mechanical, the automatic, which characterize the public library to-day. Its teaching to-day is not fitted for the librarian in business. “It lacks teachers who inspire, that help to build individuality and self-reliance. . . . It has tended to uproot individuality and build up a scholasticism that is most alien to efficient, useful work.”

In comment, Mr. Dana, “who has tried hard to forward this novelty in book and print administration,” and who disagrees with Mr. Friedel's views, tells Mr. Friedel that he seems to have been temporarily overcome by the gift of a new tongue. “That the art of being a special librarian demands for its successful practice no very special training over and above that included in a good general education, abundant open-eyed experience and a course in a standard library school.” “The library school's year is about nine months long and much of that time must be given to the elements of the technique of the mastery of things in print. . . . Out of the great stream of print which the general librarian tries to master and guide, a small part has been found of special value to certain workers in certain special fields.” This the special librarian tries to make of special utility by a very intensive administration. “For this he requires an equipment of wide knowledge and experience in a general library, plus a year's intensive study in a library school.”

LIBRARY SCHOOLS

Views of library school directors. *Pub. Libs.*, Jan., 1918. p. 13-19.

A letter was sent by the editor to the directors of the various library schools asking them to send a message to the library world setting forth whatever seemed to them timely and pertinent. Several replied; two asked for opportunity at another time.

Miss Rathbone says that she has “so far opposed the placing of Pratt Institute Library School on a college graduate basis,” and has “desired to maintain an open door for the

exceptional woman who has gained from other experiences the knowledge and culture and the power of applying them that college is supposed to give." She has found that experienced librarians profit by considering the fresh viewpoint of the outside public brought forward by students who have not been inured to library technique; that "students profit far more than has been generally realized from their contacts with one another, and the greater the variety of individual experience the richer and more fructifying the common life."

The St. Louis Library School, says Dr. Bostwick, has the advantage of being operated by a library having a branch system covering considerable territory and serving localities with wide differences of population. "The school makes a specialty of laboratory work, with a running theoretical commentary, in libraries corresponding with some degree of accuracy to the small town library, the library near a school whose relations with it are exceptionally close, the library of a high-class residence community, etc."

"The character of this school" [Library School of Simmons College], writes Miss Donnelly, "differentiating it from other library schools, is its two-fold nature, for it is at once a one-year library school and a technical department of a college. The courses given to both groups are the same, but the college graduates complete them in one year, devoting their whole time to them, while the four-year students have the same work distributed over three years. There is less local library school activity than in the more segregated schools, as the manifold college and class activities are a substitute."

In view of the fact that the library profession is called upon to accomplish great things, Dr. Sperry, director of the Library School of Syracuse University, urges the need of a higher standard for students. "The man," he says, "whose powers or knowledge are put under requisition in time of war may know that he has indeed some measure of sound and substantial work." And the War Department has made a systematic search of the United States with the purpose of adding to its staff in Washington every available trained assistant. The profession has a tried and tested value but it has not yet approached the limit of achievement. "Curricula are comprehensive enough, the methods of instruction are sound and effective but the personnel of the student-body in the library school is susceptible of improvement in quality . . . The entrance test may be passed with 100% by a student who lacks enterprise, resourcefulness, adaptability, courtesy, sympathy, generosity of

spirit and a score of other qualities." The only searching test is close observation during lectures, recitations and conferences. And "when a student is found seriously deficient she should be dismissed, no matter how great the strain on the feelings and moral courage of the faculty."

J. F. Daniels, of the Riverside, Calif., Library School, gives his library creed, among the items of which are: Lectures only when needed and then by notable experts—reduction of talk and increase of power to work; no recitations; no classroom assignments; no assigned reading—let them "hunt for it"; the library school student ought not to be treated as a child, but should be taught institution transactions in terms of money and business—the real thing, not lessons.

OVERDUE NOTICES

Beginning about Oct. 1 the Detroit Public Library adopted a war economy measure in the matter of notification sent to delinquent borrowers. One notice only is sent for overdue books. This is to be an enclosed notice and is mailed on the fifth day after the book is due. If books are not returned within a reasonable time after this notice is sent a messenger is sent to collect the book and charges. By this plan postage and time spent in writing notices is saved and some of the congestion in the already over-taxed Post Office Department is relieved.

Since Jan. 1, 1918, the Seattle Public Library has had a similar plan in operation. Only one notice of an overdue book is sent to a borrower and that when the book is seven days overdue, in contrast to the old system by which the borrower received two notices, one at the end of four days and another at the end of ten days.

PERIODICALS

Need of increased reference facilities at the branches of the St. Louis Public Library has led to adoption of the following plan which it is hoped may at once provide more satisfying reference service, relieve congestion at the branches and cut down binding expenses: A limited number of titles have been retained for the permanent branch collections, notably magazines that treat of current events or public questions; and these sets will be kept up-to-date. All other volumes are being returned to the Central Library, to form a general branch reservoir of reference material. In future it will be necessary to bind, for branch use, only one set each of certain important periodicals, which will be shelved in this collection.

The reference department has also been

conducting a small, practically permanent exhibit, entitled "Have you read them?" A few periodicals, opened to particular articles, are fastened upon a large screen in the Delivery Hall and remain in place about two weeks, when new magazines are substituted. Entire articles are frequently read in this position by the chance passerby. Only articles which have been read and enthusiastically recommended are advertised in this conspicuous way. *The Outlook*, *The Independent* and *The Atlantic Monthly* have appeared frequently, tho there has been no intention to limit the selection to these periodicals.

POSTERS

Poster bulletins again—aesthetic principles. Bernice O. Oehler. *Wis. Lib. Bull.*, June, 1918. p. 146-149.

Because a poster is made to advertise something, it must first attract attention. Then it must convey its message, and finally give the reader the impulse to obey its dictates. Single pictures should be original and striking; groups of pictures must be well massed and well balanced. Colors should be sprightly and attractive and should have enough contrast in value and color to give them force. [Miss Oehler here lists the complementary or opposite colors that intensify each other, and the reaction to be expected from various colors.]

The lettering is the most important part of a poster and should make a unit with the picture by size and placement. About two-fifths of the distance from the top on the vertical center is the most important spot on the page or board. The wording should be a direct, definite concise statement, but not too concise. A phrase is better than a word. Letter spacing should be carefully studied. Special lettering pens will be found invaluable, and a hand-made stylus (made by sharpening to a point at one end a round stick of pencil size, with the other end flattened to any width desired for the thickness of the letters), will be useful for "big" work.

The five aesthetic principles applying to all posters are harmony, balance, rhythm, contrast, and unity.

The article is illustrated with some excellent posters, and supplemented with a reading list on posters, lettering and design. The same issue of the *Bulletin* contains a description of the annual spring display of poster bulletins at the Wisconsin Library School.

VERTICAL FILE

A vertical file for every classroom. Delia G. Ovitz. *The American School*, July, 1918. p. 208-209.

For the making available of that vast quantity of valuable information which appears in periodicals or in pamphlet form Miss Ovitz of the Milwaukee State Normal School gives practical instructions, well illustrated, regarding the mounting, classification and arrangement, so that a mere beginner may operate a file which shall render efficient service.

Bibliographical Notes

The *Journal of the Patent Office Society* is the title of a new monthly published in Washington by the Patent Office Society. The first number appeared in September, 1918.

The September number of the *St. Louis Municipal Reference Bulletin* contains a descriptive list of municipal papers of the cities of the United States.

The August issue of the *Michigan Library Bulletin* was a special war service number, with data on the A. L. A. War Service and several reprinted articles.

An index has been compiled to the first thirteen volumes of the *Classical Journal*, just entering upon its fourteenth year. The publication of this index is to be expected at an early date.

A list of "House-organs of the United States and Canada," including every type of publicity organ, is being published in installments in *Printers' Ink*, beginning in the issue of August 29.

Teachers Leaflet no. 4, issued by the Bureau of Education, consists of an "Outline of an emergency course of instruction on the war" with a useful classed bibliography attached.

In "The small library and reference material on the war," in *New York Libraries* for August, Frank K. Walter gives some good suggestions to the librarian who must make a very little money go a very long way.

The Library Laws of the State of Wyoming have been compiled and issued in handy form by Agnes R. Wright, state librarian. A list of the county, city and special libraries of the state is appended.

Norsk Amerikaner, an interesting quarterly magazine devoted chiefly to material on the immigration and early settlements of Norwegians in the United States, was started in September 1916 by Martin Ulvestad of Seattle, Washington.

The Public Library of San Francisco, on the occasion of the dedication of its new

building, issued a brief description of the building and equipment, giving details of the cost, and an account of the mural paintings and inscriptions.

The Lessons in Community and National Life, which were published by the Government last year in leaflet form, have now been bound together in a series of three pamphlets and will be furnished by the Superintendent of Documents, Government Printing Office, at 25 cents per copy.

The Portland Cement Association, III Washington St., Chicago, has issued a bulletin dealing with concreting in cold weather, a subject of timely interest to architects, engineers, contractors and others interested in permanent construction. This, along with some fifty other pamphlets, will be mailed free upon request to all those desiring information upon concrete and allied subjects.

The S.E.D.E.F. (Société d'Exportation des Editions Françaises) will be glad to be of any service to all publishers, librarians, booksellers, clerks, or anyone connected with publishing, bookselling or libraries, serving in the American Army, who are in Paris on leave, will do its best to provide them with all information, and make them acquainted with people who speak English. Its headquarters are at 13, rue de Touron, Paris VIe.

Frank Aydelotte, director of the war issues course for the Students Army Training Corps, under direction of the War Department's committee on education and special training, has issued the first of a number of bibliographies planned for use in building up the course. The list was prepared mainly by Prof. T. W. Riker, of the University of Texas, with criticism and suggestion from a large number of other scholars. Every instructor in the course is expected to have a copy of this bibliography, and institutions are urged to make every effort to build up their collection in this field.

A little pamphlet has been written by Major-General David C. Shanks on "Management of the American soldier" which is one of the soundest and most practical applications of common sense to the handling of groups of men that we have seen in many a day. Its suggestions would be just as appropriate in a factory or on a railroad as in a military organization, and it will be found useful in many libraries. Thru the interest of Thomas F. Ryan in whatever pertains to the welfare of our military service, the booklet has been printed for free distribution to

officers, and libraries also may secure copies on application to Major John T. Axton, Chaplain, Headquarters Port of Embarkation, Hoboken, N. J.

No. 12

PEACE with victory and the end of the war bring to all America, and not least to the library profession, new responsibilities in a new world-order. In no war, in no era of the world, has the work of the mind, intellectual achievement, come into such supremacy as in this war period. German efficiency and intellectual achievement were the main reliance of the attack upon the world at large, and this has been resisted and finally overcome by a combination of intellectual and moral forces which has produced and inspired the superior physical force, which in war is the necessary agent of the higher forces. It was the written and published word of Woodrow Wilson, superseding the old diplomacy, which, like a chemical reagent, crystallized unseen elements into a new order. Likewise, the library, the book, behind the lines have been giving new value to life abroad and at home. The organization of the American library profession, in 1876, was the germinating influence which started similar organizations in the mother country, on the continent of Europe, and elsewhere. The remarkable development of American libraries since then has culminated in the great achievement during the war, the effects of which will be felt in other countries as well as in our own after the war. With greater opportunities realized will come, sooner or later, greater support, but the period of transition will not be without difficulties. There is every reason for mingling large hopes for the future with thanksgiving for past victory and present peace.

ONE of the greatest of the war achievements, from the library point of view,

has been the association of the Seven Sisters of Service in war work and recently in the united drive for money support. The quarter billion dollars hoped for, fifty per cent above the original estimate, has not been obtained, but the American people in raising over two hundred million dollars has made a Thanksgiving offering, a peace offering, a Christmas gift, without parallel. The original estimate of \$170,500,000, of which the American Library Association was to receive \$3,500,000, has been substantially exceeded, and of the actual total, the American Library Association will receive somewhat over \$4,000,000 for its work. For the use of this money, such broad opportunities are offered that it will be especially necessary to provide careful foresight as to just what can and just what cannot be done with the funds in hand. What may be done in the hospital field is illustrated in the letter from Robert Lynd, formerly of this office, printed elsewhere, and what is true here is true in the general field. Commissioner Fosdick has already called a general consultation of the leaders in these war services for the purpose of utilizing the mutual organization, effected in war, by prolonging mutual association for service into the times of peace. There will be a new era of non-sectarian, "all-faiths" service which should mean the better use of every means that public liberality puts into the hands of the public library and of the other service organizations. And as the boys come home and become taxpayers, the support of the public library should receive increasing public appropriations in cities, towns and villages alike.

THE difficulties of the transition period will especially be felt by trustees of public libraries in view of the present trend of curtailing appropriations and the justified pressure for increasing salaries and increasing expense. While mechanics in general, and munition workers and government employes, masculine and feminine, in particular, have been receiving phenomenally increased pay, it has not been possible anywhere adequately to increase the pay of librarians and library assistants to keep pace with the increased cost of living. The diversion of interests and of readers to war topics, coupled with the influenza, has somewhat decreased library circulation and made it possible in large library systems to reduce the number of library assistants, as the regular staff has been depleted by military or civil demands, and in some cases, branches have been or will probably be suspended. But soon there will come increased demands and also an increasing number of persons freed from government service available for library work. How soon public appropriations can be increased can only be conjectured, but that time must come, and meantime trustees and librarians alike, must do the best they can to wait the brighter day.

THE permanent development of American model libraries at Paris and elsewhere meets with general favor and the proposal to make one of those a Brett memorial library finds wide support. A fresh tribute to Mr. Brett's catholicity is made by a Jewish rabbi, whose contribution came too late for inclusion in last month's symposium. By a strange irony of fate President Bishop, thru typewriting carelessness, was made to speak of Mr. Brett's temperament as "ironic," than which nothing could be further from the mark. Mr. Brett was instead of a thoroly irenic or peaceful temperament, except when his patriotism was aroused, and it was this which Mr.

Bishop meant to say. Dr. S. Irenaeus Prime once lamented that "polemics" was more in evidence than "irenics" in ordinary use—otherwise Mr. Bishop's evident error would have had correction in advance.

ONE of the increasing elements of expense in libraries is the higher subscription rate forced upon periodicals by increased paper cost, paper restriction and vastly increased printers' wages and printing costs. The extraordinary rise in printers' wages, authorized by the War Labor Board, threatens the closing of many printing offices and the stoppage of many periodicals whose margins of profit or loss are too close to permit accommodation to these radical changes. Other periodicals, like the LIBRARY JOURNAL, may be forced, for the time being, to content themselves and their subscribers with a lessened number of pages rather than to adopt the alternative of increasing subscription rates. Most libraries confronted with an appropriation for periodicals, diminishing rather than increasing, will be forced to drop periodicals they would otherwise gladly support and confine their subscriptions to periodicals which they feel cannot be dispensed with.

WITH the new year, the LIBRARY JOURNAL will make some changes which it is hoped will make it more attractive and useful to an increasing professional clientele. Certain departments, such as that devoted to Library Schools, have required such increasing space to keep up the old perspective that it is evident the perspective must be changed and attention centered on new developments in this field, instead of scattered over details of administration and personnel. Other departments will need development of new features created to meet more and more the needs of small libraries. The LIBRARY JOURNAL will thus develop more into the character of the magazine of to-day.

SOURCES OF AGRICULTURAL STATISTICS*

BY MARY G. LACY, *Reference Librarian, U. S. Department of Agriculture*

THE Nation is marching to Victory and as we march we are witnessing the greatest triumph of organization ever achieved by a self-governing state. This organization would not have been possible without the aid of the classified facts which we call statistics and which are really the measure of the strength of a state. From the earliest times, as the derivation of the word shows, statistics were considered necessary, at frequent intervals and for special purposes, as an aid to the administration of a state. It remained, however, for the young United States in 1790 to originate the decennial census which was taken up by Great Britain a decade later. "The idea of a regular enumeration gained steadily in favor and was adopted by one after another of the civilized nations until in 1911 we find China taking her first official census" (King. Elements of statistical method. p. 6).

The war has, however, thrown into high relief the value of statistics, and has made many of us who never understood it before, realize their fundamental relation to the nation's business, which at this time is, unhappily, war. The better we understand their meaning and use the greater service can we render in winning the war, which is surely the heart's desire of every one of us. Some knowledge of their sources is essential if we agricultural librarians are to do our part in holding the food line which is as important as the battle line in Flanders and Picardy.

It was recently discovered that cocoanut shells made the best charcoal known for gas masks, being resistant for 18 hours. The statistics of the cocoanut industry, however, revealed to the Gas Defense

Board the fact that the available supply of cocoanut shells was only sufficient to furnish masks for one-fourth of our own soldiers. So one of the specialists in tropical agriculture of the U. S. Department of Agriculture was called into consultation. He knew the palms of our tropics thoroly and thru his knowledge it was discovered that the shell of the cohune nut was just as good for gas masks. A reconnaissance of this industry revealed an almost inexhaustible supply of these shells. The problem now is to get them to the United States in sufficient quantity and quickly enough to meet our needs. Five fruit shipping companies of Central America are bringing them up by the ship load and, if transportation is not interfered with, we will have enough not only to equip our own soldiers but a surplus for our Allies. Somebody knew where to find the right statistics when needed and a real service was promptly performed.

One of the best reference librarians I know said to me recently: "In reference work one had almost as well forget the places where one has found certain bibliographical information and learn all over again, for the sources of such information are all new to-day." One of the best statisticians I know said, on the other hand, when I repeated this remark to him: "Well, that is not true of agricultural statistics. There are no new and reliable sources." He went on to say, moreover, that some ludicrous mistakes had been made by newly created boards in the effort to compile statistics without adequate knowledge of how to do it. One government board recently, in the effort to induce more sheep raising, gave out figures showing the annual decline in this industry in Europe since the war began, which were larger than the annual production had ever been. So, he warned, one cannot be too careful about the sources of agricultural statistics in the interest of accuracy.

* Indebtedness for assistance in the preparation of this paper is acknowledged to Miss E. B. Hawks, assistant librarian of the U. S. Department of Agriculture, Frank Andrews, chief of the Division of Crop Records of the Bureau of Crop Estimates, and O. C. Stine, assistant in farm economics of the Office of Farm Management.

Paper read before the agricultural libraries section of the A. L. A. at Saratoga, July 4, 1918.

AGRICULTURAL STATISTICS OF THE UNITED STATES

The agricultural statistics of our own country are our first consideration. Of primary importance among the sources of these are the Census reports on agriculture, which are too well known probably to need comment. It may not be always remembered, however, that the arrangement of the state statistics is by counties—a fact of great value now when the acceptance of the county as the unit for statistical computation is being so strongly advocated. These state figures include Alaska, Hawaii and Porto Rico as well as the District of Columbia. In some states (would that it were all) these county figures may be brought down to date by using the reports of the state boards of agriculture. These statistics are given by counties in the following states: California, Florida, Illinois, Iowa, Kansas, Louisiana (by parishes), Missouri, Nebraska, North Dakota, Ohio, South Carolina (for some crops), Texas, West Virginia, Washington (for some crops) and Wisconsin. The Census reports contain a great deal besides the enumeration of crops, farm areas, etc. They contain valuable monographs on various subjects connected with agriculture, notably the one on cereals by William H. Brewer in the volume on Agriculture in the Census of 1880. No reference librarian can afford to be unaware of these exceedingly useful introductory monographs which precede the statistical tables. There is another which occurs to me on the movement of the rural population, in the first volume of the 1910 Census Report on agriculture. The statistical atlas is useful for certain purposes also, as it gives graphs and maps of agricultural products, relative populations in rural and urban districts, etc.

The intercensal publications of the Bureau of the Census are of great importance. These include monthly figures printed on cards, of cotton, cotton-seed products and tobacco, as well as occasional bulletins on these subjects and others of agricultural interest such as forest products, ravages of the boll weevil, etc. The census of manufactures contains much material of

interest in agricultural work such as canning and preserving, paper and wood pulp, slaughtering and meat packing, sugar, wool and agricultural implements. Much of this is published annually.

The U. S. Bureau of Foreign and Domestic Commerce publishes annually a *Statistical abstract* of the United States which contains a useful section on "Agriculture, forestry, and fisheries." These tables, while much more abbreviated than those of the Census, give figures for 50 years back, of the area, production and price of farm crops and, under "Values," give percentages of increase and decrease. Statistics of the exports and imports of agricultural as well as other commodities may be found in *Commerce and Navigation of the U. S.*, which is issued annually by the Bureau of Foreign and Domestic Commerce, and is kept up to date by the *Monthly Summary of Foreign Commerce*.

So much for the general governmental statistics of agriculture exclusive of the publications of the U. S. Department of Agriculture, which are the most important source of all, and from which much of the material noted in the other sources is derived. In the well known Yearbook of the department there is a statistical section comprising about 200 pages which gives statistics for the staple crops and for livestock in both the United States and foreign countries. This is probably the best single source of agricultural statistics of the United States but there are many minor crops which will not be found here. For these we must turn to the *Monthly Crop Report* published by the Bureau of Crop Estimates of the department. It may not be irrelevant here to say that this bureau, in compiling its statistics for last year, sent out two million schedules which were filled by the voluntary crop reporters and special correspondents numbering 174,103 persons. In addition "statistical records relating to agriculture have been completed for 13 principal foreign countries . . . from the earliest to the latest years for which figures are available. . . . When the compilation of agricultural statistics for the remaining countries is finished—probably within the next year or

two—the Bureau of Crop Estimates will have one of the most complete records of estimates and statistics relating to world crops and livestock in existence, all expressed in terms of American units and in such form as to be immediately available for reference" (Bureau of Crop Estimates. Annual report 1917). The *Monthly crop report*, which has suffered a severe injustice in its name, for it "reports" on so much besides "crops," contains in addition to the statistics of crops invaluable statistics on livestock in the United States and foreign countries, wages of male farm labor by states, use of firewood on farms, percentage of hogs slaughtered on farms, size of farms and size of families compared, number of gas tractors on farms, materials used in making alcoholic beverages, silos in the United States, and other unexpected treasures too numerous to mention.

We cannot, however, forbear to speak of one more, namely *prices*—for if other libraries have sought as has the U. S. Department of Agriculture Library, for prices of every conceivable commodity, any help in this line will be welcome. The *Monthly Crop Report* gives wholesale, retail and farm prices of both crops and livestock. It also gives index figures* of crop prices. The *Monthly Review* of the Bureau of Labor statistics gives wholesale and retail prices of the principal foods, and statistics of the cost of living both in the United States and foreign countries. Retail food prices may also be found in the *American Food Journal* each month. This list contains some articles not found in the other tables mentioned. There has been a great increase in the interest taken in prices in recent years, but such interest is manifested in the use of the basic material, in compiling from the original quotations, and re-arranging averages, etc., rather than in obtaining new material. A great deal of summarizing and compiling is done unnecessarily both of crop and price statistics.

By a little research an investigator may

* For a clear and comprehensive statement of what "index numbers" are—see Sechrist's "Introduction to statistical methods" (Macmillan, 1917) p. 294 *et seq.*

save himself weeks and even months of work, if he will look for summaries already compiled instead of trying to work them out for himself. We had a hurry call last winter over the telephone for the pre-war and post-war figures of livestock production in the South American countries. We knew that live stock figures for these countries were given in the *Review of the River Plate* but didn't see how we could tabulate and summarize them on such short notice. So we telephoned to the chief of the Division of Crop Records of the Bureau of Crop Estimates and asked him if he knew of such a summary. Without an instant's hesitation he referred us to a table including 17 foreign countries in a recent number of the *Monthly Crop Report*, too new to be in the last issue of the *Agricultural Index*, which completely satisfied our inquirer.

And now I can no longer conceal the distressing fact that this valuable source of agricultural statistics has no index. That may be one reason why I have dwelt on its value at such length, for one either has to make reference notes of its contents when each number is received or else dig for dear life whenever an unusual request for statistics is received. For instance, would one think of going there to find out how many horses on an average a farmer drives to a plow in the different states, or the prices of the things a farmer buys, from nails to milk cans? Well both things are there and hundreds of others just as disconcerting when figures are suddenly demanded and are wanted right up to date. Of course price statistics are usually wanted right up to date, and there are some periodical publications which give them weekly and even daily. The *Baltimore Price Current* is a modest little sheet which is published every day and gives invaluable statistics on commodities not easy to find—tho even that broke down when I tried to make it yield the price of Spanish peanuts! In the hope that it may be useful, a list of periodicals is appended in which prices of various commodities are given. We realize that this list is far from complete and includes scarcely any of the trade journals of spe-

cial industries. It is in process of being compiled by the Library of the Bureau of Markets, which was kind enough to allow us to use it. It is only in its early stages, but will eventually be an invaluable tool. It is designed to supplement Bulletins 226 and 228 of the Bureau of Labor Statistics, which give wholesale prices from 1890 to 1916 and retail prices from 1907 to 1916.

In addition to the statistical work so ably done by the Bureau of Crop Estimates, some important statistics are compiled by the Bureau of Markets along three general lines which do not duplicate in any way the work of the Bureau of Crop Estimates. These three lines are: first, statistics relating to the market news service, which include cold storage holdings, dairy products, eggs, fruits and vegetables, grain, flour, hay, honey, live stock, and meats; second, statistics relating to food surveys which are embraced in Circulars 96-101 of the office of the Secretary of Agriculture, showing the supply of the principal food staples in the country Aug. 31, 1917. These figures are supplemented by a new periodical entitled *The Food Survey* being published every four days at present by the department. Third, special statistics compiled in connection with specific assignments by the secretary's office, such as those contained in Circular 104 of the office of the secretary on the stocks of fertilizer and fertilizer material in the United States Oct. 1, 1917. It may be of interest in this connection to note that the War Industries Board is soon to publish a bulletin showing the nature and extent of the statistical work being done by the various Government agencies. The investigation which is to result in this bulletin was undertaken on the suspicion that there was duplication in the statistical work being done by the various government agencies. It is gratifying, however, to be able to report that practically no duplication has been revealed.

A valuable publication of the Bureau of Farm Management, U. S. Department of Agriculture, was issued in April called "Geography of the world's agriculture." It is the first of a series which is being prepared, later numbers of which will deal

with single crops more fully than it was possible to do in one publication. The present publication consists of a series of short monographs accompanied by graphs and maps showing the geographic origin of the world's supply of food and of other important agricultural products and indicates the climatic, soil and economic conditions that account for the distribution of the crops and live stock of the world. It includes an excellent list of statistical references at the end. This geography of the world's agriculture was scarcely off the press before a request for a copy came from China, followed soon by requests from the Attorney General of Nova Scotia, the Canada Food Board, the Minister of Agriculture of France, and a bank in Tokio. (Have you each a copy, or is the Orient ahead of you?) These requests certainly show a world-wide interest in the publication. This is not to be wondered at if others have found its contents as satisfying as an harassed employe of the War Trade Board who asked anxiously one day if we could give him any maps that would show the relative production of live stock in the various states. He had no notion that such maps existed and when he was given this geography of the world's agriculture and realized that the data was all ready to his hand, his relief, as he settled himself to study it, is a joy to remember.

This would seem to cover the most used sources of statistics relating to the United States. For our neighbor, Canada, the Census of Canada, volume on agriculture, the Canada Yearbook, published by the Minister of Trade and Commerce and the *Monthly Bulletin of Agricultural Statistics*, issued by the same office and including figures for both the Dominion and the provincial departments, will give the needed figures. For our Latin American neighbors, statistics are published from time to time in the *Bulletin* of the Pan-American Union, which also notes consular reports of a statistical nature. There is a Mexican Yearbook, which is, however, of little value as to agriculture, but is better than nothing, and a somewhat better South American Yearbook, which gives fairly full figures for agricultural production.

STATISTICS OF THE AGRICULTURE OF FOREIGN COUNTRIES

Probably the best known source of foreign agricultural statistics is the *International Crop Report and Agricultural Statistics*, published by the International Institute of Agriculture at Rome. It summarizes crop reports of foreign countries and of the United States. It is printed in English, French, German, Italian and Spanish and the figures are considered entirely reliable. There seems to be, however, no valid reason why it should not have included figures of agricultural production from the Central Powers during the last few years, as such figures have been secured and published occasionally in various trade papers as Broomhall's *Corn Trade News* of Liverpool. This *Bulletin of Agricultural and Commercial Statistics* deals with (1) Production of crops, (2) Livestock, (3) Commerce, (4) Prices, (5) Artificial manures. Two valuable half-yearly summaries are published as supplements to the March and September issues of each year, one called the "International movement of fertilizers and chemical products useful to agriculture" and the other "Statistical notes on the production, imports and exports, prices and maritime freights of cereals." The Institute also publishes an *Annuaire international de statistique*, and a series beginning in 1917 called Documentary leaflets.

Another well known and indispensable source of agricultural and other statistics is the Statesman's Yearbook, which gives besides the statistics in the text a valuable list of books of references often containing statistical items. The International Yearbook is also helpful sometimes for the main figures as to staple crops of the various countries.

The official statistics issued by the various foreign governments are of course the most reliable source of agricultural statistics. These and other general sources are listed in the appended bibliography, as the enumeration would prolong this paper unduly. We must not fail to speak, however, of the *Experiment Station Record* which indexes, under "Agricultural statistics" the principal sources for both foreign

and domestic figures each year. The *Record* also indexes statistics under special subjects. The *Agricultural Index* should always be examined too, with the most minute care. It does not use the heading "Agricultural statistics" like the *Experiment Station Record*, but uses "Statistics" as a sub-head under the subject sought. As the *Agricultural Index* indexes the *Monthly Crop Report* and the *Food Survey* in addition to much other valuable statistical material it points the way to many a rich find.

In closing I should like to say that when I asked one of the thoughtful statisticians to whom I have talked in connection with the preparation of this paper, whether he thought the War was the only reason for the greatly increased use of agricultural statistics at this time he said "No," that much of the work being done was in preparation for peace, that it was being done quietly without advertisement, but peace would find us in a measure at least prepared. And I was reminded of Dr. Richardson's splendid paper at the American Library Institute in Atlantic City last winter in which he said that it seemed to him that one of the most valuable services that could be performed by research libraries at this time was the preparation of bibliographies and reading lists on the problem areas which will be the world's first thought when peace comes. Of such bibliographies, statistics should form an important part, and the handling of them will be no task if one is fired with the motive of service in the present as well as the future, for beyond the hills of victory lies the blue expanse of peace.

 U. S. Department of Labor. Bureau of labor statistics. Bulletin 226. Wholesale prices, 1890 to 1916.

NATIONAL EDUCATION ASSOCIATION'S PLAN TO MEET EMERGENCY IN EDUCATION

THE National Education Association has been concerned for a long time over the increasing demands for service being made upon the schools of this country, while at the same time their ability to meet these demands has been threatened by the withdrawal of competent teachers and the decrease in enrollment in teacher-training schools, by the common tendency to shorten courses and lower standards, and by the growing difficulty to secure adequate revenues.

At the annual meeting in Pittsburgh last July an ambitious program for meeting this national emergency was formulated and adopted. It proposes the founding of a national department of education and the subsidizing by the Federal Government, to the extent of \$100,000,000, of certain parts of the public school system, as is already done to a limited extent in the case of institutions for education in

agriculture and the mechanic and household arts. Americanization must be accomplished for the safety and continuance of our free institutions; illiteracy must be abolished; physical efficiency must be increased; compulsory education must be extended; the number of adequately trained teachers must be increased; rural schools must be standardized and improved; teachers' salaries must be increased. It is to provide the means for these vital changes that the association has become sponsor for a bill drafted by its commission on the emergency in education, providing for the creation of a national department of education and for the appropriation of funds from the national treasury for the promotion of education.

In an effort to have, so far as possible, every teacher and every person connected with the schools in this country enlisted in the furtherance of this campaign, the association is making a special effort to secure at least a hundred thousand new members. Each state is organized with a state director, who is the official representative of the N. E. A., and a state commission, composed of the state director, state superintendent, president of the state teachers' association, and two or more members appointed by these three.

All faculties, teacher study groups, classes of normal school and college students, and all others interested in the problems of readjustment of education during and after the war are asked to cooperate with the state commission. Superintendents of schools are in general charge of the drive for members in the schools under their jurisdiction, as are the presidents of teacher-training institutions.

Convinced that a national emergency exists in the shortage of teachers thruout the country, President Wilson has made an appropriation out of his national defense fund to establish in the Bureau of Education a School Board Service Section for the purpose of assisting officers of education in finding teachers for colleges, normal schools, and technical schools, superintendents and principals of schools, and teachers and supervisors of special subjects in secondary and elementary schools.

LIBRARY WAR SERVICE

The United War Work Campaign in New York

"Now GIVE" was the slogan that began to appear on New York billboards as soon as the Liberty Loan campaign was ended, and a little later street banners, pennants, and posters, showing Uncle Sam's hat overflowing with money and urging the public to "Give all in one hat," appeared as evidence that the United War Work Campaign was getting under way.

On Nov. 3 a splendid preliminary meeting was held in Madison Square Garden, where an audience of 15,000 crowded the building to the doors. The meeting was significant in its union of Catholic, Protestant and Jew for the presentation of the program. John D. Rockefeller, Jr., chairman of the New York City campaign, presented Hon. Charles Evans Hughes as presiding officer for the afternoon. Secretary of War Baker was the principal speaker, and was cheered for several minutes, when in outlining the need for generous giving, he called attention to the significance of this union of leaders of all churches in a common cause. The united aspect of the meeting was evident from the first. Rabbi Stephen S. Wise led in the reading of the Twenty-fourth Psalm. The national anthem was sung by Caruso. Then came selections by the U. S. S. Recruit band, by the Paulist Choristers, and by the Billy Sunday campaign choir, and addresses by W. Bourke Cockran, Charles E. Hughes and Louis Marshall. The benediction was pronounced by his eminence, Cardinal Gibbons.

The following Sunday, Nov. 10, many clergymen of the city made a plea for the hearty support of the drive the keynote of their sermons, and in the evening another joint meeting was held in Carnegie Hall, where spokesmen of the Protestant, Catholic and Jewish faiths, both clergy and laymen, met under the auspices of the Salvation Army. The speakers were the Right

Rev. Peter J. Muldoon, chairman of the National Catholic War Council; the Rev. Dr. Joseph Silverman, rabbi of Temple Emanu-El; the Rev. Dr. Karl Reiland, rector of St. George's Episcopal Church and recently returned from France; Evangeline Booth, commander in chief of the Salvation Army in this country, and George Gordon Battle. The chairman, and George Ambassador Myron T. Herrick. The audience was enthusiastic and responsive, applauding wildly when a group of Salvation Army workers who had just returned from France were introduced.

On Saturday, Nov. 13, still another mass meeting was held in Carnegie Hall, a "women's thanksgiving." Secretary of the Navy Daniels, who had reviewed a column of more than 15,000 Brooklyn people in a victory parade that afternoon, was the principal speaker. Dr. Anna Howard Shaw, speaking for the first time since her recent illness, was also welcomed, and Henrietta Roeloff, recently returned from France, told of the Y. W. C. A. work for women in that stricken country. Mr. Rockefeller again introduced the speakers, and the Billy Sunday choir of 700 voices furnished music. During the evening Joseph P. Day, who was in charge of "special features" during the whole week of the campaign, arrived with the Police Glee Club and a kiltie band. After each organization had rendered selections, Mr. Day auctioned off an oil portrait of President Wilson, and Marie Dressler made one of her characteristic speeches.

All thru the week the allied theatrical, motion picture and music team, of which William Fox was chairman and George M. Cohan associate chairman, presented a series of benefits, "all for one and one for all," including a monster concert and vaudeville performance at the Hippodrome on Sunday night; two great war relic exhibitions in Manhattan and Brooklyn armories; a concert at the Metropolitan Opera House by John McCormack, Maggie Teyte, and Jacques Thibaud; a football game at the

Polo Grounds between picked teams from Camp Upton and Princeton University; a "victory ball" at the Hotel Astor; an athletic carnival in Madison Square Garden; and on the second Sunday evening a mammoth benefit presented by the Friars and Lambs, the famous theatrical clubs. The Friars and the Lambs also had a "silver race" on opposite sides of Fifth avenue for an hour each day, the Lambs winning by a few hundred dollars. Over \$15,000 was collected by the two clubs.

For the first time in any drive for war relief purposes every collector was tagged and numbered officially. Three types of collection boxes were approved, and persons approached by solicitors with cigar and shoe boxes, ordinary tin cans or punctured army canteens were asked to report the solicitor to the nearest policeman as an imposter. No children were authorized to solicit money, their contribution being, as "victory boys" and "victory girls," to

try to earn \$5 by some legitimate labor and contributed this earning to the fund. The outstanding mark of identification of collectors was either a serially numbered badge or a sash with the phrase "United War Work Campaign" upon it, or both. Three kinds of boxes were used. One, by the Salvation Army, was a metal box with a card showing the Uncle Sam hat and the legend "All in One Hat. United War Work Campaign." These boxes were of battleship gray, with a glass front with a slot in the top and locked with a brass lock, and were for use by Salvation Army workers,

principally in the subway and elevated lines and some of the steam railroad trains. Each of these Salvation Army workers also had an identification badge, numbered serially. Other canvassers had a cylinder box six inches high and three in diameter, with the same legend and showing the same hat. These persons in most cases wore a sash of the campaign and one of the identification badges. In a few cases the solicitors had a box nine inches each way, bearing

the legend and hat, the canvassers also wearing the identification badge, and in most cases the sash.

By a generous and graceful act the American Red Cross relinquished the entire gross receipts of the National Horse Show held in Madison Square Garden Nov. 11-15, for the benefit of the United War Work Campaign. The Horse Show Association had selected the dates and leased the Garden long before President Wilson designated that week for the drive, and arrangements had been

made to repeat the patriotic act of last year when the entire net proceeds, some \$63,000, were given to the Red Cross.

The many industries of New York were organized for the purpose of giving to every employe an opportunity to subscribe "one day's pay" to the fund, while firms and corporations were asked to contribute one-fourth of one per cent of their capital. To all persons contributing to the campaign a red, white, and blue button like the one at the head of this article was given, and the appeal to "stand behind the service star" was frequently made in the posters and the local advertising appeals.

As in so many sections of the country, the signing of the armistice had the effect of slowing down the giving, and the campaign was continued two days longer in the hope of making up the original quota. At the end of the original time limit set, New York city had contributed only \$28,000,000 of its \$35,000,000 quota, but the leaders were determined to turn in \$5,000,000 on each of the two additional days in the extension of time allowed.

THE CAMPAIGN IN NEWARK

The Newark Library sent out the following circular to all working in the campaign:

The Public Library is a Bureau of Information at your service. The Library is at the upper end of Washington Park. It is open daily from 9 a. m. to 9:30 p. m.

Telephones, stenographers, typewriters, messengers and library assistants are there on call.

All posters, circulars, pamphlets and notes of instructions to all workers are on hand.

The information here obtainable will be found especially useful to speakers.

The entire staff of the library is at the service of campaign workers for any purpose whatsoever.

A motorcycle with side-car for quick transfer of material or for carrying messages is at your service.

Call or phone 320 Branch Brook for any information or any kind of service needed.

The Public Library

J. C. Dana, Librarian

Beatrice Winser, Ass't Librarian

Newark, New Jersey

November 4, 1918

This Notice applies to all interested or working for the

Young Men's Christian Association
 Young Women's Christian Association
 National Catholic War Council (K. of C.)
 Jewish Welfare Board
 War Camp Community Service
 American Library Association
 Salvation Army

These have united to raise \$170,500,000 for the welfare of our Army and Navy.

With the Soldiers in Camp

WORK WITH NEGROES

Not much has been heard about work with our colored soldiers. Thomas F. Blue, who is in charge of the Public Library's branches for colored people in Louisville, has had leave of absence for the period of the war in order to act as general camp educational secretary of the Colored Y. M. C. A. at Camp Taylor. Writing to his library chief, George T. Settle, Mr. Blue says of his work:

"After six months service in the Army 'Y' which it is said makes one a veteran, I am 'none the worse for wear' and am still 'on the job.' And it seems in a big way. Last week schools were held in the mess halls of 27 barracks with 65 classes and an attendance of 2314. To direct this is only a part of my work, so you see I am kept, as the Indian would say, 'plenty busy.'

"For the past six weeks the enrollment in the school for enlisted men has been more than a thousand. Three-fourths of these men could not write their names. Our slogan is 'Every soldier must learn to write his name and as much more as he can.' To-day a soldier came to the desk to have a money order cashed and

signed his name for the first time. Several weeks ago this man entered the school for illiterates, and could not make a single letter of the alphabet."

During the six months educational classes were conducted in six different units, with the following record of accomplishment:

"Classes conducted 502; attendance at classes 20,345; special lectures given 32; attendance at lectures 36,062; books circulated 1575. These educational classes included typewriting and French."

MOTTOES FOR THE LIBRARY WALLS

Writing from Camp Cody, New Mexico, Edward Day, the assistant librarian, tells of the simple but effective mottoes used to decorate the library room.

"Before Gen. J. A. Johnston, commander of the 34th Division, went east," he writes, "he called at the library and noticing a number of panels over bookcases, maps, and doors were bare suggested that they be filled with suitable mottoes or legends. Nothing was done for a time but when Clarence W. Sumner assumed charge he was quick to recognize the wisdom of the suggestion of the General. Hence he got a

local painter to print a fine lot of suitable sentiments upon white cardboard in black letters that might be seen and read from across the library.

"Some of these are simply calculated to welcome and inform patrons of the building as that upon the front of the desk:

Everyone is welcome at the camp library and that upon one side of the desk:

What is the A. L. A.?

It's the American Library Association with headquarters in Washington, D. C., and libraries in all war camps, and in fact wherever our Soldiers and sailors are stationed

and that over an end door:

The books of
the American Library Association
ARE YOURS
Are you using them?

Most appropriate is the legend over the main entrance:

A free library is a great doorway of opportunity,

and that beside it:

Do you know the "joy of revelation" that comes in reading?

"Under the four flags which float above the office door, the American, British, French, and Italian, is this:

Borrow the brains of the best writers on your line of work.

"Calculated to stimulate readers are the following:

One of the joys of reading is that of expansion,

and:

He that loves reading hath everything within his reach;⁴

while in the alcove in which are the war books are these:

Why not advance—

Books will help, especially those about war and the training necessary to win it,

and:

A necessary part of your equipment:
Knowledge gained from books, telling WHY,
HOW, WHERE, you are to fight.

"But far broader in their suggestiveness are some of the legends which are bound to encourage in the men high ideals of life and duty, as for example:

A man never knows his strength until he has carried a load .

He who faces every duty like a man is brave enough

The wise man is always ready

He who is satisfied with himself is past cure

Take good care of the body, it's your work machine

Respect yourself if you wish the respect of others

Leadership: self-reliance, initiative, aggressiveness, and a conception of teamwork are the fundamental characteristics of successful leadership

It is easy to follow a beaten path, not so easy to blaze a new trail thru the wilderness

He is fortunate who can bear misfortunes nobly

"Finally over the shelves in which are a lot of fine books on astronomy and general science is this:

Stretch forth thy hand, O man,
To the ultimate stars and feel
The throb of the spirit of God.

SERVICE ON TROOP TRAINS

During the summer Miss Ahern made an investigation of the need and condition of reading matter for troop trains en route.

The investigation showed that most of the camp libraries saw to it that the trains were supplied with magazines at the start of their journey. In addition, many Red Cross canteens made it part of their business to offer magazines and newspapers to the boys on the troop trains as they passed thru. As the Red Cross workers are the only ones who have Government consent to know of the movements of trains, it has remained for the libraries to help them by keeping them adequately supplied with magazines.

Here and There Among the Libraries

THE BEAUTY OF THE COMMONPLACE

Those who heard Miss Webster's talk at Lake Placid on the hospital library work, and who listened to the letters she read from hospital librarians, were particularly struck by the fine tone of one, written by a woman who had been conspicuously successful in her hospital library but who had given it up to go back to the less picturesque tho no less vital, service in her own college library.

"No doubt you have heard that after consultation with the President of our college, it seemed necessary for me to resume my duties here," she wrote after her return. "This is one of the most important, if not the most important school in our state. This coming year we shall have nearly, if not quite, 3000 students, the majority of whom will be soldiers. The assistant librarian, who might have taken my place as administrator here, and so permitted me to remain at the camp, has applied for canteen service in France and I cannot leave the library of this great school at the mercy of inexperienced girls. As I sit here drudging away at the numberless dull details of this work, and think of those beautiful days at the camp when I could feel the heart beat of my lonely boys and see the light of cheer coming into their eyes, I feel keenly that all of the heroes are not in France. But I feel that these are the days when the ordinary work which has furnished our country such splendid material for its defense, must go on normally, or the supply of that material will run short. We cannot all run off to France or to special war work. Some of us must be able to keep in view the greatness of the commonplace or the greatness will not issue therefrom at call.

"I keep getting letters from my boys. I found a letter awaiting me here from one of my favorite wards. It was addressed 'Mother _____' State. Some kind postmaster who had heard of me had pencilled in 'C. A. C. Library _____.'"

RECORDS OF LOCAL MEN IN SERVICE

As soon as the United States entered the war the Forbes Library in Northamp-

ton, Mass., started a list of local men in the country's military service. Information was gathered from various sources and was then verified by means of a simple questionnaire sent to the parents or nearest relative of each boy mentioned.

An effort is being made to cover the entire county of twenty-five towns and in order to do this the town clerks were asked to furnish a list of the men from their respective towns who had entered the service. More than half the towns complied at once and the others set about compiling the necessary lists.

At the end of October the card index showed approximately two thousand names for verification. Three thousand questionnaires had been sent out and over one thousand returned. About half of these were accompanied by photographs, and many more are promised.

The information has already proved of great use to reporters, chairmen of honor roll committees in other towns who want some basis for their lists, and to the Red Cross and Home Service Bureau.

All the material is kept in a steel cabinet, which besides the card index, questionnaires and photographs of the men, contains many camp pictures of Co. I men (the local company) and other pictures of local interest such as the "community sings" held on the library grounds all summer. A special exhibit of the individual portraits of the members of Co. I was shown at the three-county fair held in Northampton this fall, and later was set up in the library building.

In the million dollar campaign last year the quota of the Blackstone Memorial Library at Branford, Conn., was \$400, and its contribution amounted to \$652. A list of the institutions and individuals contributing was printed in attractive form and distributed at the annual meeting of the Connecticut Library Association this year, together with a list of Branford men who have served in the army or navy of the United States from the declaration of war against Germany to June 10.

The Library Board of the Tacoma Public Library has authorized the fitting up

of the newspaper room for war work purposes, primarily for the use of the Junior Red Cross in making scrap books for soldiers. The newspapers will be placed on a rack in the main reading room.

BY THE WAY

THE city of Richmond, Va., tho having a population of some 130,000, has no public library. The following paragraph from *The News-Leader* of Oct. 23, under the caption, "By the way," is one of the effects of war:

"If we mean never to have a public library in this city we are doing a mighty dangerous thing to send books to soldiers. How terrible it would be if they form the habit of reading and then come home and demand a public library, when we have made up our minds never to have one in this city. It would appear that some of our townspeople feel toward a public library pretty much as an old gentleman, who lived in a small town in which there was no inn, felt about the proposition to build one. He was teetotally opposed to it, he said, because if any gentleman came to town he would entertain him in his own home, and he didn't want to encourage anybody who wasn't a gentleman to come to town. In other words, we are willing to buy a new book now and then and read it in the privacy of our own homes, but we are not willing to encourage the general reading of books by building a home for them."

THE NAIVE INDEXER

THE librarian who indexed Wilde's "Importance of being earnest" as theology must have been kin to the librarian of a public library in a certain Cornish town who indexed Borrow's "Bible in Spain" under the same heading. But he excelled himself when he included in his catalog Besant's "Golden butterfly" as entomology, and a book on American drinks as educational. However, librarians are not the only people who increase the humor of nations by their indexing. Even the index of the *Encyclopedia Britannica* used to read: Art: Art Squares, Art Teaching, "Art thou weary."—*London Daily Chronicle*.

THE A. L. A.'S RECONSTRUCTION OPPORTUNITY

THE good work of the American Library Association during the war has greatly interested me, both because of my connection with the book-trade before the war and because the books I have been able to get thru the A. L. A. War Service have laid me deeply in the association's debt. Seventeen weeks as a patient in two hospitals have given me plenty of chance to see the library work "in action" in these hospitals, and now that the prospect of peace is focusing attention on reconstruction rather than further destruction, on the problem of the returned soldier rather than the sending of more men overseas, it occurs to me that those of us who know how valuable this hospital work *can be*, may be pardoned for "standing up in meeting" and urging the A. L. A. to mobilize the best resources at its command for this hospital work during the coming months.

I don't mean for an instant to minimize the urgency of the A. L. A. task in helping to keep our unwounded men contented during the necessary slow process of demobilization and, in an even more positive sense, in helping to swing their minds from the easy-going institutionalized life of a kept man in the army to the obligations and individual responsibilities of civilian life. It's not enough merely to occupy the minds of these men with Zane Grey if tact and intelligence on the camp librarian's part can set even a few of them thinking by giving them something positive to read. This work must not be slackened until the last man is mustered out.

But the thousands of men being sent back to this country to fret thru these seemingly interminable army hospital convalescences—extending for many a month past the final signing of the terms of peace—offer the A. L. A. an opportunity which, in possibilities if not in actual numbers involved, far surpasses the routine camp work among men on active service. Look at us here at the Walter Reed alone: In addition to a thousand or so men who have come from camps on this side and will soon for the most part be discharged to make room for wounded from overseas,

BURTON E. STEVENSON, MRS. F. B. SMITH, JR., PAULINE FULLERTON, W. D. DAVIES, MRS. BURTON E. STEVENSON, MARY J. BOOTH, MRS. ELIZABETH G. POTTER, MRS. FREDERICK PALMER

THE STAFF (ABOVE) AND THE ENTRANCE HALL AND CHARGING DESK AT THE A. L. A. CENTRAL LIBRARY, 10 RUE DE L'ELYSEE, PARIS

there are 500 to 1000 men here already from overseas with limbs amputated, four inches of bone cut out of the forearm leaving a pretty useless arm, or members twisted from severe flesh wounds and only to be rendered reasonably fit again by long months of massage treatment.

For the most part these wounds, by the time a man gets back to the United States, are not painful—so that diversion is not the prime consideration it is in the hospitals in France. In the months of enforced idleness in hospital most of these men are stopping, for the first time in their lives, in their round of just working-to-get-money-to-get-food-to-get-energy-to-have-a-good-time-so-as-to-go-back-to-work-to-get-money—and so on. For thousands of them hospital is, whether consciously or unconsciously, a time for readjustment. They are either incapacitated for returning to their old occupations or have a restless inclination to try something else.

Opposing this restless prompting to think about changed personal relations after the war is an even stronger tendency among these wounded men—stronger because attended with no effort—to leave it all to the Government. The corner grocery professional veteran of the Civil War is about to reappear. I have urged wounded college men to return at once to their college or university before they got out of the notion and almost invariably they have answered, "I want to go back—but I somehow don't feel like picking it up again just yet." It's *mañana* always, and with a very great many men there's the attitude that this country owes them a holiday, "a big party," before they settle down again.

And just here, in this conflict between these two forces, lies a great opportunity for the A. L. A. It has seemed to me in these four months in hospital, with candy and fruit and automobile rides and all manner of diversion being showered on us by various agencies, that one of the glories of the A. L. A.'s work has been the very fact that it has been attempting to minister to something more fundamental than the external sense of pleasure of the soldiers.

I know one man here who, with the

help of the local camp librarian, has been reading away at economics and philosophy until he bids fair to return to civilian life with a greatly changed idea of his personal responsibilities in life. A Georgia farmer in the bed next me has had his little universe magnified some millions of times by the accident of having picked up a book on astronomy from my table.

Here, surely, among the thousands of wounded that will pass thru our great base hospitals is an opportunity for the best that is in the A. L. A. And yet, taking both the hospitals I have known as examples, the A. L. A. isn't beginning to meet this opportunity adequately. It takes time and patience to break over apparent indifference—tho don't think we are all indifferent to the librarian's visits!—and find out what a man did before he came into the army, what he is interested in, or some other crevice thru which to gain access to the latent aspirations a fellow usually keeps carefully hidden. It is, of course, infinitely easier to drop a novel on a man's bed and move on; and when I have seen one librarian on this post pulling a boy's tin wagon loaded with books up hill and down dale in a breathless effort to "cover" these scattered wards with their 2000 patients, and in between times making flying trips in to Washington to get books for all manner of specialized wants she digs up among the men, it has seemed as tho the A. L. A. must be satisfied with such a superficial policy. The librarian is doing excellent work here with an enthusiasm that frequently keeps her on the job from 8:30 in the morning till after the building closes at 10 at night, but the job simply can't be done alone—nor even with the help of the assistant who has been helping of late.

Considerations of money and lack of personnel naturally hinder the A. L. A. in its work. But there is an extraordinary opportunity and need in our hospitals and it should be met by heroic measures. As the burden of work lessens in trench and overseas camp, these other librarians could most profitably be transferred to double the present hospital staffs. All sorts of features could be worked out to advantage: brief

talks on notable and stimulating fiction, reading aloud to groups of restless bed patients, informal talks on how books can help men in their trades and occupations, constantly changing and well placarded special selections of books on various subjects, etc. Books and more books are of course needed but even more pressing is the need for more librarians to introduce the right books to the convalescing man who faces the necessity of beginning life anew. Give us the best you have!

ROBERT S. LYND.

Walter Reed Hospital,
Washington, D. C.

PLAY-READING AMONG THE SOLDIERS

FROM Barrett H. Clark, the dramatic director at Camp Humphreys, comes an interesting note on the interest in dramatic matters which he has been able to cultivate among the men in camp.

"While it is the function of dramatic directors to train groups of soldiers to produce plays for all occasions—on leave from the trenches, in huts, and in the training camps—I, for one, have managed to establish small reading circles among my men here at camp, where we have gathered about us a circulating library of plays and books about the theater," he writes. "My 'school' meets often, and at odd times, when we discuss the plays we have read and consider what will be most appropriate for the various conditions under which the men will have to work.

"We began with no intention of establishing a reading circle, and that is perhaps the reason for our present success. It has grown out of the immediate and pressing needs of the moment. First we applied ourselves to digging possible 'stunts' out of the famous modern joke-books—'Funny-bone' and 'Madison's budget'—and then we turned to one-act plays. 'Mrs. Flynn's lodgers' and 'The depot lunch counter' received the same serious consideration as did Lady Gregory's 'The workhouse ward' and 'The rising of the moon.'

"Speaking of Lady Gregory, it was due to her that our 'circle' began to assume the dignity it now possesses. One highly gifted

tho uneducated soldier liked 'The rising of the moon,' and asked to borrow the book, which contained six other plays. I gave him the 'Seven short plays,' which now form the nucleus of his circulating library 'Somewhere in Siberia.' For some months we have issued books and plays to the men as they left camp, and we send them new plays as they appear, particularly the new numbers of the Service Edition of plays.

"This Service Edition is destined to be a curiosity in dramatic annals, for it marks our Government's first enterprise as a play publisher. So far the Edition includes ten plays, most of which were written by prominent dramatists for use by the soldiers. The first play was Austin Strong's well-known drama 'The drums of Oude'; the list includes plays by Augustus Thomas, Rupert Hughes, Edgar Selwyn, George Ade, and others. Distribution is limited to military circles and to those immediately engaged in producing plays for the soldiers.

"I look forward to some sort of official organization to carry on the tremendous and vital work of to-day, and I think our Government has come to realize that the theater, the library, yes, and *even* the artist, is an asset to the country, in time of peace as in time of war."

MANY examples of the foreigner's ambition to learn our language are seen among the men who come up for naturalization papers. A case in point is that of a sturdy young Slovak who looked as if he would make an ideal American; but the utter bewilderment and ignorance which he displayed when asked about Congress made the court very impatient. "Why haven't you studied?" the judge asked. "You have been up here once before, and failed." Then someone spoke up, "He's rattled, your Honor. He did better than that for me coming up on the train." Thereupon, the young Slav took up his own case, and pronounced an indictment against the native born: "No one me help. Everybody too busy, money. I get book, nobody me teach." What are we going to do to answer this indictment?

BUDGETS AND SALARIES IN DIFFERENT CITIES

THE 1919 city budget as adopted in New York, is printed in tabulated form in the *Municipal Reference Library Notes* for Nov. 6. An introductory paragraph calls attention to the fact that the figures given may be reduced (but not increased) by the board of aldermen, that the mayor has the power to veto such action, and that the aldermen may override such veto by a three-fourths vote.

In the case of each one of the three great library systems in Greater New York, the budget was cut not only from the sum asked in the tentative budget, but nearly \$135,000 was deducted from the sum appropriated last year. The figures for each are as follows:

	1919 Budget Total	1918 Budget Total	Decreases, 1919 under 1918
New York Public Library	\$782,206	\$856,203.00	\$73,997.00
Brooklyn Public Library	481,323	526,504.30	45,181.30
Queens Borough Public Library ..	160,000	175,791.49	15,791.49

On the other hand, Election day, Nov. 5, 1918, will be long notable in the history of the Los Angeles Public Library, for it marked the acceptance by popular vote of an increase of the library tax-rate, which was raised from a minimum of four-tenths to five-tenths of a mill on every dollar of taxable property. In all, fourteen local ordinances or charter amendments were on the city ballot, and of these only five were adopted. The fact that the library tax provision was included among the measures carried is a high tribute both to the place that the library has come to hold in the regard of the community and to the remarkably effective campaign of publicity carried thru under great handicap by the Library Board and staff.

The decision to appeal directly to the community for an increase in the library's income was not made by the board of library directors until late in September. The measure was approved by the city council and ordered placed on the ballot on Tuesday, Sept. 24, the last possible date for action, and it was actually filed for inclusion on the ballot just one hour before

the legal time limit for its acceptance expired. This left just forty-one days in which to plan and conduct an intensive campaign that should thoroly inform the city of the library's work and needs—and during almost this entire period all normal avenues of publicity were closed by the restrictions due to the influenza epidemic. No public meetings of any kind were possible; clubs, schools and organizations that would ordinarily have co-operated in reaching many persons were unavailable; and the closing of the main library and branches for all public reading room and study use also limited the opportunities for personal contact. Add to this, the depression of all business, due both to the epidemic and to war demands, and the ordinary public reluctance to vote for any measure increasing taxation, and it will be seen how great the obstacles were to be surmounted. A committee of the staff was formed, under the direction of the librarian, and every person connected with the institution gave unstintedly of time, thought, ingenuity and labor to the task of arousing public interest and sympathy for the library's cause. This task was performed necessarily chiefly thru the use of posters, charts and placards (no paid advertising was used, however) and thru printed slips placed in all books issued; thru the work of library representatives appointed to cover all the voting precincts of the city; and, most important of all, thru the personal friendly relationship established with thousands of individual library users. The local newspapers, with one exception, lent their support; the city school librarians and teachers gave their cordial help, in so far as it was possible to do so; the chief women's clubs willingly endorsed the measure; and there was evident thruout the community a strong current of approval of the work done by the library and a desire for its adequate support. No organized opposition developed at any time, and tho the vote was close the provision was adopted by a majority of nearly 2600, the vote in favor being 31,765, against a negative vote of 29,194. With the success of this undertaking, the first great step has been taken for the proper development of the Los Angeles Public Library; the second

will be the public authorization of a central library building.

In Toledo the voters overwhelmingly approved a tax levy of 2/10ths of 1 mill for public library purposes at the general election on Nov. 5; 24,434 votes were cast in favor of the proposal, 11,992 against the proposal. A year ago the same proposal was defeated by the narrow margin of 1500 votes. The change in the sentiment of the people was no doubt largely due to the service given by the branch libraries which were opened in January of this year. The tax levy is for a period of five years and unless unforeseen circumstances arise will yield adequate revenue. The levy becomes effective for the revenue of 1920.

At the October meeting of the Clinton (Iowa) Library board, a resolution was passed increasing the salaries of all members of the library staff, the increases ranging from \$3 to \$10 per month.

In a recent interview with Dr. Steiner, published in the *Baltimore Sun*, the pressing need of the Enoch Pratt Free Library for increased monetary support is taken up.

Dr. Steiner said that in spite of the fact that wages and everything else connected with the performance of the work have increased, the appropriation of the Board of Estimates for public libraries has remained the same. As a result, the low wages paid librarians renders it impossible to secure girls to take up this branch of work. Out of a force of 125 employes there are 24 vacancies, said Dr. Steiner, and not one girl in training. The tax per capita in Baltimore is 9 cents, while in other cities of Baltimore's class it ranges from 45 to 75 cents. The open shelf library at 404 Cathedral street now closes at 6 p. m. instead of 9 p. m. as formerly, and station no. 10 is open only half time.

"We used to be able to drag along with a fairly good appearance," said Dr. Steiner in this interview. "Now we cannot even do that. At present because of the additional territorial annexation we should have at least 20 new branch libraries, besides the crying need for 10 new ones in old Baltimore. We need, too, a new central library building, and the organization

of three new departments, a fine arts department, a pedagogical department for teachers and a commercial department for business men."

The Tacoma Public Library has been granted a tax levy of 3/4 of a mill for 1919 which will produce approximately \$42,750. Additional sources of income will bring the total budget to \$45,750 or \$5750 more than the budget for 1918.

In tendering his resignation as trustee of the San Diego Public Library, Lieut. Eugene Ferry Smith, on the eve of departure overseas, wrote as follows of the needs of the library:

"In closing, I desire to say that it is my earnest hope that your honor and the honorable council will not forget that in such a time as this the public library should be one of the last departments to feel the axe of retrenchment, for it can furnish to the citizens of San Diego, as can no other institution, the mass of educational material and the leavening and steadying influence that is so badly needed by all in this great crisis.

"And do not forget that one of the greatest users of the public library system at this time is the very body of men who are giving their lives to perpetuate the great democracy of which we are members. Not only do they enjoy the lighter side of the book material, but many are drawing constantly on the all too small supply of technical books that are housed within its buildings.

"And, as the cost of books increases, the poorer classes, which constitute by far the larger percentage of the library's patrons, will more and more be forced to turn to the library for their reading matter, and there should be no stinting of the supply for this most urgent need."

In Ontario a definite movement to secure adequate salaries for librarians has been started. In the August number of the *Ontario Library Review* the leading editorial is an argument for better salaries for librarians and assistants, and puts the remedy squarely up to the trustees.

"Ninety-eight per cent of our librarians and assistants," says this editorial, "have always been underpaid. . . . Ontario has

scores of librarians and assistants who have the greatest devotion for their work; their work is part of their lives, and they deserve the most favorable consideration in regard to adequate remuneration.

"Is it a commendable thing to maintain conditions that make the library profession an undesirable one to be engaged in?"

"Why should a qualified librarian be worth more to a commercial or financial institution than to a library? In other words, why should she receive less for work that she has been trained for, and in which she has had experience, than for work in which she has not had one day's experience? Business houses and other institutions are learning the value of young women who have a knowledge of library science; if library trustees have learned it, is it not high time that they paid for it?"

"Salaries should be increased:

"1. Because librarians and assistants render worthy service.

"2. Because librarianship requires more than an average education.

"3. Because it requires a practical knowledge of librarianship.

"4. Because the salaries are too low to hold qualified persons.

"5. Because the diminished value of the dollar renders it impossible for most of our librarians and assistants to remain where they are.

"Trustees, wake up! Do something worth while. Your communities will approve of anything you will do to make things just and right. Keep your librarians."

INDEX PROHIBITORIUM*

Who gives a book he does not like himself
Some Deathbed Dreadful from his penny
shelf;

Defunct commission annals, thousand-paged,
Repellant ever; old ere Athens aged,
Or books on Flight wherein 'tis finally told
How Icarus, wax-feathered, fell of old—
Not flew; or "dupes" of undetermined years,
Or thrillers silenced by the censor's shears,
Or broken-backed decrepits taking space
Long needed for a handsomer volume's place—
O, Lord, who judgeth sins of all degrees,
Is there no little private hell for these?

*Books we are cordially invited not "to give to the soldiers."

WHY I BELIEVE IN ADVERTISING THE PUBLIC LIBRARY

CHARLES E. RUSH, librarian of the Public Library at Indianapolis and a firm believer in library advertising, sets forth his creed as follows in the April issue of *Associated Advertising*:

"You have asked me, 'As a librarian, why do you believe in advertising the public library?' which is equal to asking, 'What has the library for the business man and the trades and for all of the people?'"

"Out of every 1000 children who enter the common schools, only thirty-four graduate. Of these, fourteen enter high school and six complete the high school course. Of these, only two enter college and one of the two graduates from the college or university.

"One out of 100 completes the university course. The public library is for the other ninety and nine. To what other institution can they turn?"

"I believe in advertising the public library because I believe it has a great educational mission to fulfill.

"I believe it is more than the privilege of the librarian to call attention to the service which the library has to render. I believe it is his duty. The public has a right to know all about its educational resources.

"I believe in exerting every effort to teach men and women and children to turn to the public library for information just as naturally as they turn to the water company for service, the fire department for relief and the police department for protection.

"I believe that it will not be long until the business man, who fails to depend constantly upon the public library for practical help in his line, will be smiled upon for his lack of initiative, judgment and up-to-dateness.

"Therefore, I believe in making the library a bureau of information on all subjects for the free use of everyone in the community, and that publicity of these ideas and a spirit of welcome and liberality within the library are the chief means to this end.

"I stand for all sensible and feasible

means which will popularize the library, encourage the 'library habit' and spread the knowledge that the public library is an absolutely free institution, owned and supported by and for the people, and that it is not only the right of, but the opportunity for all residents to enjoy its privileges and benefits.

"I believe the public library is the greatest institution there is for the continuous education of all who are beyond their school days, and that it is the most democratic of all public institutions.

"I believe it is an integral part of our public educational system and should make itself, as nearly as possible, the center of a city's cultural and intellectual life.

"I believe the public library should be, and will be, of the greatest possible use in the sharp awakening that is taking place in our civic and industrial life, and that it should be lively interested in, and thoroly prepared on, all subjects stirring the thoughts of the community.

"I believe in endeavoring in every way to make the library of more practical and inspirational value to the interests of all classes and ages within the city.

"I believe it is the privilege and the duty of every advertising club to aid the library, and to do so even if much missionary work is necessary to make the public library see the value of publicity.

"An advertising club is in the business of teaching people, just as are individual advertising men, and my experience has shown me that advertising men are more than willing to co-operate with librarians. They see in such work a great opportunity to turn the force of advertising to public good. Better books—better citizens—better business—*ad infinitum.*"

IN the highest civilization the book is still the highest delight. He who has once known its satisfactions is provided with a resource against calamity. Angels they are to us of entertainment, sympathy, and provocation—silent guides, tractable prophets, historians, and singers, whose embalmed life is the highest feat of art; who now cast their moonlight illumination over solitude, weariness, and fallen fortunes.

ONE MORE TRIBUTE TO MR. BRETT

THE death of William H. Brett, librarian of the Cleveland Public Library, constitutes a serious loss, not only to the profession but to the whole body politic and especially to those interested in altruistic and humanitarian effort.

Doubtless, many appreciations will appear in the pages of the LIBRARY JOURNAL written by colleagues intimately associated in technical work. The purpose of this personal brief tribute is to bring out, by drawing attention to one incident, testimony evidencing the power of visualization of this eminent American citizen, an incident which is perhaps known to very few.

The writer was fortunate enough to work in Cleveland at a time when its public life was rich in the participation of some of the choice souls in the ranks of American social workers. Newton Baker was mayor, Harris R. Cooley was commissioner of public safety, Howard Strong was at the Chamber of Commerce, Charles Orr was at the Board of Education, William H. Brett was at the Public Library.

Co-ordination and co-operation reigned supreme. Happy was the lot of the social worker working in a model city. The story was set in this, in many respects, unique hour. The writer was new to America then and viewed his function at the head of a large social settlement with something of old world vision. The settlement was in the Ghetto and the library had its branch as it has in all the other settlements of the city. The avidity of the Jewish child for reading is proverbial and the children's room was always crowded to excess. This did not bother the head worker and he hardly stopped to think about it, but many times he did stop before the empty adults' room, stocked with books on Jewish subjects and full of Yiddish literature, and he wondered, why! As he remembered the reading room of Toynbee Hall in England, he visioned a room in which it was difficult to find a seat. Why should his room in the Cleveland Ghetto remain empty? There was no immediate solution, and he pondered on, in the meanwhile getting more intimate knowledge of his constituency. Then there came to him,

not as a sudden inspiration, but as a growing conviction, that the explanation lay in the fact that the Jew in the London Ghetto was to a much larger extent an Anglicized Jew than was his counterpart in the Cleveland Ghetto an Americanized Jew. So the empty library room became at once a part of the large problem of Americanization.

There are two view-points of Americanization. One is the narrow view-point which would take the Jew and the Scandinavian and Italian and Slav, and crush out of them every old world idealism, in the vain effort to make them stereotyped American citizens, without much emphasis upon the quality of citizenship. The other is the far-visioned type, which conceives Americanization as an effort to bring a common ideal and a common aspiration to a citizenship of a hundred million souls thru the contribution of the joy in music and art of the Italian, the domesticity, perseverance and frugality of the Scandinavian, and the intellectuality, chastity and impetuosity of the Jew, coupled with the similar specific contributions of the diverse peoples who contribute to the make-up of these one hundred million souls. This is the writer's humble conception and it received the whole-souled co-operation of the choice spirit that was William H. Brett.

Our reading room was changed. We took out the formal furniture and we made the room beautiful. We changed librarians, not because the girl in charge was inefficient or incapable, but because we wanted to put into the room a girl with vision, who understood both America and the Jew and who could speak to her prospective clientele in the language understood, Yiddish. We let it be known that while it was considered good manners in America to take off one's hat in a public place and especially in the presence of ladies, this was a peculiarly western custom that we strictly enforced in the children's room because the little boys were going to school and knew all about it; but that we would agree to hold it in suspense in the case of the seventy year old immigrant who had not orientated

himself to the weird and strange customs of the west. We went farther still. We wanted to make this room a haven of refuge from the drear, barren and noisy apartments of the slum and to make it approach the ineffable conception which is called "Home." So we served tea in Russian style at a cent a glass, and it could be obtained right in the reading room without an excursion to the top floor or the basement to a cafeteria, which American institution is not beloved of the men and women whom we were trying to make "at Home." At first the new order of things seemed to be too much like a dream to be true. Fresh from the atrocities of bureaucratic Russia, not altogether insensible of the pressure of the corrupt forces rampant in the American slum, these bruised and battered victims of the inequalities of our human life were naturally suspicious of this tender regard for their innermost susceptibilities and wondered what would be the price. As they came to conceive that, assisted only by the interpretation of a modest brother-in-faith differing from them in outward conception but linked to them by centuries of tradition, this new order of things was a gift from a whole-souled American citizen for whom Democracy spelled "Brotherhood" and from whose soul narrowness was far distant, our reading room was crowded, night after night, and threatened to take up more space in our building than we could afford.

The incident is not a vital one in itself, but it typifies William H. Brett. He has been called all too soon to his eternal rest, but there will be many scattered from the Atlantic to the Pacific who came under the sway of his beneficent influence, who learned at his feet the abiding lesson exemplified by his life, of the joining together of gentleness with great executive ability. The prevailing note of his life was gentleness; its prevailing passion Brotherhood; of these two the Americanism of tomorrow shall be born and shall endure. He needs no monument; his life was his monument, and many men of many creeds rise up and call him blessed.

RABBI EMANUEL STERNHEIM,
Sioux City, Iowa.

NEW PROGRAM FOR LIBRARY CO-OPERATION WITH THE FOOD ADMINISTRATION*

As members of the Food Administration our duties as librarians begin and end with placing conclusively before our communities, first, what we need to do with regard to food; second, why we need to do it; third, how we are to do it.

I.

What we need to do. We cannot tell this once for all and be done with it. Situations continually change because of natural causes which we cannot prevent nor foresee; climatic conditions, insect pests, disasters in the shape of floods, fires, and tornadoes, needs in the shape of demands from countries where productive food industries have given their workers to the war. Therefore, we must use the foods most easily procured and least needed abroad in such a manner that nothing will be wasted. Therefore, we must be prepared cheerfully to accept privation if necessary.

II.

Why we need to do this. Because America is most accessible, because our country is not devastated by war, because its resources are practically boundless and in five words, because we are a democracy!

III.

How we are to do it.

The Food Administration must arrange for fair distribution of the food supplies of the United States, leaving enough for us at home and supplying deficiencies across the water. To accomplish this our supplies must be listed and the needs of our Allies must be known. It is not necessary for every person in this country to know the above facts any more than it is necessary for every member of a household to know just what is in the pantry. It is necessary, however, for the person carrying the pantry keys to administer the food in her charge wisely and justly and it is necessary for the family to eat wisely and to waste nothing.

We face now two problems—the problem

caused by the fact that a large percentage of the Allied population formerly devoted to food production and manufacture is now on the battlefields, and the problem that many items on our daily menus tax severely the transportation systems of our country now largely needed for war service. What can we do about it? We can use only necessary foods; we can use foods raised or manufactured or naturally brought to the place in which we live. There are necessarily unexpected, temporary food shortages which must be met by our going without. These cases we must meet to order, but the all-year-round job for which one order suffices is the place where the library can help most.

Librarians are trained to gather, file, classify and make accessible information. Now is the librarian's opportunity to create a corner in food information for the home guard. This, by the way, might be the name of the corner, "Food information for the Home Guard." Here all depends on the librarian. First, she must make her collection of books; next she must advertise them, perhaps thru a local paper that will allow reviews of the material in this food corner. If the library is so well organized that a person naturally goes to it for information, then advertising on the ground is the thing, by means of the bulletin board and by means of little exhibits of all kinds. Bulletin histories of food are very much in order. This corner must have its recipe file and its bulletin board and of course no two libraries will deal with this subject alike, but every library can do something.

"Let me make the songs of the people and I care not who makes the laws." It is after all the spirit always that we rise to defend. We have got to put romance and chivalry into this food business and this is the library's legitimate business or the library has no place in the land.

Our President chose as Food Administrator, not the greatest production expert, not the greatest manufacturing genius, nor yet the foremost statistician, but the man who as the representative of the American people saved a nation from starvation and annihilation. The President in authoriz-

* Read before the New York Library Association at Lake Placid Sept. 24, 1918.

ing Mr. Hoover to organize first the women of the nation said, "The women of the nation are already earnestly calling to do their part in this our greatest struggle for the maintenance of our national ideals," and the women were the first ones called upon to help with voluntary services. They were to give to their sisters across the sea, and this gift was to be the price of sacrifice.

What is our part in all this? Reserves are our hope, for the consumption of food will increase because extraordinary physical tests call for extraordinary supplies of food.

What can mere librarians offer to offset the decrease in our production, the increase in our consumption? How can we best present the tragic romance of the old world's struggle? How can we best help to call forth the chivalrous feeling of our nation?

The first difficulty to be vanquished in creating stocks for shipment and in accumulating reserves for lean years is transportation. Every library in the land should constitute itself a bureau of information on the resources of its neighborhood. If it is a rural library, it should learn the food resources of its county; if it is a town or city library, then the food industries and the food supplies nearest at hand, and this information should be presented in such a manner that its appeal will result in effective action.

Autocratic Germany laid the foundations for a destructive program in the schools of her country. Where but in the schools of our democratic country should a great constructive program be laid? Now is the time to give to our children a hint of the power they will possess. Now is the time to give them a vision of the right use of that power. Now is the time to call them to service, lest in years to come they reproach us for depriving them of their legitimate birthright, the right to revivify our tired plans and dreary schemes with their direct and fearless ideas. Geography, history, English, domestic science, and art, these are the winning weapons for children. The commercial geography classes can make maps and lists; maps showing rail, water,

and motor transportation systems of their states in relation to the United States. They can make lists of crops raised in their counties and of food industries of their towns or cities. They can list the fish of neighboring forests, mountains or prairies.

The English classes can write the romance and chivalry as well as the practical facts into the story of food. And the libraries will be placing "The Complete Angler" and "Walden" besides Sherman's "Food Products," and "Farmer's Cook Book." The domestic science classes will compete in making balanced menus using only foods locally produced or manufactured, and they will provide recipes for the various items of these menus.

The drawing teachers will supervise the production of meals on paper in form to be cut out and arranged with easel backs so that a complete meal can be displayed.

At the library will be exhibited for the information and instruction of the public the transportation maps, the lists of local products and food industries, the menus and the recipes. And finally on the table or in a glass case the painted food executed by the art classes. This comprehensive war service can be given week by week by the schools while they are in session as long as the war lasts. As long as the seasons and the markets and the requirements of our comrades across the sea change, week by week, and month by month, interesting exhibits will be on display in the libraries all over the land.

EDITH GUERRIER.

REALIZING the immense value of the picture as a means of driving home certain facts, the French General Staff has assigned one of its own number to the sole duty of seeing that every man in the French Army sees Raemaekers' wonderful cartoons. Raemaekers has recently finished a set of 60 drawings that show how Germany during the past 40 years has steadily and continually been preparing for this war. The French government has ordered 2,000,000 books containing sets of these drawings to be put into the hands of its soldiers.

STATUS OF TRAINED LIBRARIANS AT WASHINGTON

THE confusion prevailing in the government war service at Washington as to the rating of trained librarians, may be charged, perhaps, to three things: first and foremost, the apparent ignorance of the federal Civil Service Commission as to the training given by library schools; second, the ignorance of officers—and it must be remembered that most of these officers are business men in uniforms—of the training of librarians, or as to what should be expected of them; third, the habit of every girl with high-school education, who has had apprentice training, or has perhaps been a clerk at the charging desk, of calling herself a “trained librarian.”

From these causes, utter confusion prevails at Washington in official quarters, and much discontent and unhappiness among the former librarians.

To bring this out more clearly, compare the situation with business clerks. For war service, a typist, with high school education, and ability only to use a typewriter, is paid, minimum and maximum, \$1100-\$1200 per annum, the advance of \$100 being automatic at the end of three or six months. A stenographer is on a basis of \$1200-\$1400, again perhaps with only high school education and little experience. Many of them are exasperatingly inefficient.

The Civil Service also has many combinations for business women. There is, on about the same basis as stenographers, the position of “clerk-stenographer”; or of “bookkeeper-stenographer”; or of “clerk with experience in business administration”; while an “office manager,” with ability to keep records of salaries, absences, etc., receives a salary of \$1500, or \$1600, or even \$1800, while her assistant receives \$1400 to \$1500 at work which is not at all highly-trained, but requires good business sense and accuracy.

Trained librarians, on the other hand, if they offer their services, receive a blank only for “catalogue and index clerk,” with no explanation of the work expected. The salary is exactly the same as paid a typist, and the rating below that of a stenographer.

There are many cases in Washington where women accustomed to executive work and to salaries of from \$1500 to \$1800 find themselves here granted an opening salary of \$1200, as a recognition of their special training—and then set to work standing all day long at a file, mechanically filing letters. The hopeless monotony of it would almost drive an active woman mad; yet it is almost impossible to get a transfer, tho the hundreds and hundreds of transfers asked for show the dissatisfaction.

That seems to be the idea of the Civil Service Commission of the extent of library training, and it seems to them also a fair salary for a woman with perhaps four years of college training and two years of library training, besides experience. It is, in fact, the same rating exactly as given to business girls who have had high school training, six weeks at a business college to learn how to file letters, and a year's experience in some business office.

Meanwhile there are other positions for which a well-educated, well-trained librarian is eligible but the Civil Service doesn't know enough to send out notices of such vacancies to library applicants. Such positions are those of “editorial clerk,” with entrance salaries of from \$1200 to \$1600, no maximum stated; “research assistants,” at a fixed salary of \$1500; “library assistants,” at a fixed salary of \$1200, tho perhaps if very useful, the officers over such an assistant could get the salary raised to \$1300 or \$1400, but only by persistent efforts and the sitting of an Efficiency Board after perhaps six months of waiting.

In a recent examination for “research assistant” one clever woman, well educated, reported that she could translate the French and German, with the aid of the dictionary permitted, and answer some of the other questions, but she knew she had failed. “And what in the world,” she asked, “is a dictionary catalog?” Evidently, altho the writer of this did not see the questions, the examination was one for a good reference librarian.

On the other hand, where there really is indexing to do, it is a matter of abstracting, or “briefing,” or “stripping,” as it is called here. That is, a letter comes in with

perhaps two or twelve indorsements. The index card must show a clear abstract of the contents of the letters,—and it's not always an easy thing—or perhaps it is a document to be indexed and filed. That abstract is not always easy to make; and the subject headings must be worked out by one's self, and not from the A. L. A. or the Library of Congress "Subject headings." For such briefing, librarians are not trained; business index clerks are. But a clear-headed librarian can easily learn if she is not so bound down by theories of cataloging that she wrecks the work.

"I won't have a trained librarian," said the head of a large Mail and Control Section to the writer recently. "They fall down on their work; they're no good." And he cited the case of a section which was abolished by the powers-that-be because the trained librarian, coming here with the prestige of being an expert cataloger, could not index so that correspondence and material could be found. He had tried them himself, also, he said, and a captain standing near added that "trained librarians were no good." He had tried them, too; and that captain I know to be a fair-minded, reasonable man, who takes great pride in the really good work done by a trained, experienced librarian in the office of which he has charge—a librarian who saved valuable files from being wrecked. A few minutes' questioning, however, brought out the fact that neither man knew whether the clerks who had failed were really trained librarians, or whether they were merely library clerks who had been at charging desks and knew nothing whatever of indexing.

The Civil Service Commission sent over to one of the branch libraries of the War Department a "catalog and index clerk." The librarian, a college professor in uniform, knew a good deal about library work, however, and a few questions brought out the fact that the "catalog and index clerk" knew nothing whatever about the subject—had never done any cataloging or indexing. The office manager, a former assistant superintendent in some steel works, and knowing no more of libraries than a school boy, came to the writer.

"Do you mean to tell me," he demanded, "that a person can be in a library five years and not know how to index or catalog?"

"Yes—or fifty years," I answered. "Working in a library, without special library training, means that such an assistant knows just her own work and usually nothing more."

"By Jove!" was his dismayed reply.

There are two ways out of this puzzle. One is that the Civil Service Commission label their library workers aright, and pay them salaries commensurate with training and experience. For instance, compare that one title, "index and catalog clerk" for all librarians and for all business index clerks as against the minute classification mentioned at the beginning of this article for business clerks.

Then the classification should be: "Index clerks experienced in abstracting and indexing"; "file clerks"; "editorial clerk with library training"; "library assistant," as it now stands; "research clerk and reference librarian," or "research clerk with experience as reference librarian," which would hit the nail on the head exactly. And so on.

But for the present, altho correspondence is growing and "index and catalog clerks" are going home disgusted with the work assigned them, trained librarians with executive experience, would do better to offer their services as "research clerks," as "library assistants," as "editorial clerks" (provided they have any sort of literary sense), etc., rather than simply as index clerks.

The officers, for the most part, do try to be fair; but where a man in charge of correspondence files has a dozen clerks, perhaps, or thirty, working on three shifts, and needs five or six more, he is not going to allow a capable assistant to be transferred to a higher class of work—he is certain he cannot replace her. And the more capable she is, the more he wants her.

"WHEREVER there has been vision and fineness of work there is a willingness to impart the lesson to others, and the public library is the place of exchange."

AMERICANIZATION THRU FOREIGN
PRINT

LIBRARIANS have been interested in the education, or Americanization, of our foreign-born adults for ten or fifteen years, and our belief that it is good to offer the foreign-born men and women information and inspiration in their own native languages, is excellent in principle, I believe, and founded upon accepted pedagogical truth. We have made mistakes, I also think, and in our emotional zeal "to do something for the foreigner," have reversed the order in which we might have supplied his needs more successfully. We have approached him almost exclusively thru the classical literature of his homeland instead of thru the familiar and eagerly read pages of his daily foreign newspaper.

The Public Library of Newark, N. J., has had a small branch in the most congested foreign quarter of the city, and has been interested for many years in the task of educating the foreign people. Incidentally, we believe that the public school system of a city, since it has the necessary funds and machinery, is the proper agency for directing the education of the adult alien and that the library should remain, as in all other educational work, a collateral aid. My experience in the Springfield branch of the Newark Library has taught me interesting things about various phases of "Americanization" work, and thru letters and interviews with people prominent in educating the foreigners and thru conversations with intelligent foreign-born people themselves, we have evolved a scheme for our own guidance in the purchase of material and in methods of advertising it thru the foreign press.

Expenditure for print, by which, according to our policy, a library may legitimately help in the education of foreign-born people should be made in the order and for the reasons given below:

Buy first, all the foreign-language newspapers displayed on the newsstands in the foreign sections and read by the foreign-born people of the community. We need to buy newspapers and magazines, obtainable thru news dealers and importers, so

that thru them the foreign readers may get current news at the library. If we handled all of these publications, even for a limited time, we should soon learn which ones were most accurate in statement and improving in sentiment, and would of course curtail our original expenditure.

Obtain all available informational literature published in the several foreign languages which are spoken and read by the nationalities in the community. Foreign-born people need facts, and especially do they need facts about America, her life, and laws and ideals. It is immaterial in what language these facts are presented. The disappointing discovery is that very little has been printed in foreign languages for the instruction of foreign readers in America. Farmers' Bulletins which are so valuable to the English reader are closed books to the man who reads only Bohemian but wishes to grow strawberries or onions and knows nothing about conditions of soil and climate in America. He should not be obliged to wait for this knowledge until he has mastered an unfamiliar and intricate language. We might expend some of our book fund money at this point on getting printed in our local foreign-language newspapers the educational articles which we need and which we have not been able to discover in print. The foreign newspaper editors are glad to print in their papers anything which acquaints their readers with things American.

Buy the "classics" in each foreign language and the best books on learning English. I would stretch the term "classics" to cover much that is written with sincerity of purpose, conveying some phase of the spirit of the people. I would not buy popular books merely because they are popular. It seems to me, that, since our national language is English, a public library is justified in buying material of ephemeral quality in that language which it is not warranted in purchasing in the foreign languages. I do not believe in buying the innocuous love stories, but I do want the cook books and poetry of all the nations! It would be a fine thing to build up collections, however slender, of the best and

most typical productions of the minor European groups which have come to America. We need to have in the library the inspirational books in many foreign languages.

Our experience in advertising our foreign branch thru the local foreign language newspapers, together with a specimen "story" will be given in detail in a later issue of LIBRARY JOURNAL.

DELLA R. PRESCOTT.

Free Public Library, Newark, N. J.

WORDS YOU OUGHT TO KNOW

THE problem of supplying information about new words that are constantly appearing in current news exists in every library but is especially the problem of the high school library. When the head of the English department in a high school reads the *Times* at the breakfast table, gives out a list of words to his first period seniors and these pupils come into the high school library for information the second period, the value of "preparedness" is easily understood.

In the Passaic High School Library, waiting for the demand for this information before looking it up, soon proved unwise. Accordingly the head of the English department was asked to furnish the library his list of words before it was given to the pupils, with the following results:

On a sheet of heavy white paper three and a quarter by two and a quarter feet, one of the art students printed in India ink the heading "Words you ought to know" in letters two inches high. Listed below in columns in letters one inch high were the words in question, five or six the first day, and more each day following. This bulletin was hung in a conspicuous place directly opposite the entrance to the library where it could be seen from the hall, the large heading catching the eye of the passer-by, causing him many times to stop, and often leading him to closer examination. The interest aroused was immediate and the librarian was prepared to meet the demand.

When the back numbers of magazines were removed from the reading tables they were clipped for information about new

words. These clippings were mounted on catalog cards, with the word as the subject heading, and arranged alphabetically in a drawer in the catalog reserved for them.

The best sources of information were "Words of the Week" in the *Independent*, the "Lexicographer's Chair" in the *Literary Digest*, "By-the-Way" in the *Outlook*, and *Current Events*, especially the column in it headed "Question Box." An extra copy of *Current Events* coming to the library made it possible to clip this at once.

Not all the words listed are new ones, "sinister," for instance, being one of the first on the list, and for these a late dictionary was sufficient source of information, but for most even the latest dictionary was hopelessly out of date. When the information given in periodicals was too long to be easily pasted on a catalog card, the name of the magazine and the date of issue were given instead: for instance, Soviet—*Outlook*, Mar. 27, '18; Kultur or Culture—*Lit. Dig.*, 49:1064. Everywhere we watched for definitions, derivations, and pronunciations of new words and new meanings for old ones.

The interest in and use made of this list continued until the close of school. The English teachers used it in English problems of word study and vocabulary building. The questions "How do you pronounce" and "What is the meaning of—" became very numerous. Many pupils looked up every word on the list, several copied it to "use on the family," several teachers made it a point to stop in daily to see what new words had been added and to make suggestions.

Some of the words are Aces, Anzacs, Waacs, Barrage, Bolsheviki, Camouflage, Cantonment, Communiques, Fuselage, Ground schools, Junker, Khaki, Morale, Poilu, Profiteers, Punitive, Reveille, Sabotage, Sinn Fein, Soviet, Ukraine, Hegemony, Moratorium, Uhlans, Autonomous, Shibboleths, Ultra-Montane.

The list is being shown in the branches of the public library during the vacation season and in the fall will be supplanted by a new one in the High School Library.

IRENE DAYTON,

Passaic High School Library,

Passaic, N. J.

THE AMERICAN'S CREED

"I believe in the United States of America as a government of the people, by the people, and for the people; whose just powers are derived from the consent of the governed; a democracy in a republic; a sovereign nation of many sovereign states; a perfect union, one and inseparable, established upon those principles of freedom, equality, justice and humanity for which American patriots sacrifice their lives and fortunes.

"I, therefore, believe it is my duty to my country to love it, to support its constitution, to obey its laws, to respect its flag, and to defend it against all enemies."

WILLIAM TYLER PAGE.

WHEN the idea of formulating a national creed was first advanced by Henry S. Chapin, of New York, the proposed contest was to have closed in December, 1916, but patriotic societies urged the postponement of its closing until nation-wide publicity could be given to the contest. The city of Baltimore as the birthplace of the "Star-spangled banner," offered a prize of \$1000 "for the best summary of the political faith of America." This offer was accepted, the contest was informally approved by President Wilson, and committees appointed to pass on the manuscripts submitted. Several thousand creeds were submitted, but "no. 384" was found to be the general choice. The envelope containing the author's name was opened and it was then disclosed that the successful competitor was William Tyler Page, of Friendship Heights, Md., a suburb of the national capital. His creed was selected because it was not only brief and simple and in every way suitable for educational purposes, but also remarkably comprehensive of the best in American ideals, history and tradition, as expressed by the founders of the Republic and its greatest statesmen and writers.

Inquiry developed that he is a lineal descendant of a signer of the Declaration of Independence, Carter Braxton, and of John Tyler, ex-President of the United States. In view also of the fact that Baltimore City awarded the prize in honor of Francis Scott Key and the "Star-spangled banner," it is a series of remarkable coincidences that Mr. Page should have been

born in Frederick, the birthplace of Francis Scott Key; that he should have attended the public schools of Baltimore, whose successful defense inspired the writing of the "Star-spangled banner"; that he should be living at Friendship Heights, in Maryland; and that he should be earning his livelihood in the national capital.

The *Bulletin* of the Grand Public Library for July has worked out the source of the creed, which is shown to be largely a mosaic of the words of our great American writers and thinkers:

1. "I believe in the United States of America"—

From the preamble to the Constitution of the United States.

2. "A government of the people, by the people, for the people"—

From the preamble to the Constitution of the United States, Daniel Webster's speech in the Senate of Jan. 26, 1830, and Abraham Lincoln's Gettysburg speech.

3. "Whose just powers are derived from the consent of the governed"—

From the Declaration of Independence.

4. "A democracy in a republic"—

From no. 10 of the *Federalist*, by Madison, and article X of the amendments to the Constitution of the United States.

5. "A sovereign Nation of many sovereign States"—

From "E pluribus unum," the great seal of the United States, and article IV of the Constitution of the United States.

6. "A perfect Union"—

From the preamble to the Constitution.

7. "One and inseparable"—
From Webster's speech in the Senate of
Jan. 26, 1830.

8. "Established upon those principles of
freedom, equality, justice, and humanity"—
From the Declaration of Independence.

9. "For which American patriots sacri-
ficed their lives and fortunes"—
From the Declaration of Independence.

10. "I therefore believe it is my duty to
my country to love it"—
From Edward Everett Hale's "The man
without a country."

11. "To support its Constitution"—
From the oath of allegiance, section 1757
of the Revised Statutes of the United
States, and article VI of the Constitution of
the United States.

12. "To obey its laws"—
From Washington's farewell address and
from article VI of the Constitution of the
United States.

13. "To respect its flag"—
From the national anthem, the "Star-
spangled banner"; "Army and Navy regu-
lations, War Department circular on flag
etiquette, Apr. 14, 1917.

14. "And to defend it against all ene-
mies"—
From the oath of allegiance, section 1757
of the Revised Statutes of the United
States.

BUT the finest music in the room is that
which streams out to the ear of the spirit
in many an exquisite strain from the hang-
ing shelf of books on the opposite wall.
Every volume there is an instrument which
some melodist of the mind created and set
vibrating with music as a flower shakes
out its perfume or a star shakes out its
light. Only listen, and they soothe all care,
as tho the silken-soft leaves of poppies had
been made vocal and poured into the ear.
—JAMES LANE ALLEN.

THE IMPORTANCE OF THE LIBRARY IN THE SCHOOL

At the meeting of the Inland Empire Teachers Association in Spokane, Wash., Dr. James Fleming Hosis, secretary of the National Council of Teachers of English and the principal speaker of the convention, took for his topic "The importance of the library in the school." After commenting on the recent remarkable increase of interest in the matter of school libraries in all parts of the country, he said:

"One of the most gratifying evidences of this is the enlargement of the equipment in the older schools and the providing of new and very fine equipment in the schools that are being built. Probably no finer example of the school library can be found than that in charge of Miss Mary E. Hall in the Girls' High School at Brooklyn, N. Y. With the help of a trained assistant and two or three cadets Miss Hall takes care of a daily circulation of over 500 books and conducts a library classroom next door to the library itself. In the library are found, in addition to the books belonging to the school, a large loan collection from the New York Public Library, vertical files containing clippings relating to the various subjects of study, a file of lantern slides, an exhibit case for new and illustrated books, and a bulletin board for clippings from the papers, under the charge of committees of students. The work of the library is immediately connected with that of most of the departments in the school. Among other notable examples of library organization is that in Buffalo, where a room has been provided which will take care of 40,000 volumes.

"The importance of the library will be seen at once when it is stated that in the modern school pupils are trained to work as they are expected to work in their later life. This means that they solve problems for themselves and in doing so learn how to solve problems. For example, history is not taught merely from a single book which is memorized, but the subject is presented in the form of large problems and the pupils are invited to arrange projects for getting the material with which

to solve the problems. This material they collect, present, and organize for themselves. To do this kind of work requires a library. To illustrate the point further by reference to English, it will be seen at once that if boys and girls are to form the habit and to learn the method of reading extensively, they must have access to a library. The intensive reading of a few masterpieces with the help of formal notes will never produce the ability or the disposition to use books as people actually do in the ordinary walks of life. In a word, the school is to present a full and varied experience, and the library is an essential means for doing this.

"As a matter of practical procedure, the smaller places may find it necessary to center their efforts in the public library, bringing together there all of the books which are available for circulation. In such case the pupils are near the building and it is possible for all of them to come and go. In towns of moderate size it is desirable that at least a part of the available capital of books be segregated in the various schools. Here, perhaps, close co-operation between the public library and the schools will prove to be the solution, but wherever the size of the place will warrant it, the school should have its own library and should depend largely upon it, not forgetting the possibility that books may be obtained from the public library which the school cannot afford to own, nor that if the pupils are to learn to use the public library, they must use it. The first step probably is to educate the authorities to the need of library equipment and of a properly trained teacher-librarian, who should be paid as other heads of departments are paid. The second step is to secure a definite place for library training in the course of study and full co-operation on the part of the various departments with the library. These steps must be taken gradually, but they should be taken persistently. If the modern school requires, as it is generally supposed to do, extensive shops and laboratories, it also requires a well-furnished, well-equipped, and well-managed library."

RECENT MOTION PICTURES BASED ON STANDARD OR CURRENT BOOKS

THESE pictures have been selected for listing by the National Board of Review of Motion Pictures:

The Bells, 5 reels, Pathé. Star—Frank Keenan.

A picturization of the celebrated tragedy by Erckman Chatrian.

Better Half, The, 5 reels, Select. Star—Alice Brady.

A picturization of Miriam Michelson's novel, "Michael Thwaite's Wife."

Border Legion, The, 6 reels, T. H. Holmes. Star—Blanche Bates.

Early Western story based on the novel by Zane Grey.

Burden of Proof, The, 5 reels, Select. Star—Marion Davies.

A motion picture based on the novel by Sardou, adapted from the stage play "Diplomacy."

The Cavell Case, 6 reels, Select. Star—Julia Arthur.

A depiction of the story of Edith Cavell.

Clemenceau Case, The, 5 reels, Fox. Star—Theda Bara.

A screen adaptation of Dumas' novel. (Reissue.)

Deciding Kiss, The, 5 reels, Universal: Bluebird. Star—Edith Roberts.

A gentle satire on the theory of "co-operative parentage," founded on a novel by Ethel M. Kelly.

Demon, The, 5 reels, Metro. Star—Edith Storey.

A photoplay based on the African romance by C. N. and A. M. Williamson.

Dream Lady, The, 5 reels, Universal: Bluebird. Star—Carmel Myers.

An adaptation of Margaret Widdener's novel "Why not."

Eye for Eye, 7 reels, Metro. Star—Nazi-mova.

An elaborate adaptation to the screen of the play by the Belgian dramatist, Henry Kistemaecker, portraying the difference in ideals between Orient and Occident.

Fallen Angel, The, 5 reels, Fox. Star—Jewel Carmen.

Founded on Gouverneur Morris' story "You can't get away with it."

Fame and Fortune, 5 reels, Fox. Star—Tom Mix.

A picturization of Charles Alden Seltzer's cowboy frontier story "Slow Burgess."

Flower of the Dusk, 5 reels, Metro. Star—Viola Dana.

Myrtle Reed's novel represented in a motion picture.

Gentleman's Agreement, A, 5 reels, Vitagraph. Star—Neil Shipman.

Based on the story by Wallace Irwin.

Her Great Chance, 5 reels, Select. Star—Alice Brady.

A problem drama based on Fannie Hurst's novel, "The golden fleece" [not on a book of the same name, as previously listed].

Hobbs in a Hurry, 5 reels, Pathé. Star—William Russell.

A comedy romance founded on the story by George Lee McCandless which appeared in the *Saturday Evening Post*.

Hoosier Romance, A, 5 reels, Mutual. Stars—Thomas Jefferson and Colleen Moore.

James Whitcomb Riley's poem of the same name charmingly depicted.

House of Mirth, The, 5 reels, Metro. Stars—Anna Nilsson and Franklyn Farnum.

Edith Wharton's novel turned into a photoplay.

Mirandy Smiles, 5 reels, Famous Players-Lasky; Paramount. Star—Vivian Martin.

The book, "The little scrub lady," by Belle Maniates, is the source of this comedy drama.

O. Henry Stories: A Bird of Bagdad, Mammomon and the Archer, The Marquis and Miss Sally. 2 reels each, General Film Company.

O. Henry Stories: Buried Treasure, Ramble in Aphasia, Tobin's Palm, Transients in Arcadia,—2 reels each, General Film Co. Also, The Changing Woman, 5 reels, Vitagraph. Star—Hedda Nova.

Our Mrs. McChesney, 5 reels, Metro. Star—Ethel Barrymore.

An excellent screen adaptation of the Emma McChesney stories by Edna Ferber.

The Prodigal Wife, 6 reels, Screencraft. Star—Mary Boland.

Founded on Edith Barnard Delano's domestic problem story, "Flaming ramparts," published in *Harper's Magazine*.

Riders of the Purple Sage, 7 reels, Fox. Star—William Farnum.

Another novel by Zane Grey done into a motion picture.

The Road Through the Dark, 5 reels, Select. Star—Clara Kimball Young.

Based on Maud Radford Warren's thrilling story of the early period of the war.

Safety Curtain, The, 6 reels, Select. Star—Norma Talmadge.

Screen version of the novel by Ethel M. Dell.

Salome, 8 reels, Fox. Star—Theda Bara.

A spectacular production of the classic theme along the lines of Josephus' narrative.

Secret Strings, 5 reels, Metro. Star—Olive Tell.

A detective photoplay based on Kate Jordan's story originally published in *Ainslee's Magazine*.

Tongues of Flame, 5 reels, Universal: Bluebird. Star—Marie Walcamp.

A Western melodrama founded on Bret Harte's "In the Carquinez Woods."

Wolfville Tales by Alfred Henry Lewis: The Coming of Faro Nell, The Jest of Talky Jones. 2 reels each, General Film Company.

Wolfville Tales by Alfred Henry Lewis: Rose of Wolfville, Toad Allen's Elopement, The Widow Dangerous,—2 reels each, General Film Co.

Woman, 7 reels, Hiller and Wilk. Various stars.

A Maurice Tourneur production in five episodes including the stories of Adam and Eve; the Roman emperor Claudius and Messalina, his wife; Abelard and Heloise; and a fable of the coast of Brittany; a series of beautiful pictures.

Woman's Fool, 5 reels, Universal. Star—Harry Carey.

A Western drama based on Owen Wister's story of the same name.

Library Organizations

SPECIAL LIBRARIES ASSOCIATION

The Special Libraries Association has elected the following officers: President, Guy Marion, 27 State St., Boston; vice-president, Edward A. Redstone, Social Law Library, Boston, Mass.; secretary-treasurer, Caroline E. Williams, Experiment Station, E. I. Dupont Co., Wilmington, Del.; Executive Board, president, vice-president, secretary, treasurer, and J. H. Friedel, West Newton, Mass.

The editor-in-chief of *Special Libraries* is J. H. Friedel, with the following associate editors: In charge of agriculture and government libraries section, Claribel R. Barnett; business and commercial libraries section, Mary B. Day; financial libraries section, Ella M. Genung; technological and engineering section, Edward D. Greenbaum; theological and fine arts section, Mary A. Pillsbury.

NEW YORK SPECIAL LIBRARIES ASSOCIATION

A meeting of the New York Special Libraries Association was held Nov. 8, at the Municipal Reference Library, to discuss the association's participation in the United War Work Campaign. It was voted that the association would contribute the sum of \$100, the amount to be raised by subscription among the members.

MARY D. COX, *Secretary*.

ASSOCIATIONS ELECT OFFICERS

The Minnesota Library Association at its annual meeting at Mankato Sept. 28, elected the following officers: President, Mrs. Jenny Lind Blanchard, Little Falls; first vice president, Mrs. J. T. Jennings, St. Paul; second vice president, Grace A. Meyer, Red Wing; secretary-treasurer, Marie A. Todd, Minneapolis; member executive board, Dorothy Hurlbert, Hibbing.

At its annual meeting at Chattanooga, the Tennessee Library Association on Sept. 11 elected the following officers: President, Margaret McKercheval, Nashville; vice president, Nora Crimmings, Chattanooga; secretary-treasurer, Ruth Barker, Memphis.

The election of officers was the principal item of business transacted at the annual meeting of the Vermont Library Association in Rutland Sept. 23. Mary R. Norton of Proctor was chosen president, Mrs. R. Bates of Burlington, vice president, and Alice M. Eaton of Woodstock, secretary and treasurer. The following second vice presidents were elected: Rutland and Bennington counties, Ida J. S. Kingsley of Brandon; Franklin, La-

Moille and Grand Isle, Anna L. Mower of Morrisville; Addison and Chittenden, Edith Chamberland of Vergennes; Windsor and Windham, Elizabeth McCarthy of Springfield; Washington and Orange, Frances M. Atkinson of Newbury; Caledonia, Essex and Orleans, Miss Truax of St. Johnsbury.

At the close of its three-day session in Mt. Clemens, the annual convention of the Michigan Library Association elected the following officers: President, Adam Strohm, Detroit; first vice president, Anna A. Pollard, Grand Rapids; second vice president, Alice M. Wait, Traverse City; secretary, Lucy E. Morgan, Detroit; treasurer, Mrs. E. Jennie McNeil, Lansing.

NEW JERSEY LIBRARY ASSOCIATION

A special meeting of the New Jersey Library Association was held in the Newark Public Library on Thursday, Oct. 31.

At the morning session, presided over by Charles M. Lum, second vice-president, Mr. Dana talked of the dependence of the city and its institutions upon the suburban and rural population, and its reciprocal duty toward them, touching upon the museum feature and its relation to the library.

The Newark Library and Museum were inspected under the guidance of members of the staff before luncheon, which was served in the place of meeting and gave opportunity for informal conferences.

At the afternoon session the president, Edna B. Pratt, had the chair, introducing Frank P. Stockbridge, who has been in charge of the publicity work for the American Library Association's War Finance Committee. He spoke on "Library advertising and publicity methods," emphasizing the need to know one's material and especial public, adapting one's methods accordingly. He also prophesied that the returned soldier would be the ruler for years to come, and the library's greatest patron and supporter.

An animated discussion covered the advisability and the methods of newspaper publicity, which was held to be the most effective sort; also the possibilities of advertising thru moving picture films. Mr. Dana discouraged the latter, and advised much practice in brief, biographic, dramatic news-writing as an aid to placing effective articles in the local press. The question of putting co-operative cards in tube trains for suburban libraries on the same railroad was dismissed with a consideration of the fitness of the appeal to time, place, and circumstance.

The speaker for the United War Work Campaign, Mr. MacRae, gave an hour's thrill-

ing talk on first hand experiences at the front where he had been for months with the First Division of the American Army in the interests of the Young Men's Christian Association.

The final discussion was opened by Mrs. Howard J. Baumgartel, speaking for the Victory Boys and Victory Girls of New Jersey, and closed by Miss Askew with information for libraries in the campaign and specimens of the "aeroplane letters."

IRENE A. HACKETT, *Secretary.*

MASSACHUSETTS LIBRARY CLUB

The autumn meeting of the Massachusetts Library Club was held at the Old South Meeting House, in Boston, Nov. 7. The morning session opened in a most enthusiastic way by the collective singing of soldiers' and sailors' songs under the direction of a song leader. The president of the club, John A. Lowe, presided.

The formal program opened with an excellent review of "Some recent books of importance on the war" by Robert K. Shaw, librarian of the Free Public Library, Worcester. A very helpful feature of the paper was the characterization that Mr. Shaw gave of the several titles and the grading of the books in a way to be of service for library purchase. Anna L. Bates, librarian of the Quincy High School Library, spoke on "High school work in Quincy." After outlining the nature of the work in Quincy Miss Bates urged a closer co-operation between the library and the school and the more general establishment of school libraries.

R. R. Bowker brought the greetings and the message of the American Library Association and of its War Service Committee. Mr. Bowker referred to a largely attended recent gathering of war workers in Madison Square Garden, which he regarded as a happy indication of unity among our people and a harbinger of the things to issue out of the war. Mr. Bowker referred, in a general way, to the work of the "seven sisters of service" and urged that the A. L. A., altho a little sister, should speak out loud during the progress of the United War Work Campaign. The great opportunity afforded during the war to make books of service should be a great opportunity for the future. The work of the welfare agencies will be of the utmost need in the weary days of waiting following the ending of military operations. Mr. Bowker expressed the hope that the library spirit, which is universal, will be pervasive thruout the world, and he looked forward to the time

when libraries should be missionaries of the new spirit which will come after the war.

"The welfare of the soldiers" was the subject of a brief address by Rev. Paul Revere Frothingham. The history of this war, Mr. Frothingham declared, is not going to be history in the old sense. The new and exceptional thing is not heroism and barbarism. All wars have exhibited these traits. The new thing is that the forces of goodness have pressed up to the front to keep our soldiers steadfast and upright. The history of the war will tell of the work of these divergent and separate welfare agencies which have now combined in a unified drive. Mr. Frothingham cautioned his hearers against believing that the need for the work represented by these organizations is over. He touched upon the delicate problems growing out of the war and strongly recommended the general reading of Fiske's "Critical period in American history."

The morning session was brought to a dramatic close thru the announcement, by the president of the club, of the coming of peace. The announcement was made on the authority of a press report and altho slightly in advance of the accomplished fact gladdened every one present.

At the opening of the afternoon session Pemberton Hale Cressy spoke on the subject of "Poetry." In the period just before the war, poetry, Mr. Cressy thought, had rarely sunk to lower depths. There was too much emphasis on the manner and method of expression. The war swept all this aside. The emotions were aroused by the great events of the period and we need not despair of the poems of the war because the emotions they arouse are so immediate and direct. Volumes published as "poetical works" offer, in many instances, a barrier to the appreciation of poetry. The anthology, however, offers a promising field of approach. Many who dislike "Complete poetical works" would, in Mr. Cressy's opinion, enjoy a well selected grouping of poems. Anthologies of war poems were especially mentioned and Mr. Cressy regarded the reader as additionally fortunate **who can** bring to a reading of these some snatches of the long line of English song.

In the course of an address on the problems growing out of the war Robert Herrick emphasized the need of welfare work, the value of morale and clear, straight thinking on the issues of the war. He had found some of the least muddled thinking among the soldiers at the front and some of the best comments on the war among soldiers' letters. The men in the service have proved

themselves to be readers, as well, of books in philosophy, science and politics. Mr. Herrick declared his belief in a constructive educational program for the American soldier during the period following the declaration of peace.

FRANK H. WHITMORE, *Recorder.*

OHIO LIBRARY ASSOCIATION

The twenty-fourth annual meeting of the Ohio Library Association was held at Columbus, Oct. 1-2, in the Southern Hotel, with a registered attendance of 94.

In the absence of the president, Herbert S. Hirshberg, who was detained on account of illness, the first sessions were presided over by Sophie M. Collman, first vice president. The first session, Tuesday afternoon, was devoted largely to reports of committees.

The session of Tuesday evening was devoted to the now vital subject of Americanization. Prof. Herbert Miller, of Oberlin College, who has done such remarkable work with the aliens at Camp Sherman, was unable to be present. A résumé of his work was given by Mrs. Eleanor Ledbetter, of Cleveland. Prof. Miller found 35 languages other than English being spoken at Camp Sherman, by nearly one-third of all the soldiers. As a result of his work, 90% became American citizens.

"Personal experiences" as given by Mrs. Helen Horvath, a native of Hungary, now a resident of Cleveland, was most vital and intensely interesting. Mrs. Horvath came to America with her husband and adopted child, went to night school and studied hard for four years to learn the English language. She is now teaching civics and English to foreigners in Cleveland, having eight afternoon classes, including thirty-one mothers and grandmothers. Mrs. Horvath paid splendid tribute to the work the libraries are doing for the foreign born.

"Americanization and the public library" was presented by Mrs. Eleanor Ledbetter, who suggested many ways of reaching the immigrants thru their newspapers, churches, lodges, etc. "Plans for Ohio" were outlined by Juliette Sessions.

"Camp library service" was the topic of the meeting Wednesday morning. Prof. A. S. Root, Oberlin College library, after seven weeks' work at the Camp Sherman library, brought a message of great interest, urging support of the coming campaign. Charles W. Reeder, of the Ohio University Library, outlined the publicity plans of the campaign.

The college and reference section met at luncheon at the Chittendon Hotel on Wednesday. Thirty-two were present, including as

guests of honor W. W. Bishop and Adam Strohm. At the business meeting which followed the luncheon, R. B. Miller, librarian of the Ohio Wesleyan University, was elected chairman of the section and Annette Ward, of Oberlin, continued as secretary for the coming year. Short talks were then given by Miss Dingman, Miss Olive Jones, Prof. Root, Mr. Strohm and Mr. Bishop, who spoke of the work of the A. L. A. and of the new phase of the work which the opening of the S. A. T. C. in the colleges and universities of the country would bring to the A. L. A. and to the libraries of these institutions. He emphasized the need of technical texts and felt that the A. L. A. would be ready to help the college libraries by lists and possibly with books.

Wednesday afternoon Mary E. Downey led a two hours' round table session with the librarians of the smaller libraries. The following topics were presented for discussion: binding and rebinding; when is a juvenile book too dirty to use?; hours, salaries, vacations; certification of librarians; standardization of libraries; methods of returning overdue books and of collecting fines; teaching school children how to use the library; war work the small libraries are doing; preservation of war and current literature; war books people are reading. Miss Ahern was present and spoke effectively, urging the librarians not to be led too far from their primary duty and to remember that library work is war work.

Following the college and small libraries section meetings Mr. Bishop delivered a splendid address on "Changing ideals in librarianship."

The convention closed Wednesday evening with a memorial for William Howard Brett, whose death occurred in Cleveland Aug. 30. Prof. Root, presiding, recalled that Mr. Brett was the man who sent out the first call for the organization meeting of the Ohio Association, and who was its first President, later serving a second term. W. C. Cochran, a life long friend, told of Mr. Brett, the friend. "Mr. Brett, the man," an address prepared by Pres. C. F. Thwing, was read by Alice Tyler, who added a few words of appreciation of Mr. Brett as Dean of the Library School. Mr. Strohm paid tribute to Mr. Brett, the librarian, and Miss Doren, to Mr. Brett, the founder of the Ohio Library Association. Washington Porter spoke of Mr. Brett's work in state legislative matters. Mr. Bishop read a letter from Dr. Herbert Putnam, Librarian of Congress, and added to this his own thought and appreciation. J. B. Newman, state librarian, added his tribute.

LOUISE A. HAWLEY, *Secretary.*

SOUTH DAKOTA LIBRARY ASSOCIATION

The eleventh annual meeting of the South Dakota Library Association was held in Sioux Falls, Oct. 11-12. The meeting was called to order by Miss Lewis, the president. After the reading of the secretary's report, Miss Stockett of the Free Library Commission spoke of the state war library work of county libraries, and of certification of librarians.

Committees were then appointed on revising the South Dakota Library Association's constitution, nominating officers, legislative work and resolutions. After registration, payment of dues and announcements, response was made to the roll call, "The best book I have read this year," and the meeting was adjourned.

In the afternoon, those attending met at the home of Mrs. Manchester, who welcomed the association. Response was made to her welcome by Miss Anding. Miss Story of Huron talked helpfully from personal experience on "Reorganizing the small library." Mr. Ostrander of the South Dakota State College extension force told most interestingly of the work being done with the "Boys' Working Reserve." Mr. Powers of Brookings gave a stimulating talk on his experience at the libraries at Camp Cody and Camp Funston.

In the evening, the members of the association went to the High School where Miss Story spoke on Y. M. C. A. work in the war and Mr. Robinson of Pierre gave an entertaining and instructive paper on the "Literature of South Dakota."

After preliminary business Saturday morning, Mr. Lowe of the Massachusetts Commission told the association of his very interesting work in the Camp Library at Camp Devens. Miss McCarthy of the Democrat Printing Company of Madison, Wis., gave much useful information on "Equipping the library." A telephone message from the mayor, announcing that all public meetings must be closed by noon, made it necessary to hurry thru essential business. Fifteen minutes only were left for Miss Armstrong of Council Bluffs, Iowa, who talked inspiringly on "New war books."

The afternoon and evening meetings were dispensed with, the session closing with a delightful dinner given by the Sioux Falls Library Board and Staff at the Cataract Hotel.

The following officers were elected for next year: President, Leora Lewis; vice-president, Ethel Else; and secretary-treasurer, Ada Pratt.

ADA M. PRATT, *Secretary*.

TWIN CITY LIBRARY CLUB

The annual fall dinner of the Twin City Library Club was held at the Leamington Hotel, Minneapolis, on the evening of Oct. 9, with about ninety members present.

John Adams Lowe, librarian of Camp Devens, Mass., gave a delightful informal talk on camp libraries, relating many amusing incidents of camp life in general and convincing his audience that war library service is well worth while.

Clara F. Baldwin, of the Commission, announced the coming United War Work Campaign, laying stress on Minnesota's share and what is expected of the librarians thruout the state.

A short business meeting was held and the following officers were elected for the coming year: President, Bessie Scripture, East High School, Minneapolis, vice-president, C. Edward Graves, State Historical Society, St. Paul; secretary-treasurer, Florence Currie, University Library, Minneapolis.

AMY COWLEY, *Secretary*.

IOWA LIBRARY ASSOCIATION

All public gatherings in Des Moines coming before Oct. 25 having been called off by proclamation of the Mayor to prevent the spread of Spanish influenza, the Iowa Library Association meeting, scheduled for Oct. 23-25 was cancelled, and it is announced that no meeting of the Iowa Library Association will be held this fall. The suggestion has been made that a meeting be held in Des Moines in the spring, taking the place of all of the district meetings, but that will not be definitely settled until later.

MARY E. MARKS, *Secretary*.

NEW YORK HIGH SCHOOL LIBRARIANS' ASSOCIATION

The New York High School Librarians met in the library of the Washington Irving High School on Oct. 9, when several new members were welcomed into the association. Miss Williams, assistant supervisor of work with the children of the New York Public Library, presented methods for co-operating with school libraries, and Miss Christopher gave an account of the meeting of the American Library Association at Saratoga Springs.

KATHARINE M. CHRISTOPHER, *Secretary*.

KANSAS LIBRARY ASSOCIATION

Because of the prevalence of Spanish influenza the annual meeting of the Kansas Library Association scheduled to be held at Pittsburg, Kan., Oct. 21-23, was cancelled. No annual meeting will be held this year. The

1919 meeting will be held at the same place and at approximately the same time. It is hoped that a series of district meetings can be held during the winter in various parts of the state.

JULIUS LUCHT.

Library Schools

NEW YORK STATE LIBRARY SCHOOL

Margit Smith Amundsen of Elvrum, Norway and John Ansteinsson of Christiania, whose entrance was delayed on account of war restrictions on ocean travel, have joined the school.

The subject for the study club programs prepared by the senior class is "Switzerland."

A survey of the work of the Albany Free Library is being made by the library extension class under the direction of Anna G. Hall.

Steel wall-cases have been put into the main lecture room. Not only has this relieved the congested shelves in the other school rooms but the acoustics of the room have been perceptibly improved.

During the recent influenza epidemic, school exercises were suspended for two brief periods but no serious demoralization of the school schedule resulted. The few cases which have developed among the students have not been serious.

President W. W. Bishop of the A. L. A. lectured on "College library administration" and "Fifteenth century books," Nov. 12.

The class of 1920 has erected the following officers: President, Hazel B. Warren; vice-president, Carrie M. Frey, secretary-treasurer, Mary Hiss.

The bibliography subjects of the senior class are as follows:

- Jane L. Burbank and Cerene Ohr. Representative contemporary biography.
- Helen G. Cushing. Recent phases of home rule in Ireland.
- Elizabeth B. Harding. Reading list on insects.
- Pearl Hinesley. Kentucky's part in the Confederacy.
- Hazel M. Leach. Continuation of a consolidated index to the Best Books Lists of the New York State Library.
- Glyde Maynard. Select list of English essays of the 20th century.
- Lulu Ruth Reed. The mountains of California.
- Ruth E. Smith. Municipal recreations.
- Robert E. Stauffer. Selected list of writings by American immigrants.

These subjects are all liable to later change due to changes in scope of the bibliographies.

FRANK K. WALTER.

PRATT INSTITUTE SCHOOL OF LIBRARY SCIENCE

The school did not have to close because of the influenza. There were only four cases among the students, and these were taken in

hand early enough to prevent serious result. One withdrawal was the indirect outcome of the epidemic. But the plague took toll of our graduate body. Caroline Chapin (1895) a valued member of the Pratt staff, Flor-Etta Kimball (1914), and Matilda Livshitz (1917) were among its victims.

The reception of the Graduates' Association to the class of 1919 was held Oct. 31, with sixty-six present, including five members of the class of 1918. This class was further represented by a beautiful bunch of chrysanthemums, a greeting to its successor. In order that the association might not accuse itself of frivolity in holding a reception in war times, Miss Gooch, the president, provided occupation in the shape of 300 books that the library is sending to Camp Merritt, which those who felt industriously inclined helped prepare for the shelves.

On Oct. 22, Mary F. Isom (1900), librarian of the Portland, Oregon, Public Library, gave the class a talk upon the war work that the library has been doing in Portland and the adjacent country. Miss Isom was on her way to France, where she goes as representative of the A. L. A. She was accompanied by Mrs. Grace Bush Jekyll, 1908. On the same day Anna A. MacDonald, 1908, field secretary of the Pennsylvania Library Commission, visited the school.

Dr. A. S. Root, librarian of Oberlin College, spoke before the class on Oct. 29 on "The college library and community service," a talk which several successive classes have listened to with great pleasure.

The class of 1919 organized on Oct. 17 and have chosen the following officers: President, Constance R. S. Ewing of Portland, Ore.; vice-president, Hilda C. C. Laird of Halifax, Nova Scotia; secretary and treasurer, Helen M. Drew of Clearwater, Florida; women's club representative, Frances Hubbert of Portland, Ore.

JOSEPHINE ADAMS RATHBONE.

SIMMONS COLLEGE—SCHOOL OF LIBRARY SCIENCE

The college reopened Oct. 21, after the loss of over three weeks. The calendar has been revised to compensate for this loss by extending the year from June 9 to June 16, and cutting the time for the Christmas and spring recesses. The enforced vacation not only interfered with school work, but hindered volunteer work on Tuesday evenings for the Library War Service, which was just beginning before the quarantine. About twenty-five of

the girls, carrying the Simmons banner, marched in the parade of the Dispatch Office workers on the afternoon of Oct. 31.

JUNE RICHARDSON DONNELLY, *Director*.

LIBRARY SCHOOL OF THE NEW YORK PUBLIC LIBRARY

Prof. A. S. Root, librarian of Oberlin College and formerly principal of the school, gave his series of discussions on the history of the printed book beginning Oct. 25 and closing Oct. 30. Charles E. Rush, librarian of the Indianapolis Public Library, who has been working at the headquarters of the War Service Committee addressed the school on Oct. 15 on "What makes a good librarian." A number of lectures on the departments and divisions of the New York Public Library have been given in October and November by members of the library staff. The class also inspected a very comprehensive collection of material on the history of printing in the main exhibition room of the library, as well as an exhibit illustrative of the development and technique of lithography in the print room.

In addition to the inspection of the New York Public Library visits have been made to the library of the Russell Sage Foundation, to the bookstore of the Baker & Taylor Company, to the plant of the J. F. Tapley Company, book manufacturers, to some of the libraries on the campus of Columbia University, and to the library of Union Theological Seminary.

The Red Cross auxiliary conducted at the School in 1917-18 under the direction of Miss Sutliff has resumed its activities, and is now merged with the auxiliary formerly maintained by the staff of the Library. Weekly meetings, with readings, are to be held at the school thruout the winter.

ERNEST J. REECE, *Principal*.

CARNEGIE LIBRARY OF ATLANTA—LIBRARY SCHOOL

The school opened its fourteenth session on Sept. 16 with an enrollment of ten students, representing four states: Georgia, Florida, Alabama, and North Carolina. One of the students was forced to withdraw the first week on account of illness.

With the opening of the school term, Mary Bell Palmer began work as instructor, giving several of the technical courses and having general supervision of schedules, etc.

Willis H. Kerr lectured on Oct. 26, when he was in Atlanta visiting the Camp Gordon Library as field representative of the A. L. A. Mr. Kerr talked on "Library promotion" and on "Normal school libraries."

TOMMIE DORA BARKER, *Director*.

WESTERN RESERVE LIBRARY SCHOOL

Regular class work was continued during the influenza epidemic, under certain provisions safeguarding health, as all students continued well. The practical assignments for work in the Cleveland Public Library were delayed, because of the closing of the libraries until the second week of November.

The class of 1919 has organized for the school year with the election of Helen R. Keeler, president; Beatrice Snow, vice-president; Ida W. Brigham, secretary; Loraine A. Slater, treasurer.

ALICE S. TYLER, *Director*.

CARNEGIE LIBRARY SCHOOL

Owing to the influenza epidemic, the Library School was closed from Oct. 25 to Nov. 9.

Faculty

Bertha T. Randall, instructor in cataloging, resigned her position Nov. 7. Miss Randall's successor has not yet been appointed.

Sarah L. Howell has been appointed as part time instructor in the Library School. Miss Howell will continue her work as assistant in the technology department of the Carnegie Library of Pittsburgh.

ST. LOUIS LIBRARY SCHOOL

The Library School opened on Thursday, Sept. 19, with a registration of nineteen students, six of whom had had practical experience. The rest of the students had fulfilled the preliminary requirement of two weeks practice work in the St. Louis Public Library.

The first visiting lecturer of the year was Mrs. Philip N. Moore, secretary of the Woman's Committee of the Council of National Defense, who spoke on "Woman's share in war work." Other talks have been given by Nelson Cunliff, park commissioner, St. Louis, on "Public recreation in St. Louis," and by Elizabeth B. Wales, secretary of the Missouri State Library Commission and director of library publicity of the Food Administration for Missouri, on the "Co-operation of libraries with the U. S. Food Administration."

Mrs. Edna F. Gellhorn, director of state and city relations, Federal Food Administration for St. Louis, solicited the aid of the school in the filing of cards. The students volunteered and began the work but it was postponed after a few days on account of the quarantine declared because of the prevailing influenza.

The school lecture work was discontinued because of the quarantine, but the students were distributed among the branches and de-

partments of the library which kept open for the circulation of books, thus enabling them to carry on their laboratory work in part.

ARTHUR E. BOSTWICK, *Director*.

CALIFORNIA STATE LIBRARY SCHOOL

The sixth class of the California State Library School started work Sept. 18, with twelve students.

There will be several minor changes in the curriculum. The courses in book selection and school library service have been considerably enlarged, while several lectures on subject headings will be given as an independent course.

In the practice work schedule, a plan has been adopted according to which each student will have work in the different departments of the State Library for three afternoons each week instead of five, thus allowing more time for the preparation of assignments.

A new course of lectures has been introduced dealing with library war service. This will cover the campaigns for funds, the work of the camp libraries and the base hospital libraries, and the collection and preparation of books for the different libraries. The lectures will be given by Mr. Ferguson, who is director, American Library Association, Western Military Division; by Mr. Quire who has returned to the State Library after serving for a year as librarian of the Camp Kearny Library; and by Miss Gregory who has charge of the camp library work in the State Library.

In connection with the book selection course, the students have been writing book reviews for new books, mostly fiction, sent up for the purpose from Newbegins, San Francisco.

Aside from the regular schedule, several outside lectures were given during October. On Oct. 10, J. C. Whitman, chief examiner of the State Civil Service Commission, spoke on the development of civil service, and on the functions of the various departments of California state government. The latter part of the talk was illustrated by very detailed and comprehensive charts. On Oct. 21, Dr. Margaret S. McNaught, commissioner of elementary education of California, talked about rural schools, and what the county free libraries can do for them. On Oct. 31, Hazel Askey, who has just resigned her position as assistant in the Siskiyou County Free Library, to take charge of the Plumas County Free Library at Quincy, told the class something about county free library work in Siskiyou county.

MILTON J. FERGUSON.

LOS ANGELES LIBRARY SCHOOL

The Los Angeles Library School opened Oct. 7 with a class of twenty-two regular students and eight partial students, the largest in its history. Eleven are college graduates; four, two of whom have master's degrees, come from Stanford University, the others from the University of California, Wellesley, Occidental, Pomona and Whittier Colleges, the University of Southern California and the University of Indiana. The other students have had from one to three years of college or normal school, with the exception of two, who have had several years of library experience. The students who had not had library experience spent at least two weeks in preliminary practice before school opened. The part-time students have chosen one or two courses that will be valuable to them in the libraries where they are working—the Pasadena High School, and the Pasadena, Whittier, and Los Angeles Public Libraries.

Several courses have been changed or expanded. Mr. Perry and Miss Drake will give lectures in library administration in addition to those given by Miss Zaidee Brown. Miss Haines and Mrs. Leaf will give the course in reference work. In Miss Haines' classes in book selection more time will be given to discussion of books checked in *Publishers' Weekly*. The lists of books chosen for large and small libraries will be compared with the titles reviewed in the *Booklist* and *Book Review Digest*. Miss Foote will give lectures on the work of the registration department, including overdues, clearance cards and books reported lost, supplementing Miss Kennedy's course in loan systems.

Special lectures have been given by George Watson Cole, of New York City, who described the rare books in the Huntington collection, and by Mrs. James Norman Baskin, author of "Firecracker Jane." Mrs. Baskin's experiences with books and libraries gave zest to her talk on the psychology of welcome.

MARION L. HORTON.

RIVERSIDE LIBRARY SERVICE SCHOOL

A short course will be held from Jan. 6 to March 1, 1919. A new subject, The business library, will be offered in this course, to begin Jan. 20 and run four weeks. It will be taught by Louise B. Krause, Illinois 1898, and for the past nine years librarian for H. M. Byllesby & Co., Chicago. The work will emphasize the application of library methods to business libraries.

Cataloging and classification will be taught by Jeanne Frances Johnson, a graduate of Pratt and now head cataloger of the Tacoma

Public Library. Bookbinding covers two weeks and will be taught by W. Elmo Reavis.

The other subjects and teachers are as follows: reference and documents, Lillian Dickson; library handicraft, Mrs. Mabel F. Faulkner; periodicals and serials, Alice M. Butterfield; library law, business management, book selection, old books, rare books and the book market, Joseph F. Daniels. A second course for camp library candidates is planned.

A new directory of students and teachers of the school covering the past seven years has just been issued.

JOSEPH F. DANIELS.

Librarians

ADAMS, Benjamin, chief of the circulation department of the New York Public Library, has resigned.

ALLSEBROOK, Anna, formerly librarian of the Coronado Public Library, has recently been appointed to a position in the reference department of the San Diego Public Library. She is a graduate of the library training class of the Denver Public Library and has had charge of the Coronado Public Library for the past three years.

BAKER, Mary N., New York State Library School 1909-10, head of the circulation department of the Seattle Public Library, has been granted a year's leave of absence. She is now engaged in branch work in the New York Public Library.

BASCOM, Elva L., chief of the book selection and study club department of the Wisconsin Library Commission, is to spend the next eight months in Washington doing special work in the Children's Bureau.

BEAMAN, Luella O., Pratt 1906, has left for France where she will take up canteen work under the Red Cross.

BEGGS, Lutie Alice, Carnegie 1916-17, has resigned her position in the children's department of the Brooklyn Public Library, and is at Ashland, Ill.

BEHRENS, Lieut. William B., who was in charge of the patents in the technology division of the New York Public Library, is officially reported as killed in action on Oct. 20. He was with the Machine Gun Company, 106th Infantry, 47th Division, American Ex-

peditionary Forces in France. He was formerly with the 23rd Regiment, N. Y. N. G., and served on the Mexican border.

BIRGE, Anna G., New York State Library School 1908-10, has left the staff of the A. L. A. *Booklist* to accept a similar position with the Wisconsin Library Commission.

BOOTH, Alice Elizabeth, Carnegie 1914-15, was married in October to John Robert Holmes.

BOWES, Jessie Reeves, New York Public 1917-18, has been appointed an assistant in the catalog department of the Library of Congress.

BROWN, Harriett, for the past three years librarian of the Merrick Public Library, Brookfield, Mass., has resigned to accept a position in the Carnegie Library of Atlanta, Ga.

BUELL, Myra, has been appointed chief of the branch division, St. Paul Public Library.

BUTTERFIELD, Eleanor, Western Reserve 1917, is assistant cataloger in the Public Library of Kalamazoo, Mich.

CHAPIN, Caroline, Pratt 1895, assistant in the circulation department of the library at Pratt Institute since 1908, died of pneumonia on Oct. 14. Miss Chapin will be remembered by the students of ten classes for her helpfulness, graciousness, tact and sympathy. Hers is the first loss of an active member of the staff ever experienced in the history of the library.

CAMPBELL, Donald Kenneth, New York Public 1915-17, has left the readers' division of the New York Public Library for service in the United States Army.

CAMPBELL, Ella C., Illinois 1917, has resigned as cataloger at the Oklahoma A. & M. College Library to accept a position as assistant librarian of Colorado College Library, at Colorado Springs.

CLARK, Hazel C., Western Reserve 1914, is in the loan department of the Detroit Public Library.

CLARKE, Dorothy, California 1915, was married Oct. 3 to Charles Worden. Mrs. Worden has resigned her position as librarian of the Plumas County Free Library, Quincy, Calif.

CLAPP, C. B., head cataloger of the Dartmouth College Library, resigned Nov. 1 and has gone to New York City where he has a position as cataloger in the private library of Henry E. Huntington.

COLWELL, Emily K., B.L.S. New York State Library School, has accepted a position in the office of the Chief Signal Officer, Washington, D. C.

CORNEW, Elsie May, New York Public 1914-15, (certificate Drexel 1909), who has been an assistant in the Newark Free Public Library, is now an assistant in the information and files department of the United States Shipping Board, Philadelphia.

COWLES, Katherine C., Simmons 1917, has been appointed cataloger in the Amherst College Library.

COX, Mary Frances, Carnegie 1914-15, has been appointed children's librarian of the Cedar Rapids Public Library, Cedar Rapids, Iowa.

CURTIS, Alice W., Western Reserve 1916, has completed three months' service as assistant at A. L. A. Dispatch Office, Newport News, Va.

CURRAN, Margaret Grier, Carnegie 1908-10, has been made branch librarian, St. Louis Public Library.

DAVIS, Margaret, formerly on the staff of the Earlham College Library and more recently connected with the Indiana Library Commission, was married in New York Aug. 13 to Dr. John Stevens, Lieut. U. S. Army Service. She will live in San Juan, Porto Rico.

DAY, Marian E., formerly children's librarian of the Memorial branch of the Springfield (Mass.) Public Library, has been appointed to direct the work of the children's circulation department of the Lynn (Mass.) Public Library.

DEAN, John A., has been appointed reference librarian of the Mechanics' Mercantile Library in San Francisco, in place of A. L. Voge, who is now in France with the U. S. Reserve Engineer Corps.

DOBBS, Elizabeth Vaughn, formerly librarian and organizer of the American Telephone and Telegraph Company Library in New York city, has returned from Washington where she was engaged in confidential work in the Treasury Department, and has become con-

nected with the firm of A. E. Small and Associates, 52 Broadway, New York. Miss Dobbs is the research librarian and is now organizing a rather unique research department devoted largely to economic literature and the reconstruction of business along war and peace lines.

DUTTON, Mrs. Donald L., formerly Dorothy Hanvey, has resumed her duties as assistant in the Carnegie Endowment for International Peace, while her husband, Captain Donald L. Dutton, C.A.C., is in service in France.

ENGELL, Mrs. Jennie C., head of the circulation department of the Tacoma Public Library, has resigned, to become manager of the Archway bookstore, Seattle.

FARR, Mary P., Drexel 1895, who, by reason of the failing health of her mother has given up organizing work and returned to Philadelphia, has been appointed librarian-in-charge of the Southwark branch of the Free Library of Philadelphia. This library is in the Jewish quarter of the city. During the summer Miss Farr cataloged the historical library of the American Sunday School Union in Philadelphia. She spent three weeks in September in the Philadelphia Ordnance office of the War department as classifier and indexer of the correspondence of the Production division.

FORREST, Gertrude E., for nearly nineteen years librarian of the Public Library at Milton, Mass., has been compelled by ill health to resign. Miss Forrest began her work in January, 1900, when the library was in the Associates' Building, and has brought it to its present high standard of efficiency.

FOSTER, Paul P., formerly assistant editor and editorial librarian of the *Youth's Companion*, has gone to England as editor for Great Britain of the Community Motion Picture Bureau.

FRIEDEL, J. H., librarian of the National Industrial Conference Board, whose headquarters are in Boston, has been appointed editor-in-chief of *Special Libraries*.

FULTON, Edith, Drexel 1905, is with the Emergency Fleet in the personnel department of the Philadelphia office.

GODWIN, Mrs. Winnifred, formerly assistant in the Pomona College Library, Calif., and librarian at Monrovia, Calif., has been appointed assistant in the central circulation department of the Tacoma Public Library.

GOODRICH, N. L., librarian of the Dartmouth College Library, received in August his com-

mission as captain. Capt. Goodrich is now stationed at Washington in the office of the Chief of Staff.

GRAEFE, Claire, New York Public 1915-17, has been made librarian of the Sandusky (Ohio) Public Library.

GRIFFITH, Florence I., Pratt 1915, has been made assistant librarian of the Red Cross Institute for Crippled and Disabled Men in New York.

GUPPY, Clara M., B.L.E. Syracuse 1915, has resigned her position as librarian of Temple University, Philadelphia, to become librarian of Mellon Institute of Industrial Research, Pittsburgh.

HAMMOND, Ruth, Illinois 1917, has resigned as cataloger of the Hibbing (Minn.) Public Library and has accepted the position of cataloger at the Oklahoma A. & M. College Library, Stillwater, Okla.

HARRINGTON, Marian B., Western Reserve 1918, is with the U. S. Ordnance Department, Cleveland branch.

HENDEE, Cora, Western Reserve 1914, is with the U. S. Shipping Board, Washington, D. C.

HILEMAN, Janet E., Pratt 1915, who has been for two years children's librarian in the Public Library at New Castle, Pa., has accepted a position in the children's department of the Carnegie Library at Pittsburgh.

HITCHCOCK, Jeanette, assistant in the circulation department of the Tacoma Public Library, has been appointed branch librarian at the South Tacoma Branch Library.

HOLMES, Dagmar Oerting, New York Public 1912-13 (certificate Atlanta 1910) has resigned the librarianship of the Arents Free Library, Richmond, Va., to become catalog and index clerk in the loading section of the production division of the U. S. Ordnance Department, Washington, D. C.

HOUSER, Mabel Hines, Western Reserve 1909, is supervisor of the training class in the Reuben McMillan Library, Youngstown, O.

HUTCHINSON, Lillian L., Western Reserve 1918, is librarian for the National Carbon Company, Cleveland, O.

IHRIG, Esther L., formerly an assistant in the Oshkosh (Wis.) Public Library, has been appointed a member of the staff of the Des Moines Public Library.

JAMME, Louise E., California 1915, was married Oct. 7 to Frank Harriss. Her position as librarian of the Colusa County Free Library will be filled by Margaret Livingston.

JENKINS, Frederick W., formerly librarian for the Russell Sage Foundation in New York City, has been in Washington for some time as expert statistician for the War Industries Board.

JENNINGS, Alvena Surdam (Mrs. J. H. Jennings) Drexel 1902, died of influenza October 17, 1918, at her home in Candor, N. Y. Previous to her marriage in October, 1904, Mrs. Jennings was an assistant in the Trenton (N. J.) Public Library. She assisted in the cataloging of the Vermont State Library, Montpelier, Vt., and organized the Public Library in Bernardsville, N. J. She leaves her husband and two little girls, one thirteen and the other eleven years old.

KAISER, John B., librarian of the Tacoma Public Library, is in charge of the construction of the library building and the organization of the library at Camp Knox, near Louisville, Ky.

KELLOGG, Theodora, Pratt 1908, who has been for some years general assistant in the Osterhout Library at Wilkes-Barré, Pa., has been made first assistant in the Seymour Library at Auburn, N. Y.

KIMBALL, Flor-Etta, Pratt 1914, formerly of the Carnegie Library at Pittsburgh and at the time of her death in the department of Military Intelligence in New York, died of the influenza at the Brooklyn Hospital on Oct. 12 after a brief illness, in the twenty-fifth year of her age. She was for a year and a half assistant librarian at Madison, N. J., before going to Pittsburgh.

KIMBLEY, Gertrude, Riverside 1915, is now assistant librarian at the State normal school, San Diego, Calif. She was formerly in the Barlow Medical Library at Los Angeles.

KINGSLEY, Mrs. E. J., formerly assistant in the University of Oregon Library, has been appointed assistant in the circulation department of the Tacoma Public Library.

KINKELDEY, Capt. Otto, chief of the music division, New York Public Library, is now in command of the Grove City College Unit of the Students Army Training Corps, located at Grove City, Pa.

KNOWLTON, Gladys, Los Angeles 1918, who has been an assistant in the California State

Library at Sacramento, has been appointed to a position in the Stanislaus County Free Library at Modesto, Calif.

KRAUSS, Bertha K., Pratt 1911, of the Ohio State Library, is library assistant in the Division of Military Aeronautics in Washington, D. C.

LEHMAN, Reba, Drexel 1908, died of influenza in October, 1918. Miss Lehman was with the Emergency Fleet Corporation at the time of her death. She had been engaged in library work in the Public Library of Conshohocken, Pa. and Spokane, Washington.

LIVINGSTON, Margaret, Los Angeles 1917, has been appointed librarian of the Colusa County (Calif.) Free Library.

LIVSCHITZ, Matilda, Pratt 1917, died in New York on Nov. 1, of pneumonia. She worked for five years at the Seward Park branch of the New York Public Library, where she founded the Mothers' Club and thru her enthusiasm and her knowledge of Yiddish accomplished Americanization work of the first order. She had also been on the staff of the Chatham Square branch, where she worked out the catalog of Chinese books. After her graduation from Pratt she undertook the creation of a Russian department at the Guaranty Trust Company, and shortly after, having devised a system of indexing statistics she was promoted to the statistical department—the first woman to be so honored. But her heart was in public library work, and with her rare personality, her idealism, her vision and her very great ability, there seemed no limit to the success that lay before her in that field.

LOCKWOOD, Gertrude Harriet, Carnegie 1907-08, has resigned as head of the children's department of the Public Library, Brookline, Mass.

LORBEER, Vera, Riverside 1913, has been recently appointed librarian at Pacific Theological Seminary, Berkeley.

LUCAS, Mrs. Marian Cross, Simmons 1915, has been appointed librarian in the Department of Education Library at Boston University.

MCCAMBRIDGE, Marie, Western Reserve 1910, has announced her marriage to Jacques Stanitz, of Youngstown, Ohio.

MCDONALD, Lurene, New York Public 1916-18, formerly an assistant in the economics

division of the New York Public Library, has been appointed research librarian in the Canadian Department of Labor, Ottawa, Ont.

McKEE, Clara, Pratt 1912, has resigned from the New York Public Library to take a laboratory technician course at the Rockefeller Institute.

MARION, Guy E., is organizing the collections of the Community Motion Picture Bureau at 46 West 24th street, New York City.

MARLOW, Algeline, California 1918, is serving as assistant at the Camp Library, Camp Kearny, Calif.

MATTHEWS, M. Alice, librarian of the Institute for Government Research, Washington, D. C., has accepted the librarianship of the Carnegie Endowment for International Peace in Washington. Miss Matthews was for seven years librarian of the U. S. Bureau of Labor Statistics (Department of Labor) resigning that position about two years ago to organize a special library in Government administration for the Institute for Government Research.

MEAD, Elizabeth L., librarian of the Houghton branch of the Lynn (Mass.) Public Library has resigned.

MILLER, Zana K., Western Reserve 1905, is now head of the applied science department in the Public Library at St. Louis, Mo.

MILLIGAN, May L., Western Reserve 1913, is a library assistant for the National City Company, New York City.

MORGAN, Jeannette C., New York State Library School 1914-15, is now assistant librarian and cataloger of the San Diego (Calif.) High School.

MOORE, Charlotte, for 36 years an assistant in the Public Library at Marlboro, Mass., died early in November.

MORTON, Gabrielle, Los Angeles 1918, has been chosen librarian of the Coronado (Calif.) Public Library.

MURCH, Philura E., New York State Library School 1905-06, is in branch work in the New York Public Library.

NASH, Allene, branch librarian at South Tacoma, has been appointed first assistant in the circulation department of the Tacoma Public Library, a position she formerly held.

NORTON, Margaret Cross, B.L.S. New York State Library School 1915, is calendaring a collection of manuscripts in the Indiana Historical Commission, Indianapolis.

OHR, Elizabeth, assistant organizer for the Indiana Library Commission since 1916, has resigned to become first assistant in the catalog department of the Bridgeport (Conn.) Public Library.

PAGE, Mildred, Simmons 1914, is librarian at McLean Hospital, Waverly, Mass.

PALMER, Mary B., has resigned as librarian of the Carnegie Library at Charlotte, N. C., and has joined the staff of the Carnegie Library School at Atlanta.

PANCOAST, Edith, has been appointed head of the circulation department of the Tacoma Public Library.

PETTY, Annie F., librarian of the North Carolina State Normal College, has been appointed a member of the North Carolina Library Commission, succeeding Dr. Clarence Poe. Miss Petty was the first trained librarian in the state, a charter member of the North Carolina Library Association (twice served as president) and it was largely due to her efforts that the state commission was established.

POSTE, Eleanor, formerly librarian of St. Lawrence University, Canton, N. Y., has been appointed to the staff of the Dartmouth College Library.

PRATT, Catherine, Simmons 1912, is going overseas in Red Cross work.

PRICE, Ruth, Carnegie 1912-13, has been appointed children's librarian, St. Louis Public Library.

RANDALL, Marie, Simmons 1914, is organizing files and library material for the Walkover Shoe Company in her home city of Brockton, Mass.

REID, Alice, now librarian of the People's Park branch of the Louisville Public Library, has been made reference librarian in the main building.

ROBERTS, Katharine Olcott, Carnegie 1915-16, resigned from the staff of the Carnegie Library of Pittsburgh Sept. 30, to accept a position in the children's department of the Brooklyn Public Library.

RUGG, Harold Goddard, has been appointed acting librarian of the Dartmouth College Library during the absence on military service of N. L. Goodrich, the librarian.

RUPP, Julia, Pratt 1906, formerly librarian of the Public Library at Oshkosh, Wis., has become librarian of La Salle Institute, Chicago.

ST. CLAIR, Sadie, Simmons 1913, is an index and catalog clerk in the Ordnance office at Bridgeport, Conn.

SARGENT, Jessie, Pratt 1911, head of the circulation department of the St. Louis Public Library, was married to Joseph McNiece on Aug. 19. Mrs. McNiece is to continue her work for the present.

SAWIN, Olive, Simmons 1918, has been appointed librarian of the special reference library relating to women in industry maintained by the Women's Educational and Industrial Union in Boston. The report that the library had been united with the Bookshop for Boys and Girls, printed in the October LIBRARY JOURNAL, was an error.

SCHEUCH, Madeline Anna, New York Public 1912-13, 1914-15, has left the National City Company to become file clerk and librarian for Halsey Stuart & Company, New York City.

SELLERS, Kathryn, formerly librarian of the Institute for Government Research in Washington, has resigned, having recently been appointed judge of the Juvenile Court of the District of Columbia.

SHAW, Marian, New York Public 1916-18, has resigned from the staff of the reference cataloging division of the New York Public Library to accept a position with the National Board of the Young Women's Christian Association, New York City.

SMITH, Miriam, Simmons 1912, has resigned from the Library of the Massachusetts Institute of Technology to accept the librarianship of a special library for the Dupont de Nemours Company, Wilmington, Delaware, where experience with the literature of chemistry and engineering was an essential qualification.

STANFIELD, James E., assistant camp librarian at Camp Zachary Taylor, died of Spanish influenza at the Base Hospital October 13, 1918. This is the first death in camp library service. Mr. Stanfield went to Camp Taylor from the State Normal School, Emporia, Kan., where he helped in the library while working his way thru school. He was thirty-one years old, very ambitious and promising, and his untimely death is to be regretted. He is survived by his father and mother, James and Sarah Evans Stanfield of Chanute, Kan.

STANGER, Marion, Drexel 1899, is with the Emergency Fleet in the personnel department of the Philadelphia office.

STEARNS, Lieut. Foster W., formerly librarian of Massachusetts State Library, has been transferred to General Pershing's headquarters as a member of the general staff. Lieut. Stearns went to Plattsburg in the fall of last year and was one of the few graduates who received commission for immediate service in France. He went across in January and was for several months attached to a classification camp. Later he was transferred to Co. D, 16th Infantry. He was struck by a piece of shrapnel when his regiment went into action at St. Mihiel, but continued in the fight for five hours and has been convalescing at Vichy.

STEVENS, Dorcas C., has been appointed librarian of the Houghton Branch of the Lynn (Mass.) Public Library.

STIMSON, Florence, New York State Library School 1900-01, has been appointed assistant in the U. S. Bureau of Mines Library at Pittsburgh, Pa.

STITES, Katharine, Carnegie 1917-18, has been appointed assistant in the children's department, Carnegie Library of Pittsburgh.

STONE, Edna E., cataloger in the Bureau of Railway Economics, Washington, D. C., has recently accepted the position of assistant librarian of the Carnegie Endowment for International Peace, Washington, D. C.

SUBERS, Helen D., Drexel 1903, is acting librarian-in-charge of the Oak Lane branch of the Free Public Library of Philadelphia during the leave of absence of the librarian, Helen R. Shoemaker, Drexel 1912.

THEOBALD, Ruth, assistant at Crescent Hill branch of the Louisville Free Public Library since November 1911, has been granted leave of absence to attend the training class for children's librarians at Cleveland Public Library.

THOMSON, O. R. Howard, librarian of the James V. Brown Library, Williamsport, Pa., has brought out a second volume of verse with the title "The modern comedy." It is published by the Cornhill Company, Boston.

TURNER, Harriet P., Western Reserve 1916, is librarian of the County Library at Vevay, Indiana.

VAIL, Robert William Glenroie, New York

Public 1914-16, has been called from the information division of the New York Public Library to service in the United States Army.

VAN DYCK, Katherine, New York State Library School 1917-18, died in the Du Bois, Pa., hospital, Oct. 25, from influenza contracted in service as a volunteer nurse.

VAN SANT, Clara, New York State Library School 1916-18, has been elected librarian of the Medford (Ore.) Public Library.

VIRTUE, Ethel B., for the last five years archivist of the Historical Department of Iowa at Des Moines, has accepted the position of manuscript assistant in the library of the Minnesota Historical Society at St. Paul.

WADE, Margaret, Wisconsin 1918, formerly librarian at Pendleton, Ind., has been appointed assistant organizer for the Indiana Library Commission.

WADSWORTH, Mildred, Simmons 1918, has been appointed an assistant cataloger in the Dartmouth College Library.

WARING, Mary Anne, New York Public 1911-12, formerly in the clerical service of the U. S. Coast Artillery, has become court stenographer for the U. S. District Court, Eastern District of South Carolina, Charleston.

WATSON, Dorothy, New York Public 1916-17, formerly an assistant in the technology department of the Library Association, Portland, Ore., has been appointed a research assistant for the New Jersey Zinc Company, New York City.

WHITCOMB, Alice, formerly cataloger in the Library of the National Museum, has been appointed head cataloger in the Dartmouth College Library.

WHITE, Sarah Foster, for twenty years librarian of the Reuben Hoar Library, Littleton, Mass., secretary of the Littleton Historical Society, died at Littleton on Oct. 30.

WILLIAMS, Dorothy, librarian of the Cleveland School of Art, has gone overseas as a reconstruction aid.

WOODMAN, Francis Hall, formerly acting librarian of the Harvard Club of Boston, has gone as Y. M. C. A. worker to France.

WRIGHT, Ethel C., has been appointed to take charge of the children's work in the Toledo Public Library.

YOUNG, Lida B., has been appointed librarian of the Carnegie Library, Swissvale, Pa.

THE LIBRARY WORLD

New England

RHODE ISLAND

Providence. The valuable collection of books and other material on Whist, collected by the late Walter H. Barney, and unsurpassed in this country, has been presented to the Providence Public Library, and with it has been given a very detailed card catalog of the collection. This is one more instance of a valuable special collection, coming into the custody of a library already widely known for its special collections, serviceable to students. It is much to be regretted that, owing to the congested condition of the building, all that can be done with this collection, for the present, is to store it.

CONNECTICUT

Hartford. J. Cleveland Cady, Trinity '61, an architect of New York, has given Trinity College Library his collection of books and photographs relating to architecture. There are 375 volumes and upward of 2000 photographs. Dr. Cady has followed his profession since 1870 and among buildings designed by his firm were some for Yale College, the Metropolitan Opera House, the American Museum of Natural History and structures at Wesleyan, Williams and Trinity.

Middle Atlantic

NEW YORK

New York City. The will of Mrs. Russell Sage, recently probated, leaves \$800,000 to the New York Public Library.

New York City. The prints division of the New York Public Library has arranged in the print gallery in the main building an exhibition of the War Zone in Graphic Art, being a display of etchings and other prints illustrating Eastern France and Belgium during the 17th-19th centuries. The pictures shown are by artists of repute, being selected from the portfolios in the print room, the modern ones mainly from the S. P. Avery Collection.

Rockville Center, L. I. A bronze tablet has been unveiled here in memory of Winona Caroline Martin, librarian of the Public Library, who was killed last March in a German air-raid on Paris.

Sayville. The library of the late George R.

Brush, consisting of 3000 valuable volumes, mainly works of travel and reference works, many of which are out of print, has been presented by Miss Ida F. Gillette and Charles R. Brown to the Sayville Library. The collection will be housed in a building adjoining the library and will be known as the Brush Auxiliary of the Sayville Library.

NEW JERSEY

Florence. Walter H. Wood, president of the Wood Foundry Company, has turned over the Florence public library building of which he was the founder a few years ago, for an emergency hospital.

Newark. The Colombia exhibition held during May and June at the Free Public Library of Newark, has since been considerably enlarged and has now reopened. The exhibit illustrates the resources and possibilities of commerce of Colombia, which can, among other things, furnish to the United States platinum, pyrites, castor oil, petroleum and cocoanuts.

PENNSYLVANIA

Greenville. In moving Thiel College library to another building many rare books were found. One book was printed by Zell at Cologne in 1473, a Virgil's Aeneid was printed in 1501, and one in 1508. A history of Rome, printed by Andrew Welcher in 1586, at Frankfurt, and a German religious work printed in 1594 are in a good state of preservation. Among the other volumes is an iron-bound Bible.

South Atlantic

MARYLAND

Baltimore. Speaking at a meeting of the Kiwanis Club, on Oct. 24, Dr. Bernard C. Steiner, librarian of the Enoch Pratt Free Library urged the importance of a business branch of the library, which in the approaching time of reconstruction and trade development should be a center of information in books, maps and statistics of domestic and foreign trade conditions. The Baltimore Board of trade, said Dr. Steiner, has approved of the project of a library similar to the commercial libraries established in Newark, N. J., and in Manchester, Glasgow and Liverpool.

DISTRICT OF COLUMBIA

Washington. The Railroad Wage Commission has established a library to provide the

necessary reference material for its work. The library is located at the offices of the Commission in the Interior Department Building at Washington.

Washington. The Library of Congress now has on exhibition the original autograph signed addresses of welcome to the American troops on their arrival in France, in June, 1918, from President Poincare, Marshal Foch, Marshal Joffre and Gen. Petain. These addresses were written at the suggestion of Mr. John Erskine, chairman of the Army Educational Commission, A. E. F.—Y. M. C. A., and thru his patriotic generosity have been presented to the national library. Poster reproductions of them were made and displayed in all the Y. M. C. A. huts in France. Along with these unique documents the library exhibits excellent portraits of the president of France and the three generals. Marshal Foch's welcome reads:

"To you, valiant soldiers of America, defenders of right and liberty, I send cordial salutation.

"With such ideals—the noblest that ever led an army into battle—what shall not your valor accomplish?

"Your spirit, your confidence, guarantee a decisive victory.

"The fervent desire of your seniors in the great war will be to rival your ardor in the coming contests.

"General Headquarters, June 16, 1918.

F. FOCH.

FLORIDA

Bradentown. The New Carnegie library was formally opened on Oct. 10, the ceremony concluding with the unveiling of an oil portrait of Mrs. M. T. Wertz, who was some years since elected honorary president of the library association for life on account of her activity and long official capacity in the early work of the association.

East North Central

INDIANA

Indianapolis. Ralph Adams Cram has a profusely illustrated article on the Indianapolis Public Library in the *Architectural Forum* for September. Of the building itself Mr. Cram says, "Altogether I cannot help feeling that this Indianapolis Library is one of the most distinctive and admirable contributions to architecture that have been made in America."

ILLINOIS

Chicago. Sets of postcards and lantern slides illustrating the countries to which our soldiers go, are sent with brief travelogues to the army camps by the Ryerson Library of the Chicago Art Institute. "The travelogues are designed not only to entertain, but to reveal in some measure the various new conditions the soldiers may expect to find in life

on the other side. Some that are in preparation now are the Cathedrals of France, the Chateaux of France, North Italy, Switzerland and Rome."

East South Central

KENTUCKY

Louisville. Urging the appointment of an advertising man to a place on the Board of Trustees of the Louisville Public Library the secretary of the Louisville Advertising Club has written to the Mayor: "The management of the library is becoming more and more difficult by reason of the increased demands made on the city administration for financial support. "We believe," says the letter "that in future the conduct of its affairs should be intrusted in a larger degree to business men. . . . In order that Louisville shall be able to make a wider use of the admirable library system we now possess, we earnestly urge you to appoint a live young man on the board who is in close touch with the needs of the business world. Altho our libraries are doing a wonderful work, especially in relation to the schools of this city, we feel the facilities they offer the public should be better known, and for that reason the selection of an advertising man would enable the library board to deal more efficiently with modern conditions."

ALABAMA

Birmingham. The Booker Washington Library opened in October for the use of the colored people of Birmingham. Owing to the forbidding of all public gatherings there was no formal opening, but the library is open and ready for business. The library will be open from 2 o'clock to 9 p. m. daily. This library is a branch of the Public Library of the city and is located at 1715 Third Ave., North.

West North Central

MINNESOTA

Minneapolis. The entire collection of paintings, works of art, jade, Korean and Japanese ware, Greek pottery, old Persian and Ratta ware, carved ivory, bronzes, temple idols, Egyptian and Syrian necklaces, ancient jewelry and cut and uncut gems which have been accumulating at the Walker Art gallery in Minneapolis for the past fifty years, is today in the possession of the people of Minneapolis. The Walker collection, which art critics have stated to be the largest and most valuable collection of its kind in the world, has been unconditionally presented by T. B. Walker to the Minneapolis Library board for the free use of the people of Minneapolis.

In addition to these collections Mr. Walker has offered a 3½ acres site for the erection of a new public library.

Minneapolis. The business branch of the Minneapolis Public Library has installed a complete collection of maps covering all fields including soil maps, industrial maps, statistical maps and others which are useful to business men, students and general readers.

MISSOURI

Monroe City. The formal opening of the Monroe City Free Carnegie Library took place early on Oct. 3.

West South Central

TEXAS

Austin. Preparations are well under way for the installation of the Wrenn Library, consisting of 5300 volumes, which Major Littlefield bought for the University of Texas last February. A printed index is being prepared in London, a part of it having been already received. One hundred copies of this catalog will be distributed to a selected list of libraries in this country and in Europe. Additions have been made recently to the Southern historical collection in the library of the university. Major Littlefield donated a fund of \$25,000 to the university on April 28, 1914, for this collection, and later gifts of money amounting to \$12,566.65 have made these large additions possible. About 600 volumes were added last summer. Another shipment of 1000 volumes has arrived, and 500 more are on the way. The books of the collection, which are all on Southern history, are cataloged alphabetically under the head, Littlefield Fund, and they are available to all students.

Pacific

CALIFORNIA

San Diego. The Public Library and the Chamber of Commerce are in receipt of a donation from the city bank board of seven digests on the following: Mexico, Argentine Republic, Brazil, Chile, Paraguay, Uruguay and Latin-America in general. There are about 400 typewritten pages containing valuable data on the geography, history, governments, products, industries, natural resources, commerce, transportation, principal cities, education, ethnology, archaeology, etc., of these countries. A special feature is the comprehensive lists of references, explaining clearly where additional information is obtainable. The data is carefully arranged. A. J. Mende, now connected with the city health depart-

ment, compiled this data for the Panama-California Exposition from various books and publications, information obtained from the Pan-American union at Washington, D. C., and correspondence with various parties in the Latin-American countries.

Canada

ONTARIO

Niagara. When Niagara Camp for Polish troops was opened in the fall of 1917, the usual annual membership fee of \$1.50 was waived by the Niagara Public Library for men in the camp. When at the end of the year it was found that the library had a deficit, the Niagara Historical Society, which every year since the beginning of the war had given a grant of \$25 or \$50 for prisoners or the navy or other war funds, came to the rescue by giving to the library \$25 as a "patriotic gift," seeing that the library had been doing its share for the war by admitting soldiers-in-training free of charge.

Foreign

ENGLAND

Nottingham. The Public Libraries celebrate this year the completion of a half century of existence, with the record for the busiest year of service ever known. During the year 489,398 volumes were circulated, an increase of 33,318 over the previous year. The total number of volumes in the Central Lending Library, the Reference Library, and the district libraries and reading rooms, is 154,156. There was a steady demand for technical books, works on applied science, fine arts and foreign languages, descriptive works on foreign countries, and books on the war. A special feature was made of the commercial section in the Reference Library, and a photographic record of the city has been started. Besides the issue of books to soldiers in the library, several hundred consignments of books and periodicals have been forwarded for the use of soldiers and sailors, in addition to special supplies to hospitals, prisoners of war, the Y. M. C. A., W. A. A. C., local munition works, etc.

OCEANICA

Guam. The Agricultural Experiment Station at Guam, 1500 miles from the Philippines, has, in its isolation, to rely upon its own collection of books. This now includes 2000 bound books and 7000 pamphlets. To guard against the mildew and insects which rapidly destroy books and bindings, the library is equipped with sectional book cases enclosed in glass.

LIBRARY WORK

Notes of development in all branches of library activity, particularly as shown in current library literature. Material printed in this department is cumulated each year in the "American Library Annual."

AMERICANIZATION

The library an Americanizing factor on the Range. Irma M. Walker. *Wis. Lib. Bull.*, Oct., 1918. p. 209-213.

The Mesaba Iron Range, seventy miles north of Duluth, has some 85,000 people directly dependent on the mining industry, most of whom are immigrants. Each hamlet has its colony of Southeastern Europeans—Bohemians, Lithuanians, Slovaks, Slovenians, Montenegrins, Croatsians, Bulgarians, and Austrians—as well as Italians, Jews, Scandinavians, and a few Chinese. Most of these have left their country to realize freedom here, and they find new and unexpected conditions in which their old habits of life and thought are shackles. It is at this point that the agents of Americanization must come in if the atheist, the anarchist and the I. W. W. agitator are to be kept out. The public school and the library are the best agents of Americanization in such a community. Well supported by taxes from the mines, the buildings are modern and attractive. The library is often situated in the school; the child passes the "bookish sanctum" every time he goes to the class-room, and soon acquires the library habit. Hero tales are always popular, and Lincoln is especially dear to boys who are poor and who live in cabins. The pictorial section of the New York Sunday *Times* posted on the bulletin board and a collection of war pictures illustrating aeroplanes, tanks, fabricated ships, etc., brings a wealth of information to boys and girls who know no life beyond that of the Range; while lectures on questions of the day enable pupils to carry home a correct knowledge of current events to counteract the distorted news given in the foreign papers.

BOOK BUYING

Duplication of books—a symposium. *Ont. Lib. Rev.*, Aug., 1918. p. 8-11.

Six librarians, in charge of libraries in towns varying from 200 to 56,000 in population, contribute to this discussion.

Miss Florence B. Edwards of Manilla Public Library is strongly of the opinion that the policy of purchasing extra copies of titles in demand popularizes the library and earns the good will of a large number of readers; whereas a long wait and the hearing of an adverse criticism of a book lessen the read-

er's desire to read what might have proved a helpful and interesting book.

The Public Library of Dundas, which maintains close connection with the schools, duplicates as far as possible titles asked for for supplementary reading or for reference in preparation of debates or essays, fifteen to twenty scholars often asking to use the same books at the same time.

Miss Watson, Walkerville Public Library, finds that while in many cases it seems preferable to spend money in buying additional copies of books worth while than on newer titles which may be used for a short period only, nevertheless, providing duplicate copies of popular titles gives greater satisfaction to the readers, as they desire books while they are new and are being discussed. The practice of the library is to put one copy on the reserve list and one on the shelf.

Miss Thomson, Sault Ste. Marie Public Library, and Mr. Fred Landon, London Public Library, are in accord with these, and list some of the titles of which the 4-5 or more copies possessed by the library are never to be found on the shelf.

Miss Black, librarian of the Fort William Public Library, insists also on the necessity of having a sufficient number of copies of the older popular volumes, such as some of Dickens, Scott, Mark Twain, and Burns' poems, in the library, to ensure there always being a copy to satisfy a request.

BOOKS AND READING

The encouragement of good reading. Arthur E. Bostwick. *Bull. of the New Hampshire Pub. Libs.*, Sept., 1918. p. 104-109.

The encouragement, and by encouragement is meant the fostering of what already exists, of good reading can be begun when a survey of the present condition of the public reading has been made. Such a survey will bring home to the librarian the facts that of the many who can perform the physical process called reading, relatively few can interpret the printed page, or gather from a paragraph in a book what they would gather from the same paragraph read to them, and fewer still can read in word groups, or quickly and readily interpret printed matter. The logical result is that, while the "movie" founded on a novel can "get across," few people read the novel. Still, aroused interest being the basis

of all mental acquirement and mental advance, and the public knowing what it likes and what it needs, there is no more effective way to encourage good reading than by finding out what good books the public wants and giving it its fill. The thing for the librarian to do is to find out what unsatisfied desires, what unsupported impulses towards good reading exist in the community, then catalog these and work for these. Thus, a body of men interested in a specific subject; a club studying a foreign language or a still more foreign subject; a talented family hitherto without fuel to feed their mental and spiritual fires will now satisfy their needs at the library with results far beyond a consequently increased book fund.

CHILDREN, WORK WITH

The Library of Hawaii, Honolulu, sends to any school in the territory upon request, transportation paid to the nearest port, a school library of 36—65 volumes, to be returned after three months. There is a mounted picture collection, from which any teacher may draw out a reasonable number upon a borrower's card for one month. As a result of Mrs. Gudrun Thorne-Thomsen's lecture and story-telling tour of the islands in June, the library, by special request from mothers, is conducting a study course for mothers in children's reading. A special children's bulletin, compiled by Mrs. Thorne-Thomsen, has been issued, containing best stories under different subjects: poems for children of different ages, with their sources; realistic stories and fairy tales to be told to children with their sources. At the annual Christmas exhibit to be held in November special emphasis will be laid on books recommended by Mrs. Thorne-Thomsen. A story-hour is held every week at the library and during the winter a story-hour cycle for older boys and girls, having for subject *The Odyssey*, will be conducted. Finally, the library gives each year, partly in the schools, partly at the library, instruction in the care of books, the make-up of the book, and the use of the card-catalog and reference books.

CLASSIFICATION

Classification of agricultural bulletins. *South Dakota Library Bull.*, Sept., 1918. p. 94-96.

The classification used in the State Normal School Library at Spearfish has been prepared by Miss Rowe, the librarian. The Dewey decimal classification has been used as a basis; in some places without change; with decided change in others; and with convenient

expansion in still others, notably 631: Soils and fertilizers; 632: Pests; 633: Grains, grasses, tea, tobacco; and 639: Farm mechanics.

CLASSIFICATION—MEDICAL LITERATURE

Classification scheme of the Boston Medical Library. James F. Ballard. *Bull. Med. L. Assn.*, Jan., 1918. p. 33-63.

"Section one comprises the general reference works, history of medicine, and related subjects. Next in order will be found the sections dealing with the so-called biological sciences, then medicine with its many subdivisions and specialties, science and sociology and the various periodical and serial publications. . .

"On comparison with other systems it will be seen that the present plan presents a more logical sequence of subjects than will be found in many classifications. . . Attention is called to the absence of the so-called 'miscellaneous' section, which is present in some schemes. . . Our system differs from the *Index Medicus* in that it brings together under one heading all material of a special nature. Everything relating to a system of organs or individual organs, whether of an anatomical, physiological, pathological, clinical or surgical aspect, is put in one place. In the *Index Medicus* the opposite is the rule. . .

"The notation used is a simple arrangement of numbers for the main divisions, letters for the sub-divisions, and an arbitrary number for each work. . . The Library of the Harvard Medical School in reclassifying its books has adopted this classification."

The complete outline of the classification is given, occupying 29 pages.

CLASSIFICATION—MNEMONIC SYSTEM

An alphabetical mnemonic classification. Robinson Smith. *Lib. World*, July, 1918. p. 4-8.

The alphabetical notation is chosen as being capable of use in an essentially mnemonic notation (for example E shall stand for England when countries are under discussion), and as permitting closer subdivisions than does the decimal notation which divides only by tens.

The main classes used are:—Art, Biography, Christianity, Dictionaries, English language, Fiction, Greek antiquities, History, Industries, Juveniles, Knowledge, Law, Modern languages, National, industrial and social problems, etc. Each class is capable of subdivision to a third or even a fourth letter, for example the class N, National, industrial and social problems subdivides thus:—

Administration, Business, Crime, Domestic economy, Education, etc.

"The point at issue is whether it is better to label a History of France HF (with all the library order and ease that such a symbol implies), or whether one of the following symbols would be more appropriate: 944 (Dewey), H5 (Schwartz), 9200 (British Museum), F39 (Cutter expansive), Df (Library of Congress), or R000 (Brown). Where the History of France is classified by centuries, the number of the century would follow the symbol. Thus HF16 would be a History of France in the 16th century. Numbers would be also used in some of the pure sciences, notably Botany and Zoology, to indicate the special classes.

"Since all books would be arranged in their groups and units alphabetically by authors, the author-mark of the individual book would be the first three letters of the author's last name followed by the first letter of his first name. Thus Thomas Carlyle would be "Cart" and the fifth edition of his French Revolution would be HFR.

So one could expand indefinitely, Cart 5 without disturbing the notation of the other books, everything would be in order, and everyone, classifier, attendant, habitual user and stranger would be guided automatically, quickly and intelligently. Moreover, with a symbol that visibly means something, it is more than ever possible that the same card (in duplicate) should serve the author card-catalog and the subject card-catalog. The author is printed in the upper left-hand corner and the subject-symbol in the upper right-hand corner, and they are filed and observed accordingly. Thus the crying need of libraries, a complete subject-catalog, is satisfied with almost no extra machinery. If publishers enclosed two such cards with every new book sent to libraries, there would be no cataloging problem."

The alphabetical mnemonic classification of industry. Robinson Smith. *Lib. World*, Aug., 1918. p. 36-39.

The application of the alphabetical mnemonic classification to the indexing system of a proposed central bureau of industrial information, is here given.

A list of some 800 major industries (to be obtained gratis from the Library Bureau) has been prepared, and each industry given a number, leaving many numbers blank scattering in order that the list may grow. The number, for example, 127 being assigned to

the glass industry, each glass manufacturer will receive all cards bearing that number, obviously an immensely wide range of material. Mr. Robinson is working out a classification system for this material on the principle of that described above.

The printing trade has the following sections:—Accounts, Binding, Composition and hand-set type, Engraving, Forms and stock books, Imposition and arrangement, etc., it being understood that the name given is necessarily sometimes a compromise, since two obvious names may begin with the same letter. The sections are subdivided, Composition and hand-set type for example being thus sub-divided into Alphabets (again divided into bourgeois, double pica, great primer, italic, nonpareil, etc.), Book work, Case and compositor, Distributing.

The system may be used easily in making for office use a handy index of correspondence, etc., the printer indicating by initials the material to be indexed and his typist making the cards. Thus the name of a lithographer will be found among the L cards in the main section N (Names and catalogs).

CO-OPERATION—FROM CHAMBER OF COMMERCE

On the initiative of the Providence Public Library an arrangement has been made with the Providence Chamber of Commerce whereby the latter list, monthly, in the *Providence Magazine*, important works in the library bearing on matters of interest to those concerned in the local industries. The lists are classified, a recent issue containing, e.g., works on accounting, advertising, banking, civic affairs, directories, office methods and routine, salesmanship, silk manufacture, taxation, industrial management, employment systems, and war-time conditions. Articles in periodical publications are included and a descriptive note or brief resumé of the matter is given.

EXHIBITS

Library exhibits—at fairs. *South Dakota Library Bull.*, Sept., 1918. p. 92-94.

Under the direction of Mrs. Jeannette E. Herreid, library and exhibits director for South Dakota, a library exhibit was held at the State Fair this year. Posters, books and magazines dealing with the food question were displayed and thousands of leaflets and pamphlets distributed.

The South Dakota Free Library Commission held an exhibit at the State Fair illustrating the public library, reference, school, and especially traveling library work. The same exhibit was held at Rapid City the following week, the most central and most accessible

place in the building being secured, so that no one missed the exhibit. Special prominence was given to war books and to books and bulletins on food conservation.

The Carnegie Library at Mitchell had a booth at the Corn Palace during the week of Sept. 23. Posters showing the work of the A. L. A. War Service Committee in bringing books to the soldiers and sailors were exhibited, and book-marks with brief bibliographies on timely subjects, such as Tales from the trenches, Keeping fit in war time, Canning and preserving, were distributed.

FILING

A chamber of commerce filing system. Dorsey W. Hyde, Jr. *Filing*, Sept., 1918. p. 85-87.

This is an outline, by the librarian of the New York Municipal Reference Library, of the activities of a chamber of commerce and a skeleton plan of a time-saving filing system to fit its needs. The functions of various files, namely, the correspondence, subject, duplicate, house-organ, organization and tickler files, are defined, subject-headings for a vertical file for printed matter relating to civic problems are suggested, and the uses of the cross reference slip, especially that of doing away with the necessity of much indexing, are illustrated.

Filing in a law office. Irene Julian. *Filing*, Sept., 1918. p. 81-84.

This is a well illustrated article describing the peculiarities in the files of a progressive legal establishment, discussing the uses of the alphabetical and numerical methods respectively, and explaining a serviceable method of indexing.

Central filing in big corporations. W. Herbert Gilley. *Filing*, July, 1918. p. 7-10.

In big business, details cannot be handled by any one individual, and so departments are organized. A central file must be the medium for interchange of information and instruction, and must gather and disseminate data quickly and accurately. It may also serve as an information bureau and often handles incoming and outgoing mail, follows up delays, compiles statistics, and is in every sense a service department. An adequate organization will not be cheap, but its value must be measured by the time saved to executive heads and to high-priced specialists.

The personnel must be carefully chosen. While experience is not always necessary, intelligence and adaptability are. Employees worthy of advancement should be recom-

mended by the head of the filing department for promotion, and this opportunity for advancement will attract more desirable material to the department. Cost of operating the department will be kept down, while salaries of individual assistants will be steadily increasing.

The system used must be adequate and reliable but not complicated. It must, however, be kept uniform, and the principles involved must be adhered to strictly.

Development of a trust company's statistical and information files. S. Eugenia Wallace. *Filing*, July, 1918. p. 11-13 [illus.].

The library of the Guaranty Trust Company of New York, originally only a few hundred books and serials and five filing cases, in care of one custodian, in two years has grown till the files now number 34, and the library staff now numbers twenty trained catalogers and translators. Miss Wallace tells how they first reorganized the correspondence file and established a card calendar that made it practically impossible for a salesman to forget his daily schedule of calls to be made and letters to be written. The subject and documents file, containing information about corporations and companies in which clients were interested, was next reorganized into a strictly alphabetical arrangement, with many cross references. A systematic searching of news items and financial magazines for this material was started, and additional information secured by correspondence.

Next the book collection was used as the basis for what has become a real bank library, over 400 newspapers and periodicals (in English and foreign languages) were subscribed for, and a clippings file, with daily service, installed. A special statistical reference card [illustrated] was devised for the collation of essential facts needed for quick reference. "Information on all subjects and for all departments" is the ideal of this busy library.

INFORMATION SERVICE

Information service for the community motion picture bureau. Paul F. Foster. *Spec. Lib.*, Sept.-Oct., 1918. p. 159-161.

In this article the Editor for Great Britain of the Community Motion Picture Bureau, formerly editorial librarian of the *Youth's Companion*, outlines a plan for the efficient and economical running of the business library of the bureau.

In addition to a small general collection of encyclopaedias, atlases and directories and a few of the best of the general periodicals, the library should have the indexes to peri-

odical literature, such as the *Reader's Guide*, its *Supplement*, and the *New York Times Index*. It should then purchase single issues of magazines containing specially valuable material. Certain periodicals are of use to special departments; the slide service for example can obtain humorous and political cartoons from the *Sketch*, *Tattler*, *Bystander*, *Punch*, *Sphere*, *Graphic*, *Illustrated London News*, *L'Illustration*, *Le Rire*, etc., and other departments could be well served by *System*, *Business Methods*, *The Journal of Accounting*, and *Printers' Ink*. The material ought to be examined by the librarian and suggestive articles sent to the executive or other person whom they will help.

The library should include and co-ordinate all the records of the bureau: the correspondence and all card indexes and information regarding motion pictures, the new-film library and the classified lists of special pictures of an educational nature. It ought to be the natural depository for articles about the work of the bureau and it should control the material sent by the press-clipping bureau.

The cost need not be great. A librarian trained in library methods and office economy could manage with the one capable clerk and the assistance of those clerks now employed in handling card records, correspondence, etc. The co-ordinating of these present divisions with the library would place them under the supervision of an expert and thus increase the efficiency of the whole organization.

LIBRARIANS AND ASSISTANTS—STATUS

The public librarian and his future: a consideration of current views and tendencies. *Library World*, March, 1918. p. 232-235.

Public libraries have become as never before an accepted fact in national life: witness the "significant remarks upon them by ministers of the Crown," the general failure of attacks upon them in municipal councils, and the phenomenal growth of rural libraries. The last Library Association Conference showed a strong tendency towards the requiring of a higher standard of education, if not library training for the coming librarian. Salaries have increased, largely in the form of war bonuses it is true, but it is improbable that the increase will be withdrawn. This increase is charged against the library rate, consequently the book-fund is reduced. Now it is a foolish policy to enhance the position of the library staff by decreasing the effectiveness of the library; furthermore the value of the penny rate has greatly declined. The removal of the penny limit seems therefore near, and the ratepayer will demand some-

thing in return for the increased rate: the public is likely to demand from the librarian all the qualifications usually associated with the professions. "The college-bred men of whose qualifications for library positions Sir William Osler is so certain, will try the possibilities of library positions. All present library workers thereafter will have to pass thru the crucible of educated criticism." There will be henceforth two classes of library workers: librarians and skilled manual workers and the higher posts will go to those possessing a university stamp on their knowledge, and perhaps, in time, a degree in librarianship, and who show authentic evidence of their ability.

LIBRARIANS AND ASSISTANTS—TRADE UNIONS

Trades unionism and library workers. B. Marjorie Peacock. *Lib. World*, April, 1918. p. 259-261.

"The apathy of the Library Assistants Association . . . whose real business it is to look after the welfare of the workers as distinguished from the welfare of the profession, is shocking," says Miss Peacock. Wages are low, hours are long, the future is uncertain. A constructive offensive policy is needed. It is not desirable that library workers as a unit become a part of the National Union of Clerks [as the library assistants at Bristol and part of the Manchester Libraries' staffs have done], it is the function of a union of library workers to break the vicious circle:—Low wages: Inefficiency. The first step is the definition of library work into its various sections and their grading, distinguishing between assistant librarians (technical workers) and library assistants (non-technical workers); the next to decide a uniform minimum rate of salary and a uniform maximum working day for each grade of work. It would in this owe no official allegiance to the Library Association examinations but insist on ability and efficiency, not certification, as the condition of higher remuneration.

The most obvious weapon of attack is the general strike. But since only when the services of the strikers are indispensable are strikes effective, the imperative course is an affiliation with the Trades Union Congress so that co-operation of those engaged in work more vital to the community can be secured.

LIBRARIES—DEVELOPING AND MAINTAINING INTEREST

Some essential points in the development of libraries. J. Pomfret. *Lib. World*, March, 1918. p. 228-231.

The greatest obstacle to progress, says the

librarian of Darwen, at the annual meeting of the North Western Branch of the Library Association, is the inadequate financing of the libraries, the local authorities failing to see that the saving to the rates is infinitesimal, whereas the loss to the library of even five per cent of its usual penny in the pound income means a considerable loss. The remedy for this and other ills might be found by appointing library committees composed of persons having interest and faith in the public library movement, rather than those who avowedly serve on committees in order to look after the public purse. The library can within itself help by providing an inviting and attractive arrangement of furniture and fittings, good light and ventilation, and by making accessible in the fullest sense of the word its resources, not only by giving free access to the classified books but by indexing the best contributions to knowledge which are buried in transactions of learned societies, in reviews and in volumes of essays.

LOCAL HISTORY—CLASSIFICATION

The printed catalog of a local collection. Roland Austin, *The Library*, Oct., 1917. p. 315-338.

The librarian of the Gloucester [Eng.] Public Library describes a scheme of classified catalog which has provided satisfactorily for the varied nature of the 8900 items in the collection of Gloucestershire pamphlets.

The order of arrangement of the principal "Parts" is as follows:

- Part I. Works relating to the county as a whole.
- " II. Distinct areas of the county (e.g., The Cotswolds, The Malverns, etc., etc.).
- " III. Rivers.
- " IV. County town.
- " V. Other large towns.
- " VI. Smaller towns, and parishes.
- " VII. Biography.
- " VIII. Locally printed works (viz., those printed in the county which do not appear under any other heading).
- " IX. Works by local writers (not appearing elsewhere in the catalog).
- " X. Portraits.
- " XI. Topographical prints.
- " XII. Maps and plans.
Index of authors.
Index of subjects and titles.
Index of local printers, publishers, and booksellers.

The chief subdivisions of the parts are arranged alphabetically for the purpose of quick reference; but this order is departed from in the case of history because of the importance of the subjects which it comprises, as for example, the subdivisions for part I, The county, and these with a few modifications are used also for the county town: History (again subdivided into general history and topography, religious, parliamentary

and military history); Administration (central, and local); Agriculture; Associations; Bibliography; Commerce and industries; Communication; Education; Fauna and flora; Folk-lore; Geology; Palaeontology, Mineralogy; Meteorology; Periodical publications (annuals, directories, general county periodicals); Sport; and Miscellanea (this heading being avoided as far as possible).

One entry only is as a rule used for each work, the subject-index giving references to works relating to several subjects. Each entry is preceded by a running number which used in conjunction with the subject-index is of immense convenience, e.g., Name of parish [See also 10, 70, 409 . . .].

MUSIC COLLECTION

The Chicago Public Library is making a special collection of magazine and newspaper clippings relating to American composers, including the work of women, and of Indian and Negro composers. These clippings may be taken out by card holders. The library also files for reference, programs of important forthcoming events, so that students may study scores in advance. The music department which was opened as a separate room less than four years ago, now possesses 12,000 pieces of sheet music and 8000 volumes.

NEWSPAPERS—PRESERVATION OF

The yellowing of paper; a study of the causes or principal factors producing the yellowing of paper. Alfred B. Hitchins. *Paper*, July 24, 1918. p. 11-15.

The series of tests described in this paper together with the results obtained are of interest to librarians. Test number 1 was an exposure to arc light for 100 hours. Samples withdrawn at 10-hour intervals.

Test number 2 was an exposure to moist heat, 90 degrees Cent. in a constant temperature oven in total darkness from 1 to 100 hours. Samples withdrawn every 10 hours.

Test number 3 was an exposure to dry heat 90 degrees Cent. heated in a constant temperature oven in total darkness from 1 to 100 hours. Samples withdrawn every 10 hours.

The sheets were sealed down to an opaque backing, and those exposed to heat to thin asbestos boards. No filler was used in any of the experimental sheets. All the chemicals used were tested carefully for impurities, and where necessary were further purified. The sheets were made without dye. A consideration of the results obtained leads to the conclusion that however carefully the paper is prepared the addition of rosin alone as a

sizing material will in the course of time produce yellowing. Also that the presence of iron is a very important factor. Animal-sized paper will yellow more than one which is free from gelatin sizing. The experiments disclose also that there is more or less tendency for a maximum amount of yellowing to take place in a given time, after which further yellowing is very slow or does not occur at all. Light is the most important factor in the yellowing of paper. Next in order of importance is moist heat, and the least active of the three factors is dry heat.

Microscopic sections were cut of the various samples of paper, so that it was possible to examine the internal structure of the paper. In the case of the paper containing only rosin-size it was found under the action of light that the yellowing produced was only superficial, the interior of the paper being hardly discolored at all. Under the influence of heat the discoloration extended more deeply. In the case where iron was used in known quantities the discoloration penetrated a little more deeply into the structure, and where the paper was gelatin-sized in addition to the rosin and iron the sheet was almost equally yellowed through.

The conclusion arrived at as a result of these tests is that where it is necessary that a paper retain its original color it is important to use as little rosin-size as possible consistent with the degree of sizing required, and to use always an iron-free aluminum sulphate as the precipitant. The animal-sizing should be omitted or kept as low as possible.

In a letter to *Paper*, printed in the issue of Aug. 7, E. D. Greenman, librarian for Arthur D. Little, Inc., of Cambridge, Mass., speaks of the importance of preserving newspapers for the source material on local history which they contain.

"The possibility of printing a number of copies of a local paper on a grade of paper which will last at least one hundred years, is entirely out of the question, owing to the small number of copies desired," he writes. "But the present grade of newsprint paper is of such a character that it is very doubtful if it will last twenty-five years under present library conditions subject to excessive moisture or excessive dryness, to chemical action of sunshine, gas, heat, etc., or to destructive organisms. So the problem seems to be one for the papermaker or the paper chemist and resolves itself into a problem of paper treatment after printing, such as will lengthen the life of the paper to its max-

imum. Altho expensive this can be done by thoroly coating newspapers with cellulose acetate. If properly done this will undoubtedly preserve the poorest of papers. It renders them less inflammable, more impervious to water or moisture and they can at the same time be readily handled without cracking."

NEWSPAPERS—PRESERVATION

Thoughts on the present discontents with newspaper stock. H. M. Lydenberg. [2 p.]

Mr. Lydenberg describes the experiments made in the New York Public Library, beginning in 1914, towards the solution of the problem of the preservation of newspapers.

Chemical treatment of newspaper stock gave no satisfactory results. It was found impossible to get a transparent fluid or one which would spread evenly. Furthermore casein-coated stock has been found to disintegrate within a few years. The application of zapon with a Paasche air-brush increased the thickness of the paper very little and did not discolor the paper or leave a rough surface, but on the other hand the strength of the paper so treated was very little increased. A solution of glycerine and shellac, and one of shellac, turpentine and paraffine, gave similar results. A solution of carbon tetrachloride and paraffine rendered the surface sticky and greasy, and a paper preservative made by a varnish company, in addition to these defects, made the ink run. A flexible varnish (a basis of linseed oil and resin) was difficult to spread evenly with the air-brush but gave good results by dipping. This could not be continued because the materials required were at the time requisitioned by the government.

The mounting of the newspaper between two sheets of Japanese tissue-paper, a hand-made paper of great strength and absolutely excluding the air from the printed page, was found to be entirely satisfactory, except that the cost was almost prohibitive. At first the work was done entirely by hand, and the cost per volume was about \$35; later a pasting machine was found, but the cost is still \$25 per volume, the issues for one month constituting a volume.

POSTAGE STAMP COLLECTION

In June, 1918, the H. L. White collection of postage and fiscal stamps of New South Wales was presented to the Mitchell Library, which is a part of the Public Library of New South Wales, in Sydney. The collection, surpassed only by that in the British Museum, is valued at £15,000, and is almost complete. It

has been cataloged and arranged by Fred Hazen, who was intimately associated with Mr. White during the formation of this and of other fine representative collections of the stamps of Victoria, Tasmania and South Australia.

Various plans were considered for displaying and protecting the specimens, and it was eventually decided to exhibit them under thick glass in horizontal sliding trays. Four cabinets were constructed of Queensland maple, each measuring 10 ft. 10 in. long, 4 ft. 3½ in. high, by 2 ft. 3 in. deep, and holding four rows of sliding frames of eleven slides in each tier—176 frames in all. The top slide is 48 inches, and the lowest 32 inches from the floor, so that the contents may be inspected in comfort. The frames are 28½ inches wide by 21¾ inches deep, and hold four sheets of stamps.

REFERENCE WORK

Making the library serve your purpose. J. K[aiser.] *Journal of the American Society of Mechanical Engineers*, March, 1918. p. 185-186.

This gives a good general description of the research system of the United Engineering Societies Library used to supplement the author and subject index, the published bibliographies and those compiled from day to day by the library. A staff of skilled and experienced searchers does this work which may serve a variety of purposes: It may be used for direct application in business; as a basis for technical papers, books or lectures; as a basis for inventions and patents; as a basis for legal action . . . or from the standpoint of economical, financial and other aspects." The question being formulated exactly and, if necessary, further information asked of the inquirer, a bibliography is made to cover the subject and is submitted to the inquirer who after perusal may decide to examine all or a part of the references. The Library may then be called upon to make photoprints, translations or abstracts. The inquirer may now be able to answer the original question or he may decide in what way the Library can further serve him. A record is kept of the extent of searches made, so that any search may be continued after interruption without duplication of work. A charge of \$1.50 per hour, calculated to cover the actual cost, is made so that no part of this service falls on the finances of the library.

Do libraries impede research? Adelaide R. Hasse. *Special Libs.*, Sept.-Oct., 1918. p. 155-156.

Miss Hasse answers the question with an emphatic affirmative. "Ordinarily a concern,"

she says, "engaged in the production of technical tools puts the manufacture of them in the hands or under the direction of persons having some appreciation of the needs and requirements of the ultimate consumer." Not so the library. Its catalog "is constructed according to hard and fast *a priori* rules, having regard chiefly to much non-essential technique in the determination of which the requirements of the ultimate consumer play no part whatever." The printed page contains the record of the rapid developments in all fields in these throbbing days: "How is it that the printed page, being vibrant with the mutation of psychosis, the library catalogue should be fetid with staleness? . . . The question resolves itself into three points—cause, effect and remedy. The cause, as already stated, is the prevalent overweening concentration on methodology in libraries, and very little sympathetic appreciation of the nature of the needs of the public. The effect is a serious obstruction of industrial and scientific research. As most libraries are recruiting their staffs from the graduates of the library schools, the remedy would seem to be the introduction in the curriculum of these schools of some instruction in the art of reclaiming information from printed sources."

RURAL LIBRARIES

Rural libraries. Garland A. Bricker. *Amer. Education*, Jan., 1918. p. 259-261. (Also printed in *Nebraska Teacher*, Jan., 1918. p. 199-201.)

Discusses the location of the library and the selection of the books, and includes a suggestive rural book list.

SCHOOL LIBRARIES—ENGLAND

Schools and libraries. Edward Green. *Athenaeum*, Nov., 1917. p. 585-586.

In 1906 the Town Council of Halifax, Yorks, associated the library committee with the education committee. "This, of course, provided exactly the conditions required for co-ordination of effort between the two departments, and a comprehensive system of libraries, forty in number, for the day schools was soon established, the education committee providing the cost of books, boxes, stationery, and other equipment, and the libraries the technical skill necessary in organization. These libraries vary in size from 50 volumes for a small school to 400 for a large one, and the total number of volumes now in use is 10,000. The libraries are not interchangeable between school and school, as the teachers prefer to build up permanent col-

lections, and recognize that the periodical changes caused by scholars passing thru the school provide the necessary variety. When these libraries were established the juvenile departments at the adult libraries were discontinued."

The grants of books are based on the number of children on the register and each head teacher selects the titles from a list frequently revised by the school libraries committee.

"The success of the day-school library scheme has been such that an extension of the work to the evening continuation schools was recently decided upon, and over 2000 volumes have been placed in sixteen departments.

"To link up the work of the school libraries with that of the adult libraries a system of transfer tickets, issued by head teachers to scholars leaving school, is in use, and periodical visits of small numbers of children in charge of a teacher are made to the adult libraries, where a lesson on the arrangement and working of the library is given. These lessons not only introduce the children to the large collections of books available when school days are ended, but they also afford some guidance as to selection and where to look for special knowledge on any specific topic."

SPECIAL LIBRARIES

The growth of a big idea. John A. Lapp. *Spec. Libs.*, Sept.-Oct., 1918. p. 157-159.

The "big idea" is the special library, the history of which is sketched in this paper by a former editor of *Special Libraries*. The special library he defines as an organization serving a specific institution which seeks to gather all of the experience available with regard to that institution's problems . . . to . . . present it in usable form, to study the problems which confront the institution and to bring the information to the right man . . . so that it may function in the work of the institution which it serves.

The collections prepared for the use of the state legislatures are the first example of the special library, that of New York State, the first in point of time, being however, only a collection of material, while that of Wisconsin made the information to function in the form of prepared drafts of bills and digests of legislation. The municipal reference library is the logical next step, but few cities have really effective municipal reference departments. The application of the idea to public administrative offices, notably in the case of the New York Public Service Commission,

came next, and this kind of special information bureau has developed enormously owing to questions arising out of the war. The fourth field of application is found in the realm of business: public utilities, banks, manufacturing concerns, bond houses, railroads, insurance companies and others have now their own specialized department of information, statistics and printed material. The fifth, and last of the main classes of special library is the collection relating to world commerce, this collection being still in the making.

The aim of the special library is, Mr. Lapp concludes, to make the knowledge which men possess articulate in every-day affairs, for enough knowledge is available on almost any subject to solve the problems of men and institutions if it were only passed around and made to help in doing the work of the world.

Bibliographical Notes

"Twenty-four billion," a pamphlet issued by the Bankers' Trust Company, New York City, contains valuable information in small compass on the cost of the war.

The October number of *Des Moines*, the organ of the Des Moines (Iowa) Chamber of Commerce, is a special library number containing a four-page account of "Des Moines libraries: their part in the educational and military training of our citizens," compiled by Gentiliska Winterrowd.

A list of five hundred war books published since spring is given in the *New York Times Book Review* of Oct. 20. The list is arranged by publisher under the headings: Books from the front; War songs and poems; Fiction, drama, juveniles; Germany and Austria; Russia and the East.

"Superstructures," the address delivered by W. N. C. Carlton, librarian of the Newberry Library, Chicago, at the commencement exercises of the Library School of the New York Public Library on June 7, 1918, and printed in the June number of the *Bulletin* of the New York Public Library, has now been reprinted as a separate by the library.

"Dramatizations of popular tales" is the title of an article by Louis N. Fiepel, editor of publications, Brooklyn Public Library, reprinted from the *English Journal*, for September 1918. It limits itself to a consideration of published plays in English, the fabric of which is based upon some work of fiction previously published.

A leaflet of additions to "A bibliography of the White Mountains," published by the Appalachian Mountain Club in 1911, has been printed and will be sent without charge to libraries having the book. Application should be made to Allen H. Bent, Appalachian Mountain Club, 1050 Tremont Building, Boston, Mass.

As a contribution to the United War Work Campaign the Carnegie Library of Pittsburgh published a pamphlet which lists books and magazine articles on the war work of the seven organizations which have united in the campaign. This list, entitled "War welfare organizations," was distributed widely by the various agencies of the library.

A new edition of the *Student Life* bulletin of the Missouri School of Mines has been prepared by the librarian, Harold L. Wheeler, and is an uncommonly attractive pamphlet, with good illustrations and interesting text showing the adaptation of the school's resources to the new needs growing out of the World War.

A League of Nations, published bi-monthly by the World Peace Foundation, 40 Mount Vernon street, Boston, is the successor of the World Peace Foundation pamphlet series. The new series deals with plans and projects for the kind of international organization outlined by the advocates of a League to Enforce Peace. No. 3 is devoted to the Russian Peace Offer and no. 5 to the Monroe Doctrine.

The Lamp, issued by the Standard Oil Company of New Jersey (published at 26 Broadway, New York city), is another new house organ. July was the month of its first issue, which described the marine transportation of oil. In the September number the work of the marketing division is explained in detail, and in subsequent issues other articles on the oil industry as a whole will be published.

The second part of the "Bibliography of Virginia" prepared by Earl G. Swem, assistant librarian of the Virginia State Library, has been issued in one thick volume of over 1400 pages as the combined four issues of the *State Library Bulletin* for 1917. This second part contains the titles of the printed official documents of the Commonwealth, 1776-1916.

The publication of an annotated list of selected titles of articles in current periodicals on engineering and other technical articles likely to be of interest to engineers, which was begun in the August number of the *Journal* of the American Society of Mechanical Engineers, is continued on a very much

larger scale, with closer classification in the succeeding numbers, the October number containing eighteen closely printed pages.

Beginning with the September-October issue *Special Libraries* now has for editor-in-chief J. H. Friedel, with the following associate editors in charge of the special sections: Claribel R. Barnett, agriculture and government libraries; Mary B. Day, business and commercial libraries; Ella M. Genung, financial libraries; Edward D. Greenbaum, technological and engineering; Mary A. Pillsbury, theological and fine arts.

The United States School Garden Army has issued twenty-three leaflets, which may be obtained free from the U. S. G. Bureau of Education, Washington, on organization, sustaining interest, judging the home garden, songs for the school garden army, etc. It has also recently issued in bulletin form "An outline of a course of study in gardening" designed to prepare for the supervision of school-directed home gardens.

Under the auspices of the Société d'Exportation des Editions Françaises, a selected list of French books for libraries of high schools and normal schools has been compiled by Marguerite Clément. The aim of the list, which is classified, is "to recommend the books which will teach students as much as possible about France and things French." It is published in the *Wilson Bulletin*, Sept. 1918.

In the *Ontario Library Review* for August, 1918, there is printed a very useful reference table of the free public libraries in the province in places having a population of less than 10,000. The table gives population, assessment, circulation (total adults and children), ordinary expenditure, total expenditure, expenditure on books, on binding, and on periodicals, and the number of volumes in the library collection Jan. 1, 1918.

The first issue of *InToWin*, a magazine published by the Ordnance Civilians' Association, United States Army, in the interest of the ordnance workers in Washington, has made its appearance. There are 8000 of these workers in Washington, and the magazine will be devoted to obtaining for them better living conditions. The leading article in the first issue, by Maj. Gen. C. C. Williams, Chief of Ordnance, is an appeal for co-operation among the civilian employees.

Three Americanization publications which should be in every library, are "Americanization as a war measure" (*Bureau of Education Bulletin*, 1918, no. 18. gratis); "Win-

ning friends and citizens for America" by Eleanor E. Ledbetter (Immigrant Publication Society, 241 Fifth Ave., New York City. 15 cents postpaid); and the *Americanization Bulletin* soon to begin periodical publication from the headquarters of the National Americanization Committee at 29 West 39th street, New York City. This committee has also issued several useful leaflets.

A collection of the bookplates and bookmarks issued during the course of the war is being made by Librairie H. Daragon, 10 rue Fromentin, Paris, and the material obtained is to be made the basis of a study soon to be prepared on *l'Ex libris de Guerre, français, belge, italien, et Américain*. More than one hundred and fifty of these bookplates have already been sent in, but few from this country, and gifts of plates from the camp libraries and for any special war collections will be appreciated and acknowledged.

The War Work Committee of the National Committee for Mental Hygiene has issued a bibliography with abstracts, "compiled in order that the psychiatrists and neurologists . . . attached to base and other military hospitals may have at hand the latest information about the special problems to be met in the army camps." It consists of abstracts of books, of parts of books, and of 300 articles from 87 periodicals. The material is arranged chronologically, according to the date of publication "so that development of theories, changes of opinion, and working out of methods may be traced thruout the progress of the war."

In preparation for the "Children's Year" in the Library, the Brooklyn Public Library is planning a progressive course of reading on the responsibilities of parenthood and the care and training of children. The first instalment, printed in the library's *Bulletin* for October, covers the subjects of parenthood, eugenics, and motherhood. Succeeding lists will include child psychology, child training, the child's health, the child's morals, the home kindergarten, story-telling, the school in the home, school and college, the child's reading, play and recreation, manners, and child's vocation, and stories of child life.

Medical librarians will be specially interested in the announcement that the "History of the Boston Medical Library" has just been published by the Plimpton Press. The first Boston Medical Library, formed early in the last century, was ceded to the Boston Athenæum in 1826. The present one began in a small way in 1875, with the support of such men as Dr. Oliver Wendell Holmes, Dr.

Henry Ingersoll Bowditch, Dr. David Williams Cheever, Dr. James Read Chadwick, Dr. Reginald Heber Fitz, and many others. The present history has been written by Dr. John W. Farlow, for the past thirteen years the librarian of the library.

The Grosvenor Library of Buffalo has started a quarterly *Bulletin*, the first issue appearing in September. It is designed to give to serious readers in Buffalo as well as outside the city, knowledge of the resources of this really important reference library. In this first number is printed the annual report of the library, as well as a list of the library's collection of chemistry serials. A descriptive article on some outstanding feature of the library and a list of some one of its special collections will be features of each issue. There is also a page of reference "findings," and those who were at the Lake Placid meeting will be amused to see the much-quoted "mousetrap" passage heading the list!

"Home warriors" was the title of "a playlet to promote soldier's play" written by Mrs. Minnie Clarke Budlong and Charlotte Matson of the Public Library Commission in North Dakota for presentation in schools and communities with special reference to the United War Work Campaign. The scene is laid in a modern farm home, where the father and mother, daughter and two sons of 12 and 14 are gathered for the evening. The soldiers' picture on the wall and the service flag in the window tell the story of the family's interest in the war, and the dialogue is a discussion of the work of the seven organizations and the contribution each can make to the happiness and well-being of the absent soldiers.

Two new annotated catalogs have been issued lately by the H. W. Wilson Co. in the Standard catalog series. Both are compiled by Corinne W. Bacon. One is the sociology section of the Standard Catalog, being a thousand titles of the most representative and useful books on social, economic and educational questions. The other is the Supplement to the Children's Catalog, and includes four hundred and fifty titles chosen chiefly from books published between June 1, 1916, and January 1, 1918. Another Wilson publication is a pamphlet on "Choosing a play," by Gertrude E. Johnson with both suggestions and a bibliography of good plays for amateur production.

The publication by the Merrymount press of the first part of a ten-part catalog of the present contents of the John Carter Brown Library in Brown University was announced for November. The catalog is planned to in-

clude all the printed books, pamphlets, maps and manuscripts in the library, with due emphasis upon the Americana from near the end of the fifteenth century to 1801, to which the library is largely confined, and with which no other library, public or private, can be compared. The present collection amounts to about ten times the material cataloged in the edition of 1882. As in the earlier catalog, the arrangement of this will be chronological, full titles will be given where they are necessary to identify an issue beyond any doubt, and peculiarities of the particular copy will be noted, but otherwise extended annotation will not be attempted.

The "Guide to United States government publications" compiled by Walter I. Swanton and issued as Bulletin, 1918, no. 2 of the Federal Department of Education, is bound to prove a most valuable tool for the reference librarian. It is divided into eleven sections, one for each of the ten executive departments of the government and one for miscellaneous important independent bureaus and commissions. Each part is subdivided into sections for each bureau belonging to the department, and the description is usually given in the following order: Principal administrative officials, general information and duties, general publications, method of distribution of general publications, annual and other periodical publications, lists, indexes, mailing lists, maps, and correspondence. A 14-page index gives further help in locating desired information.

"The libraries of the American state and national institutions for defectives, dependents and delinquents," by Florence Rising Curtis, is no. 13 in the Studies in social sciences series issued by the University of Minnesota. It gives an historical sketch of state and national institutions; shows the place of the library in the various institutions: the insane hospital, the reformatory, the prison, the institution for delinquents, and that for the feeble-minded; the sanatorium for tuberculosis, the orthopedic hospital, the home for soldiers, the school for dependent children, and the schools for the blind and deaf. Then follow the history of the movement for state supervision of institution libraries, and an account of the administration of the institution library—the book collection and the book fund, the library room, and library service to the inmates—and of the activities of library associations in regard to institution libraries.

"The war collection at the Clark University Library," by Louis N. Wilson, librarian, was published by G. E. Stechert & Co. in October (price 50 c.). A brief account of the efforts

made by the British, Canadian and German governments to accumulate material on the war, as well as of those made by some American libraries, in the absence of any action on the part of the government to meet the needs of future investigators, prefaces a description of the collection of books and posters in the Clark University Library, one of the most extensive in American institutions. A special classification scheme has been worked out by the library; the part relating to books is here given in full, followed by notes on some entries in special sections. British recruiting posters, War Savings, National Service, Blue Cross, Y. M. C. A., Church army, Food control and "special day" posters and pictures; the many beautiful French posters issued to raise money for charitable purposes and for the war loans; German war pictures of joyous life in the Fatherland during war time, as well as the Russian devastation of East Prussia, and a score or more of the German proclamations; a number of Raemaeker's cartoons; posters from Japan, Australia, Canada, Italy and Russia, together with more than 800 examples of our own country's posters, are included in this collection.

As a war economy measure the Carnegie Library of Pittsburgh has thought it expedient to curtail the editions of its forthcoming supplement to the Classified Catalogue. Instead of issuing a pamphlet edition as before this supplement covering the years from January 1912 to January 1917, will be issued in sheet form, folded into signatures, which will be sold as the pamphlet edition was formerly sold and which may be bound by the purchaser in any form desired. No indexes to the separate classes will be issued, but a completed Author index and a Subject index, together with title page, will be printed after all classes have been issued and will form the last signatures of the catalog. Reference in these indexes will be to pages, making them adaptable to any form of binding. The regular bound edition will be prepared and issued as formerly, but libraries desiring an earlier edition should secure these sheets. The first part covering the classes General works (000), Philosophy (100) and Religion (200) is now in press. The sheet edition will be sold by classes as follows: Part I, General works, Philosophy, Religion. Part II, Sociology, Philology. Part III, Natural science, Useful arts. Part IV, Fine arts. Part V, Literature. Part VI, English fiction, Fiction in foreign Part VIII, Biography. Part IX, Books for the blind. Part X, Indexes, Title-pages, Contents, Preface and Synopsis of Classification. languages. Part VII, History and travel.

LIBRARY ECONOMY

INSTITUTION LIBRARIES

Curtis, Florence Curtis. The library of the American state and national institutions for defectives, dependents, and delinquents. Minneapolis: Univ. of Minnesota, 1918. 56 p. Q. (Studies in social sciences, no. 13.)

LIBRARY BUILDINGS

Eastman, W. R. The library building. 2. rev. ed. Chicago: A. L. A. Pub. Bd., 1918. (Manual of Library economy chap. 10.)

Wilder, Robert Parmelee, *ed.* The Red Triangle in the changing nations. . . . New York: Assn. Press. bibls. 12°. 75 c.

The Open Round Table

RETURNING UNSOLICITED BOOKS

Editor Library Journal:

A letter on page 784 of the October LIBRARY JOURNAL refers to returns of unsolicited books. A simple way out of the dilemma is to notify the shipper of non-acceptance by the library and also a notification that they will be mailed back on receipt of the postage. Otherwise they will be placed in the discard. This proved very effective in this library.

CORA A. QUIMBY, *Librarian.*

*Winchester Public Library,
Winchester, Mass.*

INDEX

LIBRARY JOURNAL, Vol. 43, JAN.-DEC., 1918

Business libraries and other libraries specially well-known, are entered under their own names, as are national, state, university, college, and U. S. departmental libraries. Other libraries are entered under name of city or town in which they are located.
